Chapter v., "The Dugong," gives a history of this marine animal, and of the Queensland industry of catching and converting him into leather, meat, ivory, and oil, the latter having remarkable medicinal effects in the diseases of rheumatism and consumption. Chapter iv., "Among the Sugar-canes," can be recommended; and Chapters viii. and xii., "The Sheep Station" and "On a Cattle Station," contain full and well-written accounts of these chief Australian industries, of the people engaged in them, and their mode of life. Chapter xi., on Kangaroos, is also most interesting. They are the great foes of the Queensland colonists, and it is estimated that each one consumes yearly sufficient grain to feed two sheep. At certain seasons when it is very dry, the kangaroos come down in vast hordes from the mountains, and literally "eat up the country," with the result of bringing thousands of sheep and cattle to starvation. The colonial authorities give a reward for each kangaroo scalp, and to earn this, and for self-protection, the settlers organize hunts, in which, by the employment of numerous beaters, the kangaroos are driven within range of the concealed sportsmen. At one of these, in which Mr. Senior assisted, 921 kangaroos were killed, and he states that an idea of the "incredibly great number" of these animals can be got from the fact that at one station in the same district 23,000 were shot during one year.

The Land of the Pueblos. By Susan E. Wallace. New York: John B. Alden. 1888. 285 pp., with illustrations.

This little book is a reprint of a series of papers published several years ago in different periodicals. As such it must be judged, and while it, of course, still possesses the same charm which these papers offered to the reader at the time, it also suffers from the same defects. The author should have informed herself, before undertaking this republication, of whatever advance historical knowledge has accomplished in the lapse of time intervening, and should have incorporated it in the present issue, insofar as it entered in the scope of her work. For, while the book has many bright sides, it is lamentably adrift in all that touches upon the history and ethnology of New Mexico. It would be useless to go into any details; the entire picture of New Mexico's past is so utterly at fault that it would be superfluous to specify. This is the more regrettable, since the headings of several chapters give the idea that the author's data and facts are derived from the Spanish Archives at Santa Fé. Nevertheless, it is plain that, while the author has doubtless *seen* many documents, she has had no opportunity of reading, let alone studying, any of them. As far as actual life in New Mexico is concerned, the author cannot be too much praised for her admirable pictures of it. But the past seems to her a sealed book, in regard to which she is content to repeat, though in a beautiful way, statements and appreciations which at their time were just and seemed true, but which are no longer of our period. Should a second edition of the work be intended, a thorough revision of these parts would make it very valuable.

Schriftsprache und Dialekte im Deutschen nach Zeugnissen alter und neuer Zeit. Beiträge zur Geschichte der deutschen Sprache von Adolf Socin. Heilbronn: Gebrüder Henninger. 1888.

The idea of this elaborate and learned treatise is to exhibit the evolution of literary German in its relation to the spoken dialects of the people. This object the author endeavors to accomplish partly by descriptive exposition of his own, but mainly by means of illustrative quotations from the literary documents and the grammatical authorities of every epoch. Thus we are given not simply a history of the German language, but also a history of opinion with regard to it; a history of the contending forces, the controversies, the reformatory efforts that have made it what it is. Along with this purely historical matter the author finds space to interweave a tolerably full account of the researches and conclusions of recent scholarship, so far as these bear upon his general subject. Thus the book serves the double purpose of a mine of facts and a conspectus of discussion.

A treatise of this character was a real desideratum, and it is a pleasure to be able to testify that the task set himself by Socin has been performed with thoroughness and good judgment. He does not, indeed, so far as we have discovered, bring forward any new material of importance, and his personal contributions to the numerous learned discussions touched upon by him are not very momentous. It is also true that specialists may criticise here and there the perspective of the work and the leanings of the author with regard to controverted matters. In a longer notice than is here possible we might ourselves indulge in a few animadversions of that sort. It is to be remembered, however, that no book of like intent could possibly be written which would be altogether secure against criticism along those lines. Such strictures, in any case, would affect but little the real value of the great service which Socin has performed in patiently digesting an enormous literature, much of which is difficult of access, in presenting the results of his reading in a clear and compact form, and thus furnishing what may be called a bird's-eye view of this vast field of scholarship.

BOOKS OF THE WEEK.

Adams, W. I. L. The Photographic Instructor. Scovill Manufacturing Co.
Besant, W. Fifty Years Ago. Harper & Bros.
Brewer, D. C. Madeleine: a Poem in Fragments. G. P. Putnam's Sons. $1.25.

HENRY HOLT & CO.'s
Important New Educational Works.

THE NEW EDITION of WHITNEY'S GERMAN GRAMMAR. Teachers' price, $1.30; by mail, $1.45.

In revising the work many additions and improvements, suggested by experience, have been introduced. All the matter has been put into type averaging much larger than in earlier editions. The new spelling of German words appears in brackets beside the old. The exercises, which formerly were scattered through the volume, have been excised, and a much fuller and more comprehensive series, provided with references, appear at the end. No fundamental changes have been made in the plan or structure of the book, even the paragraphing having been retained.

PACKARD'S ENTOMOLOGY for BEGINNERS. 12mo. Teachers' price, $1.40; by mail, $1.53.

This book not only starts the beginner in the study, but gives amateurs and dilettanti copious directions for collecting and preserving insects and forming cabinets. It also is intended as a handbook for the farmer, fruit-grower, and gardener. After supplying the fundamental knowledge which all these persons need, it refers each very fully and specifically to the detailed works which supply his special requirements.

HOWELL'S DISSECTION OF THE DOG. Teachers' price, $1.00; by mail, $1.07.

Prepared originally for the author's own class at Johns Hopkins University, as a basis for the study of physiology.

HENRY HOLT & CO.,
NEW YORK.

HOUGHTON, MIFFLIN & CO.,
4 PARK STREET, BOSTON, MASS.

Important Educational Works
PUBLISHED BY
A. C. Armstrong & Son,
714 BROADWAY, NEW YORK.

INTRODUCTION to the STUDY of Philosophy. By J. H. W. Stuckenberg, D.D., Member of the Philosophical Society of Berlin. Crown 8vo, cloth, $2.

"This work must command the respect of all schools of thought. It is not a philosophy nor a psychology nor a book to defend a particular system of metaphysics. It is simply what it purports to be, an introduction to the subject. In this respect, it supplies for teachers and students alike a much-felt want. The problems and relations of philosophy are clearly analyzed and set out before the student, so that he may gain some familiarity with its questions without having to plod through too many original systems or their history."—N. Y. Nation.

SUPLEE'S TRENCH on WORDS. From the latest Revised English Edition. With an exhaustive Analysis, Additional Words for Illustration, and Questions for Examination. By Prof. Suplée.

TRENCH 'ON THE STUDY OF WORDS,' originally in the shape of lectures, and retaining that form in publication, was but poorly adapted for use as a text-book. The editor has long deplored this, in common with many other teachers; hence no apology is necessary for the appearance of the present volume. The advantages claimed for it over all other editions are self-evident. 12mo, cloth, 400 pages, net, $1.

*WHITE'S STUDENT'S MY*thology. A compendium of Greek, Roman, Egyptian, Assyrian, Persian, Hindoo, Chinese, Thibetan, Scandinavian, Celtic, Aztec, and Peruvian Mythologies, in accordance with standard authorities. Arranged for the use of schools and academies. By C. A. White, author of 'White's Classical Literature.' 12mo, $1.25.

REPRESENTATIVE ENGLISH Prose and Prose Writers. By T. W. Hunt. 12mo, 540 pages; full index. Net, $1.20. *Examination copies sent postpaid for 90 cents.*

In subject-matter, as in method, it is thoughtful and logical, while the English in which it is expressed is clear, vigorous, and tasteful.

*THE PRINCIPLES OF WRIT*ten Discourse. By T. W. Hunt, Professor of Rhetoric and English Language, Princeton College. 12mo, $1.

This work gives a full and philosophic discussion of the subject, with particular reference to collegiate needs.

*THE STRUCTURE OF ENG*lish Prose. A Manual of Composition and Rhetoric. By Prof. J. G. R. McElroy of the University of Pennsylvania. 12mo, $1.20. (Examination copies, 90 cents.)

"Though theory is by no means lost sight of, the aim of the author is eminently practical, thus adapting his work for use in both College and advanced classes in High Schools and Academies."

Unabridged Student's Hallam.
FOR USE IN COLLEGES AND SCHOOLS.

THE MIDDLE AGES. A view of the State of Europe during the Middle Ages. Revised and corrected edition. 2 vols., crown 8vo. Price, $2.50.

CONSTITUTIONAL HISTORY OF ENGLAND, from the Accession of Henry VIII. to the Death of George II. Including Mr. Hallam's Supplemental Volume of Revision up to 1848. (Indispensable to students.) Complete in 2 vols., cr. 8vo, $2.50.

INTRODUCTION TO THE LITERATURE OF EUROPE in the 15th, 16th, and 17th Centuries. Revised and corrected edition. Complete, 2 vols., cr, 8vo, $2.50.

MAY'S CONSTITUTIONAL HISTORY OF ENGLAND, since the Accession of George III., 1760 to 1871. By T. Erskine May. 2 vols., cr. 8vo, price, $2.50.

May is substantially a continuation of Hallam's great work, tracing the progress and development of the British Constitution during an entire century.

Special prices offered for use as Text-Book.

A New and Improved Edition—Price reduced.

BRYANT AND STRATTON Business Arithmetic. With Practical Problems and Valuable Tables of Reference, designed for Business Men, Commercial, Agricultural, and Scientific Colleges, Normal and High Schools, Academies, and Universities. By H. B. Bryant, President Chicago Business College; G. G. White, M.A., and C. G. Stowell.

PUBLISH:

1

MODERN THEORIES OF CHEMISTRY By Dr. Lothar Meyer, Professor of Chemistry in the University of Tubingen. Translated from the German (5th edition) by P. Phillips Bedson, D.Sc. (Lond.), B.S.C. (Vict.), F.C.S., Professor of Chemistry in the Durham College of Science, Newcastle-upon-Tyne, and W. Carlton Williams, B.Sc., F.C.S, Professor of Chemistry in the Firth College, Sheffield. 8vo, cloth, $5.50.

2

THE ELEMENTS OF CHEMISTRY, Theoretical and Practical. By W. Allen Miller, M.D., LL.D. Reëdited, with additions, by H. Macleod, F.C.S. 3 vols., 8vo.
Part I. Chemical Physics, $5.50.
Part II. Inorganic Chemistry, $8.00.
Part III. Organic Chemistry, $10.00.

3

THE FUNDAMENTAL PRINCIPLES of Chemistry Practically Taught, by a New Method. By Robert Galloway, M.R.I.A., F.C.S. Honorary Member of the Chemical Society of Lehigh University. Author of 'A Treatise on Fuel, Scientific and Practical,' etc. Crown 8vo, $1.75. *Just ready.*

4

INDUSTRIAL CHEMISTRY. A Manual for use in Technical Colleges and Schools, based upon a Translation of Stohmann and Engler's German Edition of Payen's *Precis de Chimie Industrielle.* Edited by B. H. Paul, Ph.D. With 698 woodcuts. 8vo, $10.50.

5

EXPERIMENTAL CHEMISTRY FOR Junior Students. By J. Emerson Reynolds, M.D., F.R.S. Fcp. 8vo, with numerous woodcuts.
Part I. Introductory, 45 cents.
Part II. Non-Metals, 75 cents.
Part III. Metals, $1.05.
Part IV. Organic Chemistry, $1.20.

6

SELECT METHODS IN CHEMICAL Analysis (chiefly inorganic). By William Crookes, F.R.S., V.P.C.S. With 37 illustrations. 8vo, $8.00.

7

A COURSE OF LECTURES ON ELEC- tricity. Delivered before the Society of Arts. By George Forbes, M.A., F.R.S. (L. and E.), F.R.A.S., M.S.T.E., and E., Assoc. Inst. C.E. Crown 8vo, $1.50.

8

ELECTRICITY FOR PUBLIC SCHOOLS and Colleges. By W. Larden, M.A., author of 'A School Course in Heat,' in use at Rugby, Clifton, Cheltenham, Bedford, Birmingham, King's College, London, and in other schools and colleges. Crown 8vo, $1.75.

9

EXERCISES IN ELECTRICAL AND Magnetic Measurement, with Answers. By R. E. Day, M.A. 12mo, $1.00.

10

THE TESTING OF MATERIALS OF Construction. A Text-Book for the Engineering Laboratory and a Collection of the Results of Experiments. By William Cawthorne Unwin, F.R.S., &c. 8vo, illustrated, $7.00.

11

THE THEORY OF THE STRESSES on Girders and Similar Structures. With Practical Observations on the Strength and other Properties of Materials. By Bindon B. Stoney, LL.D., F.R.S., M.I.C.E. With 5 plates, and 143 illustrations in the text. Royal 8vo, $12.50.

12

THE MARINE STEAM ENGINE. A Treatise for the use of Engineering Students and Officers of the Navy. By Richard Sennett, Chief Engineer, Royal Navy. With 244 illustrations. 8vo, $6.00.

13

BIOGRAPHIES OF WORDS AND THE HOME OF THE ARYAS. By F. Max Müller. Crown 8vo, cloth, $2.00.

14

A SYSTEM OF PSYCHOLOGY. By Daniel Greenleaf Thompson. 2 vols, 8vo, $12.00.

15

EDUCATIONAL ENDS; OR, THE Ideal of Personal Development. By Sophie Bryant, D. Sc. Lond., Mathematical Mistress in the North London Collegiate School for Girls. Crown 8vo, $2.00.

Professor of Harmony and Composition at the Royal Academy of Music.

Elements of Harmony and Counterpoint. Second Edition. Crown 8vo, 80 cents.

Elements of Music. Published under the Authority of the Committee of the Royal Academy of Music. Crown 8vo, sixth edition, 35 cents.

Messrs. Longmans, Green & Co. will be happy to send their Catalogue of General and Educational Books post free to any address furnished for the purpose.

LONGMANS, GREEN & CO., 15 East Sixteenth Street, New York.

The Nation.

Recent Press Comments.

"THAT the *Nation* was the forerunner and the first successful example of the independent journalism as it exists to-day may be asserted without fear of successful contradiction; and it must be reckoned to-day as among the most worthy representatives of the new departure in newspaper methods."—*Philadelphia Times.*

"THE *Nation* has fairly fulfilled its promise to be independent of party, and is respected accordingly by thinking people. Its art and literary criticisms have always been of a high order, and have helped to give it a national reputation as a weekly paper of the first class."—*Philadelphia Public Ledger.*

"MANY changes have occurred since the *Nation* first appeared as an independent political and literary journal, not the least important being the improvement effected by its precept and example in political and literary criticism across the Atlantic. We trust that many years of life and usefulness are still in store for our esteemed contemporary."—*London Athenæum.*

"THE New York *Nation* has won a place for itself by its great ability. As a critical authority in matters of art and literature, it is unapproached and unapproachable. No journal exists that is its superior—few, indeed, are they that equal it—in these departments, or in the world-wide correspondence it publishes upon all matters of interest to the best thinkers."—*Hartford Evening Post.*

"WE have often had occasion to differ widely with the *Nation;* but its intelligence, its courage, and the great service it has rendered to purity and independence in public life, have always received our heartiest recognition. The *Nation* has appealed especially to thinkers and students, and although its constituency of readers has been comparatively small, its influence has been out of all proportion to its circulation. Its success has been almost contemporaneous with the rise of a new school of thinkers on public questions in this country."—*Christian Union.*

"IT is not too much to say of the *Nation* that no single agency has done so much to advance and dignify the calling of journalism in America. Including in its scope politics as well as literature and art, it has often aroused bitter political antagonism and suffered from partisan excitement and prejudice; but we believe no one—at least, no one whose judgments are valued by thinking men—has ever soberly questioned its sincerity and disinterestedness, or the remarkable force and candor with which its views have been presented. In literary criticism its methods and achievements have been such that this has almost become a new art under its leadership. In all departments the *Nation* has been singularly able and impartial, and its success is a cause of gratification, in which American scholars generally will share."—*Chicago Dial.*

TO ALL BUYERS OF SCHOOL-BOOKS.

PERMIT us to call your attention to our special facilities for supplying SCHOOL-BOOKS at the lowest rates.

Besides being constant purchasers in quantity in the largest American book market at very low prices, we are special agents for *John Allyn, E. H. Butler & Co., J. C. Buckbee & Co., Charles Collins, Cowperthwait & Co., C. De Silver & Sons, Eldredge & Brother, Ginn & Co., S. C. Griggs & Co., Leach, Shewell & Sanborn, John E. Potter & Co.,* and *Silver, Burdett & Co.,* and carry in stock also a full line of the publications of all other American educational houses. Our stock is probably the most general collection of educational publications in the Country. We are consequently able to fill orders for whatever quantity may be needed, and on the most favorable terms.

Our general School-Book Catalogue, revised to date and containing telegraphic code, sent on application. All letters of inquiry promptly answered.

THE BAKER & TAYLOR CO., 740 & 742 Broadway, NEW YORK.

The Pennsylvania Museum AND School of Industrial Art.

This Institution intends to hold an Exhibition at the Museum in Memorial Hall, Fairmount Park, Philadelphia, of Pottery and Porcelain made in the United States. The Exhibition will be opened on October 16, 1888, and closed on the 13th of the following month.

All firms and individuals are invited to compete for prizes in money, offered under the terms of the Joseph E. Temple Trust, and all intending to compete should inform the committee as soon as possible.

Those who do not wish to compete are invited to exhibit some of their best productions, with the view of bringing this branch of art before the public.

At least Seven Hundred and Fifty Dollars will be given in prizes for the three best objects of American Art exhibited, the following being considered:

1st. Beauty of Form.
2d. Excellence of Workmanship.
3d. Appropriateness of Decoration.

Any object awarded a prize becomes the property of the Museum, to be always exhibited and labelled as a piece bought by the Joseph E. Temple Fund, in the year of its purchase.

Full information will be given to any one deciding to exhibit.

If desired and claimed, transportation both ways will be paid by the Museum, but the packing must be done by the Exhibitor or some one appointed by the Exhibitor.

The sympathy and coöperation of all interested in this Art Industry are earnestly requested.

Address "Committee on Pottery and Porcelain Exhibition," 205 South 6th St., Philadelphia, Penna.

Two Timely Books.

Is Protection a Benefit?

A PLEA FOR THE NEGATIVE. By Professor Edward Taylor. 12mo. 274 pages, $1.00.

"It is certainly one of the most important of the many recent additions to the literature of the tariff question. It is a clear, thorough, temperate, and well-reasoned study of the subject. There is no unhandsome partisanship in it, but it puts its side of the case with telling force. . . . There could hardly be a better specimen of such argument than these pages contain." *The Congregationalist (Boston).*

"This side of the question could hardly be argued with more force or fairness than it is in this volume. It is a model of vigor, brevity, and good temper. Its moral tone is high, and we ask for no fairer antagonist with whom to discuss a great question than Mr. Taylor." —*The Independent (New York).*

The National Revenues.

A COLLECTION OF PAPERS BY AMERICAN ECONOMISTS. Edited by Albert Shaw, Ph.D. With an introduction and an appendix of statistical tables. 12mo. 245 pages, $1.00; paper, 50 cents.

"The essays are not by partisans, but by profound and experienced students of economic science, men of national reputation, whose opinions will carry weight with all thinking men. They are from no one standpoint, but range from the extreme protection views of Prof. Thompson of the University of Pennsylvania to the opposing beliefs of President Francis A. Walker and of Prof. Laughlin of Harvard University. Every man writes independently, and says just what he thinks and believes, with his reasons; and thus many entirely new sidelights are thrown on all phases of the subject."—*Transcript (Boston).*

"It is a timely symposium, and is neither too voluminous to be tiresome, nor too one-sided to be prejudicial."—*Journal (Chicago).*

*** *For sale by all booksellers. Sent by mail, post-paid, on receipt of price by the publishers,*

A. C. McClurg & Co., Chicago.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Rate per year for 3 lines, $23.40; 4 lines, $31.20; 5 lines, $39.00, etc. Any term less than one year at same rates—15 cents per line per week.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

OVER TWO HUNDRED THOUSAND COPIES SOLD.

Richard Dowling, in his "Ignorant Essay" on the "Best Two Books," says: "I find Nuttall so close to my affections that I can perceive no defects in him. I cannot bear to hold him at arm's length for critical examination. I hug him close to me, and feel that while I have him I am almost independent of all other books printed in the English language."

FOR RAPID REFERENCE.

One of the handiest and, at the same time, least expensive of the many dictionaries known to the American public, is 'NUTTALL'S STANDARD DICTIONARY of the English Language' (price, crown 8vo, cloth, $1.50, or indexed, $2.00; half French morocco, indexed, $2.50—832 pages), in that it contains a very full vocabulary of words phonetically respelled according to the most approved pronunciation, and freed from the usual perplexing accent marks; its definitions are clear, concise, and adequate; its Etymology is a valuable feature, great praise being awarded the editor by competent critics for his care and moderation in determining the roots and language of the various word-groups. Besides these advantages, its tables of pronunciation of Scriptural, Geographical, and Classical proper names, Classical and Foreign phrases and expressions colloquially translated, alphabetical lists of contractions used for dispatch in business, initial letters in titles of honor, etc., etc., render it very convenient for family use, or as a desk-companion. Specimen page free. Published by

FREDERICK WARNE & CO., 3 Cooper Union, N.Y. City.

FRENCH BOOKS FOR SCHOOLS.

WILLIAM R. JENKINS,

PUBLISHER AND IMPORTER OF FRENCH BOOKS,

851 and 853 Sixth Ave., New York.

Keeps on hand one of the largest stocks of French school-books in the United States, which he is prepared to furnish to both the trade and schools at liberal rates.

His own reprints—'Romans Choisis,' 'Théâtre Contemporain,' 'Contes Choisis'—are all excellent as readers, and his other publications, notably the educational works of Prof. Paul Bercy, are such as to be of great value to the student, and, as well, the teacher.

CASSELL & COMPANY, Limited, 104 & 106 Fourth Ave., New York.

The Nation

VOL. XLVII.—NO. 1209. THURSDAY, AUGUST 30, 1888. PRICE 10 CENTS.

Every Teacher in America should read the September "CENTURY."

For the first time in its history "The Century Magazine" devotes a single issue largely to educational themes, while at the same time keeping up its other distinctive features in the way of the Life of Lincoln, the Siberian papers, fiction (two short stories), miscellaneous articles, etc. The papers on

EDUCATIONAL SUBJECTS

include the following: "Uppingham. An Ancient School Worked on Modern Ideas," with a portrait of the late Edward Thring (who is said to be since Arnold of Rugby the most highly esteemed educator of England), and many beautiful illustrations by Joseph Pennell; "The University and the Bible," by T. T. Munger, in which the author takes the ground that the student should obtain as thorough a knowledge of the Christian as of the heathen classics; "Women Who Go to College," a brief suggestive history of the growth of the movement towards the higher education of women, by Arthur Gilman; "Art in Education," by W. J. Stillman; an illustrated paper on "The Industrial Idea in Education," by Charles M. Carter; an article on "College Fraternities," with pictures of twenty-eight different society-halls and chapter-houses of American colleges, and a letter from President Seelye of Amherst on the subject of secret societies; editorials on "Modern Collegiate Education" and "Individuality in Teaching," etc.

No one interested in the cause of teaching can afford to miss this great educational issue. The other contents of the September CENTURY include an exceedingly interesting paper on

EXILE (TO SIBERIA) BY ADMINISTRATIVE PROCESS,

by George Kennan, with an "Open Letter" by the same writer, "Is the Siberian Exile System to be at Once Abolished?" Sold everywhere after Sept. 1st, or mailed by the publishers on receipt of price, 35 cents. THE CENTURY CO., NEW YORK.

NOW READY:

Eclectic Physical Geography.

12mo, cloth, 382 pages. 30 single and double-page charts and maps; 151 cuts and diagrams.

The 'Eclectic Physical Geography' differs widely from those in general use.

1. The Charts are distinct and graphically accurate. Each chart presents but a single set of physical features.
2. No scientific knowledge on the part of the young student is assumed.
3. The order of treatment is natural and logical.
4. Phenomena are not simply described, but are traced to proximate causes.
5. The treatment of *Erosion* is not dismissed with the usual brief paragraph. Nearly every chapter finds in erosion a cause or an effect.
6. It discards the theory that the secular cooling and contraction of the planet is the main cause of the present relief of the globe.
7. The chapters on *Life* and on *Weather* and *Climate* are full and in conformity to modern science.

The scientific accuracy of the book is attested by eminent specialists.

Introduction and Sample Copy, price, $1.00; Exchange price, 60 cents.

Van Antwerp, Bragg & Co.,

Cincinnati, New York, Boston.

Roberts Bros.' Handy Library

The "Handy Library: Companionable Books for Home or Travel," will comprise new works, mainly of fiction, with selections from the best literature of the day and age, printed on good paper, and substantially and neatly bound in cloth, in uniform 16mo volumes. The first number in the series is

THE STORY OF AN AFRICAN FARM.

A Novel. By RALPH IRON (Olive Schreiner). First American, from the second London edition. 380 pages, 16mo. Cloth, red and black. Price, 60 cents.

This is a book of undeniable power, original, vivid, intense, and as a first book is certainly very remarkable. The author is understood to be a young lady hardly out of her teens, and relates her own experiences.

HARVARD VESPERS.

Addresses to Harvard Students by the Preachers to the University. 1886–1888. 16mo. Cloth, crimson and black. Price $1.00.

Contains addresses by Francis G. Peabody, Phillips Brooks, Edward Everett Hale, Alexander McKenzie, George A. Gordon, and Andrew P. Peabody.

THE HAPPY PRINCE AND OTHER TALES.

By OSCAR WILDE. Illustrated by Walter Crane and Jacomb-Hood. 12mo. Cloth. Price $1.00.

Very pretty are the fables that Mr. Oscar Wilde has here strung together, tender and graceful, and not without a touch of humor.

VITTORIA.

EVAN HARRINGTON.

Two more novels in the AUTHOR'S POPULAR EDITION of GEORGE MEREDITH'S works. Already published: 'Richard Feverel,' 'Sandra Belloni,' 'Harry Richmond,' and 'Rhoda Fleming.' 12mo. Cloth. Price $1.50 each.

Just published by ROBERTS BROTHERS, Boston. Sold everywhere. Mailed, post-paid, by the publishers on receipt of price.

INSURE YOUR LIFE AS YOU *INSURE YOUR PROPERTY,*

each year by itself, but with the right to renew the insurance as long as you live by payments adjusted to the cost of the risk during the term paid for only; avoids the unnecessarily heavy outlay required by level or unchanging premiums. The renewable term policy of the PROVIDENT SAVINGS LIFE ASSURANCE SOCIETY, 120 Broadway (Equitable Building), New York, is the safest, the fairest, and the most economical contract for life insurance attainable. Among all the life insurance companies the PROVIDENT SAVINGS shows the largest ratio of assets to liabilities, and the smallest ratios of death claims and expenses. Maximum security. Minimum cost.

GERMANY, Wiesbaden.

EDUCATION IN GERMANY, WIES- baden College. Thorough German and French. Preparation for University. Boys can be met at New York. Refers to Prof. M. L. D'Ooge, Ann Arbor, Mich., Mr. L. Cushing of Yale College, Mr. A. Loeb, 204 La Salle St., Chicago. For circulars apply to BRENTANO'S, 5 Union Square, New York; 101 State St., Chicago; 1015 Pennsylvania Ave., Washington, D. C.

Teachers, etc.

A FEW YOUNG LADIES FITTING for college will be received into the family of the Principal of Paterson Seminary. References are Wellesley and many others. A. B. WIGGINS, A.M., Prin. MISS MARY C. WIGGIN, A.B., Lady Prin., Paterson, N. J.

A GENTLEMAN ENGAGED IN teaching in a college town will take into his family a boy preparing for college. A pleasant home and a careful and thorough preparation for college, are what is offered. Music if desired. Refers, by permission, to Prof. W. S. Tyler and Pres. J. H. Seelye of Amherst college. For terms, etc., address
S. A. SHERMAN, Amherst, Mass.

A GOOD CHANCE FOR DELICATE Boys.—A gentleman (graduate of Harvard) would like a few young boys to educate with his own children in the country. Preparation for Harvard or the Institute of Technology. Highest references. Correspondence invited. Address
G. L. STOWELL, Portsmouth, N. H.

A GRADUATE OF THE HARVARD Annex, full course, who has taught one year, desires a situation as teacher. Address A. C., care of Rev. C. T. Canfield, Cambridge, Mass.

A GRADUATE OF THE MASSA- chusetts Institute of Technology of some years' standing would like to teach in a preparatory or other scientific school. Address G. F. R., 10 Jay St., Cambridgeport, Mass.

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

HOLMES HINKLEY, A.M., PRI- vate Tutor, 19 Ware St., Cambridge, Mass.

WANTED.—BY A GRADUATE OF Smith College, a position as teacher in a private school or as governess in a private family. Has had experience and can give the best of references. Address Smith College, care of the Nation.

Wants.

WANTED—A TUTOR TO COACH a boy of sixteen this coming winter, in the south of France—a boy who has passed his first half Harvard Exams. Address with particulars,
J. A. B., 22 Congress St., Boston.

School Agencies.

BARDEEN'S SCHOOL BULLETIN Agency, Syracuse, N. Y., may be depended on to furnish suitable teachers *and to inform no others.*

THE BOSTON TEACHERS' AGENCY supplies Teachers to Schools, positions to Teachers. Circular free.

FOREIGN BOOKS.—Russian, Polish, Hungarian, Swedish, Danish, Hebrew, French, German, etc. H. ROSENTHAL & CO., 14 Cooper Union, N.Y.

THE FORUM.

A Monthly Review of Living Subjects.

THE FORUM is the vehicle for the thought of the foremost writers of both continents on those subjects that are of the gravest concern to progressive men. It was founded two years and a half ago by a company of scholars who had the money required to establish so costly an enterprise, and it has fulfilled their expectations. Its circulation has grown until it is now believed to be larger than that of any other unillustrated monthly, and it seems in a fair way to reach most of the educated readers in the land. Every subject of large importance that comes forward is treated in its pages by men who write with authority and with no other purpose than to tell the truth. It has a large educational and moral aim, and is constructive in its purpose, eschewing sensationalism and avoiding revolutionary tendencies.

The September number begins the Sixth Volume. Among its eleven articles are: "CAUSES OF SOCIAL DISCONTENT," Bishop F. D. HUNTINGTON of Central New York; "THE REPUBLICAN PLATFORM," Senator J. C. S. BLACKBURN; "PROGRESS FROM POVERTY," EDWARD ATKINSON; "DISTRUST OF POPULAR GOVERNMENT," the MARQUIS OF LORNE; "RELIGION'S GAIN FROM SCIENCE," Rev. Dr. T. T. MUNGER of New Haven; "WHAT SHALL THE PUBLIC SCHOOLS TEACH?" Prof. H. H. BOYESEN of Columbia College.

Henceforth every number will contain a review of notable recent books in the several departments of thought by an authoritative writer, and every article will be signed. Among the articles that will appear in the numbers of Vol. VI are by CANON FARRAR on TOLSTOI; by CARL SCHURZ on BISMARCK; by EDMUND GOSSE on AMERICAN POETS; by SENATOR EUSTIS on the NEGRO; by ANDREW LANG on ROBERT BROWNING.

"*The Forum . . . continues to hold its place as the foremost of our magazines for the variety, the value, and the weight of its contributions.*"—The New York Times.

THE FULL TEXT
OF
The Mills Bill,

As it passed the House of Representatives and is now awaiting the action of the Senate, was published in the New York WEEKLY POST of August 9. The same paper contains Mr. Mills's closing speech on the Bill. Copies may be had at 3 cents each.

F. W. CHRISTERN,
254 Fifth Avenue, between 28th and 29th Sts., New York.
Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

AN EXTRA FINE BOUND SET OF the Nation, 45 vols., for sale by A. S. CLARK, 34 Park Row, New York city.

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

A History of the United States and its People.

FOR THE USE OF SCHOOLS. By EDWARD EGGLESTON. With Maps, Prints in Colors, and numerous Illustrations. Square 8vo, cloth. Price $1.50.

This novel and most beautiful volume, although primarily intended for schools, is calculated to delight young readers out of school, and readers of all ages everywhere. It is charmingly written, and illustrated abundantly in a novel and most effective manner.

II.

The Origin of Floral Structures

THROUGH INSECT AND OTHER AGENCIES. By the Rev. GEORGE HENSLOW, Professor of Botany, Queen's College. "International Scientific Series." With numerous Illustrations. 12mo, cloth. Price $1.75.

"Much has been written on the structure of flowers, and it might seem almost superfluous to attempt to say anything more on the subject, but it is only within the last few years that a new literature has sprung up, in which the authors have described their observations and given their interpretations of the uses of floral mechanisms, more especially in connection with the processes of fertilization."—*From Introduction.*

III.

Seven Conventions.

By A. W. CLASSON. 12mo, cloth. Price $1.00.

The seven conventions here considered are the Federal Convention, five of the ratifying Conventions, and the Charleston Convention of 1860, designed as an aid to the study of the Constitution.

IV.

Practical Instruction in Minor Tactics and Strategy.

FOR THE USE OF THE REGULAR ARMY AND THE MILITIA. By John P. WISSER, First Lieutenant, First Artillery. With charts and maps. Approved and authorized as a Text-Book in the United States Artillery School. Square 8vo, cloth. Price, $2.50.

V.

Protection vs. Free Trade.

THE SCIENTIFIC VALIDITY AND ECONOMIC OPERATION OF DEFENSIVE DUTIES. By HENRY M. HOYT, ex-Governor of Pennsylvania. New cheap edition. 12mo, paper cover. Price, 50 cts.

For sale by all booksellers; or any volume sent by the publishers by mail, postpaid, on receipt of the price.

1, 3, & 5 Bond Street, New York.

The Middlesex Banking Co.,
MIDDLETOWN, CONN.

and Mortgage Notes Guaranteed. Interest payable at National Bank of the Republic, N. Y. Girard Life Ins. Annuity & Trust Co., Philadelphia. Broadway National Bank, Boston. Under same supervision as Savings Banks. Chartered 1872. The amount of outstanding obligation LIMITED BY STATUTE.

G. P. Putnam's Sons,

NEW YORK AND LONDON,

PUBLISH THIS WEEK:

THE FEDERALIST. A Commentary on the Constitution of the United States, reprinted from the original text of Alexander Hamilton, John Jay, and James Madison. Edited by Henry Cabot Lodge. Octavo, cloth, $2.00.

THE LIFE OF WILLIAM EWART GLADSTONE, 1809–1880, by George Barnett Smith. New impression. Octavo, cloth, $2.50.

"A history of British home and foreign politics during the past three-quarters of a century. . . . Written with ability and firmness."—*N. Y. Evening Post.*

READINGS FROM WASHINGTON IRVING. Selected from the 'Sketch-Book' and 'The Alhambra.' Cloth, 50 cents.

For the use of Schools and Reading Circles.

RECENTLY PUBLISHED:

THE TARIFF HISTORY OF THE UNITED STATES from 1789 to 1888. By F. W. Taussig. Comprising new edition, revised and continued, with important additional material, of the author's two volumes, 'Protection to Young Industries' and 'The History of the Present Tariff.' Octavo, cloth, $1.25.

"A valuable contribution to the question of Tariff reduction, which, it is now settled, must be the burning issue in the present Presidential campaign. . . . Students of political economy must in every case appreciate his patient research, his earnest purpose, and his honest and lucid inferences from what he finds to be the facts of the case. . . . We can heartily commend this book to the careful attention of all political inquirers."—*Washington Post.*

"Without hesitation this work can be recommended to those wishing to arrive at a comprehensive understanding of the workings of our tariff system, as the best work of the day."—*Boston Times.*

INDUSTRIAL LIBERTY. An Analysis of the existing condition of the United States, with special reference to the relations to the public of Railways and Trusts. By John M. Bonham. Octavo, cloth, $1.75.

"We earnestly commend the book to the attention of every citizen of the United States, confident that it will be read by all thinking people with interest and profit."—*Springfield Republican.*

"We must content ourselves with saying that it is a unique and valuable accession to the literature of American finance."—*Washington Post.*

NEARLY READY:

THE PRESIDENT'S MESSAGE. With Annotations of Facts and Figures. By R. R. Bowker. (Questions of the Day, No. 45.) 25 cents.

A republication, in convenient form for reference, of the clear and business-like statement made by President Cleveland, in his latest message to Congress, of the economical issues now before the country for decision.

THE PRESIDENTS MESSAGE. Edition de luxe. With 18 full-page graphic and wood illustrations by Thomas Nast. Large type, square octavo, 25 cents.

Lists of recent and standard publications in economic and political science sent on application.

G. P. PUTNAM'S SONS,
27 AND 29 W. 23D ST., NEW YORK.

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Microscopes, Acoustic Cane for Deafness, Ear Cornets, etc. H. WALDSTEIN, Optician, 41 Union Square, New York. Catalogues by enclosing stamp. Established 1840.

The Nation.

NEW YORK, THURSDAY, AUGUST 30, 1888.

The Week.

THE rejection of the Fishery Treaty had been so long anticipated that the event took nobody by surprise either in this country, or in Canada, or in Great Britain. The situation is now what it was in 1870 and again in 1885, except that there is a *modus vivendi* under which fishing operations are now carried on, which, if not satisfactory to all parties, does nevertheless answer the purpose. It is in the nature of a gratuity from the other side, and is, therefore, not revocable by us. No American fisherman need take out a license if he does not want it. If he does take it, he acts voluntarily and has nothing to complain of. If he prefers to stand on his rights under the Treaty of 1818, he can do so. That is the alternative. The rejected treaty was in large part a definition of rights under the old treaty. If the Gloucester fishermen prefer law-suits to licenses, the door is open to them to make that choice. They set out to get a monopoly of the fish market. They told President Cleveland that they wanted Canadian-caught fish prohibited from entering our ports. They wanted to have fresh as well as salt fish kept out. They wanted to secure by indirection the repeal of the law, passed by a Republican Congress and approved by a Republican President, which makes fresh fish free of duty. To accomplish this they have put the peace of nations in peril, and now they have failed.

The general opinion of patriotic Americans regarding the President's recent message is well expressed by Judge Thomas M. Cooley, a lifelong Republican whose character and standing lend great weight to his words, when he says: "The message is unquestionably a masterpiece of dignity and statesmanship. It is a document of great merit and will be likely to wield a great influence." As for the Republican politicians, there is but one word which will describe their situation: they are dumbfounded. One moment they declare that "the President has come over to our side" and "has surrendered to Republican policy"; the next, they declare that his position is untenable, and that the policy which he proposes is preposterous. As for the Republican press, its situation bespeaks the compassion of all tender-hearted men. The editors have not the slightest idea what the Senators will finally conclude to do about it, and the chances are consequently even that if they fire off their guns in either direction, they will slaughter their own friends.

On the 14th of June Mr. Sherman reported from the Committee on Foreign Relations, and the Senate unanimously passed, the following resolution:

"Resolved, by the Senate (the House of Representatives concurring), That the President be and is hereby requested to invite from time to time, as fit occasions may arise, negotiations with any Government with which the United States has or may have diplomatic relations, to the end that any differences or disputes arising between the two Governments which cannot be adjusted by diplomatic agency may be referred to arbitration, and be peaceably adjusted by such means."

Later on the same day Senator Riddleberger of Virginia entered a motion to reconsider. This motion has never been called up, and the resolution therefore now stands on the calendar with this motion to reconsider entered against it. The news of the passage of the resolution had no sooner reached Gloucester than the American Fishery Union broke forth in loud protests against the idea of submitting the pending dispute with Canada to arbitration, and the Republican Senators at once yielded to these protests. Now, however, that President Cleveland has proposed decisive action, in the failure of attempts to settle the trouble by negotiation, the Gloucester men come out strongly for arbitration. "The only way these vexed questions can be settled is by arbitration," says in August one of the Babsons who in June denounced the idea of arbitration as not to be thought of. Mr. Cleveland's message appears to have left the fish politicians stranded all around.

A telegram to the *Herald* from Montreal says that "a movement has been set on foot to petition the Imperial Government, in the event of the United States declaring non-intercourse, to place a nominal duty on American wheat and other grains, while admitting the produce of Canada and the other colonies free. This, it is claimed, would soon bring the United States to her knees, depriving her of her principal market, and would not injure England, while benefiting Canada; it being contended that India, Canada, and Russia could more than supply the British demand without increasing the price to the consumers. A public meeting in support of this proposal will be called in a few days." Whatever may happen or not happen between the United States and Canada, England will not adopt differential duties against any country with which she has any commercial relations at all. She maintains free trade, and accordingly scouts differential duties for her own benefit, and not for the benefit of foreigners. Least of all is she likely to put a tax on American cereals at a time when her own harvest is deficient. Nor, if she were otherwise disposed, would she be likely to forget that Canada has lately put in force protective duties against English manufactures which have caused a high degree of irritation in Parliament. Differential duties belong to the infantile period of national growth, which Great Britain has passed some time since. Non-intercourse also belongs to the infantile period. What President Cleveland has recommended is not non-intercourse, but the non-transshipment of other people's goods across our territory if they refuse to allow ours to be carried across their territory.

The Republican party promised in its national platform of 1884 to "correct the inequalities of the tariff," but instead of redeeming this promise or taking any step looking that way, it has offered every possible resistance to every attempt made in Congress to correct those inequalities. Now, what are the inequalities of the tariff? We think that most people will agree that duties of more than 100 per cent. are cases of inequality, seeing that some other duties are as low as 10 per cent. The following articles in the present tariff list are taxed 100 per cent. or more, viz.:

Articles	Duty per cent.
Castor oil	194.77
Acetate of lead	131.11
Tannic acid	196.97
Cylinder and crown glass { two sizes	106.21
do. do. do. { two sizes	108.50
Iron and steel beams and structural iron	102.75
Steel for railway wheels and tires	101.22
Steel wire, galvanized	111.18
Wire cloth, under No. 16	100.75
do. do. galvanized	114.21
Rice, cleaned	113.03
Paddy	134.50
Peanuts	106.04

The number of articles above 70 per cent. is too numerous to mention, but we subjoin a few in the woollen schedule which may certainly be classed as "inequalities":

Woollen cloths, etc.	Duty per cent.
Valued *not above* 80 cents per pound, no matter how low (poor man's cloth)	89.84
Valued *above* 80 cents per pound, no matter how high, broadcloth, etc.	68.91
Shawls, not above 80 cents per pound (poor women's shawls)	88.44
Ditto, above 80 cents	65.41
Ditto, alpaca, camel's hair, etc.	61.53
Woollen goods in general, not above 80 cents per pound	88.81
Ditto, above 80 cents	64.46
Flannels, not above 30 cents per pound	73.42
Ditto, above 30 and not above 40 cents	64.46
Blankets, not above 30 cents per pound	79.66
Ditto, above 30 and not above 40 cents	63.84
Knit goods, not above 30 cents per pound	88.33
Ditto, above 30 and not above 40 cents	65.20

These discriminations against the poor and in favor of the rich are presumably some of the "inequalities of the tariff" which the Republican platform of 1884 promised to correct, but which the party is now holding on to with all its might.

A most important document connected with the present tariff discussion was published by the *Evening Post* on Wednesday of last week, viz., a comparative statement of the present rates of duty on each article and the proposed rates on the same articles in the Mills bill, all reduced to an ad-valorem basis. There has been a great demand for this information. The document is prepared by the Committee of Ways and Means. It is interesting to note that the duties on woollens remain at 40 per cent. in the Mills bill even after the repeal of the duties on the raw material, wool. That does not strike us as very alarming to the American woollen industry. Nor does the average reduction to 42.78 per cent. from the present average, 47.10 per cent., appear to warrant the paroxysms that some people have been thrown into by it. Gen. Harrison has gone so far as

to admit that this bill is not in itself dangerous. He finds the real danger to be in the state of mind of those who support it. If they support it on grounds of protection, it is all right; if not, it is all wrong. No means have been suggested by Mr. Harrison for collecting their opinions, but if all the friends of the bill could be brought together and should take their Bible oaths that they support it on protectionist grounds, we are sure that Mr. Blaine would not be satisfied, although Mr. Harrison possibly might be. Perhaps the best way to judge of the bill is by its merits, without regard to anybody else's state of mind.

Mr. Thurman's speech at Port Huron last week showed that he has lost none of his intellectual vigor, and is as well qualified, in point of age, to serve in the Vice-Presidency as is his senior by a few months, Justice Bradley of New Jersey, to sit upon the Supreme Bench. It was an admirably plain, straightforward, common-sense presentation of the issue of the campaign. The *Tribune*, we observe, editorially refers to Mr. Thurman's speeches as "demagogic" and "cheap," and therefore, of course, calculated to drive voters away from the cause he advocates. We expected, consequently, to find the full text of the Port Huron deliverance in the *Tribune's* news columns as the best way of making votes for Harrison (Harrison is the name of the candidate the *Tribune* supports, isn't it?); but, somewhat to our surprise, found only the briefest possible abstract. This is very odd.

Mr. F. B. Thurber writes a letter to the *Times* to say that he is in favor of tariff reform, and also in favor of protection, and that he intends to vote for Mr. Cleveland this year. In an interview in the *Herald* he adds that he voted against Mr. Cleveland in the last Presidential election. We call the attention of Gen. Harrison especially to Mr. Thurber, because the former has been so anxious to know the exact state of mind of Mr. Cleveland's supporters on protection in the abstract. Here is a truly representative man, one of the foremost merchants and one of the most untiring "anti-monopolists" in the United States. Probably Mr. Thurber had no intention of offering himself as an example to satisfy Gen. Harrison's curiosity, but he serves the purpose all the better for that reason. The *Press* of this city should also take courage from Mr. Thurber's letter. That stipendiary newspaper of Thursday said that "the question of the difference between a 47 per cent. 'robbery' [meaning the present tariff] and a 42 per cent. 'robbery' [meaning the Mills bill] is not worth discussing": the real gist of the controversy is whether you are for protection, adequate protection. Now, Mr. Thurber declares that he is for protection, and, of course, that must mean adequate protection, because nobody can logically say that he is in favor of protection but not in favor of adequate protection. We are glad to have the acknowledgment of the stipendiary *Press* that the difference between the present tariff and the Mills bill is not in itself worth discussing.

The farmers of the South and Southwest are taking active steps to protect themselves against the exactions of the Cotton-Bagging Trust. At Memphis a large meeting resolved that they would use no jute bagging to wrap their cotton, but would buy osnaburgs or anything else merchantable rather than submit to the extortion sought to be practised upon them. The Boston *Commercial Bulletin*, on the other hand, tells us that there is no such thing as a Cotton-Bagging Trust, but only a "corner" in cotton bagging. We presume that it is immaterial to the farmers whether the combine is technically a Trust or a corner, seeing that they lose the same amount of blood in either case. The *Bulletin's* explanation of the way the corner came about is a queer one. It says that when the Mills bill was passed, reducing the duty on bagging to ⅜ cent per pound (the former duty having been 1½ cents), the manufacturers became alarmed, notwithstanding the fact that the same bill put their raw material, jute, on the free list, the former duty having been $5 per ton. They were so much alarmed that fifteen or sixteen bagging mills shut down without waiting to see whether the Mills bill would pass the Senate and become a law or not. "These mills," says the *Bulletin*, "were hopeless of being able to manufacture in competition with the Calcutta manufacturers under the small protection afforded by the Mills bill"—that is, by a bill which has not become a law, and cannot without the approval of the Senate. Not only were these particular mills shut down, but those which kept open "ran on short time so as to be ready to close down and not be caught with large stocks if the duty should be removed." It is so much easier to stop working when you are running half time than when you are running full time. "The condition of affairs," it continues, "presented an excellent opportunity for a corner, and it was seized by a large and financially strong St. Louis firm, which owns some mills and controls the products of more, who began to quote low prices and further depressed the market. Then, in conjunction with a strong New York firm, they bought up the product of certain mills, and leased other mills until they secured control of the product of about all the mills running except one Boston mill, and had leases of all the mills not closed. From present prospects we expect to see a further advance, say to 14 or 14½ cents for two-pound bagging, as the cotton crop is large and the bagging must be bought." What impresses us most strongly in this narrative is the excellent understanding that the owners of the fifteen or sixteen closed mills must have had with the wicked but financially strong St. Louis firm, to neglect the opportunity of doing a good season's business by opening their mills and taking advantage of the great rise in the price of bagging.

"J. W. T." puts certain questions to us regarding the duty on wool, which we shall endeavor to answer. We import about 114,000,000 pounds of wool, and we produce about 265,000,000 pounds. We also import about 200,000,000 pounds in the form of woollen goods and yarns. What the free importation of wool *will do* can be best judged by what it *has done* in other countries. The English wool-growers were terribly alarmed when it was proposed to make wool free of duty in that country. But the experiment was tried, and it resulted in enormously increasing the growth of wool in England, notwithstanding the high price of land. Indeed, one of the chief complaints after the wool duties were abolished was that too great a portion of English territory was turned into sheep pasture to the detriment of the cultivators of the soil. Some people would have us believe that no sheep were grown in this country until the wisdom of Congress devised a tariff on wool. There was no duty on wool until the year 1824, and it is quite certain that wool-growing constituted as large a *proportion* of the aggregate national industries prior to that time as it has done at any time since. Again, wool was substantially made free by the tariff of 1857 without any diminution of the home-grown product. On the other hand, the enactment of the high-wool and woollens tariff of 1867 was followed by a most extraordinary slaughter of sheep and decrease of home-grown wool product. The woollen manufacture was correspondingly depressed. The bulletin of the National Association of Wool Manufacturers for 1872 complains bitterly of the state of the industry "during the past five years"—that is, ever since the tariff of 1867 was passed, declaring that "it has been extremely difficult during all this time to buy wool and manufacture it into goods and get a new dollar for an old one." The same document says that the large profits made during the war had been mainly exhausted during this sad five years' period. The blow struck at the manufacturers by the wool tariff of 1867 recoiled on the wool-growers. Hence the great slaughter of sheep that ensued. Finally, let us observe, the object of human industry is to *have* wool rather than to *grow* it.

An incident in Sunday's meeting of the Central Labor Union is thus reported:

> "A complaint was made that one of the highly protected manufacturers was trying to squeeze more money out of his employees. The New York Woven Wire Mattress Company, that paid lower wages than other similar concerns, had reduced the wages of its men 33⅓ per cent. The Arbitration Committee had investigated the matter, and had found that there were no just grounds for any reduction."

The duty on galvanized woven wire is 4, 4½, 5, and 5½ cents per pound, according to the sizes, and is equal to 114.21 per cent. ad valorem. That is to say, the purchaser of $100 worth of such material abroad must pay $114.21 additional for the privilege of bringing it to this country, in order to protect Labor; and of course Labor must pay the whole sum, $214.21, for the woven wire in the form of mattresses if Labor ever sleeps on one, which may be doubtful. Would it not be well to increase the

duty on woven wire in order that the domestic makers of the article may be enabled to pay wages satisfactory to the Central Labor Union?

Mr. David A. Wells has been writing a series of articles in the columns of the *Financial Chronicle*, replying to that journal's criticisms on his 'Economic Disturbances since 1873.' In this work Mr. Wells sought to account for the great decline in the prices of leading staple articles in recent years by improved facilities of production and transportation, leading to an increase of supply in the markets of the civilized world disproportionate to the increase of population in the same time. Incidentally Mr. Wells dropped a stone on the heads of the bimetallists, for if the fall of prices can be accounted for by a careful observation of what is taking place on the earth, it is a waste of one's energies to fetch from the clouds another reason, viz.: the demonetization of silver. The *Chronicle*, whose one weakness is bimetallism, sought to show that Mr. Wells's statistics and his reasoning from the same were alike erroneous. To its criticisms Mr. Wells has replied in detail, and appears to us to furnish a hard nut to crack for those who look to the amount of the circulating medium to find out what the range of prices ought to be at any given time. It is commonly held by economists that Tooke gave the *coup de grâce* to that class of opinions in his celebrated 'History of Prices.' Mr. Wells's argument is on all fours with that of Tooke, although quite independent and original.

It is a satisfaction to us to agree for once with Senator Beck on a question of national finance. His bill to repeal the Sinking-Fund Law is right and ought to pass, and for the very reasons he has given. He said: "The sinking fund is not only encouraging Trusts and combinations of bondholders to increase the premium on our bonds, but our outstanding indebtedness is in such a condition now that I can name ten men in the United States who, by combinations, can purchase all our outstanding bonds and hold them, and, under the law as it now stands, force the Secretary of the Treasury under our laws to pay $200,000,000 for every $100,000,000 of bonds he obtains from them, and he is compelled by law to buy annually over $50,000,000 of them, even if he pays 100 per cent. premium." There are good reasons to believe that the combination to corner the bond market against the Government, which Mr. Beck speaks of as possible, already exists. It would be wonderful if it did not exist, considering the necessity imposed upon the Secretary of the Treasury by the Sinking-Fund Law, and the limited amount of floating bonds in the street. If there ever was a public advertisement to form a Trust, it is that which the Sinking-Fund Law and the state of the bond market together create.

The official evidence that Pat. Ford and his brother were deserters from the army while in face of the enemy during the Rebellion, ought not to surprise anybody. It is said that Ford's political influence will be ruined by the disclosures, but they are not the worst revelations which have been made of his character and of that of his newspaper. Is it any more cowardly to desert than it is to hire fiends to take dynamite into a great city and blow up buildings without regard to innocent human lives? Ford not only did this, no longer ago than 1885, calling it a "holy war," but he publicly rejoiced over it. He raised $40,000 for a Dynamite Fund, and when in January, 1885, news came of frightful explosions in London, Ford publicly claimed credit for the diabolical work. Ford was collecting his Dynamite Fund while "supporting" Blaine in 1884; yet Blaine thanked him personally at the close of the campaign for his "strong and valuable support." His coöperation has been eagerly sought again this year. He was one of the men who came back from the Chicago Convention full of grief because Blaine was not nominated.

Ex-Mayor Grace's testimony rounds out and completes the story of Gov. Hill's disgraceful connection with the aqueduct. Former witnesses have made it clear that the Governor entered into a "deal" or conspiracy with certain Republican jobbers to put the control of the building of the aqueduct into the hands of Squire, a man whom the Governor knew to be a characterless adventurer; they have shown, also, that one of the Governor's personal campaign notes for $10,000 was paid out of the exorbitant profits which the Governor's influence had enabled a firm of contractors to make at the expense of the city taxpayers. Mr. Grace now shows that instead of $10,000 or $15,000 in such notes, Keenan said that the Governor had $30,000 in them, and that Keenan and other political workers used all their influence to get the contract for Section 12 of the aqueduct awarded to the firm whose bid was $54,000 in excess of the lowest, in order that the profits might be used to pay these notes. The contract was so awarded, and was sold out for precisely $30,000 profit. Mr. Grace puts an end to the plea of the Governor's friends, that the Governor's notes were not personal, but were for the Democratic party as an organization. He says they were for the Governor's personal campaign expenses, and he was told that if he would help in one way or another in getting them cared for, he would secure the political friendship of the Governor.

Keely, of motor fame, is justly indignant at the legal steps taken by the directors of the Keely Motor Company to compel him to disclose his secret. The directors, reflecting alike upon the shortness of life and the longevity of Keely's experiments, have bethought them that if the inventor should die in the midst of an interesting trial of the etheric sympathizer, or if he should be paralyzed by an explosion of cold vapor, or if any other of an unnumbered series of accidents should happen while he is working alone among the vibrators, the secret would be for ever lost, and their stock would at once fall about seven points and become utterly worthless. So they have exercised only common prudence in requiring him to divulge the secret which he has held so long in his own breast. But Keely is no more ready to give it up now than he was thirteen years ago. He has issued a circular to the stockholders in which he threatens to stop work immediately unless the suit is withdrawn. He tells them that his contract with the Motor Company does not include his "ultimate system," which is that of "sympathetic attraction," but only the etheric vibrator, a much inferior force. The stockholders, it is said, are much alarmed by this threat, for although the vibrator was to carry a train of cars sixty miles an hour with no other expenditure than one spoonful of water—a saving of fuel which ought to satisfy the most avaricious shareholder—yet they are justly apprehensive of a new invention which may accomplish the same result by sympathetic attraction with no water at all. We advise them by all means to turn out the litigious directors and pay any reasonable assessment to secure an interest in the new invention. The Philadelphia stockholders are said to be backing up Keely strongly. It is very evident that they know on which side their bread is buttered.

The *Économiste Français* of August 11 publishes an elaborate article, by M. René Stourm, on the Public Debt of France. The most usual estimate of the capital of the debt is said to be $6,400,000,000. The most moderate estimates place it a few millions lower. M. Paul Leroy-Beaulieu figures it at $6,343,573,630. The result of M. Stourm's computation is a total of $5,902,800,000, with the qualification, however, that he has omitted $432,000,000 of life annuities, which other economists have treated as part of the capital of the debt. The annual charge for interest and sinking-fund, on the entire debt, including the life annuities, is $258,167,083. Of the funded debt, $2,900,000,000 are perpetual three per cents, $1,357,600,000 perpetual four and a half per cents, and $967,906,200 redeemable bonds of various descriptions. Annuities to divers companies and corporations, of $477,400,000, and $200,000,000 of floating debt, make up the balance of M. Stourm's total. This is by far the heaviest burden borne by any nation on the globe. The nearest approach to it is the debt of Russia, which is stated at $3,605,600,000. England is next, with $3,565,800,000, and Italy next, of European nations, with $2,226,200,000. The debt of Austria is $1,857,600,000, and of Hungary $635,600,000. Spain owes $1,208,400,000, and Prussia $962,800,000. These are the figures of M. Stourm. None of these nations, excepting England and Prussia, raises sufficient revenue to guarantee a permanent equilibrium of the budget, but France is the most heavily burdened of them all, and the increase of her debt has been the most rapid in the recent past and is the most threatening for the future.

THE PRESIDENT'S MESSAGE.

THE message sent to Congress by the President recommending an addition to the Retaliation Act, so that the transshipment of Canadian goods in bond across our territory may be inhibited unless Canada shall allow our fishermen to transship their catch across Canadian territory, calls attention to a glaring fault in the present Retaliation Act, and refutes the charge that the Administration, throughout the fishery dispute, has been seeking to advance British interests at the expense of American interests. The latter charge has been shown by Mr. W. L. Putnam to be absolutely false. Mr. Put nam proved by citations from the record that the present Administration, having to deal with the same problem that Gen. Grant's Administration had to deal with in 1870, and having the same class of seizure cases on hand, had exhibited far greater energy and assiduity in defending the interests of our fishermen. But the indifference of our people at large to these details is such that not one in one hundred of the voters will ever read them or care anything about them. But they can understand a single concrete fact like that stated in the President's message, namely, that the Senate, which has been rumbling for two years against Canada and Great Britain, for the entertainment of Ireland, and threatening retaliation and non-intercourse, and declaring that the fishery dispute was not a subject for treaty negotiation at all, has neglected the most important branch and the most appropriate form of retaliation all the way through. Regarded as a "move for position" merely, the President's message is worth all the speeches and reports of Messrs. Frye, Edmunds, and Hoar, and all the rhetorical exercises of Mr. Evarts, ten times over.

Regarded as a step seriously taken to secure a valuable right, the message is also weighty and important. Among all the privileges claimed by us and denied by Canada, that of transshipment in bond is the one which has the best foundation in reason. It is quite true that it was not conceded in the Treaty of 1818, under which we are now living. It is true, nevertheless, that it is the correlative of the privilege that we extend to Canada of transshipping her goods across our territory from Portland, Boston, New York, and numberless other places. There is nothing in the realm of reason or in the nature of things to distinguish fish from any other kind of portable property. You cannot in this case make fish of one and flesh of another. A long line of precedents tending that way does not suffice. The precedents only serve to show how long a bad principle may survive in spite of the amelioration of manners and the enlarging comity of nations. The privilege of transshipment is necessarily a mutual one. If we are denied the privilege as to one thing by Canada, we may rightfully deny it to her as to all things. Moreover, the denial of the right of transshipment is the appropriate mode of retaliation for that particular grievance.

The President makes mention of the inconvenience that may be suffered by citizens of the United States. There are a number of American railways engaged more or less in carrying Canadian goods in bond. Some of these earn freights on such goods all the way from the Atlantic seaboard to Manitoba. There are other American railways (the Canada Southern for example), whose earnings are derived from the carrying of American goods across Canadian territory. Both classes will be sufferers from retaliation of this sort. Both will have to thank the Senate for precipitating a crisis by rejecting a treaty which promised peace and good will to both countries.

It is too early to foretell the action of the Republican Senators in answer to the President's flank movement. If they pass a bill of the kind recommended by him, they acknowledge their laches in the past. They take their place in the rear of the procession and follow his lead. This will be a sorry exhibition to make. Even Ireland might be provoked to laughter by it. On the other hand, not to pass the bill will put them in the attitude of refusing to the President the most appropriate and effectual remedy that can be imagined to meet the most substantial grievance we have to complain of. Senators Edmunds, Sherman, and Hale gave us on Friday their opinions and comments on the President's message. Before noticing these important deliverances it is necessary to take a retrospective glance. In the first place the Retaliation Act of 1887 was in principle a reversal of all the precedents in our history applicable to non-intercourse with foreign Powers. It was likewise in conflict with the spirit of the Constitution, which, by giving the war-making power to Congress exclusively, gives to Congress the discretion of judging what steps shall be taken of a hostile character which may lead up to war, and when they shall be taken. Until the passage of this act, Congress has in all such cases assumed the responsibility, and in no case has sought to shift it upon the President. In the Retaliation Act of 1887, however, the precedents were abandoned, and the policy reversed. Instead of declaring non-intercourse upon a given state of facts, Congress authorized the President to declare it if any acts should be, or if any *had been*, committed by the Canadians to justify so grave a step. The acts which had been committed were as well known to Congress as to the President. As a matter of fact, the most objectionable of the acts complained of had been committed prior to the passage of the Act of 1887. It is plain, therefore, that Congress, to use a common illustration, was seeking to "hit it if it was a deer, and miss it if it was a calf." It was seeking to claim all the glory of retaliation if it turned out well, and to put all the blame on the President if it turned out ill. In the former case, retaliation would have been enacted by a wise and courageous Congress. In the latter, the President would have misjudged the occasion, and mistaken the kind of acts calling for so extreme a remedy. The latter charge would have acquired greater force by reason of the fact that no acts were committed by Canada after the passage of the act more objectionable than those committed before.

Now, the gravamen of Senator Edmunds's argument is, that the President had all the power necessary before he sent in this message asking for new and different powers, and that he has simply come over to the Senate's side and acknowledged that the Senate was right all the time. The President affirms that an unrepealed law of Congress authorizing the transshipment of Canadian goods in bond stands in his way. Leaving this question of fact to be settled as it may be, what, we ask, was Congress doing all those years that it did not exercise its own powers by declaring the time and measure of non-intercourse? Why did it not show the bravery and candor of the Congresses of 1808, 1809, and 1811, and perform its own duty in the spirit of the Constitution? Simply because it was engaged in a game of political fencing.

Senator Sherman, if he is correctly reported, made a greater blunder than any other who took part in the debate. He said that "if the President had based his treaty on the principles laid down in his message, there would have been no difficulty about the treaty, and it would have been ratified by a unanimous vote, because the message did assert the right of American citizens." This remarkable saying comes from one who signed a report from the Senate Committee on Foreign Relations, which contains the solemn declaration that the subject-matter of the fisheries is not one for treaty negotiations at all! But it appears that if the President had negotiated a treaty providing that if Canada did not within a certain number of days allow our fish to be transshipped in bond across her territory, we should forbid her to transship her goods across our territory, then and in that case the fishery question would have been a good subject for treaty negotiation!

Upon the whole, the advantage lies with the President in an overwhelming degree. If serious trouble grows out of the complication, let the responsibility rest with those who have publicly declared against any negotiation whatever, and who have rejected the treaty not merely because it was in their belief a bad one, but because they would not have even a good one.

THE EDUCATIONAL VALUE OF THE PRESENT CAMPAIGN.

IT has long been a commonplace with political observers that the preservation of a government founded upon universal suffrage depends upon the education of the voters. No one can dispute the truth of this proposition, but if we consider what is meant by the term education, we shall find much difference of opinion. It is rather hastily assumed that education is the same thing as going to school, and it is inferred that special political instruction should be given to the children attending our common schools. To this end there have of late years been prepared a number of manuals of diluted constitutional law and primers of elementary social science, by the aid of

which it is supposed that good citizens may be produced systematically.

Unquestionably it is desirable that all citizens should be acquainted with the nature of the government under which they live, and we have no disposition to depreciate the efforts of those who attempt to give them this information. But political education is a very different matter from this. It is not acquired by committing to memory the details of governmental machinery or by learning political maxims by rote. In fact, there is little that is peculiarly political about it. It is quite as practical as business education, and as little capable of being taught in schools. It consists simply in applying reason to the constantly varying problems of legislation. It implies a natural or a developed capacity for logical investigation. So far as schooling trains the powers of observation, of generalization, and of deduction, it prepares the scholar for the intelligent discharge of political duties. Unless the common schools give this training, they do not impart a political education. As a matter of fact, a lad may be graduated with a very considerable knowledge of the features of our Government, and yet be wholly unable to pass judgment upon any act of legislation or to vote intelligently on any issue.

Altogether the most valuable political education is furnished by just such a campaign as that in which we are now engaged. A specific measure of legislation has been proposed in order to cure a particular evil—to meet a particular condition, as President Cleveland says. This measure, however, not only relates to this condition, but necessarily brings up for discussion the general scope and policy of government. It calls forth the most contradictory statements as to its immediate effects and as to its general tendency. A great many speakers and writers are engaged in beclouding the issue, and in misrepresenting the nature of the measure. A great many others are as busily engaged in refuting them, and in defining and explaining the real principles involved. The general public is, as it were, in the jury-box. It hears all the evidence, and listens to the inconsistent statements of the witnesses and the conflicting arguments of the counsel. It is placed in a position to exercise a rational judgment, and the exercise of judgment is itself an education.

No believer in popular government can contemplate the present state of affairs without exultation. For many years there has been little that was educational in our politics. The old parties had ceased to represent any distinct principles, and the old leaders were decidedly unwilling that principles should be made an issue. The Republicans declared that their candidates should be elected because their party was in power during the war, and the Democrats declared that their candidates should be elected because they were better than those of the Republicans. There was plenty of feeling developed in these contests. There were abundant appeals to hatred and revenge, to pride and prejudice and jealousy. But there was very little that appealed to the reason; that compelled voters to think and study and reason with one another. Neither the question whether one set of office-holders was better or worse than another, nor the question which of these sets would be the least treacherous in supporting civil-service reform, was interesting as a subject of rational investigation and discussion. Even the last campaign, which involved the important political question of the proper qualifications of a chief executive officer, necessarily aroused so much personal bitterness that the value of the political lesson was very much diminished.

But, thanks to the honesty and courage of the President—qualities which, in his case, rise almost to the level of genius—the political intelligence of our citizens is now furnished with a subject worthy of all its latent powers. The theory of government involved in protective tariffs is no longer to be acquiesced in. It is on the defensive, and it cannot be defended by falsehood, no matter how shamelessly proclaimed, nor by money, no matter how lavishly expended. Such means may be temporarily successful, but permanent success can be attained only by valid argument. Now that the subject has been brought before them, the mass of the people cannot long be deceived or corrupted. The issue is not of a character to arouse passion except in the breasts of protected manufacturers, and it is of a character to arouse serious thought among all who have to be careful in their expenditures. It cannot be discussed without a very considerable degree of mental exertion. Men cannot attempt to convert one another without being compelled to base their arguments upon the general principles of government, and this process is attended with permanent results. The education thus acquired is not lost; it is not a temporary possession. It will be available for future emergencies.

For many years our voters have done little but follow traditions and memories. They have blindly supported the old parties merely because they love the old party names. Many of them have never thought and never had occasion to think of the principles of popular government, and how they are to be applied and limited. But the question that is now before the American people for their decision will compel them to think on these things, and the effect of their thinking will be felt in the formation of sound habits of political reasoning. Political education of this sort is of so much value as a safeguard to our future that it would be worth purchasing at the expense of some present suffering. The defeat of the Democratic party at the coming election would be disastrous to the country, but it would be far better both for that party and for the country that it should appeal to the intelligence of the country, even if it suffer a temporary defeat, than that it should win a temporary success by avoiding that appeal.

BLAINE'S BLUNDERS.

THE speech delivered by the Greatest Living Statesman at Bangor on Thursday served formal notice upon the country that the issue of the campaign is the position of the Leader of the Party. It was wholly devoted to an effort to explain away one of the ridiculous blunders which its author made as soon as he had reached this country. Mr. Blaine began his explanation with a characteristic misstatement. We place side by side what he really said in this city, as reported in the *Tribune* of August 11, and what he now says that he said, as reported in the *Tribune* of August 24 :

WHAT HE SAID.	WHAT HE SAYS HE SAID.
The wage-workers of Great Britain and Ireland, of England, Scotland, and Ireland, *the entire savings to-day that these wage-workers can draw upon in the hour of need* in that great kingdom, are not as great as lie to-night in the savings banks of Massachusetts to the credit of the wage-workers of that small State.	In a brief speech which I made in the c ty of New York on the day of my arrival from abroad, I remarked, as illustrating the superior condition of laboring men in the United States, that the wage-workers in the United Kingdom of Great Britain and Ireland *did not have in the savings banks of that country* as large a sum to their credit as did the wage-workers of the comparatively small State of Massachusetts in the savings banks of that State.

The original statement, it will be seen, referred to "the entire savings" of the wage-workers of Great Britain and Ireland, including, of course, the Friendly and Building Societies, which hold £52,812,281 —not, as is now claimed, to the amount "in the savings banks of that country." Mr. Blaine had apparently run across the figures of the private or trustee savings banks, as they are called in Great Britain, which were by the last report £48,885,679, or $237,877,669; and, ignorantly supposing that these were the only savings institutions existing in Great Britain, and seeing that the amount fell short of the deposits in the Massachusetts savings banks, jumped to his conclusion. Since then he has found out that Great Britain has a post-office savings bank system, the deposits in which considerably exceed those in the trustee savings banks. He has referred to the article on savings banks in the 'Encyclopædia Britannica,' and now revises his statement as follows : "The total amount at the close of last year in both the savings and postal banks of the United Kingdom was, in round numbers, $520,000,000." The amount in the savings banks of Massachusetts at the close of last year was about $317,000,000.

Mr. Blaine thus convicts himself of having made a blunder of about two hundred million dollars, but he tries to wriggle out of it by the claim that the proportion of the total deposits made by the "wage-workers" is less in Great Britain than in Massachusetts. In order to substantiate this claim, he goes again to the 'Encyclopædia Britannica.' But he does not say so. Of course not. An "intense American" consult the 'Encyclopædia Britannica'! Perish the thought. What he really did consult was "an authoritative British publication," which, however, by a remarkable coincidence, proved to read very much like a portion of the article on sav-

ings banks in the 'Encyclopædia Britannica,' vol. 21, page 329. Not exactly like the article. No; the differences in Mr. Blaine's version are very significant. Here is the return "showing (as nearly as could be ascertained) the number of depositors belonging to various occupations, and the amount of their deposits," at a period some years back, as it actually appears in this "authoritative British publication":

	Depositors.	Deposits.	Average.
Tradesmen and their assistants, small farmers, clerks, mechanics and artisans not described as journeymen, and their wives	296,407	£8,144,206	£27
Domestic servants, charwomen, nurses, and laundresses	257,711	6,907,388	27
Minors having accounts in their own names, including apprentices	182,636	2,426,195	13
Laborers, farm servants, journeymen, mechanics, and their wives	152,057	4,354,080	29
Females described only as married women, widows, or spinsters	138,858	4,037,458	29
Dressmakers, milliners, shopwomen, and female artisans	24,859	580,202	23
Trust accounts (principally for minors), including all joint accounts	22,347	417,786	19
Soldiers, sailors, boatmen, fishermen, policemen, letter-carriers, revenue officers, pensioners, railwaymen, and their wives	21,525	739,248	34
Persons engaged in education, male and female	10,497	327,795	31
Gentlemen, persons of independent means, professional men, and their wives	20,961	579,528	28
Miscellaneous, and persons without any given description	60,289	1,394,351	23
Total	1,188,147	£29,908,237	£25

Here is the version of it given by the guileless Shepherd of the People at Bangor:

"The whole of this sum was by no means to the credit of the wage-workers of the kingdom. Under the English law, various other classes are permitted to make deposits both in the savings and postal banks. From an authoritative British publication you may learn that persons of independent means, professional men and their wives, may deposit in these institutions; so also may policemen, letter-carriers, revenue officers, pensioners, and their wives; so also may minors having accounts in their own names; so also may 'females described only as married women, widows, or spinsters'; so also may 'trust accounts' be deposited, including all joint accounts, principally for minors; so also may persons engaged in education, male and female, which includes professors in universities and colleges, and principals and teachers in all other schools."

Now observe the series of misrepresentations. "Persons of independent means, professional men and their wives, may deposit in these institutions"—the implication of the statement being that this class of depositors is an important one. In point of fact, it will be seen, it is less than 2 per cent. "So also," Mr. Blaine continues, "may policemen, letter-carriers, revenue officers, pensioners, and their wives." True, but note the omissions which he makes in reciting this class—"soldiers, sailors, boatmen, fishermen"—at the beginning, and later see how carefully the term "railway-men" is excluded. With these omitted employments, this class, it will be seen, amounts to less than 2 per cent. of all depositors, and, pray, are not "railway-men," to say nothing of the others, wage-earners? How do they live, if not by earning wages? "So also may minors having accounts in their own names." True, and why are not the savings of the youth of eighteen, nineteen, or twenty as well worth considering as those of the young man of twenty-one, twenty-two, or twenty-three? "So also may 'females described only as married women, widows, or spinsters.'" True, and do not married women, widows, and spinsters ever work for wages in Great Britain, as so many of them do in this prosperous country—say in the mills of Lewiston, Maine? "So also may 'trust accounts' be deposited, including all joint accounts, principally for minors." True, but how much does this amount to? A little over 1 per cent. "So also may persons engaged in education, male and female, which includes professors in universities and colleges, and principals and teachers in all other schools." True, but how large is this class introduced with such a flourish? Exactly 20,961 out of 1,188,147.

Mr. Blaine goes on to speculate as to what proportion the deposits of wage-workers bear to the whole. It is not officially reported, he says, but he saw a man in England who put it as low as 10 per cent., and others who put it at about 25 per cent. If he had studied the table given above, he would have seen that all his alleged informants were deceiving him. Why, the class of "domestic servants, charwomen, nurses, and laundresses," alone—and who work harder for wages than they?—number almost 25 per cent. of the whole.

Moreover, the very article in this "authoritative British publication" which Mr. Blaine consults, and accepts as far as it serves his purpose, explains in the same column that "savings banks are *institutions for the purpose of receiving small sums of money* and investing them for the benefit of the depositors at compound interest"; that "the offer of a bonus on thrift was of necessity accompanied by provisions to guard against its being used by others than the classes it was intended to encourage"; that "this was done by limiting the amount that each depositor should be permitted to pay in" to £30 a year, and a total, including interest, of £200; and that "*not 2 per cent. of the deposits, either in number or amount, are made by classes whom it may be supposed it was the intention of the Legislature to exclude.*"

In Massachusetts, on the other hand, Mr. Blaine has found an estimate that "75 per cent. of the whole amount belongs to the wage-workers of the State." If he will turn to the report of the Savings Bank Commissioners for last year, he will find that the deposits then aggregated $302,948,624, and that $131,779,298 of this amount, or nearly one-half, was in accounts exceeding $1,000—which is above the maximum that an account is allowed to reach in Great Britain.

This is the way the Greatest Living Statesman starts the Republican campaign. One long speech for his savings bank blunder; another must be devoted to his blunder about the condition of business. How many it will take to explain away the Trusts blunder, nobody can guess.

GEN. HARRISON ON COMPETITION.

In his tariff address on August 15 at Indianapolis Gen. Harrison said:

"There are some who profess to be eager to exclude paupers and Chinese laborers, and at the same time advocate a policy that brings the American workman into competition with the products of cheap foreign labor. The disastrous effects upon our workingmen and workingwomen of competition with cheap, underpaid labor are not obviated by keeping the cheap laborer over the sea, if the product of his cheap labor is allowed free competition in our market."

This statement exhibits Gen. Harrison at his best. It is the sincere commonplace of a fair intellect equally out of touch with scientific thought and popular instincts. Its sincerity entitles it to a reply.

In the first place, it may be well to remind Gen. Harrison that the competition of those who wish to sell what we wish to buy has never been regarded with dread, even by his own leading constituents, the directors of the Trusts. The most pronounced and aggressive foes of competition have always made sharply the distinction which Gen. Harrison professes himself unable to discern. They have always been as active in bringing into our country the competition of foreign laborers as they have been in shutting out the competition of foreign labor products. As buyers of labor they have wished to buy cheap, and have imposed no restriction upon the importation of foreign labor; as the sellers of the products of labor they have wished to sell dear, and have imposed every possible restriction upon the importation of foreign labor products. The instincts of the laboring classes are finally asserting themselves in an emphatic protest against the injustice of this system. These classes are now thoroughly alive to the fact that the one commodity which they have to sell, namely, labor, is admitted free, while the commodities which they wish to buy are burdened with an extortionate taxation. If, as some of their leaders are beginning to advocate, they should turn the present system bottom side up, and admit free the commodities which they wish to buy, while absolutely shutting out the one commodity which they have to sell, they would be merely enforcing in their own interests a distinction which has always been recognized and acted upon by their employers.

Yet Gen. Harrison says that there is no distinction. The popular instinct he fails to feel; the scientific argument he fails to see. Only recently did he learn that there was any possible evil in the importation of foreign laborers. Having finally admitted this, he tries to use the admission to buttress up his traditional belief that there was every possible evil in the importation of foreign goods. The suggested parallel is interesting. The argument against unrestricted immigration has been admirably stated by Prof. R. M. Smith in the last number of the *Political*

Science Quarterly. In brief it is this: Unrestricted immigration decreases our average wealth, even though it increases our aggregate wealth. The average wealth of our citizens is $1,000 per capita, that of the immigrants not more than $100. The average well-being of our community is therefore lowered by their arrival. The question is not one of the greatest possible production of national wealth, but of its best possible distribution. The immigrants are laborers. Their presence therefore adds to the wealth of the rich, who wish to buy labor cheap, but diminishes the earnings of the poor, who are equally interested in selling their labor dear.

Turning now to the importation of foreign goods, where is the similarity? So long as the "pauper laborers" remain on the other side, no increase in our *aggregate* wealth is possible without a corresponding increase in our *average* wealth. No problem in mental arithmetic could be more simple. Yet the fact that our aggregate wealth is increased by the importation of foreign goods is as obvious as that it is increased by the importation of foreign labor. Not even so "uninstructed" an economist as Gen. Harrison could maintain that any nation would continue to send its products abroad unless that which it received in return was of greater aggregate value. Here again the question is not so much one of the greatest possible production of wealth as of its best possible distribution. The importation of foreign goods subjects to competition the rich and not the poor. The poorer classes own none of the commodities which the policy of exclusion makes dear. Yet they must buy the bulk of these commodities, and are interested in buying them untaxed. The effect of the importation of cheap goods is in every way diametrically opposite to the effect of the importation of cheap labor.

It is a fortunate circumstance that this distinction between the importation of cheap products and the importation of cheap labor is becoming as clear to the laboring classes as it always has been to their employers. Gen. Harrison's assertion that he can see no distinction will not seriously confuse matters. All over the world the clamor for protection comes entirely from the parties which represent the plutocracy. The parties which represent the poor are everywhere against it. Even the Socialists, in spite of their bias in favor of State interference, have everywhere joined hands with the Liberals in resisting protection as the worst form of indirect taxation, and indirect taxation as the chief instrument in the oppression and plundering of the masses. The workingmen may not comprehend the question of national economy involved in protection or free trade, but they do comprehend the question of personal economy involved in the taxation or non-taxation of necessities. The fear of cheap goods will not terrify them. When, therefore, Gen. Harrison offers them *protection by extortionate taxation*, and President Cleveland offers them *protection from extortionate taxation*, there is little doubt which they will choose. On this question, popular instincts are entirely in accord with scientific thought.

IMMIGRATION AND WAGES.

In a debate in the House on the 20th instant on the Chinese Immigration Bill, Mr. Dingley of Maine undertook to define the policy of the Republican party in reference to foreign immigration. "I believe," he said, "that I speak for this side of the House when I say that we have always been ready, that we are ready now, to amend or strengthen the present law prohibiting contract labor, if the President shall inform Congress that it needs amendment in order to accomplish the end sought; and that we further ask that it shall be faithfully enforced. [Applause.]" Then he went on to tell what he thought about the other kind of immigration and its effect upon the wages of our own laborers. He said:

> "The logic of protection requires that it should be applied not only to the imported products of cheap labor, but also to imported labor *under contract made abroad to work at foreign cheap wages*. The sober, industrious, voluntary immigrant who comes here to improve his situation and become an American in every sense of the term, and who has entire freedom of choice after his arrival, demands and soon receives *American wages*; and their coming in such numbers as are likely to voluntarily leave old homes *will not reduce the wages of labor*."

We might simply turn Mr. Dingley over to the buffetings of Mr. Powderly, with assured confidence that Mr. Dingley would get the worst of it. But we cannot refrain from saying that Mr. Dingley's argument is delusive if not insincere. Do the importers of contract labor make contracts to pay only "foreign cheap wages"? How many new hands would they get on such terms? Of course they must offer something better than foreign cheap wages to induce them to abandon the ties of home and country, so dear to every human creature. But, continues Mr. Dingley, the voluntary immigrant "demands and soon receives American wages, and their coming in such numbers as are likely to voluntarily leave old homes will not reduce the wages of labor." The assumption here is that American wages are a fixed sum or stipend, which a voluntary immigrant is sure to get, while an imported contract laborer gets something less, namely, "foreign cheap wages." Every laboring man, whether native or foreign, imported or volunteer, knows that wages, whether high or low, are, at any given time, the quotient reached by dividing the wages-fund of that particular time by the number of laborers; and that, of the two kinds of immigrants, that one receives the higher wage who has made his bargain beforehand, knows just what he has to do, and loses no time looking for a job.

Twelve hundred immigrants per day coming hither will not reduce the wages of labor, forsooth. Mr. Dingley will never get the laboring men to believe that. Testimony taken by the English Parliamentary Commission on the "Sweating System" is directly opposed to Mr. Dingley's thesis. It has been shown, and the showing has produced an unpleasant surprise, that there is a lower deep for the East End of London than anybody a dozen years ago could have thought possible. The condition of the working classes in that metropolis has deteriorated in a marked degree within that period. The reason is that, degraded as were the English poor, there were still poorer and more degraded ones on the Continent of Europe—vast numbers of them, to whom the small wage obtainable in the East End of London was a boon and a betterment. So these poorer ones flocked to London, and, being unused to English ways and English speech, fell into the hands of middlemen or "sweaters," who took a slice off their earnings. The revelations before the Parliamentary Commission have been a train of horrors almost beyond belief. To say, as Mr. Dingley does, that "their coming in such numbers as are likely to voluntarily leave old homes will not reduce the wages of labor," is either to ignore all the facts brought out by the Commission on the Sweating System, or to assume that what has happened in England cannot, on account of the greater distance, happen here. But it is only too plain that distance has ceased to be any obstacle to immigration. Any Italian, Hungarian, Bohemian, Pole, or proscribed Russian Jew who can migrate to London can migrate to New York.

That the sweating system exists here also has been abundantly shown in the course of the investigation of the Ford Committee now in progress. Wages in cloak-making, shirt-making, and similar trades, formerly $9 to $10 per week, have been reduced to $5 by the competition of the "pauper labor of Europe" brought to our own doors and coming daily. But sweating is only one boil on a diseased body. The sweater takes advantage of the ignorance of the swarms from Castle Garden. Mr. Ammidown, President of the American Protective Tariff League, and publisher of the *Bulletin* of that organization, takes advantage of their numbers to fill his mill at Passaic with Hungarian immigrants. The *Bulletin* is filled with ejaculations addressed to workingmen on the subject of the pauper labor of Europe. Yet he has the effrontery to write a letter saying that "there is no more faithful, sober, thrifty, intelligent, and self-respecting class of operatives in the country than those same Hungarians." This may be true, although Mr. Powderly finds them of a different type in the coal regions of Pennsylvania. But the point is not whether they are sober, thrifty, and intelligent, but whether they are the *pauper labor of Europe*, that so horrifies Mr. Ammidown in his *Bulletin*.

Looking at the long string of delusions that have imposed upon the simplicity of mankind at various stages of the world's history, there is none more amazing than the idea that a man who is actually employing the pauper labor of Europe in his own factory, and using every exertion to get labor at the lowest sale—such men as Ammidown and Carnegie and the rest, for they are all alike in this regard—is really concerned lest the pauper labor of Europe shall reduce the wages of American workmen. These men subscribe for newspapers like the *Press*, to be sent gratis to their operatives, or to such of them as can read English, telling them that their wages will be reduced by European competition if the Mills bill becomes a law.

Yet their wages *are* reduced every time it suits these employers to hire a fresh lot of hands from the Old World. Instead of giving heed to such barefaced lies, the workmen ought to twist these newspapers into a gag for the mouth of every protectionist orator or colporteur who shows himself inside their shops.

Nobody blames Mr. Ammidown and Mr. Carnegie or even the Trusts and Combines for employing the cheapest labor they can find. Manufacturing cannot be conducted on eleemosynary principles. A certain amount of philanthropy may be mixed with it on condition that the philanthropy is strictly subordinate to the business. No reasonable complaint can be made if the philanthropy is left out altogether. It is one of the necessities of the manufacturer that he should employ the cheapest labor that can be had, lest he be undersold by others and driven out of business. All that we can ask is, that in leaving out philanthropy he shall leave out hypocrisy also, and not pretend that he is solicitous to secure high wages to his workmen when he is, and necessarily must be, seeking the very opposite.

ENGLISH RAILWAY LEGISLATION.

For the past three sessions a contest concerning railroad regulation has been going on in Parliament not unlike that which we ourselves have recently seen in Congress. To understand what has been done we must look back over the general history of English railroad legislation, and see how the conditions in that country have differed from our own.

England has never had the liberty of railroad construction which has been allowed in this country. Each road required a special charter, given only after strict investigation. Such charters originally contained long sets of provisions with regard to rates and fares, modelled on the old canal tolls, but much more complicated. At first the whole matter was treated independently in each charter. In 1845, by the Clauses Consolidation Act, a general form was established, which was only altered where the special necessities of any particular case demanded it.

All the English railroads were thus limited to maximum rates of fare and freight; but the majority of these maxima proved of no effect, because the railroads were able to do their work at so much lower rates than had been anticipated. They could thus carry their charges almost indefinitely within the legal maxima, and produce all the evils of uncontrolled discrimination. After one or two premature efforts by Parliament to establish a Railway Commission, the courts were directed to deal with this matter by an important act in 1854, which forbade all preferences. This soon put a stop to the worst forms of personal discrimination; but it left local differences untouched. These differences were specially hard to deal with in England, because of the number of stations whose railroad traffic was directly subject to water competition. Such is the extent of English coast line, of navigable rivers and canals, that, according to the estimate of a recent Parliamentary committee, two-fifths of the stations in the kingdom are affected in this way.

So great were these difficulties that nothing positive was done till 1873. The "Regulation of Railways Act" of that year provided for the establishment of a Railway Commission of three members, who should possess the special qualifications which would enable them to take cognizance of cases which the courts had been unwilling to consider. The experiment was far from being as successful as had been hoped. The Commission had at once too much authority and too little. It was empowered to decide a great many things, but was not given sufficient power to enforce its decisions. The railroads resisted its authority, the courts sometimes sided with the railroads, and during its whole existence it has accomplished little in the way of settlement of disputed questions.

There has been a growing demand for additional legislation which should strengthen the public control over railroads, especially in the matter of local discrimination. A moderate bill was brought forward in 1886; another of the same general character, but pretty obviously influenced by our own Inter-State Commerce Act, was introduced by the present Government in 1887. This has been gradually amended in the direction of greater stringency on some points and greater vagueness on others. On the whole, the English law seems much stricter than ours, but it is impossible to speak with confidence on this point, because many important sections are so worded as to be uncertain in their effects.

Of this character is that part of the act corresponding to our "long-and-short-haul clause." It forbids charging more for a shorter than for a longer distance for the same service. It is so loosely drawn that some people think that it demands equal mileage rates—a system which could not be enforced without disaster. It does not contain the limiting clause that the shorter shall be included within the longer distance—an omission which will make it much more difficult to apply.

The most specific provision under this head is one which prohibits preferential rates for foreign merchandise. This clause was not in the original bill. It was inserted through the influence of the agricultural interest in the House of Lords. The state of things which gave rise to this legislation has been somewhat peculiar. In order to share in supplying the London market with American beef, the railroads from Liverpool or Glasgow have been compelled to make a combined water and rail rate which should be as low as the direct water rate from New York to London. This left the railroads a very small margin above operating expenses; and they could not possibly apply such rates to their whole traffic. The effect of this clause probably will be to cause more shipments of American products to London direct, instead of via Liverpool or Glasgow. There will be a similar effect on the traffic from Continental Europe. It remains to be seen whether the chief expense of the change will be borne by producers or by consumers.

The Commission is continued, but its composition has been somewhat changed. It is to consist of two "appointed" and three ex-officio members. One of the latter is a judge nominated by the Lord Chancellor in England, the others by the corresponding authorities in Scotland and Ireland. Each judicial member acts as chairman for cases which arise in his kingdom, and is assisted by the two appointed members; his authority on questions of law is nominally final, but is, in fact, a good deal limited, because his colleagues have an equal voice in deciding just what is a question of law as distinct from one of fact.

The motives for this arrangement are clear. So much trouble arose from conflicts between the Commissioners and the courts under the Act of 1873 that it was thought wise to bring the new Commission into closer relations with the judiciary of the three kingdoms. But the wisdom of the plan adopted is not so clear. More may be lost than is gained. The law is extremely vague; the right to interpret it is practically given to three distinct judges for three different parts of the country. If the views of these judges are not wholly in harmony, the development of a body of railroad-commission law, such as we have seen in America within the last year, will be quite impossible.

To make matters worse, the Commission is not the only body which is given independent power under the act. The Board of Trade has, under the "maximum clauses" of the charters, always had a certain nominal power over classifications and rates; it is proposed to make that power a real one. In other words, the judicial and administrative powers of our own Commission are separated; the former is given, with various additions, to the Railway Commissioners, the latter to the Board of Trade. But such a separation could be carried out only on condition that the powers of the Board of Trade were accurately defined. The act conspicuously fails to do this. It leaves the Board such a wide discretion in determining what are reasonable rates that they must, if they use their powers at all, be forced to exercise judicial functions. It was in this way that the judicial authority of the Inter-State Commerce Commission took its rise. But if anything of the kind happens in England, there will at once be a conflict of authority. It is this lack of unity in the means of enforcement which seems to us the most vital defect of the English law in its present form. We do not believe that it will seriously injure the railroads, as such a thing would do in this country; but we fear that it will retard the development of a sound and practical law on railroad transportation.

THE BETRAYER OF LA SALLE.

Santa Fé, August 13, 1888.

The fate of the men who, in 1687, conspired against Robert Cavelier de la Salle, and finally murdered him, has been told by Mr. Francis Parkman, as far as the murderers proper,

Duhaut and Liotot, are concerned. Of their main accomplice, L'Archevêque, only so much was known (as Mr. Parkman has had the kindness to inform me), viz., that he and another companion in crime, the sailor Grollet, were captured by Alonzo de Leon in Texas two years after La Salle's death, and probably sent to Spain. What afterwards became of them had not been ascertained.

Two months ago, while searching the archives of the Pueblo of Ka-Po or Santa Clara (New Mexico) for documents of historical import, in behalf of the Hemenway Southwestern Archæological Expedition, my attention was drawn, among others, to the great number of manuscripts called in Spanish *Diligencias matrimoniales*. They are investigations made on the petition of parties applying for license to marry, and consist in the main of the application of him or her, and of the examination of witnesses in regard to the standing of the applicants, their relations to each other, etc. Among these I found at Santa Clara one headed: "Ynformacion de Pedro Meusnier, francés.—1699." The fact that a Frenchman should be found in New Mexico at such an early date, and in face of the stringent laws of Spain against the admittance of foreigners into the colonies, appeared interesting. My interest soon increased upon discovering that Meusnier had come over to America in the fleet commanded by "Monsieur de La Sala" in 1684. This is testified to by two witnesses, one of whom signs himself Juan de Archeueque, while the other, rather illiterate, has not signed, but states in his deposition that he is a native of La Rochelle, and his name is given as "Santiago Groslee." Both these witnesses claim to have come over with Meusnier in the same fleet, and in the year 1684 also. Both Meusnier and Archeueque were in 1699 soldiers of the garrison of Santa Fé; Groslee was a resident of that town.

There was only one L'Archevêque in La Salle's ill-fated expedition, and the evidence seemed quite conclusive that this was the one whose signature I had before me at Santa Clara. Mr. Parkman, to whom I communicated the fact, also inclined to the belief that he was the fellow who enticed La Salle into the fatal snare, while Groslee seemed to be Grollet the sailor. I have since found the latter as Grolle and Groli in two official documents now in my possession. As late as 1705 he was a resident of the little town of Bernalillo, on the Rio Grande. Of Meusnier I have not been able to find any further trace as yet.

But the chief interest to me rested in the person of L'Archevêque, the more so since there is to-day in New Mexico a family calling themselves Archibeque, and of whom it is surmised, at least, that they are of French descent. Furthermore, I had met, in documents antedating 1720, the name and declarations of a Capt. Juan de Archiveque. It was but natural to suspect that the Captain of the War Councils of 1715 and of 1720 was the same man as the private soldier of 1699; the more so since at the latter council, where the project of the ill-fated reconnoissance to the Arkansas River was discussed, the said Capt. Archibeque strongly recommended it, alleging in its favor, among other reasons, that it would procure definite information in regard to "his countrymen the French."

Researches at the archives of the U. S. Surveyor-General's office at Santa Fé brought to light documents which impart valuable information. There is in the first place a transfer to Juan de Archibeque, "a soldier," of certain real estate in Santa Fé, in the year 1701. Lastly, there is "the Inventory of the goods and chattels of the Captain Juan de Archibeque, a Frenchman," bearing date 1720. From this manuscript we gather that our man accompanied the expedition to the Arkansas which he had so strongly advocated, and that he, with some forty-three other Spaniards, was killed there by the Pawnee Indians on the 17th of August of the same year. This, by the way, is the expedition to which Mr. Shea refers in his 'Peñalosa.' The official investigation held at Mexico in regard to it is also in my possession.

We further gather that Archibeque was twice married, and left two legitimate and two illegitimate children; that after leaving the military service he became a successful trader, extending his trading tours into Sonora, and sometimes buying directly at the City of Mexico. His estate, after settlement, yielded 6,118 pesos to the heirs, an amount quite respectable for the time. Upon a second visit to Santa Clara I found there at last the *Diligencia matrimonial* of l'Archeueque *alias* Archibeque. It bears date 1697, and his (first) wife was the widow of Thomas de Ytta, murdered in 1694 near Zacatecas by a mulatto. She herself was a native of Tezcuco, in the valley of Mexico.

The life of him who served as decoy to the murderers of the great French pioneer becomes thus sketched almost in full: Jean l'Archevêque was born at Bayonne in France in 1671 or '72, and came over to America when only twelve or thirteen years of age. When he played the odious rôle on the bank of the little creek in Texas, he was a boy of sixteen. This indicates precocious depravity, or, perhaps, to be charitable, boyish ignorance. He was picked up by the Spaniards among Indians in 1689. Of the eight years following I have as yet no information, but I have no doubt of finding documents which will shed light on that period. In 1696 he appears as a soldier of the "Presidio" of Santa Fé, and claims the hand of the widow of a murdered man. One year later, when sufficient proof is at last furnished that Thomas de Ytta is really dead, he gets married. In 1701 he becomes property-holder at Santa Fé, afterwards a successful trader and a respected and experienced "capitan." As such he foments an expedition whose indirect purpose is against his own countrymen, and in the course of that expedition he is killed—a strange and wild career, worthy of its beginnings upon American soil. His son, Miguel de Archibeque, was, as far as I can determine, the ancestor of the present family of that name.

It is noteworthy that L'Archevêque was the youngest of the three Frenchmen implicated in La Salle's murder who turned up in New Mexico. Grollet was his senior by at least seven years, and Meusnier was one year older than L'Archevêque. The former was, as already stated, a native of La Rochelle, and Meusnier a Parisian.

AD. F. BANDELIER.

IRISH AFFAIRS.

DUBLIN, August 12, 1888.

THE "Members of Parliament (Charges and Allegations) Bill," called by many Unionists the "Parnell Commission Bill," and by many Home Rulers the "*Times* Forgery Bill," passed the House of Lords last night. Everything connected with this bill is unfortunate for the relations between England and Ireland—the circumstances which gave it birth, the angry passions that have been aroused during its discussion, the unsettlement and bad feeling certain to exist during the inevitably long sittings of the Commission. The Commission constituted under the bill is not to try whether Mr. Parnell and his party are accessory to murder and outrage, but to show that they have not always borne themselves regarding murder and outrage, and acted in relation to the law, as the plethoric English middle and jingo classes say men should invariably act—as they claim they would themselves act under all circumstances.

The present Irish movement had its rise ten years ago. It was the outcome of Irish history, of an intolerable agrarian system, and, more than is generally supposed, of the treatment of the Fenian prisoners. It was led by Mr. Parnell and several other young men, some of them almost lads, most of them directly sons of the people, with only a village education, often with the narrowest views of life, imbued with deep hatred of England and the English. Those who have studied the history of political thought in England during the present century know how bitter at times has been political feeling there; they must know something of what was said and done, and must have tried to imagine what they themselves would have said and done and left unsaid in certain circumstances. In this Irish struggle there has been like bitterness, and there has been involved a national question, a class question almost comparable to that of your Southern planters, and a rancorous hopelessness such as English political contests have never known.

Mr. Parnell has welded together the extreme and discordant elements of Irish thought and action at home and abroad by recognizing the central possibilities of union in all, by never denouncing or ostracizing, by letting others pursue their different orbits, secure, in his own powers of attraction, that all would converge to him. I have known direct private appeals made to him to silence or modify the extreme proceedings and utterances of certain of his followers, and his reply has invariably been: "No; it is natural they should think and act so; leave them to themselves and they will unconsciously moderate." Had Parnell done as O'Connell or Butt did in like circumstances, his party would long ago have collapsed. He has brought the Irish people to believe as they never before believed in constitutional agitation. There was a time, before the discovery of dynamite, when they believed in little but "Greek fire," or shooting from behind a hedge. I can well remember when Irish national poetry and feeling breathed only a spirit of hatred towards England; and later when the mass of our people manifested their nationality by marching to the chorus of "We'll pull down the alien rag in our own beloved, dearest island home." All is now changed; Englishmen are the most popular speakers in Irish national assemblies, our leaders address ten words to English audiences for one they address to Irish, the centre of interest has changed from the hedgerow and the dusty, noisy popular gathering to Westminster, and the Irish people with perfect equanimity hear their representatives discussing the terms upon which a lasting and permanent union is to be effected with their once hated neighbors.

Is all that has been gained during the past ten years to be cancelled? This question of Irish outrage is an awful one, concerning which it is difficult to be entirely candid. Mr. Parnell and his party never knowingly compassed or encouraged murder and outrage. But when men believe, as most of us believed, that murder and outrage were a sure consequence of the mental condition in which affairs had placed us, and when men believe, as most of us believed after the calamitous experience of a generation and the sad knowledge of history, that nothing but murder and outrage would arouse English attention to our wrongs—well, human nature is fallible; few of us live entirely in ac-

cordance with the dictates of the Sermon on the Mount. I often shudder at the state of mind prevalent during the Forster régime. One of the best and most useful citizens I know, a Protestant, occupying a leading mercantile position, instant in good works, once said in my hearing: "Don't you know that if Forster had been then assassinated, we should all have rejoiced, as our opponents would now rejoice if Parnell were assassinated?" The murders of 1882, and such events as the boycotting of the Curtin family, were, I think, a terrible awakening. Age and experience had begun to do their work. In these murders, as in a mirror, were shown the inevitable results of a certain state of feeling in Ireland. And I believe the present agitation would then have been largely abandoned by the present leaders, had they not begun to see that the English people were becoming convinced, and that the desired end could be gained by influencing English opinion. Mr. Parnell, so far as I can recollect, has addressed no outdoor Irish audience since 1882.

This Commission is a superb piece of tactics, so far as passing party purposes are concerned; but it is a lamentable blunder as to the relations between England and Ireland. Were half the implications and charges which the most rancorous Liberal Unionists make true, they would still be better ignored. The Irish Parliamentary party are the ambassadors of a people. There is nothing they have done or said, nothing they could do or say, that would not be understood and excused (because understood) by the Irish nation. Some settlement may be postponed—surely Mr. Balfour does not propose to substitute his policy for a settlement. Mr. Parnell and his party form a body of men matured and rendered reasonable by suffering and experience, who can bind by agreement the Irish people as few leaders could have bound them in the past, and as it would be long in the future before another Irish party could be got together to bind them. The Commission can decide nothing. If the Parnellites come out of it like driven snow, that will not alter the question of union (or disunion, as Mr. Dicey and the logical exponents of the Liberal Unionists would put it). If the Commission on the whole declare against them, both Liberals and Nationalists will remember that it was a commission constituted and chosen for a party purpose, regarding whose details and scope of inquiry all important attentions suggested by the accused parties and their friends were vigorously negatived.

There is much less definiteness in Irish politics at present than there has been for some years. To some extent, affairs are in solution again, and we cannot tell what may result. The suspense is weary, at times nearly intolerable. Still, it may be all for the best—better than a hasty settlement years ago. It is as well, perhaps, that the present system should be fully tested. There is less talk on the subject (out of the newspapers) than there used to be, because everything has been said, every one who has a mind to make up has made it up, and we have become used to the severing of old friendships and to the avoidance of political discussion in mixed companies. Although no Government in Ireland was ever more intelligently hated, the mass of our people are, I think, for the time somewhat tired of fierce political agitation, so far as it does not seem to concern their immediate interests and amusements. Lately I heard a Nationalist railway official complain that on his line one Sunday, when there were cheap trips to a foot-ball match and to a political gathering, the former was crowded and the latter neglected. The continued migration of the healthiest and best of our populace to your shores has, to say the least, a quieting effect. The Registrar-General's return shows, as usual, a steady decline in our population within the last year. When a maid-servant went yesterday from my house to pay a visit in one of the most contented and prosperous agricultural portions of Ireland, I expressed a hope that she would have a pleasant time, and perhaps some dancing. "Oh no! that was not likely. Most of the young people of the neighborhood had gone to America." I can recognize in popular feeling more tendency to urge individual, class, and trade interests than there was a few years ago—less willingness to merge everything in one supreme political struggle. This is good, in so far as it may remove from the path of future legislators under home rule the fearful difficulty of satisfying a people imbued with the belief that legislation is omnipotent to produce individual happiness and general prosperity. The Papal brief, whatever may be said to the contrary, is patently having a sedative effect. The "nevers" and "for evers" of the leaders on both sides are as loud as ever, but a spirit of compromise is in the air.

Surely some better way of settling public questions than by party will yet be evolved. At times the political atmosphere is almost insufferable, and one feels the almost uselessness of reading newspapers on either side or listening to the utterances of public men (Mr. Morley, in many respects, excepted). They afford no light on a given state of things and given facts. Such a party such an opinion, seems the rule.

Whatever truth there may be in the foregoing considerations, certain facts appear to me evident regarding Ireland. (1.) It is impossible that the present contemptuous bureaucracy can be permanently maintained despite the general public opinion of the country. Even if we Irish were all unreliable, thievish liars, in order to obtain any peace we must somehow be made to govern ourselves and suffer for our own shortcomings. (2.) Nothing can permanently shake the confidence of the Irish people in their Parliamentary party, and nothing can satisfy them but some form of responsible national life.

—Since writing the foregoing, the interest of the situation has been intensified by the announcement that Mr. Parnell has taken action against the *Times* in the Scotch courts. The proceedings there and before the Commission will be followed with breathless interest.

I cannot but regard as a sign of the times a letter which Mr. Davitt has just published concerning distress in the islands of Arran and elsewhere in the west. He cites the wealth and power of the Catholic Church in Ireland:

"In a portion of one archdiocese over £70,000 have been collected and expended for building purposes within a period of ten years. A memorial church is now being built to O'Connell in an impoverished locality at a cost of £25,000. A bazaar recently held in Dublin (for what precise object the public scarcely knew) realized over £4,000. Costly churches and convents can be erected, even in the poorest districts of the country, with comparative ease, while kindred works in support of religion are constantly going on all over Ireland."

He then goes on to ask whether "the preservation of a people in the land where they have imbibed their faith, is not a work worthy of the attention of the Church to which they belong," and whether it might not be well if the Church turned its resources more towards improving the material condition of the people. No popular Nationalist Catholic leader would have thus publicly expressed himself some years ago.

D. B.

MORE REVELATIONS OF BENJAMIN CONSTANT.

PARIS, August 18.

THE papers of Benjamin Constant were left in 1835 to the Public Library of Geneva by his cousin, Charles Constant de Rebecque, with the proviso that they should not be communicated to the public under thirty years—that is to say, before 1865. The family asked the tribunal of Geneva for a further delay, but the tribunal only consented to extend the interdiction till 1867. M. Crépet was therefore able to publish, in a review which exists no longer, the *Revue Nationale*, two articles on Benjamin, which were full of new documents; but he was very cautious in his selection, and there were, besides, some papers of Constant's which he did not see. The letters of the famous orator to his aunt, the Countess of Nassau, had been quite forgotten in a trunk, where they were only found in 1884. M. Dufour, the librarian of Geneva, has but lately made a complete inventory of the letters and papers of Benjamin Constant. Some of these letters have been published lately in Italy, where they created a great sensation, and we have now before us, in the shape of a volume, a selection of the most important among the four hundred which are kept at Geneva.

We must say something first of the ordinary correspondents of Constant. His family was of French origin; the Constants de Rebecque lived in the province of Artois, in the north of France. After the religious wars, they settled in Switzerland; one of them, the Baron de Constant, was a friend of Voltaire's. He lived at Lausanne, which then possessed a brilliant aristocracy, whose members took service in the armies of France and Holland. Voltaire saw much of Samuel de Constant, who was a young and handsome man; and we find in the 'Vie intime de Voltaire aux Délices et à Ferney,' published by Lucien Perey and Gaston Maugras, that notwithstanding her forty-seven years, the niece of Voltaire, the inflammable Mme. Denis, fell in love with the young Constant. He married, however, Charlotte Pictet, and had four children, one of whom left the Constant papers to the library of Geneva.

Rosalie, the eldest daughter, became one of the principal correspondents of Benjamin Constant, who was her first cousin. Benjamin was the son of Juste de Constant (not of Samuel, as some biographers have said); his mother died when he was born; at the age of seven he was sent to Holland with a preceptor. He was a brilliant child—so much so that his family kept his letters. He lost at an early age his grandmother, and her place near him was taken by his aunt, Mlle. de Chandieu, who had married a Count of Nassau, but had almost immediately separated from him. Mme. de Nassau became a second mother to young Benjamin. Two persons, Rosalie de Constant, his first cousin, who never married, and his aunt, Mme. de Nassau, remained during his whole life his best friends and advisers.

We will not relate here the history of Constant. He was very wild and eccentric in his youth; he was also clever and intelligent, as his first letters show. The collection of those to his family begins as far back as 1775. While he was still very young, he married a lady-in-waiting of the Duchess of Brunswick; the marriage was not a happy one, and Constant was divorced from his wife, as well as from his post of Chamberlain at Brunswick. It was on the 19th of September, 1794, that Benjamin Constant was presented to Mme. de Staël, who was well acquainted with the members of the Constant family, and who was

already much admired at Lausanne for her extraordinary genius. The cousin Rosalie said at once, speaking of Mme. de Staël and Benjamin: "She is stronger than he." This first meeting was the beginning of a *liaison*, to use the French word, which lasted fifteen years, and whose incidents are the most dramatic part of the correspondence which is before us.

The passion of Mme. de Staël and of Benjamin Constant was extremely stormy. We find them together at first in 1795, not far from Paris. He has espoused all the ideas of Mme. de Staël; he writes to his uncle: "I have the best hopes of the destinies of the Republic." Mme. de Staël writes at the same moment some "Reflections on the Peace of the Interior." They both think that France will find her way "between despotism and anarchy." In 1796, after fighting a duel with a journalist in Paris (a bloodless duel, which, however, put Mme. de Staël almost beside herself), Constant joined her at Lausanne. Here is a curious account of a visit of Rosalie Constant to Mme. de Staël:

"I have seen two or three times my cousin Staël and my cousin *le tondu* [Benjamin, who had cut his hair, in the revolutionary fashion]. The day before yesterday I made them a visit. I found her between the fox [M. de Tracy], the kitten [Adrien de Meun], and the other [Benjamin], having one of her elbows on the breast of one and taking another by the head, while the third one held her by the neck and called her 'good little cat.' This picture somewhat disgusted me."

Cousin Rosalie admired the genius of Mme. de Staël, but did not admire her manners, and she felt very sorry that Benjamin should be completely under her sway. In 1796 Constant published a pamphlet under the title 'On the Strength of the Present Government and the Necessity of Rallying to it.' Two thousand copies were sold in a fortnight, and a second edition was issued in 1797. Mme. de Staël became, in 1797, the mother of a daughter, Albertine de Staël, who afterwards became the Duchesse de Broglie. Benjamin Constant was intimately acquainted with the Director Barras, and confessed in his letters being under many obligations to him. Though he wrote on the necessity of supporting the Republican Government, he had not many illusions as to its vitality; he wrote to his aunt: "The Goverment has not a sou; the negotiations with the Empire and with England are on the point of being broken off; those who buy the *biens nationaux* [the confiscated property of the *émigrés*] are assassinated every day; the country people are fanatical; the patriots are calumniated in the most horrible manner."

He was living at that moment at Hérivaux, on the edge of the great Chantilly forest, in a most quiet and deserted place, where he is still remembered, though he only remained in it two years. Mme. de Staël made him long visits, and he made long visits to Paris. In 1799 Benjamin Constant was appointed a member of the Tribunate. Mme. de Staël and he were now completely before the world. In 1802 M. de Staël died, and it has often been disputed whether Mme. de Staël, who was now free, entertained or not the idea of a marriage with Constant. The publisher of his letters to his family thinks that Constant himself did not wish to marry Mme. de Staël, and that his sister Rosalie was the only member of the Constant family who desired it; she writes to her brother: "You know the romantic story of M. de Staël. Benjamin must be at Coppet. Everybody sees reasons against the marriage; to me, it seems certain." But, on the 7th of July, 1802, two months afterwards, she is less positive: "We have had Benjamin for a few days. . . . His character is that of a malicious child who is always guided by the present, and on whom it is impossible to count. He seems to me to be in great fear of a marriage which I thought at first could not fail." Benjamin Constant knew that he had a master in Mme. de Staël. As long as he was not married to her, he felt that he had a chance of becoming free; he did not wish to alienate his liberty completely. She seems not to have wished it any more than he, and to have been contented with the state of things as it was. Rosalie writes to her brother on the 5th of August, 1804: "It seemed to me so natural that she should marry Benjamin, when she became free, that I did not have a doubt on the subject. It seems that they had both such a fear of it that they understood each other on the subject. . . . They hold each other by the intellect. No other man offers to her the resources of his mind. She wishes absolutely to keep him, and she succeeds, sometimes by the force of habit, sometimes by despotism, sometimes by services. He remains, but he murmurs."

He did not always content himself with murmuring, and he began to look for a wife. When Bonaparte ordered Mme. de Staël, who was making opposition to him, to retire to a distance of forty leagues from the capital, she left for Germany, and at such a moment Constant accompanied her, but deserted her at Berlin. Hearing soon afterwards that Necker was seriously ill, he left for Lausanne, and started immediately for Coppet. On the road he met the coachman of Mme. Necker, who came to announce to him the death of the former Minister of Louis XVI. The situation remained the same between Mme. de Staël and Benjamin Constant.

In a letter of December 14, 1800, to his cousin Rosalie, we find this mention: "I should like to know what has become of Mme. de Marenholtz or de Hardenberg, who is about thirty-one years old, and, if Victor has seen her, if she has spoken of me." Mlle. de Hardenberg, of a good Hanoverian family, had married a M. de Marenholtz, and the marriage had been so unhappy that she was divorced. "Though she is neither young, nor pretty, nor wealthy, she is not old, nor ugly, nor poor," wrote Rosalie concerning this person, who became the wife of Benjamin Constant. We see that even as far back as 1800 he was thinking of her. The marriage only took place on December 10, 1808. If you read the letters of Rosalie to her brother during the period which preceded the marriage, you will not be surprised that Benjamin Constant wished to make a change in his life. The scenes which Rosalie describes are almost incredible. "You don't know," she says, "the passionate character, the extreme violence, the despotism of this woman [Mme. de Staël]. She believes that her intellect gives her the right to rule over the whole universe. She wants to have slaves, especially Benjamin, whose mind suits her better than any other." What followed the marriage is worthy of the wildest novel. Though he was married, Benjamin Constant remained at Coppet, and did not dare to leave, for fear, he said, of pushing Mme. de Staël to desperate extremities. Finally, his cousin Rosalie made him feel the ridiculousness and odium of his position, and he ran away. He had kept his marriage secret for some time, and only declared it in 1809. Altogether, it is difficult to say who behaved worst in this extraordinary drama.

The father of Benjamin Constant died in 1812. He had given much trouble to his son, and had had two natural children by a servant, whom he finally married. Constant published in 1814 at Hanover his pamphlet on 'The Spirit of Conquest.' He followed King Bernadotte to Liége, and thought at that moment of defending his candidacy to the throne of France. After the return of the Bourbons he came back to Paris, and wrote several political pamphlets. He lost his aunt, the Countess of Nassau, in the month of May, 1814. About that time he fell in love with Mme. Récamier, and it was probably to please her that he wrote his famous article of March 19, 1815, in which he bitterly attacked the savage Corsican who had left Elba. A few weeks afterwards he became a member of the Council of State of the "savage Corsican." He was a gambler; he had no principles, though he was fond of writing on constitutions and laws; he looked upon life as a lottery. His famous 'Adolphe' appeared in January, 1816. Everybody recognized him in 'Adolphe,' and this novel has, in consequence, not been entirely forgotten, and it is still read occasionally by those who take some interest in Constant and in Mme. de Staël. During the Restoration Benjamin Constant remained one of the advocates of constitutionalism and of parliamentary government, and after the Revolution of 1830 he was made a Councillor. King Louis Philippe gave him 200,000 francs to pay his debts, and he died shortly afterwards. After his death the letters of Mme. de Staël to him were claimed by the Duchesse de Broglie, and were returned to her. The readers of the new volume will not find a line in it from Mme. de Staël herself; all the letters, without exception, are those addressed by Benjamin Constant himself to the members of his own family.

Correspondence.

PROTECTION AND WAGES.

To the Editor of The Nation:

Sir: Among other things, I have been studying the labor question here, without books. Our laboring men are ranch-hands and cowboys. We pay the former forty dollars, and the latter forty-five and fifty dollars per month —about twice the amount paid for the same kind of labor in the States. Two brothers came out here last spring from the State of Maine, where they were paid twenty dollars per month for farm work, and are now at work on this ranch for forty dollars per month. While their present high wages are, no doubt, the result of "our protective system," why did it not protect them as well in the State where Mr. Blaine lives? I. N. Stiles.

Hobson's Ranch, Utica P. O., Montana, Aug. 20, 1888.

H. C. CAREY ON INDIRECT TAXATION.

To the Editor of The Nation:

Sir: We have heard Henry C. Carey referred to more than once in the present campaign in support of the Republican position on the tariff question. Carey believed in protection as a means, not an end. To the present generation of protectionists, who assert that it is a good thing in itself, and should be the permanent policy of the Government, Carey is a stumbling-block that cannot be too carefully avoided.

On pages 464-465 of 'Past, Present, and Future' may be found the following:

"Everywhere it has been attempted to correct error resulting from the effort by England at indirect taxation, by other error in desiring to use tariffs as a means of similar taxation at home. It has been the substitution of plunder by a pickpocket for that of a highwayman. The whole system of indirect taxation is mere petty larceny. It is an attempt to filch that which cannot be openly demanded. It is one of those 'inventions' of man by which the

few are enabled to grow rich at the expense of the many, and is therefore greatly favored by that class of men who prefer living by the labor of others to living by their own. The man who plunders a city is of the same species with the highway robber. The one who imposes indirect taxes is of the same species with the *chevalier d'industrie*. All belong to the *genus* of great men. All are equally destitute of manly or generous feeling. The plunderer of cities selects those which are weak and defenceless, and the collector of indirect taxes selects the commodities used by poor men who cannot defend themselves; and where the system most prevails, men are most weak and cheap and food most dear."

Will any one maintain that the man who wrote such words would now be in favor of retaining permanently our present system of tariff taxation? W. H. J.

SOME QUESTIONS.

To the Editor of The Nation:

Sir: The *Independent* of August 16 has this on page 13:

"Ex-Senator Warner Miller is a sensible business man; and when he speaks in public, as he did last week at Angelica, he says a great many good things, as will be seen by the following sketch, to which we invite public attention:

"'The President argues that the farmers are injured by the tariff system. If it is an injury, then away with it: for agriculture is the foundation of our prosperity. . . . You get 100 per cent. more for your farm products than you did in 1860, and the prices of manufactured products are 50 per cent. less than they were then. Why Democrats should have put wool on the free list, I am puzzled to understand. . . . How much wool goes into a suit of clothes? In a heavy suit not over seven pounds, worth $1.40. Now, therefore, your suit would cost you that much more; but if you have fifty sheep, your loss by the abolition of the duty on wool would be $30. Therefore, to save $1.40 you would lose $30. I can't see the profit of that. Moreover, everything we consume on the table, with the exception of sugar, is cheaper than in Europe.'"

Now I want to know: (1.) Why it is that I hear and read so much about the straits the farmers are in, about the rarity of a New England farm free from mortgage, etc., if farmers give only half of 1860 prices for what they buy, and get double for what they sell? Farmers certainly ought to know how the matter stands with them; and one of two things, it seems to me, must be true, either the "sensible business man" was as wide of the mark when he talked on farm matters as Mr. Blaine was when he talked about savings-banks deposits and trusts in England, *or else* the farmers are in a remarkably happy condition as compared with 1860.

(2.) How is it that protected wool makes a suit of clothes with seven pounds of wool in it cost $1.40 more than it would with wool free? Mr. Miller says it would, and he is "a sensible business man," and of course he knows. An apparent explanation is, that to the cost of the home-made product Mr. Miller added *the whole amount* of the duty on the imported article. But on page 2 of the same issue of the *Independent*, fourth column, Prof. Thompson of the University of Pennsylvania refutes (to the satisfaction of the *Independent*, I take it), the position that "nearly the whole amount of the duty" is added to the cost of the home-made product. "It is Mr. Cleveland and Mr. Springer who make that assertion," he tells us, "and nobody but convinced free-traders ever make (*sic*) it." And the editor himself, on page 20 of the same issue, denies the fact of this increased cost. Somehow, the professor and editor do not seem to agree with the "sensible business man," *i. e.*, *if* the tariff on wool was 20 cents a pound. (3.) What proportion of our farmers are engaged in sheep raising?—for Mr. Miller's argument about losing $30 in order to save $1.40 can apply only to them, and even then it loses the force of its comparison unless we go on the supposition that a farmer with fifty sheep needs only one suit of clothes for his family, or only seven pounds of wool in the clothing for himself and family. And how about a farmer who has no sheep, and who can save $1.40 on every seven pounds of wool used by him in clothing himself and family? "Laughter and applause" greeted Mr. Miller's telling hit. Mr. Editor, do you imagine that that argument really fooled many farmers? (4.) Where is the sense, from the farmer's point of view, in levying a tariff for protection when "everything we consume on the table, with the exception of sugar, is cheaper than in Europe"? Why not let our farmers send their cheap products abroad and bring back what they receive in exchange, without having such a big proportion of it taken away from them in passing the United States Custom-house? Perkiomen.

WINTER IN NEWFOUNDLAND.

To the Editor of The Nation:

Sir: My recent letter to the *Nation* on Newfoundland has occasioned the writing of letters to me by intending excursionists, one of whom proposes to camp out in Newfoundland next October. This has alarmed me so much that I hope you will allow me a few additional lines for the benefit of any others whom I may have similarly affected.

When I said that October is no more like winter in Newfoundland than in central New York, I was unhappy in my comparison, as it led to the inference that October in Newfoundland is just like October here, which is far from being true. But it is true that the last days of October do not fairly represent the month in Newfoundland any better than they do in central New York. In central New York the woods early in October are a delight to the eye, and the weather some people consider the pleasantest of the entire year; but late in October the trees are bare, and, although winter has not yet arrived, one is not surprised if all "the season's chill symptoms begin." In Newfoundland the contrast is greater. In the early days of October there is likely to be bracing weather, which nobody except a chronic invalid would call winter, while towards the end of the month winter may set in in grim earnest. Lord Baltimore complained to the King of England that winter in Ferryland began with the "middlest of October." He so wrote when sick and dispirited, and pleading for a grant of territory far south, and, under the circumstances, he naturally made the date as early as he conscientiously could. W. E. Cormack, who travelled across Newfoundland in 1822, says that winter commenced on the 17th of October in that year. He was at the time far from the western coast, towards which he was travelling, and was "alarmed" by the circumstance, as it upset his calculations. This shows that the 17th of October was an unusually early date, according to his experience, for the setting in of winter. There may be snow in Newfoundland any time after the middle of October, but one fall of snow in that country no more makes a winter than one swallow makes a summer. Nevertheless, anybody who wants to camp out for pleasure in October had better pitch his tent far from Newfoundland.

Lord Baltimore estimated the length of the winter in Newfoundland at seven months. He seems to have reckoned from the first ice to the first appearance of vegetation. But every one who has lived long in Newfoundland knows that this is putting the very worst face on the matter. The snowfall is very heavy there—heavier by far than it is anywhere in this State; and it takes many days of genial weather to clear away the snow before there can be any vegetation. The days during the last half of April and the first half of May, when the melted snow is pouring down the hillsides, are not called winter in Newfoundland, but spring. I may add that although the winters there are longer by some weeks than here, they are often less severe. Last winter was a case in point.

John C. Cozens.

Notes.

The Clarendon Press, Oxford, will bring out in October a series of more than eighty hitherto unpublished letters written by David Hume to William Strahan, the King's Printer and member of Parliament and friend of Dr. Johnson. They will be edited by Dr. G. Birkbeck Hill. The period they cover is from 1756 to 1776. Hume was no friend to the war on the American colonies, as his language to Strahan shows unmistakably. A further interest which the correspondence possesses is that it treats of the quarrel with Rousseau.

Thomas Whittaker will publish directly a cheap American edition of the 'Reminiscences of William Rogers,' a quaint and original character in the English Church.

The Rev. W. Wilberforce Newton is preparing a life of the late Rev. Dr. Muhlenberg, for publication by Houghton, Mifflin & Co.

Ticknor & Co.'s September publications include 'Western China,' a journey to the great Buddhist centre of Mount Omei, by the Rev. Virgil C. Hart, Fellow of the Royal Asiatic Society; a cheaper edition of Tennyson's 'Dream of Fair Women,' with all the illustrations of the first; 'A Short History of the Secession War,' by Rossiter Johnson; a new and enlarged edition of 'Recollections of a Drummer Boy,' by the Rev. Harry M. Kieffer; and the Rainbow Calendar for 1889, compiled by Kate Sanborn.

Mr. Nathan Haskell Dole is to undertake a translation of another novel by Valdés, his latest, 'El Cuarto Poder' ('The Fourth Estate'). T. Y. Crowell & Co. will publish it.

The second volume of the New York Shakespeare Society's "Bankside Shakespeare" (Brentano's), edited by Mr. Appleton Morgan, reproduces the 1594 quarto text of the "Taming of a Shrew" and the folio text of "The Taming of the Shrew" in parallel pages, with an introduction by Albert R. Frey. The authorship and date of the play are much disputed. Mr. Frey is bold enough to ascribe the older version to Shakspere, in which he occupies a very lonely position among Shakspere scholars, and he dates the new play with more positiveness than the occasion calls for as between 1607 and 1609. He examines the sources of the Induction and of the story at some length, giving its stage history and the conjectures of several commentators regarding its first production; but the essay lacks definiteness and compactness, and it is by no means the complete monograph on the text it should be. The relation of the text to Marlowe's plays, for example, is not mentioned.

To the forthcoming "Othello" volume of the "Bankside Shakespeare" Prof. Thos. R. Price will furnish an introduction claiming the "discovery of an exact prosodial system experimented upon by Shakspere in earlier plays until finally perfected in the 'Othello.'"

The third volume of Prof. Henry Morley's

"English Writers" (Cassell & Co.) covers the period from the Conquest to Chaucer, and takes into view the condition of literature on the Continent, the trouvères and troubadours, the 'Nibelungen Lied' and Minnesänger, and the Italian Revival with Frederick II. and Dante. The foreign field is entered, however, only to shed needed light on the sources and course of English literature, and the bulk of the volume deals in an encyclopædic way with the chronicles, romances, and Welsh tales, and more particularly with Layamon, Walter Map, and Roger Bacon. The extracts given are fewer than in the previous volumes. The three volumes now issued make a natural division of the subject of English literature, and are by themselves an admirable résumé of its least accessible portion.

'The Great Argument; or, Jesus Christ in the Old Testament,' by Dr. William H. Thomson, which was published in 1884 by Harper & Bros., now appears under the title of 'Christ in the Old Testament; or, the Great Argument.' In all such cases of changed titles the fact should be plainly stated on the title-page of the work, so that it might be seen that the book was not a new one, but an old one renamed.

The indefatigable Mr. Rolfe has prepared a collection, for reading in school, of 'Tales from English History' (Harper), marked by his customary skill in selection and annotation. A good example of a useful and suggestive note is that upon "The loving are the daring" (p. 163). Some of the notes appear to show marks of haste, or perhaps of undue compression. On page 132 we find the startling assertion that *and* "should never be used except to connect a *second* relative clause to the preceding." On page 124 we are told, as to chaunting, that "many words that now end in *-ant* and *-ance* were formerly spelled *-aunt* and *-aunce*, and pronounced accordingly." What is "accordingly"? On page 156 "a second Benaiah" is called a "Scriptural allusion," and we are informed that "the implied comparison cannot be understood unless we are acquainted with the Bible history"—a quite unnecessary remark, inasmuch as there is a footnote to the text which refers to the passage in the Bible. Such a note as this is mere padding.

Mr. Howells's 'A Sea Change, or Love's Stowaway' (Boston: Ticknor & Co.) reminds us that even Addison once wrote a "Fair Rosamond." "The great success this opera ["Arsinoe"] met with, produced," he writes, "some attempts of forming pieces upon Italian plans, which should give a more natural and reasonable entertainment than what can be met with in the elaborate trifles of that nation. This alarmed the poetasters and fiddlers of the town, who were used to deal in a more ordinary kind of ware, and therefore laid down an established rule, which is received as such to this day, 'that nothing is capable of being set to music that is not nonsense.'" Literature repeats itself, and now Mr. Howells forms his piece upon Gilbert and Sullivan instead of "Italian plans," but he has been too wise to indulge the laudable ambition that, according to the mortified poet, sent Addison's operetta to its damnation. The rule of nonsense "is received as such to this day." Even in nonsense, nevertheless, there are degrees, and this "lyricated farce," as the author terms it, which, being interpreted, means a comic opera, resembles its models only as much as "desiccated" codfish does the green mermaid in her native element.

In No. 46 of the Proceedings of the U. S. Naval Institute (Annapolis), together with many technical papers, we find what appears to be the concluding instalment of Lieut. Rowan's "Recollections of the Mexican War." The fact that these journal extracts have been copyrighted points to their ultimate republication, as would seem to be desirable.

The Filson Club of Louisville has issued as the third of its publications 'The Pioneer Press of Kentucky,' by William Henry Perrin (Louisville: John P. Morton & Co.). It was a hundred years on August 11, 1887, since the first number of the *Kentucke Gazette* appeared at Lexington. This was the first newspaper west of the Alleghanies, and it had its origin in the separatist movement which presently divided Kentucky from Virginia. Its publisher was John Bradford, a native of the latter State, and one of a long line of printers not connected by Mr. Perrin with the Pennsylvania printers bearing the same family name. The most prominent names of editors in early Kentucky journalism are those of Humphrey Marshall and of the two New Englanders, Amos Kendall (who afterwards, as Postmaster-General, sanctioned the rifling of the mails by Southerners in search of Northern abolition publications) and George D. Prentice. Marshall's *Western World* took the credit of exploding Aaron Burr's conspiracy, and of bringing about the court-martial of Gen. Wilkinson. Mr. Perrin has collected a great deal of curious information, but his style is careless and too much infused with slang. He evidently thinks poorly of an editor who cannot shoot, or who is not prepared for what he calls an "affaire de honour." For naïveté, the following sentences may be cited: "Human nature . . . has an innate fondness for the horrible, and it is safe to say that . . . forty-nine persons read the *Courier-Journal's* account of the trial and execution of Albert Turner, where the fiftieth reads one of Mr. Talmage's sermons."

The second number of the *Journal of American Folk-lore* (Boston: Houghton, Mifflin & Co.) well sustains the promise of the first. The Indians occupy a large but not disproportionate space; the Pennsylvania Germans and the Louisiana Creoles also are worthily represented—the latter by customs and superstitions and nursery tales. We observe that Mr. James Mooney, when introducing his Cherokee tale, "How the Deer obtained his Horns," expresses the hope to prove some day that the negro animal fables of the "Uncle Remus" order are of Indian origin. This is not improbable, but we may be sure they have been bettered in the borrowing.

We found little to remark in *Le Livre* for July beyond the article on "Les Bourbons Bibliophiles," by M. Eugène Asse, with its accompanying group of etched portraits. In the August number M. Lemercier de Neuville gives some intimate personal details concerning the late Charles Monselet, whose gastronomic capacity is much insisted on. For example, after his fifth meal one day, he was observed heavily hopping about to settle it, as he explained. Interesting in all respects, and a candid paper, is M. Louis de Hessem's "Le Cinquantenaire de la Bibliothèque Charpentier." Here we have an account of the origin of the *format Charpentier*—that handy shape which gave a black eye to the *format in-8°*, and did so much to popularize good literature; and we are shown the iron-clad agreement which the publisher offered to the trade in favor of his new venture. Numerous letters addressed to him on business by Alfred de Vigny, George Sand, and Sainte-Beuve, throw light on the temperament of all parties to the correspondence, and are excellent reading. The rather hard face of the indomitable G. H. Charpentier—this man so active and pushing that "il ne devait pas avoir toujours le loisir d'être aimable"—is portrayed in an etching. Among the books reviewed we notice an 'Iconographie Bretonne,' which suggests a field of useful employment for those having leisure and means, viz., the illustration of the history of a limited territory by cataloguing the portraits of its famous men and women. Such a field is offered by Essex County, Mass., for instance.

Mr. C. N. Caspar of Milwaukee has applied for a patent for a "mail book-auction," conducted by sending out unpriced catalogues, and selling to the *first* bidder if his offer proves acceptable; or if not, to the highest bidder on file at the end of four weeks. The first catalogue has gone out.

A volume supplementary to the biography of Count Cavour before 1848 has been issued at Rome under the title 'Diario Inedito e Note Autobiografiche del Conte di Cavour (1833 al 1843).'

—The absence of any contribution to the campaign in the current literary monthlies may be taken as a sign of the abandonment of the political field to the new magazines that have sprung up specially devoted to public questions. A political leader used to be one of the conspicuous features of the *Atlantic*. This seems to have gone the way of all traditions. No magazine, however, is more interested in American topics. In this number the Revolution gives a title to two excellent historical papers, one by John Fiske in his comprehensive and lively style upon the first year of the Continental Congress, the other by Dr. Peabody upon Boston mobs. The latter is a remarkable presentation of the matter from the point of view of the law-and-order portion of Revolutionary society. Dr. Peabody asserts that there was a lawless element in Boston whose excesses and outrages were an injury to the cause of the patriots, and alienated many of the best citizens, who might otherwise have remained upon the side of the colonists. His narrative of the events gives no quarter to the mob element, and may well be compared with Mr. Fiske's recent article covering the same ground. It is said here that while Massachusetts was foremost in providing leaders for the Revolution, it also suffered more than any other colony except South Carolina by the defection of Tories. Cambridge lost almost the whole body of her most reputable citizens, "men of mark and high standing," with the exception of those who were "immediately connected with the college"; and on the list of the exiles were one hundred graduates of Harvard. This is a remarkable number, and undoubtedly represents a real loss, as the descendants of these men in the provinces became leading families and held great trust and power, especially in the judiciary of Nova Scotia and New Brunswick. It is to be recollected, too, that Harvard was not, like Oxford and Cambridge, a bulwark of the old régime, but, on the contrary, "the hot-bed and seed-plot of sedition." It may be that this fact accounts for the anxiety of the Cambridge respectables to get away. The article is aimed at the Crispus Attucks memorial, and it makes out a serious case against it; but it seems now too late to argue the point, and, indeed, the monument will be less the memorial of a man than of the revolutionary spirit. Mrs. Wyman contributes a second paper upon Factory Life, which is philanthropic in intention, and illustrates by personal observation the beneficent workings of the Ten-Hour Law upon the lives of the women employed. Julia C. R. Dorr furnishes a pleasant sketch of a short tour in North Wales, and Mr. Downes brings his account of Boston artists down to the present day. There is the usual fiction, and the beginning of a new novel by Prof. A.

S. Hardy, "Passe-Rose." There is no poetry in the present number.

—The September *Harper's* contains a large element of travel. Mrs. Pennell begins a series of papers upon the well-worn but always fresh subject of the Hebrides, which, besides its romantic and picturesque features, well rendered in the illustrations, glances at the condition of the peasantry there and the practical workings of eviction. The American cities dealt with by Mr. Warner are Memphis and Little Rock. The former has an interesting history, of which it cannot be said that the most has been made in this article, and the latter of the two has the advantage of novelty, Arkansas being *terra incognita* to the public as much as any portion of the country. Another writer describes, in the same way, the origin and features of Helena and Butte, typical mining towns, and succeeds very well in giving sharp impressions of the economical conditions in Montana. Mr. Lafcadio Hearn continues his perfervid passages upon the West Indies. The article upon the caribou also takes us into unfamiliar ground. Thus, travel and fiction practically monopolize the number. The most important paper, however, is Prof. Morse's description of Old Satsuma ware, beautifully illustrated from his remarkable Japanese collection. This is a thorough discussion of the topic, and it need hardly be said that it is of the most reliable character, and alike interesting from the artistic point of view and as an illustration of the strange civilization to which these marvels of the potter belong. Similar in interest is the brief account of the tapestries in the new Florence gallery, of which also there are fine woodcuts. A number more exclusively devoted to information and amusement, and less exacting of any mental exercise, is not often met with; but the drift in this direction is unmistakable.

—A 'Digest of the Reported Decisions, Precedents, and General Principles enunciated by the Board of Railroad Commissioners of the Commonwealth of Massachusetts, from 1870 to 1888 inclusive,' has just been prepared by Mr. John H. Wigmore of the Suffolk Bar. To the general public, the interest of such a book lies not so much in its contents as in the mere fact of its existence. It illustrates one of the ways in which law may grow up unconsciously rather than be consciously made. The Massachusetts Commission, as established nearly twenty years ago, had practically no power beyond the mere power to make reports. But their reports showed such a clear comprehension of the whole subject as to command wide public attention. What they blamed the public blamed, and the railroads ceased to defend; what they suggested the railroads tried to carry into execution, and generally with good results. Insensibly, public opinion reached such a state that the judgments of the Commission were universally accepted, and came to have the force of law, not from any power of enforcement which was behind them, but from their own inherent soundness. Recent legislation has given the Commission greater nominal power than it once had; but its actual authority has hardly been magnified. The same process of growth of law beyond the limits of technical authority is repeating itself on a larger scale in the history of the Inter-State Commerce Commission.

—It is safe to say that not more than one person in a hundred of those who read Donnelly's contributions to the Shakspere-Bacon controversy will take the pains to search the original folios and discover there for themselves the accuracy of the facts on which the marvellous cipher is constructed. Most readers will judge of the whole by the character of the argument that connects the asserted facts with the conclusions. Some external test as to the accuracy of Donnelly's asserted facts and the validity of his conclusions has therefore a current interest, and it may be found in his curious volume entitled 'Ragnarok,' which we are told was written between the earlier and later epochs of his Shaksperian investigation. 'Ragnarok' has had an extraordinary sale for such nonsense as it is. Many of its readers have been half convinced of the truth of its thesis by the wonderful array of facts, quoted from the writings of famous authors, that lead so clearly to the desired conclusion; but among these persons there can have been no geologists and no students of mythology and legendary history. The book is written to prove that a comet once struck the earth, covering half of it with gravel and furnishing a basis for many myths of fiery disasters to the early human race. From first to last, the pages contain little more than special pleading. Facts are not investigated to learn what they will lead to, nor are extracts quoted in the spirit in which they were written: quotations are made merely to support a conclusion already reached at the beginning. The quotations are something marvellous. Scientific articles and treatises, popular scientific compilations, text-books, and manuals are ransacked to furnish sentences which, thus taken apart from their context, seem to support the desired opinions; and the selections would read admirably if one could only be persuaded that they had been chosen with fairness, knowledge, and judgment.

—A brief example of the method followed may be given. It is boldly stated that the drift, as Donnelly's cometic gravel is commonly called, and which geologists regard as of glacial origin, consists of nothing but granite. Consisting only of granite, and not also of limestone, sandstone, and slate-rocks, which form so great a part of the earth's surface, how can it be the rubbish scraped from said surface by an ice-sheet? The granitic drift is plainly of igneous, not of glacial origin. The drift lies only on one side of the earth, its distribution being shown in a frontispiece map which Donnelly thinks is "substantially accurate." The drift is therefore the product of a sudden collision with a comet's tail! The only difficulty with this and other equally plain arguments is that they are all wrong. The mistakes are simply silly. There is plenty of limestone and of other aqueous rocks in the drift. The map showing the distribution of the drift is ludicrously incorrect. The argument is farcical. Yet throughout it there is an air of earnestness, conviction, and even of solemnity that is very impressive. The reader is asked to follow the argument closely, "that he may see whether any part of the theory is inconsistent with the well-established principles of natural philosophy." There is much of the short-paragraphed candor that is intended to be convincing, thus:

"Would a comet meet all these prerequisites?"

"I think it would."

"Let us proceed in regular order."

And the "regular order" is of that "put-up" kind that always rewards virtue and punishes vice in our moral melodramas.

—The Dearborn Observatory of Chicago is now removing to Evanston, Illinois, to become connected with the Northwestern University at that place. The new site is sixteen miles north and three west of the old, and within three hundred feet of the lake shore, and, according to Prof. Hough, the Director, undoubtedly is much better adapted for astronomical work than the old one. Mr. James B. Hobbs of Chicago gives $25,000 for the new observatory building, which includes abundant observing quarters for the fine instruments and some eight or nine rooms for other purposes. The Chicago Astronomical Society will continue its connection with the Observatory, having relations similar to those maintained with the late University of Chicago. The 18½-inch telescope, which has so interesting a history, will be remounted in the new dome early next year. Prof. W. R. Brooks, who has rendered most efficient service to cometary astronomy at Phelps, N. Y., where he built with his own hands the telescope which did the most of his work, has met with a well-deserved reward in the generosity of Mr. William Smith of Geneva, who has founded and built the Smith Observatory at that place. Prof. Brooks enters upon the directorship with several fine instruments; among them a 10-inch object-glass made by Clacey of Boston, and fitted with accessory apparatus for celestial photography.

— The two numbers of *Les Lettres et les Arts* for July and August (Paris: Boussod, Valadon & Cie.; New York: Chas. Scribner's Sons) contain a charming story, "Norine," by M. Ferdinand Fabre, in which the recollections of his early years spent among the remote hamlets of the Cévennes, and the longings for the *pays natal* of the middle-aged librarian of the Bibliothèque Mazarine, are mingled in the most happy manner. The unreal realism of the designs with which M. Boutet de Monvel has accompanied the story is not inharmonious with the abundant riches of M. Ferdinand Fabre's own pictures, always most vivid in what the other artist purposely effaces in his—the representations of nature which serve as a setting for the characters. The "Souvenirs d'un soldat," of Vsevolod Garshin, is also given in two parts in the numbers before us. This is a striking account of the early experiences, up to the first battle in which he took part, of a young volunteeer in the Russian Army in 1877. A certain superficial resemblance to the manner of Tolstoi, common to all Russians who write about war, takes something, at first, from the impression of originality these "Souvenirs d'un soldat" would otherwise make. They seize and hold the attention and interest to the end, however, by the vigor and individuality with which the various characters, soldiers and officers, are presented in their ordinary military life during an advance towards the enemy. A second of M. Henri Bouchot's interesting articles, "L'Histoire par les éventails populaires," is given in the July number. This extends from 1789 to 1804, and, like the preceding one, is very fully illustrated. The first part of M. Adolphe Jullien's "L'Opéra sous l'ancien régime" includes "le grand règne et la régence," and gives occasion for the really charming frontispiece of the August number—"Mademoiselle Prévost dansant au théâtre de l'Opéra," after the painting by Raoux in the Musée of Tours. In the same number M. Frédéric Masson's "Un mot sur les primitifs" is suggested by the work now in course of publication by the Vicomte Delaborde: 'Les Maîtres florentins du xve. siècle.'

THE FOUNDER OF OHIO.

Life, Journals, and Correspondence of Rev. Manasseh Cutler, LL.D. By his grandchildren, William Parker Cutler and Julia Perkins Cutler. Cincinnati: Robert Clarke & Co. 1888. 8vo, 2 vols., pp. 524 and 495.

EVERY one knows that this is centennial year in the Ohio Valley. The settlement planted a

century ago has so prospered that it stands as the eastern boundary of the new empire of the West, to which it seems to be almost the ultimate parent. But the natives of Ohio are fully aware that their State was no chance growth of accidental and discordant atoms. They know that their forefathers came from other American States, and that the enterprise was the deliberate and vigorous outgrowth of New England thought, manhood, and capital. Hence, in this memorial year, and carrying out the instincts of their race, they eagerly explore the records of the past, and give a grateful and deserved prominence to the men who planned and effected the successful settlement a century ago.

Foremost among the names entitled to such remembrance is that of Manasseh Cutler, whose papers now presented to the public give the fullest proof that he is entitled to rank with Bradford, Winthrop, Penn, Calvert, and Oglethorpe, as the founder of a State. A brief examination of the facts will make this evident, and, indeed, the orators of the present year have been prompt and fervent in their praises of the Massachusetts clergyman. In his eloquent address at Marietta, on April 7, Senator Hoar gave the credit of founding Ohio to Gen. Rufus Putnam and Manasseh Cutler. That Putnam was the great leader, the man of action, is indisputable; but that Cutler's portion of the work was the more important in its results may also be affirmed. Not only was the Ordinance of 1787 the charter of the colony, but one of its provisions was of transcendent importance to the future of the whole country; possibly it may prove to have affected the future of all civilized nations. We refer, of course, to the clause providing that "there shall be neither slavery nor involuntary servitude in the said territory, otherwise than in punishment of crimes whereof the party shall have been duly convicted." The results of this dedication of the West to freedom have been too great to be even epitomized in the space of a review, but no one will dispute the right of the author of the measure to rank among the great leaders of mankind.

To understand Cutler's merit, it is necessary merely to consult the authorities. Senator Hoar has briefly and clearly stated all the essentials as follows. After the cession by the individual States to the United States of their claims to the Western lands, Congress undertook to dispose of the territory:

"Various plans were reported from time to time. Nine committees were appointed on the frame of government and three on the schemes for survey and sale. Thirteen different reports were made at different times; but from September 6, 1780, when the resolution passed asking the States to cede their lands, until July 6, 1787, when Manasseh Cutler, the envoy of the Ohio Company, came to the door, every plan adopted and every plan proposed, except a motion of Rufus King, which he himself abandoned, we now see would have been fraught with mischief if it had become and continued law. Manasseh Cutler came into the Chamber on the morning of July 6, 1787, bearing with him the fate of the Northwest. He had left Boston on the evening of June 25, where on that day he records in his diary: 'I conversed with Gen. Putnam, and settled the principles on which I am to contract with Congress for lands on account of the Ohio Company.'

"He was probably the fittest man on the continent, except Franklin, for a mission of delicate diplomacy. It was said just now that Putnam was a man after Washington's pattern and after Washington's own heart. Cutler was a man after Franklin's pattern and after Franklin's own heart. He was the most learned naturalist in America, as Franklin was the greatest master in physical science. He was a man of consummate prudence in speech and conduct; of courtly manners; a favorite in the drawing-room and in the camp, with a wide circle of friends and correspondents among the most famous men of his time. It now fell to his lot to conduct a negotiation second only in importance in the history of his country to that which Franklin conducted with France in 1778. Never was ambassador crowned with success more rapid or more complete. On the 9th of July the pending ordinance was committed to a new committee. They sent a copy of the ordinance which had come over from the last Congress to Dr. Cutler, that he might make remarks and prepare amendments. . . . But one day intervened between the day of the appointment of the committee and that of their report. Cutler returned the copy of the old ordinance with his proposed amendments on one day. The next the committee reported the finished plan. But two days more elapsed before its final passage. The measure providing for the terms of sale to the Ohio Company was passed on the 27th of the same July."

Manasseh Cutler was, indeed, "a man after Franklin's pattern." He was born in Killingly, Conn., in 1742, grandson of John Cutler of Lexington, who was grandson of James Cutler, the emigrant who settled first in Watertown and then at Lexington. It was a typical New England family, and naturally, as it prospered, one son, Manasseh, was assigned to the ministry. He was graduated at Yale in 1765, where he acquired a fondness for scientific pursuits which continued through life. He taught school at Dedham, where he married Mary, daughter of the Rev. Thomas Balch, and in 1771 was settled in the ministry at Ipswich Hamlet. He was evidently an ardent patriot, and during the siege of Boston he repeatedly visited the American troops and preached to them, receiving in September, 1776, a commission as Chaplain in Col. Eben. Francis's regiment. In 1778 he was Chaplain to Gen. Titcomb's brigade, and on his return he studied medicine and became a skilful practitioner. In 1782 he opened a boarding-school, and devoted much time to natural science, becoming especially proficient in botany.

Thus, up to the age of forty-five, Cutler had pursued a career differing, as in the case of Franklin, from that of many of his contemporaries only in the bent of his mind for scientific research. Circumstances then placed him in a position to distinguish himself in a new direction. Prior to 1787 Congress had made various ineffectual attempts to deal with the land questions. It was conceded that the safety of the nation demanded that this vast territory should be peopled by its citizens, to act as a bulwark against those foreign nations which still had a foothold on our borders. It was hoped that these millions of acres might furnish the means to retrieve the national credit, and especially to enable the nation to repay the arrears due to the army of independence.

The officers and soldiers had for several years endeavored to devise some plan by which they should receive land-grants in exchange for their warrants. In 1783 a petition signed by 288 officers was presented to Congress, asking for a settlement on that basis, but, despite the powerful support of Washington, they were unsuccessful. In January, 1786, the matter was revived by a circular issued by Rufus Putnam and Benjamin Tupper. In March a convention was held at Boston, and of the eleven delegates, Manasseh Cutler was one. He was one of the five members who drafted the articles of association of the Ohio Company, the plan being to raise a fund not exceeding one million dollars in Continental certificates, with which to purchase lands in the new country. Each share was to be based on the payment of one thousand dollars in certificates and ten dollars in coin, and actual settlement in person or by proxy was essential.

In March, 1787, it appeared that 250 shares had been subscribed, and, accordingly, Gen. Samuel H. Parsons, Gen. Rufus Putnam, and Rev. Manasseh Cutler were chosen directors, with full powers to treat with Congress as to the purchase of the lands. Cutler alone assumed the task, and, fortunately, he wrote out a very full account of his actions. In June, 1787, having conversed with Gen. Putnam and "settled the principles on which I am to contract with Congress for laws on account of the Ohio Company," Cutler started for New York.

We have already mentioned his rapid and entire success in treating with Congress for the purchase of a million and a half acres of the Ohio lands for the Ohio Company. On July 9, 1787, the ordinance was referred to a committee of five members, on the 11th it was reported back, on the 12th amended on motion of Mr. Dane of Massachusetts, by adding the proviso against slavery, and on the 13th it was passed by the vote of the eight States present, Mr. Yates of New York giving the only vote in the negative. Cutler was then on a visit to Philadelphia; but on his return he carried through his negotiation for the purchase, including a still larger purchase for other parties. It is unfortunate that his Journal was written out later from his notes, and, though giving interesting facts about his travels, is very brief in regard to his interviews with members of Congress. It is, however, shown (Journal 1, 343) that his family preserved a copy of the Ordinance of 1787, and that "on its margin was written that Mr. Dane requested Mr. Cutler to suggest such provisions as he deemed advisable, and that at Dr. Cutler's instance was inserted what relates to religion, education, and slavery." Cutler himself writes, under date of July 19: "The amendments I proposed have all been made except one, and that is better qualified." This one he explains to be in regard to representation. Congress agreed to admit delegates, with the right to debate, but not vote. Cutler's son also positively states that his father told him that he prepared the clause prohibiting slavery. Having so prepared it, the clause would naturally be presented in Congress by the member from Massachusetts, Mr. Dane, who was also on the committee.

That earlier attempts had been made by others in Congress—Pickering and Jefferson—to keep this territory for freedom, does not diminish the value of Cutler's work. At the decisive moment, availing of his controlling position as the great purchaser of the lands in question, he insisted that the Northwest should be for ever free from slavery. It adds nothing to the strength of our argument that by his birth, training, and associations, he ought to have done this. Other New England ministers have been found wanting in a like case. Cutler did his duty, and the results have justified him.

Dr. Cutler served in Congress for two terms, 1800–1804, and died July 28, 1823, in his eighty-second year, still minister at Hamilton. These journals and letters contain many interesting facts, but they are of small importance in comparison with the great event of the settlement of Ohio. A generation ago they would have found many readers, as a welcome contribution to our knowledge of the period. Even now they will be valued as authority and be quoted with respect. But the great events of the past twenty-five years have ruined the public taste for chronicles of small beer.

As to the Ohio Company, a writer in the *Pennsylvania Magazine of History and Biography* for July, 1888, states, that the contract was for 1,500,000 acres at 66⅔ cents per acre. Land-warrants were receivable for one-seventh of the amount, at the rate of 150 acres for each 100-acre warrant. These warrants were then worth $10 to $15; Government securities were

worth 10 to 12 per cent. The first payment of $500,000 was made in October, 1787, but as securities advanced in price, the subscribers failed to pay in, and 148 shares were forfeited, 769 shares were paid in full, and 83 in part. In 1792 the company went into liquidation, and, after the division of lands, $152.48 per share was paid in money. The soldier, therefore, received for his payment of $17 in money and his 100-acre land-warrant, 1,273 acres of land and $130 in money, which sum at the time would buy him 3,250 acres more. It is characteristic of this enterprise, founded and carried out by a New England minister, that it was equally successful in its moral and material aspects.

EMPEROR WILLIAM AND HIS BOSWELL.

Aus dem Leben Kaiser Wilhelms. 1849-1873. Von L. Schneider. Berlin: Otto Janke; New York: B. Westermann & Co. 1888. 3 vols., 8vo, pp. 341, 286, 291.

Louis Schneider began life as an actor. He was born in 1805 of a theatrical family, his father being a musical director and composer; his mother, brother, and sister opera singers. His first appearance on the stage was made at the age of nine, and at the age of fifteen he was a regular member of the profession and had his name printed on a play-bill. His connection with the stage ceased in 1848, when he became reader to King Frederick William IV. In the intervening years he had made his mark as a journalist and man of letters. Although a civilian, he edited two military periodicals, contributing at the same time to several of the leading Prussian newspapers, and publishing sketches, novels, poems, plays, and historical and biographical works. His versatility, his rampant loyalty to the royal family, and his total freedom from diffidence, procured him a position at the Prussian court which was anomalous if not unprecedented, and in which he maintained himself with great skill for twenty-five or thirty years. For a long time he was the only person not of noble birth who was permitted to sit at meals with the royalties, and he was on confidential if not on intimate terms with three successive Prussian kings and two Russian emperors. Besides his official position as reader, he performed, unpaid, the functions of librarian to King William I., who used him as a convenient medium for indirectly conveying his views on public affairs to the public through the semi-official press, which was always ready to print Schneider's articles, proceeding, as they were presumed to do, from the highest authority. He accompanied his sovereign in the campaigns of 1866 and 1870, during which he had daily interviews with the King, to whom he submitted proofs of the letters which he wired to the Berlin newspapers, and which were thus corrected and edited by the Commander-in-Chief. It was also his self-imposed duty to keep the King informed of the opinions and comments of the press in all parts of the world. All of these matters and other episodes in his varied career are most entertainingly set forth in the three volumes of Schneider's posthumous memoirs, published in 1879 and 1880.

The present work is more particularly devoted to a glorification of the late Emperor William, and was left in manuscript with the understanding that it was not to see the light during the lifetime of that monarch. The position which its author occupied naturally raises great expectations, which are, just as naturally, doomed to be in some measure disappointed, as it was next to impossible to say anything new on a subject which had recently been so much written about. But while the book adds, perhaps, not much to our stock of historical knowledge, it contributes not a little in the way of details and minor touches, and will be drawn on liberally by every future historian who undertakes to paint a lifelike portrait of William I. The Emperor has found his Boswell in Schneider, as Bismarck found his in Busch, with the difference, however, that Schneider is a writer whose natural gifts are supplemented by a high degree of culture. The mechanical execution of the work is praiseworthy in every respect, and the only sin to be laid at the door of the publisher is the unfortunately very common one of neglecting to provide an index, for which not even the poor substitute of headlines is offered.

The first and prevailing impression which the reader of these volumes receives is the predominant militarism of the Prussian court and rulers. Everything is done by and for the army; everything is subservient to the army; army officers are the chief persons in the realm, and civilians almost seem to exist only on sufferance. Liberals and Radicals are objects of aversion and suspicion, not so much because they oppose the Government as because they would curtail the importance of the army, cut down the period of compulsory service, and reduce the army estimates. The most serious and stubborn conflicts between the executive and the legislature have almost always hinged on these cardinal points. As Prince of Prussia, as Regent, as King, and as Emperor, William was the incarnation of this overshadowing military principle. Of this well-known bent of his character Schneider's book affords much minor corroboration, as in showing the immense importance attached by King and court to the matter of orders, crosses, medals, uniforms, and other branches of what, from an American point of view, seems little more than army millinery. We are informed that the King was very particular and conscientious in wearing the special uniform which each particular occasion demanded (vol. i, p. 191). On a visit to Olmütz in 1853, the Prince of Prussia started on his journey wearing a Prussian uniform; several stations before his destination he donned his Austrian uniform, because the Emperor of Austria was to meet him at the station; arrived at his lodgings he found a number of officers of the Sixth Prussian Army Corps waiting to pay their respects, and, in order to receive them becomingly, had to change the Austrian to the Prussian uniform. Scarcely had they departed when it was announced that the Emperor was coming to pay a visit, when the change had to be made back again; then a messenger came in breathless to say that the Emperor of Russia was coming at once, and a Russian uniform, with all the stars and ribbons thereunto belonging, had to be put on in place of the Austrian. After receiving Nicholas, the Prince returned the visit of Francis Joseph, which, of course, had to be done in the Austrian uniform, which latter had to be assumed again for dinner, as, during the interval spent at home, the Prince could not, with propriety, wear any but the Prussian uniform. All of this was done within two hours, and, as the author says, was unavoidable (vol. i, pp. 141-2). On one occasion the Prince administered a severe reproof in writing to Schneider because a newspaper report supposed to be written by the latter had stated that, at a military review, the Prince had appeared in civilian dress, when, as a matter of fact, he had been in full uniform (i, 34). If troops passed the King's window, he showed himself, but never without first buttoning up his uniform coat and putting on the order "pour le mérite" (i, 76).

Pages upon pages are consumed in giving accounts of orders and decorations conferred by the King and conferred upon him. Eight pages are required to ventilate the author's grievance at not receiving a certain order to which he considered himself entitled (i, 40-49). About the same space is filled with exuberant telegrams and letters exchanged between King William and the Emperor Alexander in December, 1869, when Prince Albert of Prussia visited St. Petersburg, and the Emperor conferred the order of St. George on the King of Prussia, the latter returning the compliment by sending the order *pour le mérite* to his imperial nephew. One brief specimen telegram is all we have space for; it is from William to his brother Albert, and is dated Berlin, December 8, 6½ P.M.: "Well, what an honor has been done me! I am overjoyed, but completely overcome. I take my revenge by offering the Emperor the *pour le mérite*. If you have two crosses, give him one" (ii, 87-96). As having some connection with this subject, and showing the footing on which Schneider stood with his patron, it may be related that in July, 1872, as the Emperor William was leaving Wiesbaden, he inquired for certain officials who were to bring him an order of the Red Eagle. As they had already taken their departure, Schneider offered to give up his, if the ribbon did not look too much worn. The Emperor said: "I want to do a favor to Col. von Witzleben by conferring this order on him before I go; you can take it to him with a letter, and can explain to him why the ribbon is not fresh." "Could I not tell the Colonel that your Majesty had taken the ribbon from your own breast? That would please the old gentleman still more." "I cannot forbid you to tell a lie, if you choose to do it; but I will have nothing to do with that" (iii, 246-7).

William's predilection for the army is also indicated by various anecdotes showing great knowledge and a remarkable memory concerning the personnel of the forces. Habitually he read the lists of the killed and wounded among the officers with great attention, sometimes attaching to each name some comment showing his intimate acquaintance with their personal history, and then laying down the paper silently, shaking his head (iii, 73). He grieved much over the losses his armies sustained. During the campaign of 1866 he declined an invitation to visit a theatre in Prague, saying: "One who has seen so many of his brave soldiers dead and wounded cannot go to the theatre" (i, 270). He was, indeed, of a kindly disposition, and it was a most difficult matter to obtain his signature to a death-warrant. When one was sent to him, he delayed returning it until the Minister of Justice, tired of waiting, would ask for it; then he began searching among his portfolios, and would say that he must have left it at Babelsberg; but if the request happened to be made in the palace of Babelsberg, it would unfortunately have been left in Berlin. When he assumed the government as King, he impressed it upon his assembled ministers as a sacred duty to call his attention to any, the most insignificant, attenuating circumstance in every case of capital punishment, in order that, whenever possible, the extreme penalty might be commuted. He went patiently through the details of every such case, and if he could find no ground for clemency, he put the papers on one side as if expecting that some festive event would afford a pretext for amnesty. When such an occasion did present itself, whole batches of death-sentences would come piling into the Ministry of Justice, all commuted to imprisonment for life. The author reports a case which shows how the King delayed in these

matters. A sentence of death was pronounced October 1, 1861; on January 13, 1862, the Minister moved before the King, "that justice be allowed to take its free course," that being the official formula in which the monarch assents to a sentence of death. Not until August 19 did the King give his assent; he did not affix his signature until at the meeting of the Ministers not a single voice was heard in behalf of the murderer. September 9 was set as the day of the execution; but as Prince Henry was to be baptized on that day, the Minister of Justice informed the King at Baden that the execution was postponed to September 16; the King returned this communication with the following marginal note, in his own handwriting: "Is there really no extenuating circumstance whatever which would justify a commutation? Anyhow, if at all possible, let another date be named, as I never wish to know the day of an execution." In consequence of all these delays the sentence finally *was* commuted (i, 161-4). Another similar story in the same place cannot be here reproduced for lack of room.

William's mildness of temper also manifested itself in his mildness of language and in his treatment of those in his service. Never, says our author (i, 71), did an abusive word or an oath pass his lips; he preserved his equanimity in the most trying circumstances; none of his servants ever heard from his mouth an unfriendly word or one that could wound him. Several anecdotes illustrate this trait, of which a single short one must here suffice. One night, at half-past eleven o'clock, when he was returning from the Rhine, the carriages which were to have met him at the station had, through a misunderstanding, been sent elsewhere. The situation was embarrassing to all the party. The King alone manifested no impatience, but simply said, "Well, let us walk; fortunately, the weather is good." He was so convinced that no one in his service would willingly cause him inconvenience that he attributed the occurrence to accident, and said nothing more about it. On one occasion, while the King was conferring with Schneider in the library at Babelsberg, he heard voices in the adjoining rooms, and said, "Come into the corridor; they are going to show strangers through here," and continued the conversation outside until the visitors had finished their inspection of the library. He was equally placid in keeping the even tenor of his ways amid the discouragements of his two great campaigns. To those who now look back on the wars of 1866 and 1870 they appear an uninterrupted series of brilliant successes, and they even appeared so to many who witnessed them or took part in them. The King, however, was always disposed to take a sober view, and in neither war had great faith in a speedy termination of the conflict. After the battle of Sedan, when all Germany was discounting the future, he alone foresaw that the campaign might last through the winter, and that the resources of the French were not nearly exhausted. It will never do, he said, to underestimate the foe (i, 269, ii, 231, 246, 274, iii, 71). But although he did not always share the general elation, he was not unduly depressed nor ever excited. On September 3, 1870, the day after Napoleon's surrender, he was transacting the civil home affairs of his kingdom as calmly as in the piping times of peace (ii, 223). His great industry and capacity for work are well known, but it will be news to many to learn from these volumes how fluent and even eloquent he was as an orator, how ready and precise as a writer. He never, we are told, corrected anything he wrote. His style was direct, without rhetorical phrasemaking, that being foreign to his nature. After the King had made a speech, he usually again dictated the substance of it to Schneider for his newspaper reports; Schneider would then bring him the proofs, and says that he never succeeded in making his report concise and positive enough, and that his finest passages, introduced to make a more effective impression, were unmercifully cut. It should here be added that Schneider's style is by no means exuberant, but rather easy and elegant, and almost always in correct taste, which throws William's simplicity of character still more into relief. One instance may be cited. In his speech delivered to his generals and staff on March 3, 1871, after the final conclusion of peace, the Emperor concluded: "But let us not forget that we all owe our thanks to Providence, which willed that we should become the instrument for bringing about such grand world-historical events." The next morning early he dictated this speech to Schneider, as usual, from memory. Schneider went into the next room to elaborate his notes. It occurred to him that not even the most powerful mortal was justified in assuming so much familiarity with the designs of Providence, and he allowed himself the alteration, "Providence has *permitted* us to become its instrument." Quite proud of the emendation, he returned to the Emperor's study, and submitted his draft for approval. When he came to this passage the Emperor interrupted him: "That is not what I said. I said, 'Providence has *willed*.'" "I had it so written in pencil," replied Schneider, "but in making my draft I doubted whether every reader would correctly apprehend your Majesty's course of thought. No mortal can know what Providence has willed." "Do you suppose," was the answer, "that I could have borne the heavy burden of this war, or that such successes would have been possible, if I had not been firmly convinced that Providence willed it, and chose us for its instrument? Write exactly as I dictated to you." Schneider, with his phenomenal obstinacy and impudence, insisted upon the Emperor's changing "permitted" into "willed" in his own handwriting and signing the entire manuscript, in order to satisfy his scruples (iii, 201-2).

Of the proverbial economy, not to say parsimony, of the Emperor, these volumes afford several illustrations. When Schneider asked for permission to go to St. Petersburg to the funeral of the Empress of Russia, the reply was, "Certainly, go ahead, but at your own expense!" A most characteristic incident occurred during the campaign of 1870. A poem had got into the newspapers in 1872 about a hacked and battered helmet which the King was said to have picked up from the battle-field and preserved as a memento. Schneider read it to William, who said there was no truth in it, and thereupon told him that he did remember a similar scene; he noticed a dead hussar on the battle-field, and what attracted his attention was that his uniform was perfectly new, showing that the man could not possibly have made the march from the boundary to the Moselle, but must have just joined his regiment. He told an officer to see whether the hussar was really dead, and, being assured of that, gave orders that the uniform should be taken off and sent to the regiment, where it might still do good service. On which Schneider took the liberty of remarking that Prussia no doubt owed its greatness to the unprecedented fact that it had had a series of fourteen economical rulers (iii, 229-30).

The Emperor's economical habits also manifested themselves in his well-known plainness of living, which, however, was partly the natural outcome of his plainness of character. When he took up his headquarters in Baron Rothschild's country house at Ferrières, and saw the lavish splendor with which it was furnished, he said, "I cannot allow myself anything of that kind, and have taken the plainest room." For his study he took the bath-room, but declined to use the magnificent bedroom to which it belonged, and had his cot put up in an adjoining chamber. He allowed himself no indulgence in luxuries or in idleness. None of those about him ever saw him unoccupied. He was habitually prompt in answering letters on the very day on which he received them, and had a habit of returning the answers in the same envelopes in which the letters came to him. It was in this way that he appointed Bismarck Chancellor of the *Empire*. On January 18, 1870, the day on which William was crowned Emperor, he returned the papers relating to the ceremony in the original envelope, but made a change in the address. It had read, "To the Emperor's Majesty, from the Chancellor of the Confederacy (*Bundeskanzler*)," and he crossed out the word "Bundes," writing over it "Reichs" (iii, 157).

Another instance of William's activity and endurance at an advanced age is found in the record of the day of Sedan, when he was at work bodily and mentally for sixteen hours, from nine in the morning till past midnight, notwithstanding which he was ready for his daily task at half-past seven the next morning.

Many other traits are here described and illustrated, such as his respect for property of the enemy, as shown in his refusal to take for himself any books from the libraries of St.-Cloud or St. Cyr, his consideration for Napoleon, and, generally, his generous disposition towards his enemies in war, his patience in adjusting the conflicting claims of the civil and the military authorities in the midst of war, his prevailing seriousness of character, and the like. For all this, and for many interesting details concerning the wars and the foreign relations of Prussia during the years 1866 to 1870, the reader must be referred to the book itself, which will no doubt be soon translated into English, as it has already been done into French.

Fifty Years Ago. By Walter Besant. Harpers. 1888.

Mr. Walter Besant's Jubilee volume is so richly illustrated as to make the cuts almost its main feature. These sketches of the look of the streets and houses, the crowds, the typical characters of the pavement, the demolished shops, taverns, and public buildings, the sports and the humors of the time, tell a story by themselves, and the revival of the *Fraser Gallery* of portraits is enough of itself to render the volume welcome. These caricatures often keep so close to the reality that they seem the most speaking likenesses, and make the men of the time live before our eyes in a most surprising way. Those of Coleridge and Rogers are "the lean and slippered pantaloon" itself, and have, besides, the individuality of their originals; Wordsworth's and Scott's are unique, and "Dizzy's" is the dandy *au naturel*, while those in which there is no caricature in fact (such as Carlyle's and Leigh Hunt's) are admirable portraits. The volume, however, is a written as well as a pictured one, and although one glances at the illustrations first, as nearly every reader will be sure to do, it would not be pardonable to neglect the text; for Mr. Besant has written with great vigor, and succeeds in representing the times very much more fully than do the illustrations, numerous and striking as these are.

He naturally begins with statistics of comparison between the old and the new, in order to gain perspective, but when he has satisfied the reader of the vast increase of the British Empire and all things pertaining to it, in the spirit which ought to be every one's at a jubilee, he gets quickly to his work. He really gives us his point of view in a word by saying that in 1837 England was still in the eighteenth century. The nineteenth began with machinery, the Reform Bill, and science, with steam communication, the expansion of the colonies, and the opening of the universities, with the diffusion of political power through the State, the philanthropic "interference" of law, the religious revival; but fifty years ago was before all this. Manners and morals then were perceptibly different to that degree which separates one epoch from another, and the controlling element in society was still the eighteenth century. For example, Mr. Besant says that, at the time of the accession of Victoria, "there was no loyalty at all either to the Queen or to the institution of a limited monarchy or to the constitution or to the Church." He is speaking, of course, of the people. "There had been no loyalty since the Stuarts; for exactly one hundred and fifty years not one sovereign who sat upon the throne of England could boast that he had the love of his people. Not one wished to have the love of the people. He represented a principle; he governed with the assistance of a few families and by the votes of a small class. As King he was a stranger. When he drove through the streets, the people hurrahed; but they did not know him and they cared nothing for him."

Mr. Besant pays much attention to the people; he thinks they were never worse off than in the middle of the eighteenth century, never more degraded, and in 1837 this brutal stage of their condition still continued. He wonders how England got on without a mob revolution, and seems to ascribe the apathy of the masses to their being cowed by "Father Stick"—in other words, to the habit of wholesome obedience inculcated by flogging, in a time when everybody was whipped—women at Brideswell, criminals at the cart-tail, 'prentices, soldiers, sailors, slaves, and boys. The number and the virulence of abuses were, to a man of the author's eyes, astounding. The condition of the prisons accuses the civilization of the time, and that of the factories and mines brings a still heavier indictment against its Christianity. Yet Mr. Besant acknowledges that those who were responsible for these things or reaped their profits, and who looked on unmoved, were very good, well-intentioned people, fond of their own interests, but with no worse hardness of heart. The progress made in bettering the condition of the laboring classes in the last fifty years constantly provokes a pæan of thanksgiving from him:

"It is not true, as stated in a very well known work, that the poor have become poorer, though the rich have certainly become richer. The skilled workingman is better paid now than then, his work is more steady, his hours are shorter. He is better clad, with always a suit of clothes apart from his working dress; he is better taught; he is better mannered; he has holidays; he has clubs; he is no longer forbidden to combine; he can coöperate; he holds meetings; he has much better newspapers to read; his food is better and cheaper; he has model lodging-houses."

With this reassuring passage one can turn from this portion of the volume with better spirits; for what with ignorance and atheism, gin and rum, the chimney-sweep and the child-trap keeper, the rowdy fair, the prison, and the criminal code with two hundred and twenty-three capital offences, these chapters are chilling reading.

The people were but a part of society, and Almack's was at the other extreme, with Crockford's for diversion, and the land of clubs and cards. This lives for us in Thackeray. Then there were Lady Blessington's and Holland House, in literature. The list is too long to be enumerated, for Mr. Besant covers a broad field. One or two of the more striking of his observations may be cited. The theatres entertained about twenty thousand nightly, and now he reckons that, notwithstanding their increase and the growth of London, they do not have more spectators. The reason is, that city men live in the suburbs now, too far away to come in for the play, and it is left for the visitors largely to support the drama. If the theatre had grown as the city has, there should be six times as large an audience. On the other hand, the clubs, which then had twenty thousand members, are now calculated to include one hundred and twenty thousand. This indicates the vast social change which has broken down old professional barriers of intercourse and caused a more free movement. It also indicates the decline of the tavern, which was the old club-room, and was still in vigor fifty years ago. Mr. Besant seems to lament this change. Another loss which he regrets is the decline of the Ring, and he hails the prospect of its revival with enthusiasm:

"The decay of boxing during the last twenty-five years has been certainly followed by a great decay of the national pluck and pugnacity, and therefore naturally by a decay of national enterprise. We may fairly congratulate ourselves, therefore, that the noble art of self-defence is reviving and promises to become as great and favorite a sport as before. Let all our boys be taught to fight. Only the other day I read that there are no fights at Eton any more because the boys 'funk each other.' Eton boys funk each other! but we need not believe it. Let there be no nonsense listened to about brutality. The world belongs to the man who can fight."

Few on this soil will share Mr. Besant's regrets or hopes on this subject. Another fact he remarks upon is that the "noise of mighty London" is no longer heard. There is still a rumble, but not the old roar. "Your London, Eighty-seven, will not know how to roar"; first, because the streets of fifty years ago were "not macadamized or asphalted or paved with wood; next, the traffic of wagons, carts, and wheelbarrows and hand-carts is vastly greater than you had ever previously imagined; then there is a great deal more of porter work done in the street, and the men are perpetually jostling, quarrelling, and fighting"; to which elements of discord the man of Thirty-seven goes on to add the coaches before the time of railway traffic, the great freight wagons, the wooden sledges, the donkey with coals, and the whole Babel of street cries, now silent. But the characteristic of the "roar of London" is not its loudness, but its continuousness.

The subjects which Mr. Besant has drawn into his volume are as various as the aspects of life in the greatest Christian city—though the adjective seems strangely out of place. The great topic of the position of women, which was correctly described by the title of Mr. Mill's treatise as "subjection," is lightly touched upon; that of practical jokes somewhat fully, and wonder (in which we share) is expressed that people did not fall upon the wits, and especially Jerrold, with immediate personal violence. That there is a brutality in superior wit as well as in superior muscle, the anecdotes of the time amply show. In this respect manners have improved, if we have lost something in dignity and graciousness of demeanor, the ways of "the old school." Mr. Besant protests, however, against the notion that we have lost in leisure. He declares he cannot find that vaunted "leisure" either in the fiction or the fact of the eighteenth century, which was one of downright hard labor commonly speaking—much harder than to-day's. It was just at this period, too, that the "great drop" in poetry occurred, following the popularity of Byron. The British public suddenly, and without warning, stopped buying verse, and it has never begun again, poetry continuing to be the most sluggish article in the literary market to this day. The one thing that has suffered no change is the Court. Now, as then, the Court is in the hands of a few families and entirely disconnected with the life of the nation, which goes on as if the Court "did not exist." Mr. Besant put it in italics, but plain print will be emphatic enough: "The whole of these men who in this generation maintain the greatness of our country in the ways where alone greatness is desirable or memorable, except in arms—the only men of this generation whose memories will live and adorn the Victorian era—are strangers to the Court."

It will be seen that his volume takes a wide range, that it is not the year 1837 he tells of, but rather the social conditions of an age, with much comparison of old and new. There is next to nothing of individuals in his pages; but the lack is made up for by the "profuse illustrations," which include the faces of the distinguished persons then alive. Among the rest we observe a curious one of Emerson at the period, and another of Tennyson, both small. But both in cuts and text the volume is equally happy.

Gouverneur Morris. By. Theodore Roosevelt. [American Statesmen Series.] Boston: Houghton, Mifflin & Co. 1888.

Of the three clearly marked classes composing the population of New York at the date of the Revolution—the great landholders, the rich traders, and the farming and artisan multitude—the first was unquestionably that one which risked the most in taking up arms. If the rebellion failed, the fate of its members was sure ruin, and probable hanging. If the Revolution triumphed, an untried government by the many boded danger to their station and estates. All honor to those whose convictions ranged them on the right side, against their doubts whether it was the safe one. How great the wavering and the conflict were can only be noted in an epitome like this biography. Curiosity as to details may be amply gratified by the venomously prejudiced but instructive monograph of Dawson on 'Westchester County in the Revolution.'

The family of Gouverneur Morris was of the manorial class in that county. As a younger son, of slender means, he chose this city for his field, and the law for his profession. His preceptor was William Smith, afterwards Chief Justice of the province, an enigmatical character, described by Tory historians as one of that young triumvirate of Yale graduates, resolved on pulling down Church and State, who, in the year of Morris's birth, formed a club with that object. The pupil's liberal bent was not likely to be warped under such culture. His profession, bringing him into association with Hamilton and Jay, he soon exchanged for political action, which thenceforward united them as the three leaders among the statesmen of New York.

That Morris did not run an equal race in statesmanship with the other two, and does not stand quite their peer in history, was not due

to want of power, or conviction, or honesty. He was fertile in thought, a terse and picturesque speaker, and almost prophetic in foresight. But "he inherited a certain whimsical streak, that ran through his character." While this eccentricity heightened the charm of his personality, it sometimes deflected his aims, and perverted his conduct into inconsistencies that bear no explanation except such as this congenital defect supplies. As an early instance, while yet under age, he effectively attacked a bill pending in the New York Assembly to provide an issue of paper money, pressing all those arguments unhappily too familiar to us by iteration. A few years later, dropping his theories, he reported, while a member of the Provincial Congress, in favor of such an issue, to be made a national measure. The best excuse for inconsistency is that his doctrine was right in the first case and his practice necessary in the last.

A few years later, at the age of twenty-eight, he proved his mastery of the subject by a series of essays on finance and taxation. Their merit led to his selection as assistant by Robert Morris, official "Financier" under the Confederation. In this office he did great service by aiding to establish the Bank of North America; and still greater by preparing a plan for the national coinage, which, as afterwards simplified by Jefferson and modified by Hamilton, became the basis of our present metallic system.

The next step in Morris's public career was his mission from Pennsylvania as a delegate to the Convention to form a National Constitution. No one brought to that assembly a more thorough-going national spirit. In that gathering of the sifted genius of the country he held place with the best as a broad and ingenious thinker, a keen reasoner, and a precise and vigorous speaker. In discussion he was constant and insistent, calling things by their right names, and speaking out on the question of slavery the truths that others whispered. On most of the other subjects of debate in the Convention, Morris took sound positions, and enforced them with power. The biographer finds fault with his incurable cynicism and disbelief in all generous motives. In such an assembly the *advocatus diaboli*, exceptional as he then was, may be a safer counsellor, though not for his own fame, than a sentimentalist.

Probably his "deep-rooted distrust of mankind" inspired two plans proposed by him, so singular that the most excessive whimsicality cannot account for them. One was, to constitute an aristocratic Senate for life, with a democratic House, each having a personal interest in watching and checking the other. The friction even under our present system may teach us how such machinery would have jarred and strained until it came to a full stop. The other proposition, less theoretical, but more narrow and short-sighted, was to secure to the seaboard States, by a constant majority of votes, the absolute control of the Union, and the right to impose such conditions on the Western States, when admitted, as to keep them always subordinate to the East. He feared combinations between the West and the South injurious to Northern interests. No one could then foresee the rise of a counterbalancing Northwest.

A singular instance is within the reviewer's experience of a like want of foresight in a great mind. Twenty years before the civil war, Judge Story, lecturing to his law classes, often intermingled with his vivid recital of the difficulties in framing the Union, and his fervid counsels of devotion to its maintenance, grave doubts and warnings as to the danger to be feared from a future combination between the West and the South to seize and divide the public domain. The seer had no vision of the slaveholders' war.

Business interests called Morris, when thirty-seven years of age, to Paris. He arrived there early in 1789, while Jefferson was our Minister, and while the French Revolution was in the first stage of its development. In the spring of 1792 he succeeded Jefferson and remained as Minister until recalled in 1794, at the request of the French Government, only because Genet had just been withdrawn at the request of ours. He remained some time longer in Europe, engaged in complicated business affairs, and returned to America, after an absence of more than nine years, in 1798. These years witnessed the most amazing events of modern history in the hideous progress of the French Revolution, of which his diaries and letters preserve a contemporary record of surpassing interest. His insight, his experience, his impartial truthfulness, and his relation as friend and counsellor to all who were best worth knowing in Paris, give these writings a value shared by no other record of that period. The ample extracts given by the biographer are among the most interesting pages of this volume, and justify the statement that his writings are more valuable to the historian of his time than those of any of his contemporaries. His official duties were discharged under difficulties and amid dangers from which the envoys of all other nations judged it prudent to withdraw, and with such courage, dignity, and wisdom as well merit the praise that "we have never had a foreign minister who deserved more honor than Morris."

Curiously contrasting, yet in many respects curiously resembling, the life of Morris in Europe, was that of another self-expatriated American. Joel Barlow, two years his junior, came to Paris a year before him, and left it a year after him. He, too, sold wild lands, for which purpose he first went out. He, too, speculated boldly, and made a fortune in large business enterprises. He was much in England, too, and no friend of that Government, and closely allied with the French leaders, but with those of the worst kind. He even supported the Revolution as a pamphleteer, became a French citizen, and was talked of as a member of the Convention from Savoy. Instead of charming letters and valuable diaries, he achieved the failure of a stupendous epic. Yet in the public employment, under a Federal Administration, he braved great dangers and rendered great services in Barbary. We do not recall any mention of him in Morris's published letters. They must have met, for both were friends of Jefferson, and it would be interesting to know how they regarded each other.

Morris reëntered the Senate in time to assist at the decadence of the Federal party. As time went on, the weakness of the new Administration exasperated Morris into "an opposition so violent that his follies surpassed the worst of the follies he condemned." The painful details of the closing days in his public career are minutely pictured by the biographer, culminating in the description that "throughout the war of 1812 he appeared as the open champion of treason to the nation, of dishonesty to the nation's creditors, and of cringing subserviency to a foreign Power."

The biographer's style is easy, graceful, and spirited, while his method leaves something to be desired. It is rather discursive, apt to effervesce into facile generalities on slight suggestion. In minor points, we could miss without regret the uncouth Gallicism, "goes without saying," that would have delighted Jefferson; and could wish that "voiced" had never crept into books from the reporter's column. And in another edition, besides some typographical amendments, "cet éloge," instead of "cette," and *Carnes* corrected to *Carmes* would be welcome.

Housekeeping Made Easy. By Christine Terhune Herrick. Harper & Bros.

THIS volume is made up of a series of papers that appeared first in *Harper's Bazar*. One cannot look through its pages without feeling that the writer is a sensible woman, with a practical knowledge of the subject on which she writes. If there is a novice in housekeeping who has not a theory of her own to carry out, she will find a safe adviser in Mrs. Herrick, and she will be sure of finding rules for the ordering of all departments of her new realm. Indeed, so minute are the directions that one is disposed to think there is to be a revival of the methods of our grandmothers as well as of their fashions in dress. Of late it has seemed as if the minute attention of the mistress of the house to the duties or economies of the household, was an old fashion that was passing away. Our author is evidently not of this school; her book is meant as a guide to the mistress of a small establishment who is just coming into her kingdom. The estimates and the lists given, however, are often meant for a family of five, rather than the family of two which is the usual number a novice has to keep house for, unless she marries a man with a "ready-made family."

In the furnishing of a house Mrs. Herrick wisely distinguishes between the "must haves" and "may haves," and she gives a scale by which to proportion expenses that seems a good one in the main, if she had only allowed a wider margin for the unforeseen drains on the purse. It is as true in regard to household contingencies as in other things, that it is the "unexpected that happens." Thus, "a man with an income of two thousand dollars a year has no right to devote more than one-fourth of that to payment for the roof to cover him. If he can get it for less, so much the better. . . . It may at least be said that not more than one-quarter should be given to food, not more than one-eighth to service, and about the same amount to fuel and lights." This leaves only one-quarter of the income for clothing, etceteras, and the "unexpected." We are afraid it is not enough. Unless there is a fairy godmother in the family, there will be heartaches in January and in July, and heartaches cause bodily aches and failing strength in the head of the family.

The house Mrs. Herrick recommends one to search for will be hard to find, we suspect, but one is so often called on to sacrifice one's ideal, that it may as well be done at the outset. She gives good advice about asking the landlord for all needed repairs and changes before taking the house, and about making the agreement in writing. She advises a clear understanding with a servant as to her work and her privileges before she is engaged. There are also wise directions as to giving a servant time for the care of her own room, and for saving her trouble by waiting on one's self. There are two sides to the question of supplies in large quantities: the housekeeper can tell better whether too much is used if they are obtained weekly or monthly. Mrs. Herrick dwells too much on drapery. In her regard for curtains and portières, she seems to lose sight of the general principle, that because they make a large room look cosey and inhabited, they also belittle a small one and make it seem "stuffy." She is fully alive to the horrors of a "parlor set," or of

an ornamented dust-pan or milking stool, or the family photographs on the walls; and she is aware of the power of growing plants and of books to give a room an air of being lived in. Yet she sensibly says, in speaking of the sitting-room, "If this is to be a place where every one may feel at his ease, rigid principles cannot be established. The home feeling is worth more than even spotless tidiness."

The fault of the book is, that it does not clearly distinguish between the desirable and the possible in regard to the style of living, and it often leaves one in doubt whether one maid or two or more are expected to do the work which is mapped out. In a family of five, where only one servant is kept, if there is a dinner of five courses, it will take at least three hours to clear the table, wash the dishes, and return them to their places. If the mistress attempts to have so much done each day, she will lose either her health or her maid, and perhaps both. It also seems as if the writer made the common mistake in America of recommending a too elaborate menu for the entertainment of company, which, of course, leads to the other mistake of entertaining but seldom. She recommends putting by part of one's income each year, but, alas! she cannot solve the problem how one is to avoid living up to one's income when the income is small. It would have been well if the book offered guidance as to the amount of tea, coffee, laundry soap, and such things required each week in a small family, that the housekeeper might be provided with a standard by which to order her own outgoings.

'Housekeeping Done Thoroughly' would have better defined the book. Rules given may reduce housekeeping to a science, but it does not follow that it is easy to acquire the science, nor that the rules are carried out without effort. To keep house is the best and the truest way of living, but it is not the easiest way, especially if the eye of the mistress is to be in every place, as this book recommends, and as is undoubtedly best when her income is small. The true woman will bear her housekeeping burdens cheerfully and uncomplainingly, as a true man bears the strain of providing for the needs of a family; and the happiness that comes from a duty fulfilled will help to lighten her task.

Cricket. By A. G. Steel and R. H. Lyttelton. Boston: Little, Brown & Co.

THIS is another of the Badminton Library of books devoted to sports and pastimes, and it is as interesting to those who care for such subjects as its predecessors have been. Mr. Andrew Lang contributes chapters on the "Archæology of the Game" and on "Border Cricket," while Mr. F. Gale writes of "Country Cricket," Mr. W. G. Grace on "How to Score" and "Outfit," Mr. R. A. H. Mitchell on the "Art of Training Young Cricketers," and the two editors divide the remaining eight chapters between them.

In endeavoring to ascertain the age of this "great, glorious, and unsurpassable game," as one of its admirers calls it, Mr. Lang refers to a miniature in the Bodleian Library, dated 1344, in which a woman is seen bowling to a man; but he adds, with characteristic humor, that the evidence of art is never very trustworthy, as the painter may have been a woman, or a monk, or an uneducated person! There is, however, very little doubt that the name was derived from the A. S. *cric*, a staff, corresponding to the French *crosse* used in the game of lacrosse. Although references to the game are not frequent in early literature, there is no doubt that it was permanently established as a national pastime many years before Pope thought it worthy of his satire. Writing in 1740, Lord Chesterfield says: "If you have a right ambition, you will desire to excel all boys of your age at cricket as well as learning"; and to a foreigner visiting England to-day the intense love of cricket which has been gaining strength through many generations will probably appear one of the marked social peculiarities of the people. An American, ignorant of this peculiarity of English life, will find it difficult to believe that only the other day an important debate in the House of Commons had to be postponed because a majority of the members were watching the Eton and Harrow match at Lord's!

There is an anecdote, well known to English Public School players of thirty years ago, which illustrates this somewhat comical exaltation of the national game. An old cricketer had two sons at Eton, and the great ambition of his life was that they should get into the school eleven. This was happily accomplished, and when the day came for the great annual match with Harrow, the old gentleman arrived early at Lord's ground, his heart full of exceeding great joy. Unfortunately Tom, the elder boy, was run out before he had had a chance to distinguish himself, and Archie, the younger, was bowled without making a run. In the evening, the old gentleman was found by a friend gloomily pacing to and fro in a remote corner of the ground, and the only explanation of his unhappiness he vouchsafed was, "Tom was unlucky, but d——n Archie!"

Mr. Lyttelton holds that there are three delightful moments in life connected with games: (1) Making chase one on the floor at tennis; (2) a successful drive at golf; (3) a crack to square leg off a half-volley just outside the legs —and those who understand these particlar sensations will be disposed to agree with him. But there are also plenty of unpleasant sensations in cricket. Take, for instance, Mr. Lyttelton's description of the pleasures of wicket-keeping:

> "There are several seconds, therefore, when the wicket-keeper is only conjecturing what course the ball is taking, and is certain of but two things—one, that the ball is hard; the other, that it is advancing in the direction of himself with terrific rapidity. Then, even if you see the ball plainly, it may happen to be, and frequently is, straight, and a straight fast ball raises unutterable emotions in the wicket-keeper's breast; for who knows what devilish tricks the ball, to say nothing of the bails, will play after the wicket is struck, and the course of the missile diverted, not stopped? The writer was once struck by the ball on the eye and by the bail on the mouth at very nearly the same second."

Nowadays cricket grounds are so true that a good deal of the danger is eliminated, but Mr. Lyttelton very truthfully remarks that long-stopping on Lord's ground in 1861 and 1862 was no laughing matter. There is on record a Public School match in the latter year in which the wicket-keeper was incapacitated early in the game by a blow on the head, and the unfortunate longstop looked—and felt—like a defeated prize-fighter, at the end of the second day. But in spite of these disagreeables there is undoubtedly a wonderful fascination in the game, not only for the players, but also for the lookers-on. True, the game loses much by the endless delays that seem inseparable from it, by the pokey play that has come into vogue with the modern slow-twisting bowling, and by the unsatisfactory state of the law in relation to *leg before wicket*. But though the important matches in England always last three days, and are very often unfinished at the end of the third day, owing to lack of time, the fact remains that ten or fifteen thousand people will pay to see the play each day. An American audience, accustomed to the rapid changes of base-ball, would regard such a performance in the same light as a Chinese drama which takes several weeks for its complete evolution; and yet, in Philadelphia, cricket, with certain American improvements—all in the direction of saving time—is unmistakably popular. This may be due either to climate or to some subtle similarity of temperament between the average Philadelphian and the average Englishman—a point which may be left to scientific investigation; but in spite of this fact it is extremely improbable that cricket will ever take the place of base-ball in this country.

Nor, on the whole, is it desirable that it should do so. At the great English Public Schools a natural turn for cricket in a boy is absolutely certain to result in a more or less serious impairment of his education; and when he comes to man's estate and realizes that there are more important things in the world than cricket, he finds it exceedingly difficult to make up for lost time. The fact is, that the time devoted to the game at these institutions is not in proportion to its value as an exercise, but to the national overestimate of its importance. The ever-increasing class of idle young Americans may well take to cricket, for it is not only admirable as a game, but is likely to develop many valuable moral as well as physical qualities; but those who have to make their way in the world cannot afford the loss of time involved in a thorough cricket training, and they are fortunate in having so good a substitute as base-ball.

There is much in this volume, however, that will interest any reader who cares for games, even though he be neither a Philadelphian nor a gentleman of leisure. Mr. Lang's chapters are not unworthy of his literary reputation, and the purely technical chapters on batting, bowling, etc., are, as a rule, well written. It is curious to note how a technical term will occasionally make a sentence unintelligible to the uninitiated, as, for instance, when Mr. Steel says: "Straight long hops do more to *get in the eyes* of batsmen than any other sort of ball."

The History of Protective Tariff Laws. By R. W. Thompson, ex-Secretary of the United States Navy. Chicago: R. S. Peale & Co. Pp. xii., 525. 8vo.

THIS book is not a history; it is a campaign shriek. Perhaps we should rather call it a long-drawn roar, for the intensity of a shriek cannot be kept up for 525 pages. Of intelligent historical investigation there is no trace. The author gives us abundance of quotations from the utterances of various public men, chiefly such as can be conveniently culled from the 'Statesman's Manual,' with occasional resort to the Congressional debates; at times we have a row of figures, such as may be got from the reports of the Secretary of the Treasury; but of original investigation, or even of pertinent information, there is not a particle. One could learn from the book the rate of duty on hardly a single article under any tariff act; there is no pretence of endeavor to trace out the effects of any duty.

The book, in fact, adds but another to the list of empty diatribes against British Free Trade. We are sorry to speak of it with contempt, for a careful specific discussion of the effect of duties, from a protectionist point of view, would deserve a respectful hearing. But what are we to say to an author who tells us, without further ado, that the "derangement of

business" in 1837-39 was due to the "threatened withdrawal of protection" under the Compromise Act of 1833?—who sagely remarks that "if revenue tariff could protect, it would be accidental, not incidental"? Mr. Thompson ascribes, in an off-hand way, the revival of trade in 1842 to the Tariff Act of that year. But in discussing the period between 1846 and 1857, he takes pains to show that prosperity was then due to other causes than the moderate duties. The idea that, when a protective tariff exists, other causes may also have an effect on general welfare, seems never to occur to him.

We are given several chapters on the Tariff Act of 1789, and there are lengthy extracts from the writings of Washington, Hamilton, Jefferson, Madison, Gallatin, and Jackson, all intended to show that these were indiscriminately in favor of protection. It is amusing to see Gallatin, the ablest of American statesmen in the advocacy of free trade, put side by side with Hamilton, the ablest of the protectionists. In contrast with this copiousness, we have hardly a word on the Tariff Act of 1828, the most striking and interesting of the earlier acts; which is the more peculiar, as this measure is generally cited by protectionists as a crowning example of beneficent tariff legislation. We may note by the way the extraordinary misstatement that Jackson's election in 1828 was due to his being *more* of an advocate of protection than Adams, and that the result of the campaign was, therefore, a vindication of the protective policy! We have the vaguest description of the acts of 1842, 1846, and 1857; there is bare mention of the Morrill tariff of 1861; and then the narrative, such as it is, stops abruptly. There is not a word on the history of the present tariff, or of the process by which the existing system has been built up since the civil war. After reaching the year 1860, we get nothing but half-a-dozen concluding chapters on the advantages of protection, on home markets, on the selfishness of England, and, of course, on the Cobden Club. It is delicious to be told that the Cobden Club is "a political organization which has become formidable in this country by the character and intelligence of its members. It has the centre of its operations in New York city (!), where it is mainly—as is believed [note the diplomatic caution of this qualification]—supported by the large body of importing merchants who there represent foreign capital and manufactures."

Perhaps the most remarkable feature of the book is in the illustrations. These are diagrams scattered through the volume in the most inconsequential manner. Pink, yellow, and green circles and squares show "the world's manufactures"; "cereal products" (lovely rose-pink circles on a pale-green ground); the comparative wealth, income, and debt of various countries—in all of which the United States, of course, comes out first. These and other pictures are obviously supposed to convey their own meaning to the reader's mind, for there is not the slightest allusion to any of them in the text. Thus we have a diagram of the average yearly wages of artisans in the United States opposite a long and wearisome account of Jackson's attitude towards the nullification movement; another, of the value of farm lands, opposite a discussion of the advalorem duties of the act of 1846; while another, showing the receipts and expenditures for the year 1887, is sandwiched into the history of the tariff of 1824. This last is really a charming picture. The golden coins flow from green and yellow funnels, which are labelled "tariff," "internal revenue," "public lands," into a huge rosy coffer, well clamped and studded with nails, and marked "U. S. Treasury"; thence they go by rosy pipes into baskets, again green and yellow, labelled "War Dept.," "Navy," "Pensions," and so on. No one who sees this work of art can fail to be convinced of the beauties of the act of 1824 and of protective tariffs in general.

The Life of Dr. Anandibai Joshee. By Mrs. Caroline Healey Dall. Boston: Roberts Bros. 1888.

A PATHETIC interest must always attach to the story of the first Hindu woman to seek our shores for access to that learning which the institutions of her own country denied her, though they could not prevent her thirsting for it. Mental does not lag behind physical precocity in Hindu women, if we may judge by the two representatives they have sent to us—Ramabai and Dr. Joshee. It is not every sixteen-year-old girl, even if born to English speech, that could write such excellent English as we find in a letter of Anandibai's when at that age; and the sentiments she expresses in it are such as we get from too few older heads. For example (she was writing to her new-found American friend): "I love these Mission ladies for their enthusiasm and energy, but I dislike blindness to the feelings of others. . . . How arbitrary would it be if I were to say that all you believed was nonsense, and all I believed was just and proper! My dear friend, I have nothing to despise. The whole universe is a lesson to me. I am required by duty to respect every creed and sect, and value its religion." And when the daring purpose of sailing to America, to study medicine, was fully fixed in her mind, there is something to remind of Emerson in the language in which she announced it: "My design meets with the approbation of a few, say one or two to a thousand, and they are probably youths, reformers, and patriots. I am not discouraged. I must not fear, but try my best and show all what we Indian ladies are like. Our antient Indian ladies were very wise, brave, courageous, and benevolent, and endurance was their badge. Let it be my badge also."

This book tells of her coming to our country, of her study and graduation at the Woman's Medical College at Philadelphia, of her broken health (it would seem that her medical friends were unaccountably inattentive to her marked symptoms of consumption), of her return to India, and of her death, not yet twenty-two, before she had done a stroke of that work for Hindu women to which she had determined to devote her life. The narrative is a brief and fragmentary one, but it reveals a strong and singularly noble soul. Dr. Joshee's wonderful mental poise appears in many ways, in none more than in her steadfast refusal to gratify those American friends who were fondly counting upon her "conversion." She welcomed all that Christianity had for her, and maintained that her way of looking at religion embraced whatever was of value in either Christianity or Hinduism; he would be bold who should say she was wrong.

The editing is not without faults. The reader has too much gratuitous information thrust upon him, and finds all too frequent finger-boards pointing out the proper places for him to bestow his admiration. Most serious defect of all, the treatment accorded Dr. Joshee's husband is extremely unfair. He is pictured in a wholly unpleasant light, and yet no proof is supplied that the characterization is just. He may have been all that he is said or hinted to be, but the reader is not shown the evidence. Where are Anandibai's letters to him—his to her? How much was he consulted in the writing of this memoir? With such questions must one who would not condemn a man unheard turn from the reading of this book.

BOOKS OF THE WEEK.

Franklin, B. Complete Works, edited by John Bigelow. Vol. 9. G. P. Putnam's Sons. $5.

The Pennsylvania Museum AND School of Industrial Art.

This Institution intends to hold an Exhibition at the Museum in Memorial Hall, Fairmount Park, Philadelphia, of Pottery and Porcelain made in the United States. The Exhibition will be opened on October 16, 1888, and closed on the 13th of the following month.

All firms and individuals are invited to compete for prizes in money, offered under the terms of the Joseph E. Temple Trust, and all intending to compete should inform the committee as soon as possible.

Those who do not wish to compete are invited to exhibit some of their best productions, with the view of bringing this branch of art before the public.

At least Seven Hundred and Fifty Dollars will be given in prizes for the three best objects of American Art exhibited, the following being considered:

1st. Beauty of Form.
2d. Excellence of Workmanship.
3d. Appropriateness of Decoration.

Any object awarded a prize becomes the property of the Museum, to be always exhibited and labelled as a piece bought by the Joseph E. Temple Fund, in the year of its purchase.

Full information will be given to any one deciding to exhibit.

If desired and claimed, transportation both ways will be paid by the Museum, but the packing must be done by the Exhibitor or some one appointed by the Exhibitor.

The sympathy and coöperation of all interested in this Art Industry are earnestly requested.

Address "Committee on Pottery and Porcelain Exhibition," 205 South 6th St., Philadelphia, Penna.

COLUMBIA COLLEGE.

SCHOOL OF POLITICAL SCIENCE.

The prime aim of this school is the development of all branches of the political sciences. It offers eight courses in political and constitutional history, nine in political economy, five in constitutional and administrative law, four in diplomacy and international law, three in Roman law and comparative jurisprudence, two in political philosophy, and one in bibliography—in all, forty-four hours per week through the academic year. The full course of study covers three years. For admission as candidate for a degree, the applicant must have satisfactorily completed the regular course of study in this college, or in some other maintaining an equivalent curriculum, to the end of the junior year. Special students admitted to any course without examination upon payment of proportional fee. For circular of information apply to Registrar, 49th St. and Madison Ave., N. Y. city.

F. A. P. BARNARD, LL.D., D.C.L.,
President of Columbia College.

GOLD MEDAL, PARIS, 1878.
BAKER'S
Breakfast Cocoa.

Warranted *absolutely pure Cocoa,* from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

J. B. LIPPINCOTT COMPANY'S
NEW SCHOOL AND COLLEGE TEXT-BOOKS.

WORCESTER'S DICTIONARIES,

The Standard in Spelling, Pronunciation, and Definition.

TWO ENTIRELY NEW BOOKS:

WORCESTER'S NEW COMPREHENSIVE DICTIONARY.

WORCESTER'S NEW ACADEMIC DICTIONARY.

These Dictionaries contain more words than any others of similar grade, *and are the latest School Dictionaries published.* New type, new illustrations, new plates have been employed in the production of these books. Many words have latterly acquired extensions of meaning, or other modifications in definition. In the latest editions of these Dictionaries special attention has been given to such points; and the publishers of the Worcester series of Dictionaries would invite those interested in educational matters to institute a rigid comparison of their publications with those of any rival series.

The *New Academic Dictionary* presents the accepted etymologies of nearly all the words in the language. The very latest and best authorities have been followed in the making of this book. It is believed that in respect of fulness and completeness no other etymological dictionary of like grade can approach it.

Worcester's School Dictionaries are adopted and used in New York city, Philadelphia, Boston, Cambridge, Chicago, St. Louis, Worcester, Lowell, Salem, Washington, and hundreds of cities and towns throughout the United States and Canada. Liberal terms for introduction and examination. Correspondence solicited.

LEADING EDUCATIONAL WORKS:

LIPPINCOTT'S POPULAR READERS.
First Reader, Second, Third, Fourth, Fifth, and Sixth (for advanced classes).

CHAUVENET'S GEOMETRY.
Chauvenet's Geometry, Abridged, Trigonometry.

CUTTER'S SERIES OF PHYSIOLOGIES.
Beginner's Anatomy, Intermediate, Comprehensive, Anatomical Charts, Human and Comparative. Nine in a set, 2x3 feet, on rollers.

LIPPINCOTT'S NEW SCIENCE SERIES.
Sharpless and Philips's Astronomy, Sharpless and Philips's Natural Philosophy, Key to Sharpless and Philips's Natural Philosophy, Greene's Chemistry.

BERT'S FIRST STEPS IN SCIENTIFIC KNOWLEDGE.
Seven Parts in one 16mo volume, or in four books, as follows: I. Natural History of Animals. II. Plants, Stones, and Rocks. III. Physics and Chemistry. IV. Anatomy and Physiology. By Paul Bert.

Descriptive circulars, price-list, and general catalogue sent to any address on application. Liberal rates for examination and introduction.

J. B. LIPPINCOTT COMPANY, Publishers,

715 and 717 Market Street, Philadelphia.

Dr. Sauveur's Educational Works.

"You are striking at the root of the evil by showing how to teach, and by inspiring with your example, as well as with your books, many most intelligent persons to begin on a new basis the work of instruction."—*Pres. D. C. Gilman.*

"I believe that the common methods of teaching languages, ancient or modern, to children and young persons, need to be profoundly changed, and changed in the direction of your 'Natural Method.'"—*Pres. Charles W. Eliot.*

"The HENESS-SAUVEUR SYSTEM is the rational way to lead the pupil to understand, speak, read, and write a foreign tongue. I would call it the Natural Method. In the hands of a spirited teacher it produces marvellous results, enabling the reader to think and express himself unconsciously in the new language he is acquiring, and to appreciate its genius and feel its niceties.

"I think it can be carried out even in the largest classes; it is so good and simple that I hope it will be fairly tried by teachers of languages. I desire to say this because I was never convinced of its practicability and excellence myself until I tried it."—*Ferdinand Bôcher, Professor of Modern Languages in Harvard College.*

CIRCULARS AND INTRODUCTION PRICE SENT ON APPLICATION BY

GINN & COMPANY

HAVE JUST PUBLISHED:

WENTWORTH'S COLLEGE ALGEBRA. By G. A. Wentworth, author of a series of Mathematics. 500 pages.

As the name indicates, the book was prepared especially for the use of college classes. It begins with a review of elementary topics, but the real work of the book commences with Quadratics. It is surprising that no distinctive College Algebra has been prepared before, and it is believed that this work will supply a well-marked deficiency in our lists of text-books.

THE HELENICA OF XENOPHON. Books I–IV.

Edited in the College Series of Greek Authors by Chancellor Manatt of the University of Nebraska. Introduction prices, including text edition: Cloth, $1.65; Paper, $1.35.

The commentary deals largely with the history and antiquities of the period, but provides grammatical information and suggestions.

SELECTIONS FROM RUSKIN. In the series of Classics for Children. By Edwin Ginn, with notes and a sketch of Ruskin's life. Introduction prices: Cloth, 40 cents; Boards, 30 cents.

This volume contains Ruskin's four lectures on Books and Reading, War, and Work, selected from 'Sesame and Lilies,' and the 'Crown of Wild Olive,' slightly abridged for school use, and provided with judicious notes.

A GUIDE TO THE STUDY AND HISTORY OF THE CONSTITUTION OF THE UNITED STATES. By W. W. Rupert, Principal of the High School, Pottstown, Pa. Introduction price, 70 cents.

This is designed to be used as a supplementary work in connection with any text-book on United States history and civil government. It is a valuable handbook for the teacher, and calculated to be of great assistance to the pupil.

A COURSE OF BENCH WORK IN WOOD. By W. F. M. Goss, Professor of Practical Mechanics in Purdue University. Introduction price, 70 cents.

Besides an Introduction on interpretation of mechanical drawings, the work includes three parts: First, the necessary explanations and descriptions of bench tools; second, a graded course of bench work; and third, the elements of wood construction. The work is illustrated with over 300 cuts and diagrams, and seems just the book required for the many manual training-schools that are springing up throughout the country, and for all schools where there is a department of industrial education.

Advance pages of YOUNG'S GENERAL ASTRONOMY may be had on application.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 6, 1888.

The Week.

THE Greatest Living Statesman's latest performance on the stump really staggers the reader. When he made his first defence of Trusts in his Portland speech, friendly organs, like the New York *Tribune*, sought to excuse it on the plea that the remarks were "casual and inconclusive," and the Cincinnati *Commercial Gazette* announced, in a triumphant tone, that "presently Mr. Blaine will speak of Trusts at length." Well, he has "spoken at length," and to make sure that nobody should style his remarks "casual and inconclusive," he carefully wrote them out in advance and read them from the manuscript. And what does he say in this long-promised explanation? Why, that "Trusts are State issues," that they "have no place in a national campaign," and that the fuss about them is ridiculous anyway — "*if* there be evils connected with these Trusts," he said on Friday, with the emphasis on the "*if*." At the same time he abused the editors who dissented from his Portland speech, many of them Republicans, as "impudent men, who mistake assertion for argument," and declared that they "either are ignorant or else they wilfully concealed the truth."

Notwithstanding Mr. Blaine's declaration that the National Government has no power to deal with Trusts, Congress continues to investigate the Cotton-Bagging Trust, and has got at the bottom facts very nearly. The substance of the finding is that the manufacturers, stimulated by a protecting duty of 54.13 per cent., overdid the business "by a large majority," and found themselves last autumn making a great deal more jute bagging than the market would take. A number of mills were obliged to stop. Naturally these were the ones least favorably situated, or least skilled, or least something, no matter what. It was a case of survival of the fittest. They were actually selling bagging at lower prices than it could be imported for. The Ways and Means Committee naturally concluded that under such circumstances they did not need protection, and therefore put bagging on the free list. Then the manufacturers decided, in the language of one of the witnesses, that "if they could not do any better, they would at least make what money they could this year." Hence the Trust, or the Combine, or the corner, or whatever it may be called. Probably this explanation will apply to some of the other tariff-protected Trusts. They see the end of their system coming, and they are "going for all that is out" while it lasts.

Mr. Blaine ought to have stuck to his first savings-bank statement in the way in which he put it. Nobody can deny that the average deposit of the wage-workers of some parts of this country, where the savings bank has long been in existence, is much greater than it is among the poorly paid operatives of Great Britain and Ireland. Nobody denies that wages are a great deal higher here, because the efficiency of labor is so much higher. Nobody denies that the American workman has a larger margin for saving; but why did Mr. Blaine limit his comparison to a small section of the country? He gave the total savings in all the postal banks of the United Kingdom at five hundred and twenty million dollars, belonging to wage-workers and everybody else—a very small sum for a population of thirty-eight millions. But there is one thing to be said: under the old system of protection in Great Britain which culminated in such disaster in 1840-46, the working people had no deposits at all in the savings banks that amounted to anything. Now, if Mr. Blaine were honest, he would not limit the comparison of the deposits in Great Britain to those in Massachusetts, New York, and Connecticut; if the people of the United States as a whole had a deposit in the savings bank equal to the average belonging to the population of Massachusetts, the entire deposits of the people of the United States would be over *nine thousand million dollars*. If protection to domestic industry has enabled the people of New York, of Massachusetts, and the rest of New England to save so much, why has it not enabled the people of the rest of the country to make an equal saving?

It would be interesting to know by what warrant the Republican Senators propose to push a tariff bill which is directly at issue with the tariff plank of the Republican platform. The reduction of the duty on sugar one-half would be at variance with the fundamental principle upon which the Republican platform declares that a tariff bill should be framed. Here is that principle: "The Republican party would effect all needed reduction of the national revenue by repealing the taxes upon tobacco, which are an annoyance and burden to agriculture, and the tax upon spirits used in the arts and for mechanical purposes, *and by such revision of the tariff laws as will tend to check imports of such articles as are produced by our people, the production of which gives employment to our labor*, and release from import duties those articles of foreign production (except luxuries) the like of which cannot be produced at home." Sugar is an article "produced by our people, the production of which gives employment to our labor." A "revision of the tariff laws" cutting down the duty on sugar one-half would not "tend to check imports of such article." On the contrary, it would inevitably tend to increase imports of such article. The Republican Senators may possibly be able to reconcile it with their consciences to repudiate the Republican platform in this fashion, but they cannot expect the Republican candidate for President to go with them. Gen. Harrison has already declared that he has "examined the platform with some care, and its declarations are in harmony with my views."

The London *Standard* has lowered its own standard by publishing a threatening article on the fisheries question. "If we have to deal with a nation of filibusters," it says, "let us know it." The word filibuster has a definite meaning, as the *Standard* knows. It signifies one who seeks to possess himself of his neighbor's territory by violence. It is this character which the chief Tory organ impliedly ascribes to the United States. It is amazing that such an ascription can be made to a country that has refused repeatedly, in recent years, to accept foreign territory offered to it in the way of peaceful negotiation. Our latest acquisition was Alaska, and this was almost forced upon a reluctant Congress and country. Mr. Goldwin Smith, in a magazine article a few years ago, said truly that "the United States was almost the only country in the world that looks at a mouthful before swallowing it." So far as Canada is concerned, we venture to say that outside of the contributions that Great Britain has made to our citizenship from the Emerald Isle, nobody ever thinks of annexing by force the smallest scrap of her territory. Nor would that thought be entertained if the power that stands behind Canada were as weak as that which stands behind Cuba.

Supposing that Senator Cullom is right in assuming that the President's recent message was a political move, what else than a political move was the Senate's Retaliation Act—the act of 1887? We have pointed out that this measure was a cowardly evasion of the duty of Congress, and a reversal of all the precedents of the past, since Congress, although possessed of full knowledge, refused to declare non-intercourse, but merely authorized the President to declare it in his discretion. How differently did the Congress of 1809 behave towards the two greatest Powers in Christendom when they had committed acts in contravention of our maritime rights. Here is the act passed on the 1st of March in that year, bold, explicit, and unequivocal:

"Be it enacted, etc., That from and after the passage of this act the entrance of the harbors and waters of the United States and of the Territories thereof be, and the same *is hereby, interdicted to all public ships belonging to Great Britain or France*, excepting vessels only which may be forced in by distress, or which are charged with despatches or business from the Government to which they belong, and also packets having no cargoes or merchandise on board. And if any public ship or vessel as aforesaid, not being included in the section above mentioned, shall enter any harbors or waters within the jurisdiction of the United States or of the Territories, it shall be lawful for the President of the United States, or such other person as he shall have empowered for that purpose, to employ such part of the land and naval forces or of the militia of the United

States or the Territories thereof, to compel such ship or vessel to depart."

We have examined the debates in the Congress of 1809 on the Non-Intercourse Act to see if any suggestion was made looking to the shirking of their responsibility in the premises and putting it on the President. No such thought was ever entertained or expressed. This bill was passed as above because, though the nation was in its infancy, Congress was in earnest and had no partisan end to subserve. The discretion was lodged with the President to declare non-intercourse at an end when the offensive acts should cease, but as to the inception of it, he had no more discretion than one of the pages of the Senate.

House Bill No. 155, which the President has just vetoed, bestows a pension on a man who never did a single day's service at the front, never left the State in which he enlisted—Maine—and deserted while there. He was finally discharged on a surgeon's certificate for disability incurred by a fall from a wagon at his own home, but the certificate bore the endorsement: "Never done a day's duty—is utterly worthless and unfit for the veteran reserve corps." Here is another proof of Grover Cleveland's heartless indifference to the sufferings of veterans caused by falls from wagons. It shows, moreover, how little he understands or appreciates the delicate feelings of a man who deserts before his regiment leaves his State, instead of deserting in the presence of the enemy, as Pat Ford did.

President Hyde of Bowdoin College is suffering the fate which befalls the New England man who ventures to dissent from the dominant sentiment of the community. He is the President of a college in Maine, where it is a tenet of good Republicans that a man has no right to be a Democrat, and that if he is so misguided as to support a Democratic candidate, he must be made to suffer for it. Having given the reasons which constrain him in the present campaign to favor tariff reform and the election of Mr. Cleveland, he is promptly notified, through "a letter from a prominent Bowdoin graduate living in a Western State," published in the Boston *Advertiser*, that he displays such independence at the peril of his future. "As you may imagine," says this letter, "the Republican alumni of the College feel outraged, and I may say to you that a sentiment is being crystallized into form, asking him to resign. We do not want that kind of a President at the head of Bowdoin." In other words, we do not want the kind of a President whose convictions are so strong, and whose sense of duty is so clear, that he follows the course which seems to him best for the interests of the nation, knowing perfectly well that this course would not only make him unpopular, but might cost him his position. The Republicans of Maine are greatly distressed in mind because Southern Democrats bulldoze negroes by physical force, but this offence is less grave than the moral intimidation which they themselves stand always ready to apply to white men.

Campaign lies multiply as fast as usual. One of the most nimble of the species is a pretended quotation from the London *Times*, extensively circulated in a leaflet signed "H. K. Thurber." In this leaflet Mr. Thurber says:

> "When the London *Times* thinks the best use they [the English manufacturers] can make of Irishmen is to help them to emigrate to this country and join the Democratic party, and thus help break down our protective tariff, that makes me think that our tariff is a great benefit to *this* country, and of course I range myself on the side of a protective tariff."

This particular lie having reached London in due course, it was ascertained that the London *Times* had never said anything of the kind. But it was too good to be lost. So a variation was tried, and the paragraph was credited to the London *Sunday Times*. Then the Chicago *Herald* put the question to its London correspondent whether the paragraph or sentiment quoted had ever appeared in the London *Sunday Times*. The correspondent replied by cable: "The London *Times* prints no Sunday issue, and the man who publishes the fact is either a liar or an ignoramus, and in neither case worthy of belief." Deprived of this resource, the Chicago *Inter-Ocean* replied that there is a London *Sunday Times* printed at No. 2 Salisbury Court, Fleet Street. It added that "every Republican paper that had published the extract, had honestly credited it to the London *Sunday Times*, and not to the London *Times*"—another lie, which its neighbor the *Herald* nailed instanter by identifying it in the columns of the *Inter-Ocean* itself of August 18, credited to the London *Times*, not the London *Sunday Times*. We have seen the pretended extract in several Republican papers kept standing at the editorial head. One of these, the Niles (Mich.) *Republican*, is now before us. We trust that Mr. H. K. Thurber will now recall his misleading circular to workingmen, and apologize to them for issuing it.

Another able-bodied lie we find going the rounds of the press credited to the St. Louis *Globe-Democrat*. Whether the *Globe-Democrat* ever published it we do not know. It recites that $58,300 was subscribed in England and sent to this country to carry the election of 1844, "to aid the free-traders during the canvass," and that the names of the men who furnished the money were ascertained. Of course, it is always well to go into particulars to some extent, but not to too great an extent. So the manager of this lie tells us that "over $51,000 of this sum was contributed in Manchester, Halifax, and Leeds, England, and in Glasgow, Scotland." No names of contributors are given, however. It is generally hard to prove a negative, but in this case it is possible to do so. England herself was wallowing in protective tariffs in 1844. She did not believe in free trade then any more than the St. Louis *Globe-Democrat* does now. Cobden and Bright were toiling to get the corn laws repealed, and did not succeed until 1846. Moreover, every student of history knows that the issue of our own election in 1844 was the annexation of Texas, and not the tariff at all. Indeed, it was one of the charges brought against Robert J. Walker, Polk's Secretary of the Treasury, that he brought forward his tariff bill in 1846 without any previous discussion of it before the people. It was said that the Democratic party had carried Pennsylvania with the cry, "Polk, Dallas, and the tariff of 1842."

A letter from the editor of the *Independent*, recently published in the *Voice*, is remarkable in more ways than one. It gives the Democratic party the regulation scolding, glories in the past of the Republican party, after the familiar fashion, and complains a good deal of the action of the Prohibitionists, although the conclusion it arrives at is, that Dr. Ward is mightily inclined to vote the Prohibition ticket. If he actually does, it will be because he thinks the Republican party has fallen under the domination of the saloon, and because its platform is, in Dr. Ward's opinion, a compound of "slush and mush that Harrison cannot stand upon without falling through." The funny part of all this is, that one turns in vain to the columns of the editor's own paper to find examples of such plain speaking. The reason is, of course, that the interesting gentleman who owns the *Independent* runs the politics of that publication. Having turned the theology of the editors upside down already, he now seems resolved to leave them nothing but the puzzle department and book reviews. The subscribers may not like it, but they had a good taste of Mr. Bowen's political quality four years ago, and have learned, we presume, that the madness into which every Presidential election stings him is soon gone. By the way, he must still have on hand copies of that circular he sent to irate readers, in 1884, begging them to bear with him until after the election, when he promised he would give over those political contortions which, even for him, he admitted, were painful.

It is a favorite argument of the defenders of Governor Hill that he had the same Mugwump opposition in 1885 that he has now, but that he was elected in spite of it. It is true that the Mugwumps opposed him in 1885, and they did so on the ground that his general course in office had not been such as to entitle him to reëlection. There were suspicions at that time that, in addition to using his office to promote personal and partisan ends, he had also been connected with transactions which reflected even more severely upon his character. What was suspicion then is proved fact now. The testimony in the aqueduct inquiry leaves no doubt upon that point. He was an ally with Squire and Flynn and a lot of Republican jobbers for the plunder of this city, and he profited by that plunder to the extent of having from $10,000 to $30,000 of his personal campaign indebtedness paid with it.

What the use or object of "Labor Day" is will doubtless appear eventually, but Monday's observance threw no light on it.

It was plain to be seen that Labor Day is a legal holiday, but all other legal holidays celebrate or commemorate something. What Labor Day celebrates or commemorates does not appear. It doubtless calls our attention to the existence of labor and laborers; but this is very like calling our attention to the sun at noonday. There is no phenomenon of the solar system more familiar to the human race than labor, and the class of laborers may be said, in a general way, to include the entire human family. It can hardly have been intended to show the strength of the laboring element of the population by means of the parade, because if the procession contained all our laborers, we should be in a bad way. It is said to have contained only about 8,000. On the whole, Labor Day seems to be simply an additional holiday or day of recreation, and if this be so, the name is a misnomer. It ought to be called "Non-Labor Day," as the only legal holiday the sole object of which is to enable men to stop working without being accused of idleness or laziness. On Washington's Birthday, Decoration Day, the Fourth of July, Christmas Day, and Sunday, we stop working in order to keep some great event in better remembrance, or fulfil some sacred obligation. But on Labor Day we stop work simply because we want a "day off."

The Sugar Bounties Conference in London has really accomplished what it set out to do. It has put machinery in force for abolishing the bounties in all the countries of Europe, except France, and France herself is expected to accede later. It has applied a species of coercion to other countries by prescribing that the countries acceding to the Conference shall not admit to their ports the sugar of non-acceding countries. This is clearly right and necessary if the principle is established that governments must not grant export bounties to the detriment of corresponding industries among their neighbors. But it remains to be seen whether Lord Salisbury can sustain himself before the English people on this ground. The principle is firmly fixed in British history and policy that you have no right to prevent the buyer of an article from getting it as cheaply as he can. If makes no difference to those who hold this doctrine whether the cheapness of sugar in the British market is due to one cause or another, whether it comes from the increased productivity of the beet root, or from the folly of a foreign government that chooses to tax its own people in order to supply the world with sugar below cost. We think that Lord Salisbury has done a good thing in bringing common sense to bear upon the governments of Europe in this matter, but we apprehend that he will find it difficult to sustain himself in Parliament on such an issue.

The judgment of Lord Chief-Justice Coleridge in the case of the Mogul Steamship Company furnishes an interesting illustration of the working of the Trust system. A combination of English shipowners, called a "conference," was made in China, to monopolize the transportation of tea, which they did by offering heavy discounts to shippers shipping in the vessels of the Conference. A rival shipowner who could not get into the Conference, and was ruined, accordingly sued them for malicious damage, but the court ruled that he had no case—that the law of trade is the survival of the fittest, and that the fittest is the man who can produce the desired result at least cost. The Conference, it will be observed, did not combine to raise prices, but to lower prices so as to drive rivals out of the field, the process by which nearly all the great retail stores have been built up, and against which it is difficult to contend, either by law or competition.

One of the humors of the home-rule agitation in England is to be found in a book on the Irish question entitled 'Ireland Under Coercion: the Diary of an American,' by William Henry Hurlbert, the late editor of the New York *World*. Of the merits of the work we know nothing, except from reviews in the English papers, who receive it as an anti-Irish contribution to the controversy with really amusing gratitude. The "first notice" of it in the *Spectator* occupies nearly two pages. What diverts us most is the *Spectator's* solemn announcement that "Mr. Hurlbert is not only a citizen of the United States, but evidently also a good Roman Catholic," and its reason for putting a high value on the book is, "that Mr. Hurlbert's study of Ireland has been the study from the point of view of a liberal Roman Catholic who cares a great deal more for the moral welfare of Irishmen than for any particular political system, but who is quite favorable to local liberties as long as these local liberties do not really imply moral anarchy." We fancy many an old acquaintance of Mr. Hurlbert's here will have aching ribs on reading this picture of him as a pious Catholic examining Irish sin with an anxious, pitying eye.

The Secretary of the British Legation at Buenos Ayres, Mr. Jenner, in a letter quoted in the London *Economist*, accounts for the great gains shown in the Argentine returns of revenue and trade by alleging that they are estimated in depreciated paper currency, at the rate of seven and one-half dollars to the pound sterling. In this way, he says, the reported foreign trade of $218,000,000, in 1887, really means only $145,000,000 on a gold basis. This is a great mistake, and we cannot account for the *Economist's* printing it without contradiction or correction. The returns made by the Argentine Treasury are estimated in "moneda nacional." That means, not the depreciated bank notes, which are called "circulacion forzada," but the established monetary unit of the Argentine Republic, the dollar, which is worth, according to the last report of the United States Mint, 96½ cents in gold. There is thus a slight inflation, but nothing like that charged by Mr. Jenner. It is undoubted, also, as we have before noted, that some discount is to be made from the face of the Argentine returns on account of the unnaturally high prices now ruling, due to the fever of speculation present in all branches of business. The paper money of the republic, or rather its suspension of specie payments, is the gravest feature of the financial situation. It is made more grave by a recent legal decision that contracts which actually mention gold dollars can yet be satisfied in paper money, unless the specific words "stamped gold," or "dollars from the mint," are used. Still, the great expansion of trade may enable the country to resume gold payments at the promised date, the 9th of next January.

The history of the successive reductions of the duty laid by Belgium on pig-iron illustrates the trustworthiness of protectionist predictions of ruin from tariff reduction. In 1856, the duty of $10 a ton was lowered to $4.80. Five years later the rate was fixed at $3, and in 1863, at $1. At each reduction the manufacturers of pig-iron took up the doleful strain of prophecy with which we are so familiar, and declared in the usual positive way that ruin was directly ahead of them all. But each time that the deadly blow at the Belgian industry was struck, it turned out to be not so much of a blow, after all, since the manufacturers, so far from closing their works, went right ahead and produced more than ever before. And so evidently wise has the policy of low tariff been proved, that now a majority of the chambers of commerce of the country have demanded that pig-iron be put on the free list. This will undoubtedly soon be done, as M. Beernaert, Minister of Finance, promises to recommend a law to that effect at as early a date as possible.

The decree of President (or Dictator) Barillas of Guatemala, revoking the law which made Livingston a free port and established a free zone in the adjacent territory, illustrates afresh the greatest of all difficulties in the way of a regular trade with Central America — arbitrary, inconsistent, and changing tariff laws. Guatemalan importers had a taste of the President's quality last December, when a decree was issued raising all duties 15 per cent., and that with only ten days' notice. The recent action in regard to the port of Livingston is the more indefensible in that it is in violation of the tacit pledge made in 1882. The law of that year, which made Livingston a free port, declared that it should continue to be such for ten years. Of course the right of repeal always remains with the law-making power, but the merchants whose goods in the Livingston warehouses are now held for customs, have good ground for complaint, certainly, at so peremptory a withdrawal of privileges which they had supposed were assured them. The whole move appears to be only a desperate reaching out for revenue to meet pressing needs, leaving the future reckoning, which will surely be all the heavier for this short-sighted policy, to take care of itself, after the true Spanish-American manner.

THE CHINESE TREATY.

THE treaty negotiated by Secretary Bayard with the Chinese Government, limiting the use of "permits" granted to Chinese laborers once domiciled here, but returning to their own country, and imposing further restrictions on immigration, was amended in the Senate by the insertion of a proviso cancelling all such permits absolutely. This proviso rendered it necessary to send the treaty to China once more for ratification. It is reported by way of London that the Chinese Government has rejected the treaty in its new shape, as it was almost certain that it would, but no official information on the subject has been received.

Here was a rare chance for somebody to "get ahead" in the scramble to gratify the hoodlum element on the Pacific Coast, and Mr. Scott, for and in behalf of the Democratic party, improved it. He promptly introduced a bill providing for the complete and absolute exclusion of the Chinese, treaty or no treaty, and this measure was passed by the House immediately and without a division. The bill makes it unlawful for any Chinese laborer, whether he was, is, or may be a resident in the United States, who has left or may leave before the act passes, and has not returned, to come back to the United States. It prohibits the issue of certificates of identity, and declares all certificates previously issued void and of no effect. Chinese laborers presenting them shall not be allowed to enter the country.

Mr. Scott's *coup* was so sudden that the Republicans in the House were dazed. A great game had been played for the hoodlum vote, and they had had no chance for innings. But in the Senate they were not caught napping. Senator Stewart of Nevada there got the start. When the Scott bill came over from the House, Mr. Stewart moved that it be immediately put upon its passage. Senator George of Mississippi moved that it be referred to the Committee on Foreign Relations. So many Senators objected to any reference to a committee that Mr. George was fain to withdraw his motion. Senator Butler of South Carolina suggested that such a bill might be a violation of an existing treaty, and that it would be well to look into that question before taking the vote. Senator Sherman, who usually "takes in" a situation very promptly, asserted the right of Congress to abrogate any treaty at any time with or without notice, and he so browbeat the halting Senator from South Carolina that the latter reluctantly consented to "fall in" behind the supporters of the bill, although he took leave to say that he considered the measure an open and flagrant violation of decency, which would not be thought of if there were not an important election pending. In fact, Mr. Butler came very near signalizing himself as a man of straightforward character and purpose among a lot of demagogues, but the pressure was too great. The debate continued till the hour of adjournment, so we have been spared the disgrace of the passage of such a bill through both houses in one day.

The gist of the measure is, that the Government of the United States violates its own faith by cancelling agreements deliberately made with a foreign government without extending to that government the usual courtesy of notice. Senator Sherman is probably right in his contention that treaties may be abrogated by either party. The Ohio statesman is usually right in technicalities and often wrong in the substance of things. The intention to abrogate the existing treaty with China is probably too strong to be resisted successfully either by Mr. Sherman or by any other Senator. In such case the only question remaining is whether we shall proceed in a way to conserve our own respectable position among nations and our own self-respect, or whether we shall sacrifice both in an unseemly scramble for the votes of the hoodlums. The Chinese laborers who have gone abroad on the faith of our laws, taking certificates entitling them to return, have just as many and as valid rights as anybody in the world. Among the rights belonging to them is the right to reasonable notice of any intended change in our laws. This right in every moral sense belongs to them independently of the treaty with China. Still more is the Chinese Government—our equal in the eye of public law—entitled to such notice. And what great evil is this tumultuous haste and breakneck speed intended to avert? To prevent 12,000 Chinese—12,000 at the outside, for doubtless some of these holders of outstanding certificates have died or made other plans for themselves—from returning to this country according to a fair agreement made with them and their Government. And if they are kept out in this way, their places will be taken in all probability by Italian laborers, who are as little liked but more feared in California than the Chinese. The Chinese are a meek and unresisting race; hence the contumely and cruelty heaped upon them in California. But every Italian carries a dagger, and nobody harms him with impunity.

WHERE ARE THE REPUBLICAN ECONOMISTS?

THE Republican party labors in the present crisis under a good many disadvantages, foremost among which is undoubtedly its having charged itself with the defence of a privileged class. In our day it is very hard for any political party to keep or obtain power, or even live at all, after it has become the advocate of exceptional legal privileges for a small minority of the community, such as our American manufacturers enjoy. Such privileges may, as our protectionist friends maintain, be very beneficial to the community at large, but keeping people convinced of it is dreadfully up-hill work. It may be good for Jones, for instance, on some sort of "general principle," that he should be made to pay Brown a pension or to purchase his goods above the market rate, but if he has to keep Brown satisfied with the arrangement for an indefinite period, he finds the wear and tear of the task increasingly serious. People always, sooner or later, grow suspicious of a man who is for ever trying to persuade them that they will grow rich by dealing exclusively with him at more than the market rate. They may for a while be persuaded that there is something in his theory, but they by-and-by begin to think that the argument is very queer, and that there must be a fallacy in it somewhere, although they may not be able to point it out. A party, in short, in our day which has to justify inequality of rights, has to fight against the whole spirit of the age, as it is called.

But next to this, undoubtedly the greatest disadvantage the Republican party labors under is the incapacity of its leading men for economical discussions. This is really the most remarkable political phenomenon of the day, and illustrates in a very striking way the false security about the tariff into which the war feeling and the size of the public debt lulled the party during the last twenty years. If the tariff had been a genuine economical creation—that is, had been imposed on the country after thorough discussion of the protective system—the party which triumphed in the struggle, and which was charged with the duty of watching over the system and bringing it to perfection, would by this time have had many leaders who could have made a good fight for it in the purely economical arena. During the period between Hamilton and Greeley, when the tariff men had to contend with their adversaries in the open field, and occupied no territory they had not fairly won, it always had such champions on hand, and they showed in one way or another that they understood the free-trade argument, and had some acquaintance with the theory and practice of foreign trade, and could give respectable reasons for the faith that was in them.

But the growth of the tariff in the guise of a measure of national defence, and the rapid identification of the enemies of high taxation with the enemies of the Union, long removed all incentive to the study of economical questions. The result is, that the party has not now a single man in public life or in journalism, with the possible exception of Senator Sherman, who is able to make even a tolerable resistance to the attacks of the tariff-reformers on economical grounds. Their articles and speeches are mostly stuffed full of puerile personalities, appeals to national or race prejudice, or fraudulent quotations from foreign newspapers. There has probably never been in political history anything more discreditable to a great party than the Republican reliance in the discussion of a question of domestic economy on English likes and dislikes. To watch what Englishmen desire and then do the opposite, is of course the policy of a child or an untutored savage, who is incapable of forming an independent judgment about his own interests.

As matters stand, the starting of the tariff

discussion by President Cleveland has caught the party without leaders or champions of any description. We are not indulging in any ordinary campaign sneer at Mr. Blaine when we say that, as far as we can see, his ignorance of economical subjects is, in a man of his age and experience, something remarkable. Of course it is possible that he knows more than he pretends to know, but we have in common decency to assume that his blunders and explanations and retractions are honestly made, or, in other words, that when he is on the stump he is doing his best. But from the day when he threatened Europe with the vengeance of the disbanded armies of the United States if it did not behave handsomely towards American silver, down to the day when he made the blacks of the South reduce white wages at the North to thirty cents a day, and when he filled the savings banks of Massachusetts with fabulous amounts of workingmen's economies, and "plastered" England all over with Trusts, he has been incessantly either making mistakes about matters of fact, or showing in some way that he does not understand the free-trade theory, and therefore cannot answer it.

There is, for instance, in not one of his speeches the smallest sign that he knows what is the now generally accepted theory of the source of wages and of the conditions of their rise and fall. If he had any knowledge on the subject, he would long ago have attempted to explain how it is that free-trade England pays higher wages than protectionist France or Germany or Russia—an oversight almost like that of a general who encamps in hostile territory without outposts.

Of Gen. Harrison's economical equipment there is even less to be said than of Mr. Blaine's. He frankly admits that the whole subject is Greek to him. He knows about education and the domestic affections, but about the tariff he is lost in innocent wonder. And yet these two gentlemen are the Republican leaders in the tariff debate, and they have no followers or supporters. There is hardly another speaker or editor in the party who has thus far shown himself capable of a tariff argument without abuse of England and the free-traders. The situation is a very odd one, and, so far as we know, has no parallel or precedent.

REGULATION AND CONFISCATION.

Two points with regard to railroad policy are now pretty clearly recognized by all sensible men, whether they represent railroads or shippers. The first is, that uncontrolled discrimination is an intolerable evil. The second is, that most of the attempts to stop this evil by statute have been extremely ill-advised.

It is easy to see the reason for these apparently conflicting statements. The right and wrong uses of railroad power are so closely intermixed that it requires great technical knowledge to stop the wrong without stopping the right also. The more complicated the organization, the greater is the difficulty from this source. The power of the railroad officials to do either good or evil is increased; the power of the Legislature to distinguish good from evil is diminished. This complexity of business organization is the central fact in the whole situation. It is this which gives the modern corporation its power as a monopoly. Railroad monopoly is only to a slight extent due to advantages of location. Still less is it due to special legislation in favor of corporations. The exercise of the right of eminent domain may sometimes make it possible to build railroads more cheaply than could otherwise be done, but it has little effect on their relations to the public after they are built. A railroad has a monopoly because one company can do the business much more cheaply than it can be done by several companies, so that only the most short-sighted policy will lead a railroad to place its rates at the level which will tempt the construction of a parallel line. For somewhat the same reason, adjoining railroad lines tend to consolidate, and the consolidated company, if properly managed, can serve the public better than the independent ones. And what is true of railroads is true, with various modifications, of nearly every other modern industry employing a large plant. The railroad monopoly differs from other monopolies chiefly in the extent to which it has been developed. The most important advantage of the single company is, that it can afford to extend its business without corresponding increase in expenditures. Business done by two companies must pay two sets of fixed charges; if one company by a slight change in methods can do the whole business, one set of fixed charges is saved. For any such extension of its business the company can make rates which little more than cover the wages and materials used in handling the new traffic. It is this possibility of doing a large business at slight addition in cost, which has been a chief factor in the reduction of rates on railroads, prices of manufactured goods, and other commodities or services in which large corporations deal.

But this implies that the new traffic is, in many cases, differently treated from the old. Some business bears the burden of fixed charges more fully than other business. Can the authorities of the corporation be trusted with an uncontrolled right to decide where this burden shall be placed? The history of railroad discrimination shows that they cannot. They have abused their power in such fashion as to furnish an excuse, though not a justification, for many of the most severe measures of restriction which have been tried.

The Granger legislation of 1871–75, however disastrous to all parties concerned, was at least undertaken in good faith by many of its promoters. Their sins were sins of ignorance. They believed that if the railroads could afford to handle any traffic for rates which did not pay fixed charges, they could afford to do the same thing for all their traffic. They passed laws reducing all rates to the standard of the lowest ones then existing, and they were bitterly undeceived when they found what was the real effect of such a course.

Their successors to-day know more about some of the complications of railroad business, but they really care less for the rights of property. The railroad legislation of to-day is actuated by a somewhat communistic spirit—which is not confined to Knights of Labor or to State politicians, but which sometimes appears where it would be least expected. The writer of a recent work on Industrial Liberty, Mr. John M. Bonham, who is as far as possible from being a Communist in other respects, falls into precisely this error when he comes to speak of railroad corporations. He speaks of the railroad officials as exercising a lesser trust for the benefit of the stockholders, a larger one for the public. He says that the former is subordinate to the latter—that the question of compensation to the investors is a secondary thing; and he demands that public trusts of this kind should be controlled with an exclusive view to the public interest, in the same way that private trusts are, or are supposed to be, regulated with a sole view to the interests of him in whose behalf the trust is created.

The merits of other parts of Mr. Bonham's work are such as to make an error of this kind all the more significant. The attempt to treat the question of compensation as something wholly secondary is a serious mistake. The analogy of a private trust does not hold good. In the case of a private trust the risks of a trustee are little, and his compensation may therefore be treated as a secondary matter. But in the case of a railroad the risks of an investor are very great. He must have a reasonable prospect of compensation to make him willing to undertake the public trust.

But this is not all. The practical effect of Mr. Bonham's proposal is to give the parties in whose behalf the trust is exercised control over the funds of the trustee. If you say to the community, "The duties of the railroad towards you are paramount to any rights of its owners for compensation on their invested capital," you pave the way for the most unwise reductions in rates. Experience shows that such will be the result—the character of railroad investments makes it certain. A railroad has not the same temporary means of defence which are available for certain other forms of business. It cannot withdraw from the field. Once built, it is there to stay, and is, for the time being, at the mercy of local legislative authorities.

But the reaction comes sooner or later. While such legislation may not drive existing railroads away, it prevents the development of new roads which are essential to the growth of the community. The State which adopts a policy of virtual confiscation falls behind its neighbors. Mr. Bonham does not shrink from facing this contingency; he says that "individual and public political rights are far more important than any convenience which a corporation can offer." But he will find few who are candid enough to follow him to this extreme. The great majority of his readers will prefer the conveniences of modern civilization to a somewhat vague ideal of industrial liberty. The logical outcome of Mr. Bonham's view would be a return to a less civilized state. Undoubtedly we can have more political liberty by foregoing some of the material advantages of

civilization. But the really practical question is, how to combine the two with as little sacrifice as possible of either. This result can only be obtained by a policy of regulation as distinct from confiscation—by restriction without destruction.

The system of regulation by commission, which Mr. Bonham condemns as so inadequate, has at any rate the merit of being a practical compromise between the needs of the shippers and those of the investors. A set of men specially trained in problems of railroad policy can distinguish between the right and wrong uses of railroad power far better than a legislature can possibly do. They can stop those things which do the public much harm and the railroads little good; they can allow the continuance of those methods which are a necessity of good railroad economy, where the harm to shippers is much less than is commonly supposed. They do not need to make either interest subordinate to the other, but, as proved by experience, can act as a protection to investors and shippers both. And if any new line of policy is to be adopted, they can make the change slow instead of sudden, and give legitimate interests time to adapt themselves to it. This is a more efficient safeguard to the investors than any other.

This is the kind of work which a commission can do under favorable circumstances. But there is no virtue in the form itself. The members of a commission are under a constant temptation to magnify their office, and to pass from the work of regulation to that of confiscation. If they are incompetent, they will do it unwittingly; if they are actuated by political motives, they will do it designedly. The railroad controls few votes in proportion to the shippers; the reaction due to an unwise policy is so far distant in the future that the politician can leave it out of his calculations. It taxes all the energies of men like the Inter-State Commerce Commissioners to keep their authority within its proper sphere.

FORSTER AND GLADSTONE.

The most interesting recent contribution to political literature has been Wemyss Reid's memoirs of the late William E. Forster, the English statesman, not so much because Forster's career was a very memorable one as because the book throws a good deal of valuable light on the origin of Gladstone's conversion to home rule. Forster came of excellent Quaker stock. His mother was one of the Buxtons, a good county family, but sacrificed her social position and opportunities, which were very brilliant, to marry a Quaker preacher whose religious fervor and purity and simplicity of character were his chief distinctions. He does not appear to have been either learned or eloquent, but he was absolutely detached in spirit from the things of this life, and passed years at a time away from his home and wife in truly apostolic journeyings. Their only child, William Edward, was brought up in thoroughly Quaker fashion in a home in which he saw nothing from his earliest years but plain living and high thinking. His parents were very poor, and his father was one of the most unworldly of men. He received little but a home education, never went to college, and, though he had influential friends and connections, got from none of them the kind of help on which young Englishmen rely so much. So he made his way finally, in American fashion, by starting in business as "a wool-stapler" in Bradford, on borrowed capital, with a partner as young and poor as himself. He had, however, from the first a passion for politics, got into Parliament as soon as he could afford it, made his mark very soon in debate by the display of what we call "level-headedness," was offered office by Gladstone, and came into full contact with the literary and intellectual world by marrying a daughter of Dr. Arnold of Rugby. He soon obtained a seat in the Cabinet, and became famous as the author and promoter of the great Act which first gave the people of England a system of popular education. He did not accomplish this, however, without giving mortal offence to the advanced Radicals by the concessions he made to the clergy of the Established Church. They never forgave him, and he had to struggle against their hostility in his own constituency, Bradford, to the close of his career.

When Gladstone came back to office in triumph in 1880, and found that the condition of Ireland was the most serious problem with which he had to deal, he selected Forster for the place of Irish Secretary, not only because he had shown himself a first-rate administrator, but because both he and his father before him had always manifested the strongest sympathy with Irish grievances and sufferings. He recognized at once the strength of the case of the Irish tenants against the landlords, by introducing and passing in the House of Commons a bill, known as the Disturbance Bill, suspending temporarily the right of eviction for non-payment of rent, in consideration of the terrible agricultural depression, and pending the preparation of the Land Act subsequently passed. This Disturbance Bill was peremptorily rejected by the House of Lords, and Forster then found himself face to face with the Land League and a desperate tenant population on the edge of winter. The outrages began, and he met them by suspending the habeas corpus, and locking up, without trial, about 1,000 Irishmen of more or less prominence. The Cabinet left Irish affairs wholly in his hands. He assured them that he understood the situation—that all he had to do was to silence the agitators and imprison the "village ruffians," and order would be restored. He tried his experiments for two years, and Irish affairs during the whole period got worse instead of better. Finally, the discontent of the Liberals in England became so great that the Cabinet came to the conclusion that they must throw him overboard, and he resigned, broken both in health and spirits.

The Tories of that day were among his bitterest opponents, and loudly maintained that his coercion was unnecessary, that Ireland could be governed without difficulty by the ordinary law. But after they got into power and became coercionists themselves, they buzzed it about in every direction that Forster's failure was due to want of support from Gladstone, both in and out of the Cabinet, and Reid's book was looked for eagerly as likely to contain revelations on this point which would prove crushing for Gladstone and the English Home-Rulers. Never was disappointment more complete.

The testimony of Forster's letters to Gladstone's loyalty and coöperation down to the end, even after he had begun to doubt the wisdom of Forster's policy in Ireland, is as strong as it could well be. In July, 1881, when he was half-way through his troubles, Forster wrote to a friend: "In fact, one great compensation for the troubles and vexations of the last year has been the fact that I have got to know Gladstone, and really to love and honor him. No one could have been more faithful, or considerate, or generous to a colleague than he has been to me." Mr. Reid adds that when Foster resigned, he parted from "most of his colleagues" in the Cabinet "with open grief," "and from Mr. Gladstone especially he parted with profound sorrow"; and that he had received "a constant, and loyal, and generous support from his chief."

Curiously enough, too, it would appear that the exception made by the phrase "most of his colleagues" includes Mr. Chamberlain, who, though Mr. Reid veils his name occasionally under dashes, was Forster's chief opponent in the Cabinet, and chief promoter of the hostility to his Irish policy which finally led to his overthrow; and this was so well known that it was generally expected that when the "new departure" was resolved on, Chamberlain would take Forster's place in Ireland. All this gives color to the exposures of Chamberlain's double-dealing at that period which Parnell threatens to make before the Judicial Commission, and gives to his present rôle of a "conscientious" politician resisting the unscrupulous Gladstone a peculiarly diverting air. Gladstone's letter taking leave of Forster when the latter sent in his resignation, and it was understood that Gladstone was satisfied that the Irish problem could only be solved by home rule, contains in its first sentence the explanation of his subsequent course: "I have received your letter with much grief, but on this it would be selfish to expatiate. I have no choice; *followed or not followed, I must go on.*"

"*PRIVACY.*"

Mr. Henry James, who has cultivated perhaps more than any novel-writer of the day the art of pointing contrasts between the minor morals of Europe and of the United States, has, in his last book, 'The Reverberator,' undertaken to compare European and American ideas on the subject of privacy—using that term to designate the exemption of private individuals and families from newspaper criticism, comment, or

description. In fact, the book may be called a study of the American "newspaper man," as he is known to American society—that is, the man to whom the most important thing in the world is news, and to whom news is something which, whether true or false, people must have, and to whom the great function of the intellect is to be "newsy," "breezy," chatty, and to whom its highest achievement is the production of a very salable "gossipy letter," or a column of "Stroller's paragraphs."

He depicts this type in the person of a certain Flack, who occupies in Paris the place of correspondent of an American "society journal," known as the *Reverberator*, and is charged with the duty of letting in light on the inner recesses of European society. This creature makes the acquaintance there of two American girls, somewhat of the Daisy Miller kind, who are travelling with their father, a wealthy and retired speculator, and are attacking the social problems of Europe with the usual naïveté of their class. Flack seems so very knowing and cultivated both to the father and daughters that they unhesitatingly accept his advice in trying to see something of French life. He introduces them to an American portrait painter, who paints the portrait of the prettiest of the girls, and at the studio they make the acquaintance of Gaston Probert, a charming young man, whose father is a Gallicized American who has married into an old French family, very proud, very refined, and exceedingly private in its tastes and traditions. Probert becomes engaged to one of the girls, who is received into the family with more or less cordiality, and speedily, of course, finds out all about them. Like nearly all families, they have skeletons in their closet—incidents in their history which they would like to forget and which have been well-nigh forgotten, and personal traits and peculiarities on which they do not care to dwell. Seeing Flack frequently, the girl tells him all this little by little, and to Flack it is all news of the most ravishing description about the French "exclusives" and old fogies, and well calculated to make the circulation of the *Reverberator* take a great jump.

Accordingly, he manages to work it all into a letter apropos of the portrait, with numerous additions and embellishments of his own, intended to increase its "spiciness." It comes back to the Proberts, who read it with indescribable horror, shame, and disgust, and the scene in which poor Miss Francie, the American fiancée, has to face them and confess that it was due to her indiscretion and her acquaintance with Flack—to them an awful blackguard—is very dramatic, and is sketched with great power.

The story brings out in a very striking way the remarkable success the French have had in defending their private life from a press, part of which is really just as ruffianly and unscrupulous as the very worst of our newspapers. In one way or another, partly by legislation, partly by strong social traditions, particularly an extreme sensitiveness about family honor and respectability, they have managed to keep interviewers out of their houses, and to prevent family affairs from being converted into "copy." In fact, journalistic personalities and exposures are confined almost exclusively to journalists, who are even more merciless to each other than American journalists when "war" breaks out, and fight probably three-fourths of the duels which occur in France. Of these things French society takes little notice. It takes the view, which is not uncommon even in this country, that it is the nature of the journalist to be silly, unscrupulous, impertinent, or buffoonish; and that as long as he practises his art only on his fellows, who can repay him in kind, nobody need be troubled. Any attempt to subject private affairs to journalistic exploration is sternly repressed both by courts and juries. The publication of almost anything about a man's private life which he objects to and considers disagreeable, as long as he is not under accusation before a criminal court, is a penal offence. It is very rare indeed that a French newspaper in publishing an "item" of a disagreeable nature about anybody will venture to give more than the initials of the victim. The pursuit of afflicted families for news about their sorrow or disgrace is something still unknown in France; and so is the persistent ridicule and abuse of persons not in public life for the gratification of the editor's private malice, or in furtherance of a private quarrel of some kind, with which we are, unhappily, very familiar here. It may be that there too, eventually, as Flack observes, "the idea of sticking up a sign of private, and thinking you can keep the place to yourself," will be "played out," and that "privacy has got to go"; but thus far the French have held on to it very successfully.

Privacy in the best sense of the term is the virtue or the luxury of an old society. In all very new communities, the desire to live to one's self and keep one's affairs to one's self, and see only a restricted or in some manner selected circle, is considered more or less an affectation of superiority, and resented accordingly. There is a very good story of a traveller from one of the Eastern States hanging his shirt across the window of his room in the hotel of a mining town somewhere in the Rocky Mountains, in order to protect himself during his toilet from the gaze of some loafers on the piazza. It was soon thrust aside from without, and when the traveller asked the head which appeared at the opening what the intrusion meant, he was informed that they wished to know "what there was so darned private going on in there." In the first stage of civilization there is no privacy; it grows as the community becomes larger and more complicated. But it is kept down, even in our great cities, by the newspapers working in combination with the large class which loves notoriety. The journalist who starts out with a sense of the sacredness of a man's personality and private affairs, is very apt to have his reverence for them greatly blunted, if not destroyed, by finding that the lovers of publicity appear to the journalistic eye to be in a majority, so numerous are those who dread nothing so much as obscurity, and would sooner be known for anything than not known at all. It is among these people that many of our young journalists obtain their experience of public tastes and needs, and it is not surprising that they soon become hardened explorers of private life, and cynical disbelievers in professions of dislike of the popular gaze. But it is none the less true that since communities were delivered from the daily terror of being sacked, massacred, or led into captivity by victorious invaders, nothing causes as much keen suffering to innocent people as the newspaper exposures of their misfortunes or weaknesses, or, in some cases, of their peculiarities. The most sensitive or well-behaved journalist gets so soon indifferent to the sillinesses, buffooneries, or insults of his esteemed contemporaries, that he loses the power of entering into the agony of mind of private individuals whose home has been laid waste by inquisitive reporters; but there is no faculty the young journalist should so carefully preserve and cultivate.

EATING AT SEA.

THE London *Standard* has been descanting with much force on the excessive consumption of food which goes on on all the great ocean steamers, and particularly those patronized by Englishmen. It says that people on shore are getting over the meat-eating habits of an earlier generation. They eat less of everything, and particularly less beef, but at sea they seem to try how much beef, mutton, and fowl they can consume in the course of the day, even in the tropics, and they wash it all down with plenty of strong wine, and go to bed on spirits and water. Americans are not so bad, but they do not lag far behind. Shipboard is a very dull place. The amusements are few; everybody has not the habit of reading, and very often the most practised readers find it difficult to stick to a book in a steamer. Either the jar of the machinery fatigues the eye, or there is enough stomachic disturbance, even among "good sailors," to make the attention fickle and fugacious. Accordingly the meals become the principal events of the day, and steamboat-owners, as a matter of business, make them as frequent as possible. Luncheon follows rapidly on a late breakfast, and then comes dinner and supper, both as heavy as any one likes to make them, and they all sorely task a digestion which receives little or no fortification from exercise. The consequence is that it is only the really delicate, who eat little on shore and are sick at sea, who get much good from a sea voyage. The robust, hearty feeders are almost always worse off when they land than when they embark.

And then there are in every ship a good many boastful eaters—that is, men who eat heartily out of pure braggartry, to show that they are good sailors, and to enable them to look contemptuously on the squeamish people. There is probably, especially among Englishmen, no form of pride so pronounced as the pride of exemption from

seasickness. Of course, in nine cases out of ten, it is, among landsmen, a mere peculiarity of physical constitution, like the ability to take certain kinds of food which disagree with other people; but it nevertheless puffs a man up in an extraordinary degree. It gives him a secret consciousness of some sort of connection with the Vikings and the great modern admirals and discoverers, and a delightful scorn for those who "go below" when the ship begins to pitch. In addition to this, they look upon it as a peculiarly masculine trait — a sentiment which *Punch* some years ago embodied admirably in the lines :

> "A man's an ass that's sick at sea,
> At him I do deride.
> But woman is a tender flower,
> And delicate inside."

Many a man lands at Liverpool or Southampton in our day, with his digestion terribly disordered, simply through vainglorious cramming on shipboard—a very high price to pay for fame which is in its very nature both shadowy and fleeting.

Much the same observations may be made with regard to yachting. To any one who can bear the sea even tolerably there is, particularly in American waters, no more delightful form of recreation than a cruise in a reasonably well-appointed sailing yacht which carries a competent cook. The silence, the change of scene, the purity of the air, the freedom from dust and smoke, the absolute escape from business cares and worries, make it probably the best vacation a tired brain-worker or business man can take. But it is an expensive luxury, within the reach of but few, and the few who have it do not profit by it nearly as much as they might, owing to this same snare of eating and drinking too much. Owners of yachts are apt to be hospitable souls with plenty of money to spend, and they enjoy filling themselves and their guests up with good food and good liquor, and generally find the guests most receptive. There is, too, even less opportunity for exercise on a yacht than on a steamer, and there is as great consumption of victuals, and probably in a large number of cases a greater consumption of punch, and brandy, and soda, and champagne, and choice cigars. The consequence is, as hundreds can bear witness, the yachting man is only too apt to come home with his liver in a bad state, and with gloomy views of life and of business prospects, and with a good many additional pounds of flesh for which he has no use, and which burden his heart and lungs seriously. In fact, it is curious, considering the amount of money spent on the sea as a place of recreation, how little health and vigor is got out of it.

THE DALMATIAN COAST AND MONTENEGRO.

CORFU, July 15, 1888.

THE long, broad wedge of Austro-Hungarian territory, extending southwards from the main body of the Empire nearly to Albania, encroaching upon and enveloping the smaller States of Bosnia, Herzegovina, and Montenegro, and forming the eastern boundary of the Adriatic, presents much that is interesting and complex, politically and socially, as well as many curious vestiges and reminiscences of the past. The outlying and irregular chain of islands off the coast are not fertile or to any extent inhabited, but they form extensive waters for sea-fisheries that have always been and are still of value, principally for tunny and mackerel. The region differs essentially from the sections above and below, in being more mountainous, desolate, and treeless in appearance, and in sparseness of population. The hard limestone rock is ever grayish blue, but little soil forms, while many of the islands rise out of the sea in round, flat masses, without a sign of life; a few only rise in irregular peaks, with slight soil and signs of vegetation in the crevices and valleys. On the mainland the mountain ranges abruptly shut out the sea, the rivers debouch by considerable falls, and where harbors exist they are remarkable for size and security. It is a land of rugged features, containing much grand scenery and many small basins of fertile land deep down in the valleys and hill slopes, with races of liberty-loving, physically strong people. Old Venice procured its fleets and seamen in great part from this coast—the training-station for Austrian seamen now—the storms and dangers of which are well known; and, to this day, they tell of the forests that once existed and that vanished in the building of the ships, and finally were wantonly destroyed in the later years of the Venetian power.

In all the ports, from Fiume in the north to the Ionian Islands in the south, the Italian language is spoken by most of the people, next being the native Slav tongue, and lastly the German. The military and the larger business firms use German, the smaller shop-keepers and fishermen Italian, these languages persisting some way into the interior. The Greek faith prevails, excepting in small parts of Herzegovina and Montenegro, where the receding tide of Islam has left its scant traces. One meets everywhere an abundance of churches and chapels, many quite new, and a suggestion of power and influence from the direction of the orthodox Russian or Greek Church.

What is, however, most apparent, is the fact of Hungary's activity and vast money expenditure in forcing recognition for her natural productions, building a fine large port of export at Fiume, and the making of rail and other methods of communication. Railways now exist from Fiume to the north and east, connecting with systems in those directions in Croatia and Hungary, and with roads to remote points in Bosnia and Servia. Short lines connect Sebenico on the coast with Spalato, Dernis, and Knin ; further south, Metcovich with Mostar and Serayevo. By sea the steamers of the Austrian Lloyds ply regularly and frequently between all the ports. The impression is gained that a change is taking place among these races, not perhaps voluntarily, but still for the greater security of life and property. Schools are opened, hospitals are found in the larger towns, the methods of summary vengeance and punishments by the old tribal systems and customs are being put aside, and many of the young men are sent abroad for higher and professional training. Schools now exist for both sexes in Zara, Sebenico, Podgoritza, and in most of the towns ; and in Cettigne, the Montenegrin capital, they are constructing a lyceum, to contain also a theatre. Moscow and Vienna are usually selected for university or special training for the civil occupations, while many of the young men, particularly in Montenegro, seek military instruction in the Russian Army, some having made in recent years active campaigns in the operations of that army along northern Persia in Turkomania.

Fiume, since 1867, has had expended upon its artificial harbor and appurtenances the sum of 35,000,000 florins, the present annual outlay being given at 2,000,000 florins, and the port is not yet finished. The population is 25,000, the exports of flour and lumber now exceed those of Trieste, and from an insignificant Croatian village it has become a large port and the outlet for Hungary. The flour mainly goes to South America, prunes and wines to the United States, and lumber to Europe generally. The new modern city is well kept and clean, with good hotels and wide streets, and is in striking contrast to the older hillside town, with its rookeries and narrow streets. The surrounding country is in great part deforested, but is receiving governmental attention in this respect. The Austrian Naval Academy for the training of officers is situated here. It contains four hundred pupils, and in the curriculum the acquisition of at least four languages is required. There are numerous chemical works, and the manufactory for the famous Whitehead torpedoes. The town has a southern exposure, the climate being mild ; elsewhere in Dalmatia extremes occur, with much snow in winter, and in the autumn an enormous rainfall.

Sebenico, formerly the finest and strongest city of Dalmatia—having once withstood successfully a siege from 40,000 Turks—is an important port a short distance south from Zara. The approach from sea is by a series of inland waters, and, finally, through a narrow lane a few hundred feet wide in the solid rock, with sheer sides several hundred feet high. On one side of this channel is still standing a fine type of one of the old Venetian circular forts, with a large sculptured lion of St. Mark over the main portal. These old fortifications remain in good preservation throughout all the towns of the coast to the number of hundreds, including town walls and citadels, hill forts commanding roads and villages, and strategic islets. They are built of brick, principally, of the thin hard-burnt, durable kind, originally from Italy. The familiar winged lion is found in panels of towers, over portals, and in the façades of churches; while the bell-towers, the quaint town squares—notably at Ragusa—and the type of architecture in the narrow streets and silent dark churches, all remind one of the old domination. Sebenico has a large circular harbor with the Kerka River from the interior. The seamen's training station is situated here, with its schoolships and paraphernalia, and an average of five hundred boys is constantly in attendance. There is a little wine and oil for export, and some liqueurs—notably the maraschino, made from a species of wild cherry. Upon going up the river some six miles, past the old Roman town of Scardona, through bare rock clefts and one large bay, the striking falls of the Kerka are seen. They are composed of numerous broad cascades and irregular falls, one above the other, for several hundred feet, the total fall being not less than one hundred and fifty feet. The banks are beautifully green and tree-covered, as well as the points and basins in the midst of the falls, and large trout are taken in these pools and further above. Rude mills are hewn in the rock and exist all about here, painfully grinding flour and Dalmatian powder for insects, and in washing and bleaching white the coarse woollens of the natives. The people are a dull lot, though strong and hardy, and every man possesses—even if poor—large silver globular buttons, and enormous weapons in his waist-scarf.

Bosnia has its outlet port at Spalato, a considerable town of 11,000 inhabitants, picturesquely situated on a hill, connected by rail with Sebenico above, and with not a good har-

bor. The ruins of the palace of Diocletian are found here, his native place, and are the only attraction for the visitor. Herzegovina has for its outlet by sea Ragusa, the famous old republic. The country hereabouts is more wooded and fertile, and more prosperity and activity prevails. The city possesses great walls, a citadel, and a large fort on the adjoining mountain. The harbor is not secure, and larger vessels use the neighboring one of Gravosa. Without the walls has sprung up a new town, with public institutions and hill drives, and much beautiful and flowering vegetation is seen. The garrison numbers seven hundred, who are here, as elsewhere in Dalmatia, mostly Hungarians. The quaint old city contains some ten thousand inhabitants, and is built on a projecting rocky spur, the sea washing its high walls in great part.

The Austrian dominions narrow from here downwards rapidly, and at Cattaro the wedge of territory thins to a few miles and less, the Montenegrin boundary being just above the town on the mountains. The great bay of Cattaro is remarkable for its size and irregularity, extending for fifteen miles into the interior between lofty mountains, with fertile stretches of plain and valley, and containing many small villages on its shores. Over the whole scene—with the gray monasteries on solitary islets, and ruined churches—there hangs an air of partial desolation, of the past. There seems to be a lack of life about the many-storied houses on the banks and in this rich, fertile environment, and the seal and mark of old Venice is upon everything still—the architecture and the winged lion. Cattaro at the head of the bay much resembles Ragusa, and is within walls of great strength and ingenuity, zigzagging up a steep rocky slope several hundred feet. Immediately behind the town the mountain rises to 5,700 feet, over which passes the new road (as well as the old trail) to Cettigne, the Montenegrin capital. This carriage-road was built by the Austrian Government, and ascends the mountain by a system of zigzag developments, one over the other, to the number of some twenty-six in full view of Cattaro; the final long plane of ascent leading over the frontier, marked by a line of square white stones. The road continues over the range and gently descends into the upper valley and village of Negus—the native place of the present Prince—then crosses a second high mountain range, and, in six hours from the time of leaving Cattaro, leads down into the second valley and the capital of Montenegro. Austrian engineers superintended the construction of the road on Montenegrin territory, the work being done by their own labor and money. From Cettigne the road leads to the river Moratcha, a short distance above its entrance into the Lake of Scutari. There are no other roads like this in the country, and communication is still by primitive paths and trails.

A carriage with two small active native horses is easily procured to make the journey from Cattaro to Cettigne, though it could be walked readily enough in a day. In all directions one sees the utter desolation of the bulk of the country—it all seems to be rocks as far as the eye can reach; but few birds, insects, or life of any description can be seen, and only at rare intervals hidden in some deep hollow is there a bit of soil with its standing corn, potatoes, beans, or grain. On the slopes of the few valleys there are streaks of stunted pine, scrub-oaks, and sage brush. The Austrians have here in the past eighteen months constructed some new mountain forts—one with a centre steel turret—commanding the valleys and approaches about Cattaro. Travelling over the mountain trails is extremely arduous and difficult for the stranger, the path being only marked by the smoothly worn shining rock points. The natives cling to the rock by their hide sandals, constantly using the hands, and they can cover long distances in an incredibly short time. In going on the old paths, however, one meets quaint piping goatherds, and sees more of the natives in their rude stone huts and occupations.

Cettigne, the capital and residence of Prince Nikolai I., consists of some two hundred houses in an irregular upland valley, with several other villages scattered about on higher slopes in the rocks, and is not more than two miles long by from half a mile to a mile wide. The few rectangular streets contain some native shops and, at the end of the main street—*en face*—the hotel kept by a family of natives in the European manner. The Prince's residence, a large plain house, is close by on a side street, contiguous to a small garrison and arsenal, the post-office, and other unpretending public buildings. There is always a guard on duty here composed of a few men and officers. The town also contains the state prison, a hospital, four schools for boys, a girls' seminary, one gymnasium or higher school, a lyceum in course of construction, some Greek churches, and a large monastery. One small weekly newspaper is published in the native (Slav) language. Cettigne appears like a quiet New England mountain town, except for the parti-colored costumes and arms of the natives. Ministers and general officers of state stand about in groups under the trees, there are no beggars, and one feels that here exists a commonly united people with simple aims and ambitions. In a small grove near by, some men and boys were practising at games of skill and athletics, some drinking-shops were a bit noisy—it was the day after the feast of St. Peter; but there was little fussing about, stir of life, or business activity. The wants of the inhabitants are simple and easily supplied, and beyond the little dingy shops, few in number, there is no trade or commerce. The men, in their baggy blue trousers, white leggings, and hide sandals, embroidered jackets, long white cloth half-coats, and small square caps with the Prince's initials embroidered in gilt on the top, are handsome and picturesque-looking—each with an immense revolver in the waist scarf. The women do not look so well, their skirt being now longer than formerly, the jacket short, with the embroidered sleeve thrust through the sleeveless coat, and the waist not constricted. The men appear to have all the leisure, adornment, and looks, while the allotted portion of the women is constant labor and burdensome tasks; at least, most of those seen appeared bent, shapeless, and prematurely old. Both sexes wear the small cap, the women with often a long veil falling behind, starting from a button on the front. Priests and women wear the hair long, the men being notably close-cropped, with long moustachios and smooth chins. As a rule, they are a tall race and bear pain well, though, as I am informed, of nervous temperament, the result of centuries of murderous warfare with the Turks. All males capable of bearing arms are liable for military service, the number of fighting men being estimated at 75,000, of whom 20,000 are in the first class, and the remainder in the second and third classes, subject to call. They have six batteries, three being of Krupp guns. Since the last war with Turkey, the outcome of which they are extremely proud of, there has been nothing more serious than small affrays at the Albanian frontier. Many of the older men wear medals gained by conspicuous courage and skill in that and other Turkish wars; and if one could believe some of the stories related of these gray-haired veterans, there are not many heads left in Albania, and head-collecting must have been for years their sole occupation. For the most part the army is formed of groups composed of individuals coming together from the tribal communities, the whole being an irregular body of mountain fighters; how well and how tenaciously they carry on war in their rugged mountains the world already knows. The telegraph connects the towns and strategic points, and there is a system of signals and alarms for use in times of disorder and war.

The Montenegrins have no coinage, and use the Austrian gold, silver, and paper money in Cettigne. Their modern arms are also Austrian, yet, from what is heard and seen, Russian influence is paramount. There are a Russian minister, and agents of English, Turkish, and a few other Powers, living here; and it is hinted that much aid financially and pay to some of the general officers comes from the great northern Power. Taxes are levied on cattle, land, and imports, and there is no debt beyond one of $400,000 contracted privately by the Prince in Vienna some years ago and bearing interest at 5½ per cent. The Prince has a council of ministers of war, finance, education, church, and external affairs, but he is in reality an autocrat, and not accountable to any one. He is much beloved, and worthily so, by all his dutiful subjects. The family consists of nine children and the Princess—a noble-appearing, handsome woman, with lustrous dark eyes and hair. The Prince and his heir, now seventeen, are gone on a short tour to Europe. Considerable fertile land accrued to Montenegro by the terms of the Berlin Treaty, including Podgoritza, a town of 10,000 people, and the eastern part of the principality is comparatively more valuable and less mountainous. The whole population is now 220,000. The chief men in their districts throughout the country preserve order, and the old tribal customs of rule and management prevail; the Prince deciding upon the severer punishments. In the prison were not over a hundred criminals, many being banditti. From the Prince down, every member of the community is supposed to be an example of courage, fortitude, and moral conduct. Quite recently, gold-embroidered garments have been prohibited and will be no longer worn, the Prince saying that his people had a better use for the little money they possessed.

By walking out from Cettigne several miles southeastwardly I was shown from an elevation the lake and in the distance the town of Scutari in Albania. More vegetation and a greater variety is seen in this direction. Much land is valueless from constant overflow, which a little engineering might remedy. Albanians are rarely seen in Montenegro, and are not always treated civilly; they wear the white fez and longer embroidered trowsers of the Turks, and they are by contrast ill-looking. Antivari and Dulcigno are the two small unimportant seaports of Montenegro, the latter only having a small harbor; they possess but little trade and commerce.

C. A. Siegfried.

THE TEMPLE OF PAPHIAN APHRODITE.—I.

Paris, August 7.

Before a combined meeting of the friends of the British School at Athens and the Cyprus Exploration Fund, held in London on the 18th of last month, Mr. Ernest Gardner, Director of the school, gave an account of the important work of the year in Cyprus. Mr. James has

uncovered, upon the summit of the so-called "Lion's (Leondari) Hill," the wonderfully solid foundations of a huge and very ancient building of stone—it was probably a stronghold. Around it are many tombs in which pottery of various kinds and epochs have been found. Mr. Hogarth has been unearthing at Amargetti, distant a half-day's journey inland from the site of Old Paphos, the tokens of an ancient Apollo worship. Many tombs have been opened with interesting results, some near Nicosia, which has been the capital since the days of the Lusignan Kings, in the hills close to the temple of Aphrodite at Old Paphos. Work of interest has thus been in progress and is still progressing in various parts of Cyprus; but the chief contribution to knowledge obtained thus far by the Cyprus Exploration Fund results from the admirably conducted excavations which have unearthed at last all that remains of the temple of Aphrodite at Old Paphos. A minute account of these walls, patched many times, and as often overturned by earthquakes, was given at the same meeting by Mr. Elsey Smith, a student of architecture attached to the British School by the Royal Institute of British Architects.

The means by which these investigations have been made possible, the Cyprus Exploration Fund, is due to the generosity of the Hellenic Society, of the Universities of Oxford and Cambridge respectively, of the British Archæological School, of the Institute of Architects, and of private subscribers, among whom it is interesting to notice our adopted countryman, Gen. Louis Palma di Cesnola. Exploration alone, without adequate means of publication, would leave the world little wiser than before. Fortunately, there is every reason to expect that the *Journal of Hellenic Studies* will make known the valuable results obtained.

While this information is preparing, it behooves those who would profit by it to turn away from the darkness which hitherto has been all the light vouchsafed upon Cypriote matters. The chief lesson which I have learned from a recent tour of three weeks in Cyprus, has been that trustworthy information is hard to disentangle from the mass of misinformation now available. So many travellers who took pains elsewhere were careless when they spoke of Cyprus—so many learned men have talked of Cypriote topography without visiting Cyprus—so many unlearned men have visited Cyprus and rushed into print, that the world is full of falsehood, and Cyprus is a by-word, not, like Crete, for the lies that come from it, but for those that are brought to it and inflicted upon it. What Ferdinand Dümmler says of Cypriote "Keramik," may be applied universally to Cypriote archæology: "It is a shapeless, monstrous mass, so shocking that most archæologists let it alone."

The most every-day question, if it concerns Cyprus, will not get itself answered without much searching and many surprises. If, for instance, you wish to know where Old Paphos is, look in the seventh edition of the 'Encyclopædia Britannica,' and read: "PAPHOS: in *Ancient Geography*, two adjoining islands on the western side of Cyprus, the one called *Palaea Paphos*, and the other *Nea Paphos;* and when Paphos is mentioned without an adjunct, this latter is always understood." After the first shock is over, there is a natural desire to know whence this precious information came. It was not derived from any map, for no map then available named any of the insignificant reefs between Cape Gatto and Cape Arnaut. Strabo, like Ptolemy, makes no mistakes about Cyprus; he is particularly clear about the two towns of Old Paphos and of Paphos. The poets had a habit of calling the whole island of Cyprus Paphos, but the only place in the universe where Paphos is called an island, as the 'Encyclopædia Britannica' would have it, is in a note on the sixty-fourth line of Virgil's second Georgic. Servius, by a slip of the pen, there talks of Paphos as an island. In two other notes he makes amends by clear accounts of both the places called Paphos.

But to return to the modern search for Paphos. Suppose it be granted that "bygones shall be bygones." Let the dead bury their seventh edition of the 'Britannica.' The last, the ninth edition, appeared years after the occupation of Cyprus by the English. Turn, then, for the truth, to the article Paphos, in the ninth edition. Here Old Paphos is described correctly, except as regards the river Bocarus, of which more anon; but the case with New Paphos is different. Here New Paphos is, but how changed from the island of the seventh edition! So far from being an island, it appears that New Paphos was situated "on a fertile plain, about ten miles inland from Old Paphos." Apparently, the writer has left it there to dry after its submersion, which lasted through two whole editions. Less flagrantly inaccurate, but still hopelessly confused, is the account of Old and New Paphos given by Élisée Reclus, in his 'Nouvelle Géographie Universelle.' Reclus has apparently dreamed only that there was more than one Paphos. In his account he confuses them, and on his map only one Paphos is marked. Decidedly, a person who has not the happy idea of turning to Strabo, Pausanias, or the notes of Servius on the tenth and first Æneid, will have to wait long for trustworthy facts about Paphos.

There were in ancient times two distinct towns, both of them named Paphos, and both upon the sea. One of them, the smaller and the older, was called Old Paphos, and is represented by the modern village of Koukliá. The other was called New Paphos, and is represented by the modern town of Ktíma. Ktíma, be it said, is not exactly upon the site of the ancient New Paphos, but lies very near it; a village called Baffa occupies a part of the actual site. If either Paphos be described as lying inland, it should certainly be Old Paphos. For this place, as Strabo correctly says, is on a hill ten stadia (over a mile) from the sea. At the same time Servius is not necessarily wrong in saying that in flourishing days of peace the buildings of Old Paphos spread down from the hill to the shore. Have the ten stadia that originally separated Old Paphos from the sea been transformed into miles and bestowed by the 'Encyclopædia Britannica' upon New Paphos as its distance at once from Old Paphos and the sea? In reality, New Paphos possessed a notoriously good harbor, which remained a great resort for shipping until the tenth century A. D. A glimpse of it given by the monk Cameniata, who was captured by the Arabs when they sacked Thessalonica, shows that in 904 A. D. it was still a natural stopping-place between Crete and the Syrian port of Tripolis. Before the tenth century was over, the Arabs and Greeks had pillaged and devastated the whole district of Old and New Paphos so many times that both towns had practically disappeared. Stephen of Lusignan, writing in 1572, speaks of the port of New Paphos as pestiferous and choked up by the invasion of the sea. Under Lusignan rule the town was governed by a functionary called "le Capitaine de Paphie." Ross, travelling in 1845, declared that the port of New Paphos might be cleared. In its ancient perfection this port brought worshippers of Paphian Aphrodite in great numbers to New Paphos. They moved in procession every year along the coast from this their place of landing to the goal of their pilgrimage, the most sacred and ancient shrine of Aphrodite upon the hill of Old Paphos. Old Paphos was the Paphos of poetry, and New Paphos was the Paphos of prose. New Paphos, having a good port, together with the command of a fertile plain, naturally gained commercial importance, and became, in ordinary speech, Paphos *par excellence*. Strabo and Pausanias both use Paphos for New Paphos and Palæpaphos for Old Paphos. The poets, on the other hand, have occasion to speak chiefly of Old Paphos. Commerce does not concern them, and, therefore, in Homer as in Virgil, Paphos means Old Paphos.

Old Paphos never had any importance apart from the temple which made it one of the great religious centres of pilgrimage in antiquity. With the disappearance of the worship of Aphrodite, Old Paphos ended. Like Delos, once a religious centre and now deserted, Old Paphos has seen a neighboring shrine enlist enthusiasm, purer, no doubt, but hardly more fervent, than that which moved votaries of old to throng about its "hundred smoking altars." Just as the island of Tenos, over against Delos, has become the Delos of latter-day pilgrims, so not far from Old Paphos is a monastery and a holy picture called the Panaghia Cheque, which in Richard Pococke's day (1738) was "as much resorted to by the Greeks as Loretto is by the Latins," for Pococke adds, "and they come to it even from Muscovy." The triumph of Christianity at Old Paphos has been dramatized in a legend of St. Barnaby, a native of Cyprus. The good saint was sorely distressed at seeing the most wicked and detestable idolatries that were practised in the temple, with all manner of lewdness. He uplifted his face and stretched his hands towards heaven praying to the Almighty. His prayer was no sooner ended than the temple was straightway stricken by lightnings and thunders until it was overturned, and all who were in it were brought to a miserable and sudden death. "On en veoit encor les vestiges," the narrator adds. That is to say, this story must be true, for are not the ruins of the temple there to prove it?

The modern village of Koukliá (Pococke's Coukleh, called Couvoucles in Lusignan times) is so insignificant that it can hardly be said to represent the Old Paphos of antiquity. Nor can it be said that the mixed population of to-day, Turkish, Greek, and Nubian, maintains the memories of old. Indeed, an acquaintance of three days' duration with the ladies of Koukliá at the time divided between the too enthusiastic celebration of Easter and pagan neglect of it, leads me to qualify the praises of their loveliness sounded by the good brother, Stephen Lusignan. For the sixteenth century, perhaps, but not for the present day, his words are appropriate: "But the dames of Paphos surpass—according to the more usual opinion—all the others; inasmuch as it was there that the gods, their ancestors, had their abodes." In justice to these ladies I ought to add that no longer ago than the year 1806 Ali-Bey—a Portuguese travelling as a Turk—visited Koukliá and gave a far more flattering report. In fact, he was so engrossed by the charmers of his host's household at Koukliá, that he did not see the temple on his first visit. He had to come back a second time for that. Dr. Richard Pococke in 1738 assumed a very different tone, saying of Cyprus at large: "The women are little superior to their ancestors with regard to their virtue." Freiherr Joseph von Hammer-Purgstall, on the other hand, was charmed by the maidens of Amathus, "of figure so comely,

with eyes so bright, and ways so gentle that they might still to-day be the priestesses of Aphrodite."

But there are questions less beguiling than these computations of comparative loveliness, which must be answered before it can be easy to profit by the publications forthcoming in England. The nature of these questions would be shown if a copy of General di Cesnola's 'Cyprus' were opened at its eighth chapter, and if then points of interrogation were sprinkled rather freely along the margins of every page. These eloquent question-marks would be absent only from pages 207, 208, 209, and from the last page of the chapter, which contains a somewhat overcharged peroration and a picture. Here, as upon pages 208 and 209, a question of taste might be raised, but still the trick which General di Cesnola played upon his Turk illustrates the wonderful hold, not even yet relaxed, which the notion of buried treasure has upon the Cypriote mind. Ludwig Ross, whose wide knowledge of the Mediterranean islands gives weight to his opinion, declares that nowhere does this "idée fixe" take such stubborn shape as in Cyprus. He tells, indeed, two or three stories of Cypriote credulity and superstition about this matter which might have come from the 'Arabian Nights' Entertainments.' And yet Ross visited Cyprus as lately as the year 1845.

But to return to the question-marks. There should be no question-mark on page 207, because it chronicles an observation worth its weight in gold. Our author there says that only a government with ample funds could undertake to remove the many feet of rubbish accumulated upon the site of the temple at Old Paphos. The pity is that this very just observation did not prevent him from giving a ground-plan of the temple and from going into all manner of details.

On the first page of the chapter it is hinted that Cinyras may not have been a mythical character. This is misleading, since there is no room for doubt as to Cinyras; he certainly was and is a mythical character if mythical characters there are. Then our author says that the priesthood at Paphos, held by the Cinyradae—a family or caste claiming descent from Cinyras—continued even to Roman times to be an office of high dignity. This is undeniable, but Cato's offer of this priesthood to King Ptolemy in compensation for the throne of Cyprus does not prove it. If General di Cesnola could truly add that Ptolemy accepted the priesthood as an equivalent, or as something he was glad to get, then the point would be well taken. But the fact, not mentioned by our author, is that Ptolemy answered Cato by taking poison, and chose death rather than this position of dignity.

On the next page (205) our author, in speaking of Koukliá, talks of "fine architectural fragments in marble and granite, . . . the cost of one of which must have been far greater than the value of all the modern dwellings at Koukliá." These expressions about the cost and artistic merit of the temple remains at Old Paphos, whether in the village houses or elsewhere, should be attributed to an amiable enthusiasm. Some are astonishing, many are puzzling, all are interesting, but none of them are fine. Of those who have visited the site, only General di Cesnola admires its architecture. Even the dithyrambic Von Hammer confines his admiration to the bushes and the birds. Again, had our author been called upon, as have Messrs. Gardner and Hogarth, to purchase several modern dwellings at Koukliá, he certainly would not have rated their value so low. Of the granite here mentioned I shall speak anon.

Below, upon this same page of 'Cyprus,' the opinion is expressed that Vespasian did not rebuild the town of Old Paphos when he rebuilt the temple. Seven pages further on it is argued, from the quality of stone used for certain inscriptions and from that used in the temple walls, that Vespasian "may after all have only repaired the temple of Paphos, or, if he rebuilt it entirely, it had been partly with the former stones." As for Vespasian's rebuilding of the temple it is certain that it marked an epoch in the history of Old Paphos, for the local coins issued under Vespasian, Titus, and Domitian are dated from the year of the new temple. The evident importance thus attached to Vespasian's reconstruction discredits our author's suggestion that it may have been only patchwork. Moreover, General di Cesnola is in error about the stone used in the temple building and inscriptions at Old Paphos, and consequently his whole argument concerning this rebuilding by Vespasian disappears. Again, it is more reasonable to think with Engel ('Kypros' i., p. 125) that the town of Old Paphos was rebuilt by Vespasian, than with our author that it was not so rebuilt. The reverence for the temple and oracle of Aphrodite at Old Paphos felt by the Flavian emperors is notorious; witness Tacitus in his account of the pilgrimage thither made by Titus Vespasianus. But if Vespasian did not rebuild the town, it certainly must have rebuilt itself, for it is as impossible to dream of the temple at Old Paphos, constantly resorted to, both as an asylum and as the seat of an oracle, without some cluster of houses about it, as it is to think of the more secular resorts in modern Switzerland without pensions or hotels. Therefore the next statement or suggestion of General di Cesnola is unfortunate. He says, "A great deal of the decorative and architectural material of Paphos was transported to the other city called Neo-Paphos." I cannot help the perhaps unjust suspicion that the writer of these words momentarily thought of New or Neo-Paphos as of a town which hardly existed until the earthquake toppled down its elder namesake. How, otherwise, could it have escaped his penetration that a rich agricultural and shipping centre like New Paphos would hardly regard as a windfall the broken bits of a neighboring hamlet?—for such, comparatively speaking, was Old Paphos, apart from its temple. Perhaps, though, the error which leads General di Cesnola to see at every turn imported granite in place of the coarse Cypriote stone which covers the site of Old Paphos, has again misled him. The people at New Paphos were rich enough to import granite columns from Egypt, and they did so. At Old Paphos there is no vestige of granite to be seen. There is no material there, and probably there never were any decorations, outside of the temple, which the "millionaires" of New Paphos would not have scorned.

On the next page (206) is mentioned the "purchase" by our author in 1870 of the "area of the temple and that portion of the peribolos, or outside wall, which was not occupied by houses." The word *purchase* here means, no doubt, the acquiring of the right to make excavations. If it be taken literally, the absolute failure of any landholder now living at Koukliá to remember any such transaction is hard to explain — the more so because the presence and proceedings of General di Cesnola's man Besbes are well remembered in the village. But this question of purchase is insignificant compared to that of the "peribolos" and of the "temple." These terms, "peribolos" and "temple," used as our author puts them, contain beforehand the whole of his ground-plan of the temple. There is an enormous *petitio principii* in taking it for granted that a temple of Phœnician origin will have, as Greek temples do, a peribolos wall. General di Cesnola, no doubt, thought he used his own eyes, but he was really looking with the eyes of Von Hammer, the first to talk of and map out an "Umfangsmauer" (see his 'Topographische Ansichten'). Engel based his whole account of Old Paphos upon Von Hammer, and often reproduces him verbatim without using inverted commas. For the most absurd part of Engel's description, however, Von Hammer is not responsible. Von Hammer thought he saw a peribolos wall, and made a shrewd guess as to where the temple stood. It was reserved for a young architect who had never visited Cyprus to describe minutely the temple itself. The name of this clairvoyant archæologist is Hetsch, and his preposterous ground-plan, made in Copenhagen, at a respectful and respectable distance from Paphos, is quoted by Müller in his 'Hand-book of Archæology,' while Engel devotes pages to its elaboration. Absolutely the only basis for all that Engel and Hetsch say of the temple is a word or two of Von Hammer about its position, and various effigies of the shrine upon local coins! Still, it will become evident anon that, in their idea of the size of this shrine, Engel and Hetsch, following Von Hammer, were far nearer the truth than General di Cesnola, after all his excavating and purchasing of ground.

Passing over three pages (207–209), we reach page 210. There it is written that "The great temple of Venus was situated on an eminence." With this there is little reason to quarrel, but look three pages ahead and read that this "famous temple must have been visible many miles out at sea." After this, contemplate on page 214 the picture of the "eminence" with enormous mountain peaks looming behind. The picture serves to explain what the text was intended to convey, and the whole is a gross exaggeration of the facts. I have seen the negative of a photograph taken so as to test General di Cesnola's illustration. After every allowance for the false perspective of photography, the fact remains that our author's illustration does not represent what any eye has seen at Old Paphos. The site is a charming one, but wholly lacks the Alpine grandeur of General di Cesnola's most misleading picture.

And now, turning back to page 210, we find our author committing himself beyond recall about the material of the temple at Old Paphos. First he speaks of the so-called peribolos: "The stone," he says, "is not from Cyprus, but, being a kind of blue granite, must have been imported either from Cilicia or from Egypt." Then he writes that "the walls of the temple itself" are made "of the kind of stone previously mentioned," *i. e.*, blue granite. We have already heard of fragments in granite built into the village houses, and are soon to hear of "inscribed pedestals" (p. 212) which are "mostly of the same kind of stone as the walls of the temple, but of a finer grain." Then, on p. 214, the two "monoliths" by the sea "are of a brownish granite, which is not to be found anywhere in the island." Here indeed we have granite, and to spare. Three different kinds, (1) blue granite, (2) blue granite of a finer grain, (3) brownish granite. The site of Old Paphos would at this rate be little short of a granite quarry. But what does Ludwig Ross say about the nature of the stone upon this site? Ross is the only man of scientific attainments who has published an account of the site as it was when General di Cesnola went to Cyprus. Where our author sees blue granite, Ross speaks of a wall "aus einem weichen durch

die Zeit an der Aussenseite geschwärzten Sandsteine." The "peribolos," then, and the temple are of sandstone, says Ross. They certainly are not of blue granite. The fragments scattered about in the village, says Ross, are "aus gelblichem Kalkstein." Of this same calcareous stone are the monoliths, which General di Cesnola says are of "brownish granite"; these Ross did not see. The authority of Ross emboldens me to say that, during the three days of my stay at Koukliá, I wandered in every direction over the site of Old Paphos, and did not see a particle of granite there or down by the sea shore in the neighborhood of the two monoliths, which are not of granite. All the stones used for the inscriptions, and for the building of the temple, at Old Paphos are of the kinds which cover Cyprus, and there is none which has been imported. The only place where I saw granite pillars in Cyprus was at New Paphos. Ali-Bey as well as Ross saw them there, and both have especially mentioned them. There are magnificent granite columns also on the site of Salamis, but my visit to the ruins there was so hasty that I failed to see them. These Ross saw, and he calls attention to the probability that, like similar ones found on the island of Delos, they were used for interior decoration. Von Hammer, who was far from being in an accurate mood when he visited Old Paphos, does speak of granite, and also of white and of red marble. But he lays no such stress as our author does upon these materials, and would have been the first to yield to the superior accuracy of Ross. Ali-Bey, who, in spite of all his gallantries, had a practised eye, does not speak of any material at Old Paphos. He is content to make the ignorant observation, which Engel ponderously and pointlessly reproduces, that the ruined walls on the site were "cyclopean." General di Cesnola, therefore, is the only man who has ever seriously maintained that there was granite in large quantities on the site of Old Paphos.

As you glance further down page 210, it is worth asking how our author satisfied himself that "the temple, as rebuilt by Vespasian, seems to have occupied the same area as the former temple"; and again, protesting against the reappearance of Von Hammer's "peribolos, or outer wall." "Of this," General di Cesnola himself here says, "a few huge blocks only are now extant." If this be true, and from personal investigation I know that it is true, how can any human being pretend to know that these few huge blocks formed part of an extensive outer wall? But more of this anon. The author of 'Cyprus' now proceeds to tell of "a doorway, still plainly visible," on the west side. The doorway has evidently been there, but when our author proceeds to give its width as "seventeen feet nine inches," there must be a pause. Perrot and Chipiez, in their third volume, depend upon this, the width of General di Cesnola's doorway, for the admittance of a solemn and numerous procession. These authors describe with much animation an occasion when this door would be flung open to admit a gorgeous throng of worshippers. Alas! this procession must be excluded if there is no other door of admittance—excluded, or forced to enter one or, at most, two abreast. The doorway here was certainly not more than five feet wide. The two sockets for the "bolts" upon which the doors swung, the meaningless dimensions of which are correctly given in 'Cyprus,' stand plainly at the opposite sides of the doorway, and they are not five feet apart. The breach in the wall, at the beginning of which are the unmistakable traces of this postern gate, was correctly measured by our author. His mistake apparently resides in thinking that the two sockets were both on the same side of an enormous doorway. Grant him this, which is an absurdity; and if you ask him how a single door, enclosing a space of seventeen feet eight inches, could be hung at all, not to speak of hanging it upon two bolts five feet apart, I fear the answer would not be satisfactory. This is not the only case where General di Cesnola has misled Perrot and Chipiez in the third volume of their truly monumental 'History of Ancient Art.' This has happened, too, in spite of their conscientious efforts to correct and control his data. That both of these authors used every caution in accepting the data of 'Cyprus' is abundantly shown in their just criticisms of the various and self-contradictory plans given by General di Cesnola of the temple near Athieno, usually called the temple of Golgoi, and also by what they say (iii, p. 263) of the site of Old Paphos (the italics are mine): "Aujourd'hui même, malgré tout ce qu' ont bouleversé ou détruit des explorateurs *qui se sont proposé surtout pour but la recherche et l'invention des objets de musée*, peut-être des fouilles méthodiques, dirigées par un architecte, donneraient-ils encore de beaux résultats." It is to be regretted that their third volume had to appear before the publications soon to be made in England. In one matter their great knowledge of antiquity has enabled them to anticipate the results of actual excavation. In spite of the absolute silence of 'Cyprus' on the subject, Perrot and Chipiez say in so many words that there must have been extensive porticoes or sheltered ways near the temple. These porticoes have now been uncovered, and they occupy a large part of the area which General di Cesnola's plan marks as the temple. But I must not attempt to forestall the promised publications, for fear of adding to the mass of spurious facts which have buried the temple from sight almost as effectually as the vast accumulations of earth which much labor has at last removed. L. D.

Correspondence.

THE BLISS OF INDIRECT TAXATION.

To the Editor of The Nation:

Sir: The following is an extract from a speech of Gen. Harrison, made at Put-in-Bay yesterday afternoon:

"And I may note also the fact that, notwithstanding this complaint of excessive revenue, there are some who suggest that they are not able adequately to arouse the popular indignation against excessive taxation because they *cannot disclose to the people when or how they are paying the taxes.* [Applause.] It is taken, they say, *so indirectly and so subtly that these—our plain people—don't know that they are paying them at all.* [Applause.]"

This seems to be all that Gen. Harrison said upon the subject. He does not claim, with the Senator from Vermont, that the burden of the protective tariff falls upon the foreign producer; on the contrary, he admits that it falls upon the consumer. But the merit of the system, to his mind, lies in the fact that the consumer is in blissful ignorance of the fact that he is himself the victim.

Very truly yours, Edwin Brainard.

Chicago, September 1, 1888.

TRUSTS AND PROTECTION.

To the Editor of The Nation:

Sir: Suppose that the great wheat-growing kings of Minnesota, Dakota, and Nebraska should combine, and, through the influence of their greater wealth and other advantages, attempt to control the production and price of wheat, and consequently of flour, in this country. Suppose that this combination first secured legislation in Congress virtually prohibiting the import of wheat from any foreign country, and then, by the manipulation usually prevailing in such transactions, induced the smaller wheat-producers, the country over, for a bonus, to discontinue growing wheat. Suppose that, in consequence of the success of this scheme, the price of wheat were gradually increased to $5 per bushel, and that of flour in a corresponding ratio, to the consumer. Would this be a "Trust," with its legitimate results, or would it be "a private matter," with which neither the President nor any one else has any right to interfere?

Suppose that immediately after the successful accomplishment of this design, or at any other time, for some unknown reason, or for other reasons, the price of wheat should fall instead of rising; would this be justification for the claim that the wheat barons were patriotic citizens engaged in a laudable endeavor to furnish their fellow-citizens the necessaries of life at a minimum cost? Or supposing the price of farm labor on the barons' farms should continue somewhat higher than the same class of labor in England; could it be justly said that this was in consequence of the "combine" referred to, or that the wages of the laborer were protected by the reduction of the field for his labor consequent upon limiting the area planted in wheat to the lands of the Trust?

Is it a fair answer to the above suggestions to say: "It would be impossible to effect a wheat Trust such as you describe; therefore your proposition is not relevant"?

Is it a self-evident truth that whatever may be of benefit to England must necessarily be injurious to the United States, and, if not, upon what basis does the seeming disposition rest to regulate our commercial conduct by the amount of damage that may inure to England, rather than by the benefits we should derive from seeking foreign markets, naturally tributary to us, absolutely regardless of the effect, for or against England?

Respectfully, Thos. T. Turner.

St. Louis, Mo., August 29, 1888.

THE MARKETS OF THE WORLD.

To the Editor of The Nation:

Sir: Speaker John G. Carlisle, in the closing paragraph of his very able speech on "Tariff Reform," in the House of Representatives, says, "We want not only the home market, but all the markets of the world for the varied products of this great country. We want to send our agricultural products, our cotton, and our breadstuffs and provisions to the agricultural peoples of South America, Mexico, and Asia."

Strong as it is, this is only a partial statement of the pressing need of this country. A nation, like an individual, cannot live in selfish isolation without injuring itself, not only in its material interests, but in its moral character and influence as well. Commerce is the great teacher of civilization, and by virtue of a beneficent law every teacher becomes a learner also. By our own folly, under the pretence of protection, we have swept from the ocean our merchant vessels and have driven away those of other nations. All this would, under a reformed tariff, be speedily amended. There is no industry more congenial to the enterprising spirit of this nation than that of foreign commerce, and we should soon find that we have much to learn as well as to teach through its peaceful and friendly methods. The persist-

ent stifling of that commerce by arbitrary law for the benefit of a class, and to the injury of the rest, is unworthy a free and intelligent people. B.

BALTIMORE, August 31, 1888.

STRANGE ERROR OF A FORTNIGHTLY REVIEWER.

TO THE EDITOR OF THE NATION:

SIR: The following remarkable statement is to be found in the June number of the *Fortnightly Review* on "Social Problems in America," by W. H. S. Aubrey, LL.D., pages 856–857:

"Seeing that silver has been for some time at a discount, the practical effect is that the country at large has to suffer from the depreciation, for any one can obtain at the mint, in exchange for gold or United States bonds, silver coinage at the full discount, which he can use at the par value. Many large employers and storekeepers have been in the habit of purchasing silver in this way, so as to make a profit upon their payments for wages or commodities. The system is convenient for debtors and for all who have to pay money, but it is the reverse for creditors and for all who have money to receive."

Does it not seem as if the absurdity of this statement would be apparent even to those who might be ignorant of the facts in the case?

Yours respectfully, JAS. A. HUNT.

WINNETKA, ILL., August 31, 1888.

FATNESS.

TO THE EDITOR OF THE NATION:

SIR: I have just read your article on "Fatness" in your issue of the 16th inst., and am tempted by its perusal to submit to you a regimen which, if followed by your fat friends, will reduce superfluous flesh without injury to the constitution. I write from experience, having reduced my own weight fifty pounds.

Schweninger's plan of decreasing the quantity of food is good, but difficult to follow. Very few people have the moral courage to stop short in the midst of a feast of good things when they bring to the table appetites sharpened by fasting; who ever heard of a hard drinker setting down his glass of bourbon half consumed and resignedly walking away from it? No, sir, that particular glass he always empties; as old Rip Van Winkle says, "He won't count that one." The case of the hard eater is much the same; most fat people have vigorous appetites and indulge them. My plan for their reformation is precisely the same as for the drinker: as in his case total abstinence from the rosy is the only sure cure, so in the case of our fat friends absence from food that stimulates and excites the appetite, and at the same time weakens or destroys the resolution to be moderate, must be practised.

What shall we do, then, starve? By no means. I propose that you shall eat and drink all that you want, and that you shall take no more exercise than you are disposed to; this, surely, is easy enough of accomplishment. Now for the rule:

Morning.—Sponge bath, tepid water, rough towel; walk half a mile if convenient. Breakfast: one cup tea, coffee, or milk, no sugar, all the bread you can eat, no butter.

Noon.—Mush, milk, bread, vegetables, fruit, tea, coffee, or milk, no sugar or butter.

Evening.—Bread, fruit, tea, coffee, or milk.

Every other day three eggs with the noon meal, or, if the person following this treatment has been largely a consumer of animal food, then, three times a week, broiled meat, fowl, or fish of any kind, not to exceed one pound. Eschew all grease, pastries, and sweetmeats.

In a day or two the appetite for bread alone will enable the experimenter to make a hearty meal, and in a few days the disposition to move about will manifest itself, and the party will take exercise the most convenient or for which he has the most disposition.

If any of our fat and amiable brethren are induced to try this treatment, I shall feel amply repaid for the trouble of writing this letter, and I feel assured that you also will consider it a fair recompense for publishing the same if any one is benefited thereby.

Yours very truly, J. T. SUTTON.

SAN FRANCISCO, No. 4 CALIFORNIA ST., August 24, 1888.

Notes.

CHARLES SCRIBNER'S SONS' fall announcements include the work of which a foretaste is given in the current *Scribner's*, viz., ex-Secretary McCulloch's 'Men and Measures of Half a Century'; 'Dogmatic Theology,' by Prof. W. G. T. Shedd; the sixth volume of Dr. Philip Schaff's 'History of the Christian Church,' forming vol. i. (1517–1530) of the "History of the Reformation"; 'The Text of Jeremiah,' by Prof. J. C. Workman of Victoria University, Coburg, Ontario; 'Amos Kilbright: His Adscititious Experiences, with Other Stories,' by Frank R. Stockton; a new and uniform edition in eight volumes of Donald G. Mitchell's works; a select edition of J. T. Headley's historical works; 'The Five Talents of Woman;' and the following juvenile publications—'Children's Stories of the Great Scientists,' by Miss Henrietta C. Wright; 'Little People and their Homes in Meadows, Woods, and Waters,' by Stella Louise Hook; 'A Tale of the Indian Mutiny,' by Louis Rousselet; and 'Wild Men and Wild Beasts,' by Lieut. Gordon-Cumming.

J. B. Lippincott Co. issue next week the second volume of 'Chambers's Encyclopædia.' They will be the American publishers also of the new "International Statesmen Series," edited by Lloyd C. Sanders, of which the initial volume will be 'Lord Beaconsfield,' by T. E. Kebbel, writer of the sketch of Beaconsfield in Leslie Stephen's 'Dictionary of National Biography.'

The Messrs. Putnam are about issuing a second edition of Mr. C. B. Todd's 'Story of the City of New York.'

Thomas Whittaker will publish 'Studies in the Acts of the Apostles,' by Bishop Williams of Connecticut.

'Songs of Toil,' by the Queen of Rumania, translated by John Eliot Bowen, is in the press of Frederick A. Stokes & Bro.

Mr. Andrew Lang has written an introduction for a volume of Mr. J. Whitcomb Riley's verses which has been prepared for publication in England.

Mr. Froude has written a preface for a volume of travels in the United States which Longmans, Green & Co. will shortly publish. This is 'Our Kin across the Sea,' by Mr. J. C. Frith, a New Zealand colonist who visited us last year. The same firm will bring out, early in the autumn, 'The Inns of Old Southwark, and their Associations,' the title of a forthcoming work by Mr. William Rendle, author of 'Old Southwark and its People,' assisted by Mr. Philip Norman, who has been instrumental chiefly in collecting the numerous illustrations.

A revised edition of the catalogue of the loan collection of books, autographs, pictures, and relics shown at the recent Pope Commemoration at Twickenham, England, has been prepared by Mr. Austin Dobson and Mr. H. R. Tedder. Orders may be sent to the librarian of the Twickenham Free Library.

The latest issue of the Camelot Series is a handy but copious volume of selections from above fifty of the leading writers of our prose literature, under the title, 'English Prose from Mandeville to Thackeray, Chosen and Edited by Arthur Galton' (London: Walter Scott; New York: Thomas Whittaker). The selections vary in length and in interest, but they have been chosen with judgment, and edited as little as possible. There are no biographical notes, with the exception of a few lines upon Southwell, who, the young editor seems to think, stands in need of an introduction; but in other cases he has "not ventured to doubt the knowledge or to outrage the intelligence" of his readers, and therefore confines his notes to the mere dates of the authors quoted. The plan has its advantages, especially for the literary reader. Many of the extracts are among the familiar noble passages of English literature; others are less known, particularly those from the divines; but all taken together are a fine illustration of the various music, the dignity, and the plainness of our tongue. The editor's reflection is perhaps the most obvious one, but it is certainly the most important: "One of the great uses of a book of selections," he says, "is to remind us that in all ages the really great writers have differed very little from one another; all good prose has the same qualities of directness, plainness, and simplicity." This use the volume serves admirably.

'Evan Harrington' is the latest of the series of George Meredith's novels to appear in the popular edition issued (with the author's sanction) by Roberts Bros., Boston.

Dr. Samuel Lockwood is well known as an entertaining writer on natural history, and his 'Animal Memoirs: Part I, Mammals' (Ivison, Blakeman & Co.) sustains his reputation in this particular. We cannot, however, agree with his publishers when they say that the pretty, illustrated volume is "just the thing for reading classes in our schools." The truth is, that Dr. Lockwood's style is open to grave objections as a model, being anything but simple and idiomatic. "This is trending on a profoundly interesting fact"; "his downfall was the outcome of an unwarranted confidence in his own abilities"; "the species or trivial distinction is based upon the external features"; "let us not damage Joey's record"—are characteristic sentences which children will least suffer from by not understanding.

A large part of the 'Selections from Ruskin' which Mr. Edward Ginn has made for the "Classics for Children," published by his firm, should likewise prove unintelligible to young readers and listeners. A further selection by the teacher is necessary from these abridgments of 'Sesame and Lilies' and the 'Crown of Wild Olive.' Neither have we here a style which, for all the reputation of Ruskin as a master of English prose, is one to set before children.

We recommend to teachers for their examination the 'School Grammar' prepared by David Salmon (Longmans), of which the unconventional scheme and the excellent typography are very attractive.

Whether more or less than a book, 'The Family Caterer' is likely to find many readers (American News Co.). It is a calendar of bills of fare for a whole year, and attached to it for easy reference is 'The Good Cook,' whose recipes are numbered to correspond with the respective entries in the calendar. The idea is ingenious. The unit of *quantity* has regard to the needs of a small family.

A comely and dignified-looking campaign text-book is Mr. C. B. Norton's 'The President and his Cabinet' (Boston: Cupples & Hurd). The biographies (Thurman being included) are accompanied with portraits and views, and among the documents are the President's late tariff and civil-service messages, and the platform of 1888.

'Sur l'Eau,' by M. Guy de Maupassant, which appeared in some of the earlier numbers of *Les Lettres et les Arts* for the present year, has been published in a volume by Marpon & Flammarion (Boston: Schoenhof). The illustrations in the text, which fill its pages, are entirely new ones, by Édouard Riou, and not reductions of those which originally accompanied it in the large pages of the review, by Meissonier and others.

Madame de Witt, the daughter of Guizot, and one of the most inexhaustible of bookmakers, has published 'Du Visible à l'Invisible: Rêveries consolantes, d'après Mrs. Oliphant et Miss Elizabeth Phelps' (Paris: Perrin; Boston: Schoenhof).

M. Ernest Renan's new volume, 'Drames Philosophiques' (Paris: Calmann Lévy; Boston: Schoenhof), is a collection of his well-known writings, with the same descriptive title, issued singly during the last ten years. It contains 'Caliban,' 'L'Eau de Jouvence,' 'Le Prêtre de Nemi,' 'L'Abbesse de Jouarre,' '1802,' and 'Le Jour de l'an 1886.'

The announcement was made in the *Revue Bleue* for August 4 that its "Causerie littéraire" would hereafter be written by M. Jules Lemaitre. M. Maxime Gaucher, whose death was announced in the preceding number, had written the short and lively reviews of new books that have appeared in its pages under this heading almost every week during the past sixteen years.

L'Art for August 1 and 15 continues the account, partly autobiographical, of the career of the late François Bonvin, giving a number of his pen-and-ink caricatures evoked by his journey to Holland and Belgium in 1873, and a strong, unfinished full-page etching of a *fileuse Bretonne*. An eccentric (and finally insane) brother etcher, Charles Méryon, is commemorated by Henry de Chennevière in an article on the archives of chalcography at the Louvre. Méryon's literary style was refreshingly unlike the standard French staccato, and some quotations from him embrace sentences twenty lines long, with hardly another point than the comma. When we recall Mr. Cole's Italian work on wood, graver in hand, before the very canvases of the old masters, it is interesting to read Méryon's report of his own etching in the same way, holding the plate in his hand and the mirror, too, that reverses for him, and not even sitting down ("gravant même debout").

The most noteworthy article in *Petermann's Mitteilungen* for August is on the Artificial Changes in the Flora of California, by the late H. Semler. After a brief review of the agricultural history of the country he treats particularly of the small fruits, calling attention to the fact that, while the introduction of foreign species has been prosecuted with an energy amounting "almost to a mania," little or no attention has been paid to cultivating the wild native berries. Dr. Junker sends the substance of the news received at Cairo on July 5 by a messenger who left Khartum May 25, bringing letters from Slatin-Bey and Urwalder, one of the captive missionaries. In it is the startling statement that during the past two months the Mahdi had been preparing an expedition, consisting of 4,000 men, with four steamers and numerous transports, designed to attack a white Pasha in the south and to conquer his dominions. This is held in Cairo to indicate an impending attack on Emin Pasha, and the supposition is made that, in anticipation of this design of the Mahdi's, Emin may have marched his forces to the northward into the Province Bahr el-Ghazal, hence giving rise to the report of the advance of a white Pasha in that direction. This weakening of the Mahdi's army in Khartum, it is suggested, should be availed of to send an expedition against that place, which would doubtless encounter very little opposition, so oppressive is the tyranny of the Mahdi.

No. 34 of the *American Journal of Philology* opens with a paper "On the Stylistic Effect of the Greek Participle," by Prof. Gildersleeve, whose *obiter dicta* at the beginning concerning the participle in English and in German will arrest attention. One might infer that this scholar was "unfriendly" to the participle, as our bimetallist brethren say of silver. The editor also takes a hand, in footnotes, in the discussion of the "Sequence of Tenses in Latin," continued by Prof. W. G. Hale. The other leading articles are "Charleston Provincialisms," by Sylvester Primer; "The Pennsylvania German Dialect," by M. D. Learned; and "Gerunds and Gerundives in Pliny's Letters," by James W. Bright.

By a slip of the pen on page 159 of our last issue, we referred to the *Evening Post* of August 22 for a comparative table of the Mills bill and the present tariff. The true date of the paper is August 23.

—Some of the many persons in America who feel themselves under obligation to the late Matthew Arnold, may like to unite with his friends and admirers in England in the public testimonial which is proposed in his honor. Mr. Arnold died a poor man, and it is, we believe, the design of the Committee that has the matter in charge, to devote a portion of such sum as may be subscribed for the memorial to placing a medallion of the poet in Westminster Abbey, and to put the remainder of the sum at the disposal of Mrs. Arnold. Something over £2,000 has been raised in England. Should any of our readers wish to add to this sum, we shall be glad to receive their subscriptions, and to transmit them to the treasurer of the memorial fund.

—Hugh McCulloch's reminiscences of public men, in the current *Scribner's*, are interesting, but they show rather a temperate judgment than keen observation. They are almost entirely lacking in detail, anecdote, and that distinct personal impression, as of a character in a novel, which one expects to find in memoirs. He saw and was familiar with many of the great historical characters of the time, and he reviews the career and genius of several of them, giving a rather more favorable sentence than history has yet pronounced upon those who are or have been under a cloud—such as McClellan, Hancock, and Johnson; and a less favorable one upon the favorites of fortune, like Grant. What he says of Johnson is of most consequence. He testifies that in a daily intercourse of four years he never saw him under the influence of liquor, and quotes Lincoln as saying at the time of the inauguration, "I have known Andy Johnson for many years; he made a bad slip the other day, but you need not be scared: Andy ain't a drunkard." He also testifies that Johnson did not use his appointing power for personal ends, was free from any improper influences in his patronage, and administered his office with entire integrity in a clean and honest way. He admits that under bad advice Johnson did undertake to bolster up "a third party," but adds that there were fewer changes than is usual under the circumstances of the accession of a Vice-President to office. This is altogether the most favorable opinion upon Johnson that has been set down. For Arthur, the third President with whom he had official connection, he exhibits the warmest regard, especially for his resistance to the demands of his former political associates for offices, and says he "did not know which most to admire, his firmness in resisting their importunities, or his tact in retaining their good will, notwithstanding his refusal to comply with their urgent requests." He distinctly sides with McClellan, and disparages Grant even on the military side of his career, while for Sheridan, Sherman, and Thomas he has the highest respect. In all these judgments the lines of old differences are still so plain as to mark them as contemporary opinions by one whose sympathies are not entirely disinterested.

—The principal articles in the number besides this are, the Railway paper upon Passenger Travel, which is finely illustrated; one upon the modern Greeks, which incidentally pleads for the American School at Athens; and one upon the recondite subject of Campaign Medals, which possesses a curious interest. The writer of the last-named article, Mr. Gustav Kobbé, has been misled by the collector's desire to have a complete series. He figures the obverse of a medal bearing a kneeling female slave, the legend, "Am I not a woman and a sister?" and the date, 1838. The reverse, he tells us, is inscribed, "United States of America" and "Liberty." From all this he concludes that "it evidently commemorates the organizing of the Liberty party." But this party was not founded till 1839; and what we are dealing with is obviously a token coined by or in behalf of the female anti-slavery societies before the division in the ranks of the abolitionists, and while the future founders of the Liberty party were deprecating such a political organization. The division, by the way, Mr. Kobbé ascribes to the promulgation of the disunion doctrine by Mr. Garrison; but the separation in 1840 had a purely sectarian origin, and was prior to any talk or thought of disunion as an abolition policy.

—The September *Century* makes a new and useful departure in devoting nearly all the number not occupied by serials to subjects of education, in which one naturally finds reflected the most interesting current reforms, art and industrial education, the progress of women as students, and the question of methods in boys' schools. The last, which is perhaps the most important topic, is treated "under a parable" by the detailed account of Dr. Thring's school at Uppingham. He believed in so organizing a school that the commonplace boys should get their full share of attention, in opposition to the system that develops the prize-scholars at the expense of the others; and besides this leading idea, he had also many other original notions, which resulted in his introducing studies and pursuits unthought of in the old régime, such as French, tools, and gardening, and also in his providing a little room for each boy, not as a sleeping apartment, but for study and privacy. The stamp of the individuality of Dr. Thring is all over this school, yet although the tradition of his methods may long continue, the vitality of his experiments was undoubtedly in the man himself. His model, however, is full of instruction to those teachers who have boys in charge. In the latter part of the magazine the opposite theory of education—that it is the bright boys destined to fame who

make the reputation of the school, and that it is necessary that the one genius should be developed—is guardedly and almost indirectly argued for, and the point is made that our improved colleges, with all their system, do not produce great men. But this is the old fallacy of ascribing too much to education, too little to other social conditions. Mr. Stillman, in a like vein, argues that the inferiority of modern art is due to the indifferent education which artists receive even in their technical work, to say nothing of the liberal studies. The Greek-letter societies receive the honor of an article and of a card of recommendation from Prof. Seelye; naturally, only one side of the shield has light thrown upon it. Prof. Sill is remembered in a eulogistic paper which tells us more of his private life than has yet been published, and it fitly finds a place in this number, for in his nature the teacher monopolized all other functions. We observe, among other matters of interest besides education, Minister Romero's account of his loan of money to Gen. Grant, which sets the transaction modestly but definitely in its true light—which is highly honorable to Signor Romero.

—The continued illness of Professor Newcomb, Superintendent of the Nautical Almanac, directs no little attention to the colossal researches in theoretical astronomy which have mainly occupied him for a period of ten or twelve years. The general object of this work is the determination of the form, size, and position of the orbits of all the large planets of the solar system, from the best and most recent observations, and the preparation of entirely new and uniform tables for predicting the future positions of these objects. The first of the four sections of the work relates to the general perturbations of the planets by each other, and the part already in hand comprises the four inner planets, Mercury, Venus, the Earth, and Mars, in which fourteen pairs of planets come into play. Twelve of these were completed some months since, and only the action of Jupiter on Venus and Mars remained undetermined. In the next place, the older observations of the planets must be recalculated, and thus problems constantly arise which cannot be met by general rules. All the observations at Greenwich from 1765 to 1811 have been completely reduced with modern data. Earlier Greenwich observations were similarly treated by Dr. Auwers of Berlin, who liberally presented the complete calculations as his contribution to the work of the Nautical Almanac Office. In a recent report of this work, Professor Newcomb gives further details of his progress in the treatment of other classes of planetary observations.

—Following this collation of all the available observations of each planet, comes the theoretical preparation of their corresponding positions at the time of observation. This forms the most laborious and difficult part of the work; and had Leverrier's tables, the best hitherto, been used without modification, Prof. Newcomb would have found it impracticable to complete it with the number of computers at his command; but he has skilfully avoided the difficulty by a reconstruction of Leverrier's work in such form that it should be much less laborious to use, while sufficiently accurate for the purpose required. These theoretical positions must next be compared directly with the observations, one by one, and the differences between the two are then, by suitable mathematical processes, construed as implying the nature and amount of certain corrections to the planet's motion in its orbit. More than a full year must still elapse, says Prof. Newcomb, before the work on the four inner planets will have advanced to the stage where this direct comparison is ready to be made. There remain the four outer planets, on the two more important of which, Jupiter and Saturn, Mr. Hill of the same office has been engaged for many years, and his new theory of their complicated motion is already in the printer's hands. The two outer planets, Uranus and Neptune, have not yet been begun.

—The August Proceedings of the Royal Geographical Society opens with a striking account by Lieut. Younghusband of his adventurous journey across central Asia, from Pekin over the Gobi Desert and eastern Turkistan to Kashmir. The author, who accompanied Mr. James in his travels through Mantchuria, went in the simplest manner, having part of the time but a single servant, and apparently never more than ten. As he approached the desert, the soil became so friable as to crumble to dust "when the slightest pressure is put on it. In consequence of this, the roads are often sunk thirty or forty feet below the level of the surrounding country." Every cart in passing pulverizes the soil, the dust being immediately blown away by the wind. In the Gobi itself, rain fell sometimes, but would generally "pass off into steam before reaching the ground. Ahead of us we would see rain falling heavily, but before it reached the ground it would gradually disappear—vanish away—and when we reached the spot over which the rain had been falling, there would not be a sign of moisture on the ground." The inhabitants of Turkistan he found living peaceably under the Chinese rule, which is now much milder than it was before the insurrection of Yakub Beg. The most perilous part of his journey of some 5,000 miles was the crossing of the stupendous Mustagh Pass into Kashmir. This was so choked with glacial ice that the difficulties to be overcome, especially in the descent (six hours, for instance, spent in hewing steps in an ice-slope on the edge of a precipice at an altitude of 19,000 feet), make the most daring feats of Alpine travellers seem almost like child's play. He passed within a short distance of the second highest mountain in the world, K2, 28,250 feet in height. "The upper part, for perhaps 5,000 feet, was a perfect cone, and seems to be composed almost entirely of ice and snow." This peak it was proposed, in the discussion following the reading of the paper before the Society, should be henceforth known as Peak Godwin-Austen, after the officer who first surveyed the Mustagh range. Lieut. Wissman contributes a graphic sketch of a central African town which he visited in 1882. For ten miles the village street was lined with homesteads, each consisting of "four or five carefully built grass-huts, rising to a height of twenty feet," and surrounding a scrupulously clean courtyard. These homesteads were separated by gardens, in which fruits, vegetables, and medicinal plants were cultivated, as well as tobacco, hemp, and sugar-cane, while behind were thickets of bananas and plantains, the street itself being bordered with palms. The inhabitants, a tall and muscular race, had some knowledge of the arts, making "open-work battle-axes inlaid with copper," among other things. Only four years later, in 1886, he again visited this peaceful spot, but as he approached it he was struck by the dead silence which reigned. "Tall grass covers everything, and a charred pole here and there, and a few banana trees, are the only evidences that man once dwelt here. Bleached skulls by the roadside, and the skeletons of human hands attached to poles, tell the story of what has happened here since our last visit." The Arab slave-hunter had been there, and not this town only, but "the whole tribe of the Bene Ki, had ceased to exist."

SOME SEVENTEENTH-CENTURY LOVE-LETTERS.

Letters from Dorothy Osborne to Sir William Temple. 1652–54. Edited by Edward Abbott Parry. Dodd, Mead & Co. 1888.

THESE letters have been partly known to the world before by some extracts from them given in Courtenay's Life of Temple, upon which Macaulay based a charming passage, describing Dorothy's character and courtship, in his well-known essay. When Temple was a youth of twenty and on his way to France, he fell in, by traveller's luck, with this young lady, a year his senior, and with her brother, in the Isle of Wight. The impression made upon him by her conduct in a little adventure they met with, and by her manners and mind, was a lively one, and destined to be lasting, but how and when he became her "servant," in the phrase of the time, there is no way to find out. These letters begin some five or six years later, and were a secret correspondence, attended with all the anxieties and pleasures that belong to that method of courting. Time had brought bad fortune to Dorothy's party; and her father, who had been the Governor of Guernsey, and long sustained the siege of Castle Cornet for the royal cause, charged with betrayal and relieved from command by Prince Charles, had made his peace with the Commonwealth and retired, a broken and dying man, to his estate at Chicksands. Here Dorothy was attending to him during his long illness and living the quietest of lives, except for the one great concern of her maiden age—the disposal of herself, as she terms it. The letters, which unfortunately show only her side of the correspondence, are genuine love-letters, but they are such as exhibit a sound and sensible mind, a vivacious interest in the news, and especially the matrimonial gossip of the day, and a very complete account of how she spent her time. A familiar correspondence of this sort is a rare historical find, and it affords a picture of life in the Commonwealth period not without entertainment to lovers of that informal history which memoirs and diaries often handsomely provide. The zest of such matter, it should be said by way of caution, lies almost entirely in the words of the speakers; but perhaps we may give some notion of Dorothy and her ways and circumstances in the limits assigned us.

The mistress of Chicksands was, in the eyes of her time, a woman to be wooed. She had little fortune, but innumerable suitors. The smallness of her dowry was, indeed, what stood between her and Temple as the main obstacle to their union, for he, too, was scantily provided with lands and goods; his father wished a wealthy marriage for him, and the friends of Dorothy had the same natural ambition for her. The worldliness of the wedding contracts of the time in good society is the one trait that stands out before all others in this volume. It was as much a matter of course as birth and death. "I am told," writes Dorothy, "that R. Spencer is a servant to a lady of my acquaintance, a daughter of my Lady Lexington's. Is it true? And if it be, what is become of the £2,500 lady?" This is the spirit of the period. Dorothy herself acknowledges the rightfulness of the family view of marriage, and protests that she should not think of disregarding it, or finally doing other than she was bid, and more than once she is discouraged at the prospects of

Temple's suit, and urges that they both give up their hopes and yield to the necessities of their fortunes. Meanwhile, the number of her own suitors made her position a very embarrassing one, and put her constancy to the trial. First among these as a good match was Henry Cromwell, the son of the Protector, whom Mrs. Hutchinson calls an "insolent foole" and "a debauched, ungodly cavalier." He was perhaps more agreeable to Dorothy for those traits which drew these bad words upon his memory, and he was useful in getting her some Irish greyhounds she desired, but he did not prosper further in her favor. Another one of her lovers, if they can be called so, was her cousin, Sir Thomas Osborne, afterwards the notorious Earl of Danby. A third was "a squire that is as good as a knight," apparently, Richard Bennett, son of a London alderman of note, with a magnificent seat. There were country gentry in plenty who besieged her. The most amusing of these is one whom she nicknames the "Emperor," a Sir Justinian Isham, with four daughters and much learning, who returned to the attack three times, and at each assault provoked some bantering mention in these letters, for Dorothy faithfully told her lover of all his enemies. This is the way in which she pays her respects to him:

"'Twas the vainest impertinent, self-conceited, learned coxcomb that ever yet I saw. . . . Lord! what would I give that I had a Latin letter of his for you, that he writ to a great friend at Oxford, where he gives him a long and learned character of me; 'twould serve you to laugh at these seven years. If I remember what was told me on't, the worst of my faults was a height (he would not call it pride) that was, as he had heard, the humour of my family; and the best of my commendations was that I was capable of being company and conversation for him. . . . Oh, my conscience! we should all have joined against him as the common enemy, for those poor young wenches [his daughters] are as weary of his government as I would have been. He gives them such precepts as they say my Lord of Dorchester gives his wife, and keeps them so much prisoners to a vile house he has in Northamptonshire, that if but once I had let them loose, they and his learning would have been sufficient to have made him mad without my help. . . . I never had, I think, but one letter from Sir Justinian, but 'twas worth twenty of anybody's else to make me sport. It was the most sublime nonsense that in my life I ever read; and yet, I believe, he descended as low as he could to come near my weak understanding."

Dorothy, however, is usually more gentle with her admirers' characters. Most of them, it may be surmised, did not get further than treating with her relatives for her hand, but occasionally one was rash enough to plead directly. This is the fortune one such worthy met with: she, being on her guard, kept "Mrs. Goldsmith and Jane" to sit with her when he called; but he came "better provided than I could have imagined. He brought a letter with him and gave it to me as one he had met with directed to me; he thought it came out of Northamptonshire." Dorothy was equal to the emergency, and dashed his hopes by not opening it, on which he whispered to her that it "was of great concern to him, and begged I would read it and give him my answer. I took it up presently, as if I had meant it, but threw it, sealed as it was, into the fire, and told him (as softly as he had spoke to me) I thought that the quickest and best way of answering it." It does not appear, however, that even by such sharp means Dorothy broke any hearts. One by one her suitors, even to Sir Justinian, consoled themselves with other wives within a short period, and their fates are duly recorded.

All this did not go on unobserved. There was an elder brother in the case, who seems to have been attached to his sister, but desperately jealous of Temple, whose favor he more than suspected, and very anxious to marry Dorothy well. The two would converse of the advantages of wealth, the deceitfulness of good nature, the ill fortune of marriages founded on love, the good effects of compliance in breeding affection in marriages of convenience, and similar burning subjects when the talk was upon general topics; but the bearing of it was well understood by both. They quarrelled outright more than once, and the brother did not scruple to say ill things, much to his discredit, of Temple, whose family, it is to be remembered, were "Parliament" men. Here is the account of one such "skirmish":

"The Emperor and his proposals began it; I talked merrily on't till I saw my brother put on his sober face, and could hardly then believe he was in earnest. It seems he was, for when I had freely spoke my meaning, it wrought so with him as to fetch up all that lay on his stomach. All the people that I had ever in my life refused were brought again upon the stage, like Richard the III.'s ghosts, to reproach me withal; and all the kindness his discoveries could make I had for you was laid to my charge. My best qualities (if I have any that are good) served but for aggravations of my fault, and I was allowed to have wit and understanding and discretion in other things, that it might appear I had none in this. Well, it was a pretty lecture, and I grew warm with it after a while; in short, we came so near an absolute falling-out that 'twas time to give over, and we said so much then that we have hardly spoken a word together since. But 'tis wonderful to see what curtseys and legs pass between us; and as before we were thought the kindest brother and sister, we are certainly the most complimental couple in England."

At a later date matters went further, her brother charging that "Religion and honor were things you did not consider at all, and that he was confident you would take any engagement, serve in employment, or do anything to advance yourself." On this Dorothy lost patience and forgot her disguise, and they "talked themselves weary," until "he renounced me and I defied him, but both in as civil language as it would permit; and parted in great anger, with the usual ceremony of a leg and a courtesy, that you would have died in the laughing to have seen us." After these bouts they were outwardly reconciled, and although the ties were strained by the long contest, they seem not to have been broken.

Life at Chicksands, besides this endless coil of love, had its daily routine, and the glimpses one obtains of this are perhaps not an unfair example of how the days then went on in a country-seat. The house was an old priory in quiet scenery, with pleasant outlooks—"a sleepy country-house," says the editor, "the warm earth and her shrubs creeping close up to the very sills of the lower windows, sending in morning fragrance, I doubt not, when Dorothy thrust back the lattice after breakfast." The noise of the world was far away, and the breaking of the Parliament by Oliver only calls forth a query whether Algernon Sidney did really resist, and a reflection on what her fortunes might have been had she accepted Henry Cromwell's suit. Dorothy describes how she passes her time, and says that it is "what I am likely to do these seven years if I stay here so long." She rises "reasonably early," goes round the house till she is "weary of that," and then into the garden till it grows too hot. At ten she "makes herself ready," and then to her father's chamber, and then to dinner, "where my cousin Molle and I sit in great state in a room and at a table that would hold a great many more," and after dinner there is talk, and in the heat of the day reading or working. About six or seven she goes out for a walk

"into a common that lies hard by the house where a great many young wenches keep sheep and cows and sit in the shade singing of ballads. I go to them and compare their voices and beauties to some ancient shepherdesses I have read of, and find a vast difference there; but, trust me, I think these are as innocent as those could be. I talk to them and find they want nothing to make them the happiest people in the world but the knowledge that they are so. Most commonly when we are in the midst of our discourse, one looks about her, and spies her cows going into the corn, and then away they all run as if they had wings at their heels. I, that am not so nimble, stay behind; and when I see them driving home their cattle, I think 'tis time for me to return too. When I have supped I go into the garden and so to the side of a small river that runs by it, where I sit down and wish you were with me (you had best say this is not kind neither). In earnest 'tis a pleasant place, and would be much more so to me if I had your company. I sit there sometimes till I am lost with thinking; and were it not for some cruel thoughts of the crossness of our fortunes that will not let me sleep there I should forget that there were such a thing to be done as going to bed."

It is not often that Dorothy is so prettily sentimental as this, but it must be granted that this is charming writing. Her books were the romances of the time, 'Cyrus' and the rest of them in as many volumes as a standard history nowadays, and she discusses the characters with her own lover in a demure way that provokes a smile. The books of the day, too, she read, among them Lady Newcastle's poems. "For God's sake, if you meet with it"—this "book of poems newly come out, made by my Lady Newcastle"—"send it to me; they say 'tis ten times more extravagant than her dress." She had a pure taste in diction, too, and is very contemptuous of Lord Broghill for using *concern* instead of concernment, and she objects to *extreme* instead of *extremity*, and as for *wellness* and *unwellness* she professes not to know what they mean. She was clearly a well-educated lady of the period.

There were neighbors, too (among them Sir Samuel Luke, the original of Hudibras), and visitors at Chicksands, and she has a feminine interest in describing them; or she goes to make calls about the country and comes home with similar materials for a letter. These passages are very characteristic, marked by keen observation, and the portraits drawn, though touched with caricature, are among the most entertaining matters in the volume. Here is a young husband whose lady Dorothy went to call upon when he brought her down to the country; she had known him "so handsome, so capable of being made a pretty gentleman," and now he "was transformed into the direct shape of a great boy newly come from school. To see him wholly taken up with running on errands for his wife and teaching her little dog tricks! And this was the best of him; for when he was at leisure to talk he would suffer no one else to do it, and what he said and the noise he made, if you had heard it, you would have concluded him drunk with joy that he had a wife and a pack of hounds. I was so weary on't that I made haste home." There is a lively sketch of a widow "broke loose from an old miserable husband that lived so long she thinks if she does not make haste she shall not have time to spend what he left. She is old and was never handsome, and yet is courted a thousand times more than the greatest beauty in the world would be that had not a fortune. We could not eat in quiet for the letters and presents that came in from people that would not have looked upon her when they had met her if she had been left poor. I could not but laugh to myself at the meanness of their humour, and was merry enough all day, for the company was very good."

Dorothy had a keen eye for this perpetual comedy of human nature, and she draws us

more than one of those ridiculous persons whom we know like our Molière. Occasionally she goes outside of her circle of observation into the field of common report, and sketches the characters of the fashionable world; but we have room only for one more extract of this nature. It shall be about Lady Isabella Rich, daughter of the Lord Holland beheaded a few years before, and sister of Dorothy's friend, Lady Diana, who seems to have been of a sweet and winning nature :

"But my Lady Isabella that speaks and looks and sings and plays, and all so prettily, why cannot I say she is as free from faults as her sister believes her? No; I am afraid she is not, and sorry that those she has are so generally known. My brother did not bring them for an example; but I did, and made him confess she had better have married a beggar than that beast with all his estate. She cannot be excused; but certainly they run a strange hazard that have such husbands as makes them think they cannot be more undone whatever course they take. Oh 'tis ten thousand pities! I remember she was the first woman that ever I took notice of for extremely handsome; and in earnest she was then the loveliest lady that could be looked on, I think. But what should she do with beauty now? Were I as she I should hide myself from all the world."

These scenes and characters from contemporary life, however, should not lead us from the fact that the substance of the correspondence is the trials of the two lovers, though, as love is rather the spirit than the matter of the letters, it is more difficult to give an impression of this side of the volume. Temple seems to have been an ardent lover and an anxious one, and there is much protesting on Dorothy's part to meet his doubts and fears. She describes receiving a letter from him, however, in such a spirited way that it should relieve any lover's mind, but there is no space left for the passage. She writes often of their "crossed fortune," and at one period there is very great despondency, so that she urges that he abandon the suit and that they both go their several ways to the lot of all the world. She speaks of the beginning of their affection.

"Can I remember how ignorantly and innocently I suffered it to steal upon me by degrees; how, under the mask of friendship, I cozened myself into that which, had it appeared to me in its true shape, I had feared and shunned? Can I discern that it has made the trouble of your life and cast a cloud upon mine that will help to cover me in my grave? Can I know that it wrought so upon us both as to make neither of us friends to one another, but agree in running wildly to our own destruction, and that perhaps of some innocent persons who might live to curse our folly that gave them so miserable a being? Ah! if you love yourself or me, you must confess that I have reason to condemn this senseless passion."

And so she goes on through several letters, in a strain of intensity and seriousness that shows the genuine suffering. But the clouds broke away under Temple's influence, and they determined to stand to their hopes. When Dorothy's father died, she left Chicksands and made visits about the country and in town. London evidently wears the Puritan yoke more lightly than at first, and in the correspondence which, under somewhat greater inconveniences of exchanging letters, kept on, we get a few features of the city, a visit to old Lilly and "the execution of the Portugals," with the rest. It was not many months now before the alliance was finally arranged, Sir John Temple at last consenting to the desire of his son, who had also done some rejecting of advantageous marriage on his side, and the relatives of Dorothy, even to the jealous brother who had denied "honor and religion" to Temple, joining in the negotiation for the settlement. The Temples wished to leave this graceless enemy out, but Dorothy insisted that he should appear formally. The remainder of their lives was passed with distinction and honor, and there is no sign but that the marriage, for which they had waited seven years, was a happy one. They were unfortunate in losing their children —one of them, who was for a few days King William's secretary, under strange circumstances. A letter referring to his suicide closes the correspondence, and shows in Dorothy the same firm spirit that breathes in her earlier writing. As a record of a few years of a young woman's life in England in the middle of the seventeenth century, and of the contemporary social spirit, the collection has a high value, and it is in itself an addition of mark to the list of English biography. The editing has been performed with the utmost fidelity and thoroughness, with excellent judgment. It was a labor of love, and the devotion of the editor to Dorothy's memory has a personal touch which adds to the charm of the work.

SOLOMON MAIMON.

Solomon Maimon: An Autobiography. Translated from the German, with Additions and Notes. By J. Clark Murray, LL.D., F.R.S.C. Boston: Cupples & Hurd.

It was a happy chance that led Prof. Murray of McGill College, Montreal, to glance over the shelves of a second-hand bookstore in Toronto; for he was attracted by a little volume entitled 'S. Maimon's Lebensgeschichte,' whose translation will serve to acquaint English and American readers with a veritable Jewish Rousseau—at least his autobiography possesses in many respects the fascination of Rousseau's 'Confessions,' however dissimilar the authors in character and disposition. It is, indeed, surprising that so little is known in English of Maimon—an important figure among Kant's contemporaries, and, according to Kant himself (in a letter to Marcus Herz), one of the keenest and most prominent of his opponents. German writers devote some attention to him, Kuno Fischer in particular (in his 'History of Recent Philosophy'), while Erdmann and Ed. Zeller recognize the merits of a thinker for whose intellect Fichte confessed "eine grenzenlose Hochachtung" (boundless esteem). It was reserved for the author of 'Daniel Deronda,' who in that book shows a fair acquaintance with Jewish literature, to refer to "that wonderful bit of autobiography—the life of the Polish Jew, Solomon Maimon," and to immortalize the name of Maimon's friend, Moses Lapidoth, in her Jewish heroine, Mirah Lapidoth.

The story of Maimon's life is a night-piece from the latter half of the eighteenth century —a record of want, beggary, wandering, illumined by an indomitable zeal for knowledge. His efforts to emerge from his Polish-Jewish environment—his struggles to attain recognition in the world of letters—are not without their parallel in the history of literature, but it is rare to meet such a saddened experience, such long-continued misery, described in a style so naïf that it reminds one of Montaigne in his most confiding mood. There are passages not a few which suggest, too, Heine's picturesque irony; but there is little humor to relieve the gloomy narrative, which is an historical picture of Jewish life in Poland and parts of Germany a century ago.

Maimon was born in Lithuanian Poland in 1754, where his grandfather leased an estate from Prince Radzivil, but was so careless in his domestic economy that he was robbed on all sides. Maimon's father introduced a little more order, and trading with Koenigsberg in Prussia provided the household with tin and brass utensils. "We began," writes Maimon, "to have better meals, to wear finer clothes than before; I was even clad in damask." Following the old-time Jewish system of education, he was taught the Bible in his sixth year, and thus relates his first difficulties:

"In my sixth year my father began to read the Bible with me. 'In the beginning God created the heaven and the earth.' Here I interrupted my father and asked: 'But, papa, who created God?' 'God was not created by any one,' replied my father; 'He existed from all eternity.' 'Did He exist ten years ago?' I asked again. 'O yes,' my father said, 'He existed even a hundred years ago.' 'Then, perhaps,' I continued, 'God is already a thousand years old?' 'Silence! God was eternal.' 'But,' I insisted, 'He must surely have been born at some time.' 'You little fool,' said my father. 'No! He was for ever and ever and ever.'"

Not a very promising beginning for a young theologian, and Maimon soon developed an uncomfortable desire for wider knowledge than the traditional training. He was forbidden to read any books except the Talmud; but in his father's absence he made a raid upon the cupboard in his parent's study, and alighted upon some Hebrew books, histories, and astronomical works.

"As I was still a child, and the beds in my father's house were few, I was allowed to sleep with my old grandmother, whose bed stood in the above-mentioned study. As I was obliged during the day to occupy myself solely with the study of the Talmud, and durst not take another book in my hand, I devoted the evenings to my astronomical inquiries. Accordingly, after my grandmother had gone to bed, I put some fresh wood on the fire and took out my beloved astronomical book. My grandmother, indeed, scolded me, because it was too cold for the old lady to lie alone in bed, but I did not trouble myself about that, and continued my study till the fire was burnt out."

The even current of Maimon's childhood was soon disturbed by the loss of his grandfather's property, which set the family adrift. In their new abode, he was sent to a Talmudic school, and in his eleventh year was married, after the custom of his time. His married life was not a happy one. "I stood not only under the slipper of my wife, but—what was worse—under the lash of my mother-in-law." It must have been a painful relaxation, judging by the labor involved, to study Latin, Greek, and German, and turn for further knowledge to the Kabbala. His scepticism began to bud, and he and his friend Moses Lapidoth soon earned unsavory reputations as independent thinkers. After some experience as tutor he journeyed to Koenigsberg, Stettin, and Berlin, resolved to extend his knowledge of men and the sciences. This was in his twenty-fifth year, and he admits that he was far from presentable, with a "tolerably stiff beard, in tattered, dirty clothes," and with a language a mixture of Hebrew, Jewish German, Polish, and Russian. He was refused permission to stay in Berlin, and his deepest stage of misery which followed is described with some minuteness, as well as the story of his deliverance at the hands of a charitable rabbi, who recognized Maimon's learning and offered him shelter. But Maimon's restlessness had become chronic. He soon tired of the monotonous village life, and again set out for Berlin. How he found Wolf's 'Metaphysics' in a butter-shop, paid two groschen for the treasure, and wrote a treatise in Hebrew against the "foundations of revealed as well as of natural theology," is narrated in a chapter which introduces the reader to Moses Mendelssohn.

"I sent this dissertation to Mendelssohn, who was not a little amazed that a Polish Jew, who had scarcely got the length of seeing the Metaphysics of Wolff, was already able to penetrate

into their depths so far that he was in a position to shake their results by means of a correct Ontology. He invited me to visit him and I accepted his invitation. But I was so shy, the manners and customs of the Berliners were so new to me, it was not without fear and embarrassment that I ventured to enter a fashionable house. When, therefore, I opened Mendelssohn's door, and saw him and other gentle folks who were there, as well as the beautiful rooms and elegant furniture, I shrank back, closed the door again, and had a mind not to go in. Mendelssohn, however, had observed me. He came out and spoke to me very kindly, led me into his room, placed himself beside me at the window, and paid me many compliments about my writing."

It was not long before Maimon's careless manner of living made Mendelssohn and other friends dissatisfied, and Maimon again became the wanderer, visiting Hamburg and Amsterdam, in which place he was on the point of drowning himself, but overcame the desire. He abandoned Holland, because he discovered that "the main desire of the Dutch Jews is to make money; and they manifest no particular liking for the sciences." Returning to Hamburg, he offered to become a convert to Christianity, but he was told by a Christian clergyman, to whom he had stated at length his reasons for conversion, that he was too much of a philosopher to prove a good Christian. For two years he studied at the gymnasium, his favorite branches being philosophy and mathematics, and then the old restlessness reasserted itself. He forsook Hamburg, dwelt a while in Berlin, and settled at Breslau for a longer period, where he was visited by his wife, from whom he had been separated for so many years. She returned to Poland, with his son, after being legally divorced.

The last chapter in the Autobiography tells of the fourth journey to Berlin, his study of Kant's works—at first being a warm adherent, and later a keen critic—and finally throws light on his literary activity in that capital. Fortune at last began to smile on the wanderer: a Silesian nobleman, Count Kalkreuth, who had formed a high opinion of his writings, offered him a home, which was gladly accepted. Maimon, however, enjoyed rest for a few years only, dying November 22, 1800. The kindly village clergyman who visited him the day before his death, gives a pathetic account of a conversation with the philosopher, who remarked: "Ah me! I have been a foolish man, the most foolish among the most foolish —and how earnestly I wished it otherwise."

Prof. Murray has done English literature a service by enriching it with this autobiography, which is quotable throughout, and presents many striking and suggestive passages. He is the reverse of harsh in his estimate of Maimon, and inclined to extenuate those lamentable defects of temper and mind which made him one of the many who are called, not chosen. He has these good words to say for Maimon's character:

"It is noteworthy that with all the unrestrained rudeness which often characterized his manners, Maimon was not without a certain dignified courtesy; and when the occasion demanded it he could turn a polite phrase as prettily as the most accomplished gentleman. There was, moreover, in Maimon an intrinsic shyness which must have gone a long way to soften the less amiable side of his social character. Then it is evident that his conversation, in his better moods at least, had a charm which made him a welcome guest in any company. Thus, amid all that may have been repulsive at times, there must have been in Maimon's character a good deal to attract the friendly companionship of others."

Prof. Murray would have added appreciably to the value of his book by appending a chapter on Maimon's philosophy and his relation to Kant and Fichte. The subject has been fairly treated by Dr. Witte in a *brochure* which Prof. Murray has overlooked ('Salomon Maimon, von Dr. J. H. Witte. Berlin: H. R. Mecklenburg.' 1876). The omission of an index is unpardonable. The English transliteration of Hebrew and foreign terms is not always happy.

Report of a Commissary of Subsistence, 1861-5. By H. C. Symonds, formerly Major and C. S. U. S. A. Sing Sing, N. Y.: Published by the Author.

It is a misnomer to call this volume 'Report of a Commissary of Subsistence.' 'Recollections of a Commissary' would be a more suitable title. The work is desultory, and while it contains some of the official correspondence and some formal statistics of a commissary of subsistence, it contains also many of the commissary's recollections of matters in no way connected with his branch of the public service. The author is a graduate of the U. S. Military Academy, and was an officer of the regular army until he resigned in 1865. Able, industrious, conscientious, and sensitive, Major Symonds left the service with a grievance, which he sets forth in his book. It is easy to see, now that the blinding heat of zeal and loyalty has somewhat subsided, that his discomfiture in the particular matter he suffered from was inevitable. He undertook (in 1864) the dangerous task of controlling (to borrow the *mot*) the product of the *pen*. That is to say, to protect the Government from extortion in its purchase of pork for the army, he, with proper authority, set up a Government pork-packing establishment in Louisville. He might have known that that would be more than the patriots who were fighting in the rear of the army (for money) could endure. With the aid of some newspapers and politicians, they made a raid upon the audacious innovator who wanted to buy pork for the soldiers at something less than $50 a barrel. The worst of it was that Major Symonds's superior officers, who had forced him into the business, failed to stand by him. He says: "When I needed support, they withheld it. It was long after I had fled from the service that I first thought I had discovered the true inwardness of that whole hog business. I now have no doubt that it was a well-conceived scheme to bulldoze Kentucky and Indiana in the coming Presidential election [1864], and I appear to have been the only victim."

It was a stormy period, but it has all passed away, and, so far from injuring Major Symonds's reputation, it is safe to say that not one in a million knows that he was abused, and probably all who read of the affair hereafter will see that Major Symonds was not only honest, but was absolutely true to his trust and calling. Nevertheless, he had cause for discontent. He was maligned by speculators and adventurers, and his valuable services were in no way rewarded by the Government. On the contrary, he says that when a bill passed Congress in 1865 authorizing the addition of five or six colonels to his corps, he was especially recommended by the chief of the corps for one of them, but "the Secretary of War read, tore up the paper, and, throwing the pieces down, said, with a round oath, that I should never have anything so long as he could control it." That is enough to account for Major Symonds's resignation, and for the bitterness that marks his little book. It fixed the key upon which his song is pitched. In his view, "the call for 75,000 troops" (April, 1861), instead of attesting the loyalty and patriotism of the people, demonstrated "that there was profit in loyalty, and the accession of patriots and plunderers to the ranks of the Administration was overwhelming." He lived in what he aptly calls "the opiated atmosphere that is generally provided for those who spend other people's money."

But, apart from its tone and cynicism, the book throws valuable side-lights upon some important questions of history. Major Symonds says that he had a visit in Louisville from an old schoolmate, who had just come from the Altoona Conference of Northern Governors, and was on his way to Springfield, Illinois. Major Symonds called this schoolmate's attention to the fact that he had seen in the *New York Times* several extracts from rural papers thrusting at McClellan, and asked if there "was any method in it." His friend, after considerable hesitation, said there was, "that it had been decided that McClellan must go" (this, it should be remembered, was as early as July, 1862); that the Democrats had determined upon running McClellan in 1864, and that they, the Republicans, did not propose to supply the ammunition; that I might as well know it so that I could govern myself accordingly." This is testimony upon an interesting point in history.

Major Symonds served in Louisville under Generals Anderson, Sherman, Buell, and Rosecrans in 1861-62; indeed, he remained on duty there until 1865. Speaking of General Buell's return to Louisville, about the last of September, 1862, his reorganization of his army, and his prompt advance against Bragg, Major Symonds says:

"Personally I had not been an ardent admirer of Buell, although I fully recognized and respected his military virtues. It may have been that I had no such inducement as the lamb had to love Mary. But on this occasion he showed as grand qualities of fitness for chief command as had ever come within my knowledge by reading or observation. And from all the information I received, and I received a good deal that has not been written, or, if written, has been presented in so gingerly a manner as to carry erroneous convictions, I believe that had his orders been executed with subordination to duty and loyalty to military service, he would have redeemed the disasters in the East by victory in the West. By the displacement of General D. C. Buell the country lost the services of the best general I had thus far encountered in the war; in fact, he was the only one who had those qualities I had thought necessary for high command."

Major Symonds's testimony concerning General Sherman's great campaign, which began May 1, 1864, and extended from Chattanooga to Atlanta, and thence "to the sea," contains something new. He was in charge of the Subsistence Department at Louisville, the base of supplies, and General Robert Allen was in charge of the Quartermaster's Department at the same point. Major Symonds says:

"One morning during Christmas week of 1863, Col. C. B. Comstock, of General Grant's Staff, came to my office. . . . He stated that General Sherman was to start on the 1st of May following from Chattanooga with 105,000 effective men and 30,000 civil employees; that I was charged with the subsistence of that army, and would be held responsible for that part of the work, . . . and that only General Allen and myself would know the details, otherwise than at the headquarters of General Grant and of General Sherman; that if any knowledge reached the public, one of us would be considered responsible; that I must put nothing on paper in my office or in my correspondence by which the plans or the purpose of the campaign could be disclosed; that he, Porter, or Babcock would stop in and see me from time to time, when, if I had any complaints to make or orders to request, I would state the matter orally to either one, and it would be attended to. He told me General Grant was to make at the same time a forward movement with the army of the Potomac. I asked him whose plans these were, and he replied 'General Grant's.' I asked, 'What after Atlanta?' and he replied,

'Savannah if we can, Mobile if we must.' He took his hat and left. *These were orders.* I obeyed them with the fidelity of a sacred obligation, and, so far as I know or believe, no one but General Allen and myself did know of them. It is hardly possible that the Commissary-General himself could have known of them, and I do not believe that they were known to the Secretary of War. . . . At the beginning, General Allen and myself were made by General Grant an integral part of the campaign, and we were charged with its logistics, in order that General Sherman should be free to do only with its strategy. How well he did his part, a great deal of the history of the war has been made to tell. How well we did our part, is only known in the glory he achieved and the rewards that were bestowed upon his immediate entourage. If we had failed in any respect, it would probably have been fatal to his ambition as well as to our official existence. If he had failed, it would have been entirely in order to charge the failure to the incapacity or disloyalty of one or both of us."

Therefore, Major Symonds adds, "I defiantly claim that a fair share of his success was due to work done by myself, General Allen," etc. The claim is the usual and reasonable one made in favor of the supply departments, and probably General Sherman does not dispute it. It seems to be the fate of war that glory is not measured by the real importance of services rendered, but goes wholly or mainly to the men who do the actual killing. Major Symonds, it seems, devoted himself to the important and confidential duty assigned to him by General Grant, but by August he says: "The Secretary of War had received information from General Sherman's headquarters that there was danger of his expedition failing from want of subsistence, and that the fault lay with me in Louisvllle." Thereupon the Commissary-General was sent from Washington to Louisville, and dropped in upon Major Symonds without warning to look into the matter. He immediately sent to Captain Bright, Major Symonds's subordinate, who was at Chattanooga serving rations directly to Sherman's army, a telegram saying: "Send me at once the daily average number of rations you have forwarded to General Sherman's army since the 1st of May." The reply was: "The daily average number of rations I have forwarded to General Sherman's army since the 1st of May is 412,000." This, says Major Symonds, "was more than three rations a day to every mouth that left Chattanooga on that campaign, and yet they were crying for more and 'living off the country.'" Major Symonds continues: "I do not desire to appear in the light of a critic of General Sherman's strategy in that campaign, nor would I pluck one laurel leaf from the crown he so ably won. . . . Fortunately, Hood stepped aside and gave them the way they wanted, and with abundant supplies they were enabled to start for the sea with the least possible delay."

Major Symonds's object is not to detract from fighting men or commanders, but to set forth the claims of what he calls the "working officer" of the supply departments. He appears to be correct in his conclusion that their rewards are small in proportion to their merits and services, and his injunction to young soldiers is, "Avoid a staff appointment in time of war."

Struggles for Life. By William Knighton, LL.D., Vice-President Royal Society of Literature, etc. London: Williams & Norgate. 1888. 3d ed., revised, 12mo, pp. 289.

THE subject of this book is an important one, and the author, who is already known by other works, mostly on life in the East, has an easy style and a quick eye for taking facts, and his sympathies are ready for every form of suffering. But that is the most that can be said. He had probably some vague moral purpose in writing, and the statement on the title-page that this is the third edition shows that he has caught something of the public attention; and yet it is hard to see what he meant to teach, or indeed why the book should have been written at all. Mr. Knighton tells over in a hasty and miscellaneous way the old story of the various horrors that humanity has gone through. The suffering of modern English paupers, primitive barbarism, Roman persecution and Indian Thuggism, the Spanish abuse of the Caribs, the persecution of the Albigenses, the tortures of the Inquisition, Greek slavery, the horrors of the middle passage, feudal ferocity, the plague, the ballet, the *droit de cuisse*, the *Pall Mall Gazette* scandal, the Berlin trial of the Artist Gräf and his nude model, human sacrifices, Jewish wars, Tartar invasions, Turkish conquests, our savage treatment of Indian tribes, and a vast number of other brutalities are hastily recounted, with no evident order or argument. Mr. Knighton does not intend to cater to any low instincts, and yet his narrative has not a little of that ghastly attraction which the "police" newspapers have for the average man. There is in most of us something of the savage love of suffering, a craving to sup full of horrors, which might not be sated by twice the number of details Mr. Knighton gives us. In spite of all that modern humanitarianism can do, this cruel instinct remains fixed in man's nature, and every now and then some warm-hearted and notoriety-loving writer appeals to it and plays upon our cruelty under the disguise of charity.

But the practical question comes up at once, What is the good of it all? Mr. Knighton has no new facts to offer. Indeed, regarded from a scientific point of view, his pessimism is one-sided in the extreme. What is the use of telling over the hideous story unless there is some conclusion to be drawn, some way pointed out to prevent the recurrence of the evils described? Mr. Knighton does not even attempt to do this. The only approach he makes to a suggestion of remedy is to urge a federation of English colonies, and suggest some form of action by ladies of social prominence in England; and it would be unjust to suppose that he could seriously expect either of these to help us much in solving the hardships of the struggle for existence. The truth is, he has made a heterogeneous collection of striking facts, but has not digested them enough to find out whether any practical conclusion can be drawn from them. Probably there is none to be drawn. Very many of his instances belong to a state of life so different from our own that it is not worth while to try to guard against them, for they cannot recur without a decay in civilization so profound that everything we hold most dear will first have gone by the board. No doubt the brutal instincts still exist even in the most civilized races, and they will occasionally break out in times of war or popular excitement. Even a change of fashion like the license just now accorded to prize-fighting may bring them to the surface; but, on the whole, the influences of civilization are strongly opposed to their manifestation. It is not so clear that the brutal instinct itself is dying out. The struggle for existence is shaping the races pretty constantly, but perhaps without doing anything more to eradicate this trait than merely keeping it out of sight; for the fertile portion of the race from which the new generations spring has a much larger proportion of violent physical energy and hot-headed passion than of gentle sentimentalism. Still, gentleness is firmly enthroned as far as outward manifestations go, and this book may give the average American some pleasure in thinking how much worse than himself most of the world has been. Severe competition and great contrast of wealth and poverty are an essential part of modern civilization, and the pressure of the struggle for existence is, on the whole, a good thing. Books of this kind, which dwell exclusively on its brutal side, without having any remedy to offer, are mischievous, no matter how philanthropic the author's intentions may be.

"*The Fighting Veres*": Lives of Sir Francis Vere, General of the Queen's Forces in the Low Countries, Governor of the Brill and of Portsmouth, and of Sir Horace Vere, General of the English Forces in the Low Countries, Governor of the Brill, Master-General of Ordnance, and Baron Vere of Tilbury. By Clements R. Markham. Boston: Houghton, Mifflin & Co. 1888. 8vo, pp. 508.

THE name of Sir Francis Vere is a striking reminder how empty and evanescent a thing is fame. He was, says Mr. Markham, "the first great English general in modern history. He founded a school which was further developed by his brother Horace. In that school were formed those distinguished leaders who fought out the war between Charles I. and the Parliament of England." Yet he is not mentioned by Mr. Green in his 'Short History of the English People,' and only once incidentally by Mr. Gardiner in his 'History of England.' Mr. Markham adds: "In the same school were formed those military advisers who accompanied the lovers of freedom to colonize America. The posterity of both the great branches of the English folk, of that in America as of that in the old country, ought therefore to know the story of the 'Fighting Veres.'" But the American Cyclopædia does not contain his name, nor does Bancroft's History, although we are told by Mr. Markham (p. 388) that "Miles Standish had been educated in the school of the Veres."

In truth, Sir F. Vere's career is so identified with the war in the Netherlands that both the English and American historians forget to notice that it also stands in near relation to the history of their countries. In Motley's pages he is, of course, a conspicuous figure; but Mr. Motley, while praising his soldier-like qualities, speaks of "his inordinate self-esteem, both personal and national, and his want of true sympathy for the cause in which he fought." That he was essentially a soldier has no doubt helped to obscure his name with a generation which places emphasis rather upon the arts of peace, in reaction against the undue prominence of war in former times. Mr. Markham has done well, therefore, to revive the memory of this distinguished man in a book written especially for the American public, and to call attention directly to the connection between his subject and the early history of America. "I now venture," he says, "to submit to American readers this new attempt to supply what I believe to be a desideratum in their national history. The proclamation of Queen Elizabeth in 1585 was the forerunner of the Declaration of American Independence. The lives of Sir Francis and Sir Horace Vere include events which aroused the spirit of American colonization." He has, we think, made too large a book of it. It contains a great deal of detail which is really unimportant, and detracts from its interest by withdrawing attention from the great current of events.

Mr. Markham undertakes, as is natural, to vindicate his hero against Mr. Motley's strictures—chiefly in the account of the battle of

Nieuport, also upon other occasions. It is not possible to weigh the argument pro and con with perfect fairness, because Mr. Motley is no longer able to make a rejoinder. So far as one can judge from the evidence placed before us, the defence is complete. It is fair, also, to cite in full Mr. Markham's opinion of Sir Francis Vere's writings, containing his account of the military events in which he participated; his judgment, it will be seen, is directly opposite to that of Mr. Motley, cited above. He suspects, by the way, that Mr. Motley never read the writings in question, except in "an incomplete French abridgment" (p. 303).

"To one who has also read his letters and despatches written on the spot, and the letters of others describing the same events, the most striking feature of these Notes is their accuracy. With the exception of discrepancies in numbers of men or guns—and even these are of rare occurrence—the agreement of the Notes, written from memory long after, with narratives prepared at the time, is very remarkable. Another point worthy of remark is the proof afforded by the Notes of the modesty and absence of self-assertion in Vere's public despatches" (p. 358).

We must say, too, that the general tenor of the narrative appears to contradict Mr. Motley's charge that he lacked sympathy with the cause in which he fought.

It seems at first sight as if Sir Francis Vere received disproportionate attention in this volume, his younger brother, Sir Horace, having nominally less than a hundred pages out of 460. But it must be remembered that he was for several years associated with his elder brother, whom he survived. The book is very handsomely printed, and contains, besides portraits of the two brothers, a number of excellent maps and plans.

The Poetry of the Future. By James Wood Davidson. New York: John B. Alden. 1888.

THIS rather snappish little essay shows the singularly annoying influence which English prosody seems to have upon the minds of those who discuss it. The writer has set himself to a thorough reform of what he regards as the height of the learned folly of grammarians, and has reduced our prosody to no more than four feet, of which the principal are the iamb and the anapæst. Trochees, spondees, dactyls, amphibrachs, etc., he discards altogether. This is but the beginning of his iconoclasm, and he proceeds to demolish stanzaic and metrical divisions and the childishness of rhyme without more ado; the "poetry of the future"—alias "Walt Whitman and Adah Menken"—will not have them. To show that he is right, Mr. Davidson scans many passages on his new system, to which there can be no objection, since he gains in unity and simplicity in several instances and the arbitrary element in scansion has long been recognized. When he further rewrites our poems, however, in the paragraphic way of Walt Whitman and Adah Menken, truly he treats them "as gypsies do stolen children." He "deforms" them with a vengeance. The fact of the matter is, that he regards verse purely from the point of view of an elocutionist. Elocution is his fetish; the stresses of the elocutionist are prosody, his pauses make line and stanza, and his convenience is the Apollo-measure to which all the Muses must dance.

Mr. Davidson is, of course, a disciple of Poe, but he has left that pioneer far behind. Like his leader, he has great contempt for Longfellow's hexameters, and perhaps more for his Hiawathan trochees, which he characterizes as "humpty-dumpty with a perceptible tendency to the higgledy-piggledy"; and he corrects Milton, as if the poet were a truant schoolboy, but in such a way as shows the one to be the schoolmaster and the other the poet. These defects of temper and taste are the worst thing in the little volume, which, with its Swedenborgianism, its Poelsm, its Walt-Whitman-and-Adah-Menken-ism, and its heroic wrath at old Murray, is a more idiosyncratic work than one is likely to meet with in a twelvemonth. The author is well read in his subject, and he writes as well as he has read; but "the poetry of the future" which he is so sure about, with its elocutionary god, is, under favor, only the buzzing of his prosodical bee in his bonnet.

William Shakespeare Portrayed by Himself. A Revelation of the Poet in the Career and Character of one of his own Dramatic Heroes. By Robert Waters. Worthington Co.

THE temptation to satisfy curiosity about Shakspere's personal character seems able to be resisted only by the soundest and most learned of Shakspere scholars. The issue of some book written to tell us more than any one knows about the poet, is so regular an occurrence that one could almost make a law of it, as of some facts in sociology. It is a disease, such as Mr. Furness lately called the Baconian theory, that attacks the tyro, like the measles—an incident of literary childhood. In the present case the character chosen by Shakspere to unlock his heart in is said to be *Prince Hal;* and a long discourse, with liberal extracts from "Henry IV.," is written out, for the purpose of paralleling the remarks of the scapegrace Prince with Shakspere's supposed history and temperament. The argument fills a volume of considerable size, and at the end one is just as wise as before. The last pages are occupied with an attack on Donnelly's revelations, such as was to be expected from one who found Shakspere in so attractive a character as the young Prince. But in such speculation every man may have his will.

BOOKS OF THE WEEK.

IVISON, BLAKEMAN & CO.'S
TEXT-BOOK ANNOUNCEMENTS.

Messrs IVISON, BLAKEMAN & CO. invite attention to their large and varied list of Educational Text-Books, comprising the newest and best works in every grade, adapted to every class of schools, and embodying the latest and most approved methods. Teachers and educationists contemplating a change of books, and those dissatisfied with the works now in use, are invited to correspond with Messrs. I., B. & Co. regarding any of the following books :

WEBSTER'S SCHOOL DICTIONARIES. "The foundation of all correct teaching of the English Language, Webster should be the one universal text-book in all our American Schools." *Webster's Academic Dictionary*, of all works of its kind, most nearly approaches the Unabridged as a reference book for students and teachers. *The Common School* and *Primary* editions are specially adapted for the grades for which they were prepared.

SWINTON'S READERS.—In character of the selections, gradation, methods of teaching, illustrations, general finish, and artistic and mechanical excellence, these books are easily superior to all others. *Five numbers*, supplemented by a *Sixth or Classic English Reader.*

SWINTON'S ADVANCED READERS.—Full of the choicest reading matter, presenting the best work of the author in the line of special language work. *Four Books.*

SWINTON'S WORD-BOOK SERIES. — Word Primer, for Primary Grades. *Word Book of Spelling*, for Grammar Grades and for ungraded schools. *Word Analysis*, for beginners in English Etymology.

METCALF'S SPELLING AND LANGUAGE BOOK.—A book based upon actual experience, and in harmony with the best modern methods.

FISH'S ARITHMETICS.—Number One, a remarkable book, full of new methods for primary grades. *Number Two*, a practical business arithmetic of the highest merit. The best two-book series.

ROBINSON'S MATHEMATICS.—Standard books kept thoroughly up to the times. Among them are the *Progressive Practical Arithmetic, Shorter Course in Arithmetic*, Algebras, and Higher Mathematics.

SPENCERIAN PENMANSHIP.—Thoroughly fresh and new, these books maintain their long established superiority. *Tracing Books, Shorter Course. Common School Series, Etc.*

SWINTON'S GEOGRAPHIES.—The Introductory. Readings and Recitations in Geography, for Beginners' Classes; *The Grammar School Geography*, for Advanced Classes. Published in six different editions, with local geography for all the States. Everywhere successful.

SWINTON'S HISTORIES.—The Primary U. S. History, adapted for recitation or for supplementary reading. *Condensed United States.* A text-book of approved excellence, prepared to secure definite results in recitation, and in this respect a complete success. *Outlines of the World's History.* The most widely used book of this class published.

FISHER'S OUTLINES OF UNIVERSAL HISTORY.—For Higher Grades. "The best work of the kind extant in the English language."—*N. Y. Tribune.*

LOOMIS'S MUSIC SERIES—"The most remarkable series of elementary school music-books ever made."—*Wm. T. Harris. Five Books* for the regular school grades. *Glee and Chorus Book* for Academies and Normal Schools.

SMITH'S PHYSIOLOGIES.—The Primer, for the younger classes of graded schools. *The Elementary*, for Grammar Schools and ungraded schools. Exact as text-books of physiology; truthful and emphatic in temperance teaching.

GRAY'S BOTANIES.—Conceded to be standard authority among scholars; simple, and yet exhaustive. Recent revisions place these books far in advance of any other works on the subject.

DANA'S GEOLOGIES. — Revised editions of these high-class text-books, embodying recent researches, have been published within a few years.

COOLEY'S SCIENCES. — Physics and Chemistry. — Standard works both for elementary classes and High Schools and Academies. Recently revised and thoroughly up to the times.

BRYANT AND STRATTON BOOKKEEPING.—Common School, High School, and *Counting House* editions. Works of the greatest merit, and extensively used throughout the country.

TOWNSEND'S CIVIL GOVERNMENT. — The Shorter Course is adapted to use in Common Schools and Grammar Schools. *The Analysis* is of a grade suited to High Schools and Colleges.

TENNEY'S ZOOLOGIES.—The Natural History of Animals, for Grammar Grades. The *Manual* and *Elements* are for the use of higher classes and for private students.

GUYOT'S PHYSICAL GEOGRAPHY.—The highest American authority, and recognized throughout the scientific world as the leading work on the subject.

THE GEOGRAPHICAL READER.— Being *Guyot's Introduction to Geography—Revised.*—A charming book of readings, adapted to all grades, and unequalled in the richness and variety of the exercises.

WHITE'S INDUSTRIAL DRAWING—Revised.— Just completed in *Eighteen Books*, giving two books for each year of a nine years' course. *The set by mail, for examination, on receipt of $1.50.*

DR. LOCKWOOD'S READINGS IN NATURAL HISTORY.—Part I. Mammals. The latest and best book for supplementary reading. Delightful stories of animals, beautifully told by "*an old Naturalist.*" *By mail, for examination, 50 cents.*

DR. LOCKWOOD'S READINGS IN NATURAL HISTORY.—Part II. Birds. Ready Sept. 15.

COMPTON'S FIRST LESSONS IN WOOD-WORKING.—This book is practical, not theoretical, and gives specific and exact directions, sufficient to enable any teacher to begin the work of manual training. *By mail, for examination, 25 cents.*

*** BRIEF DESCRIPTIVE LIST of the above and other publications, and special circulars, sent free to any address on application. Also, a copy of the EDUCATIONAL REPORTER, a publication devoted to popular instruction.

Scribner & Welford's

LIST OF BOOKS

Suitable for Use in High-Class Schools, Colleges, and Ladies' Schools.

An Elementary History of Art.

By N. D'Anvers. With a Preface by Prof. Roger Smith. An entirely new and enlarged edition in 2 vols. Vol. i, Architecture and Sculpture. Vol. ii, Painting, with 360 illustrations. Large crown 8vo, cloth, gilt top.

For students who desire thus to train their own minds, for those who wish to prepare themselves for Continental travel, and, above all, for pupils in schools of a high class, no handbook of Art History could be more suitable than this work.

Biographies of the Great Musicians.

Specially prepared for Schools, Amateurs, and Students of Music. Each volume strongly bound in decorated cloth. Price, per volume, $1. Including,

Haydn, Handel, Mozart, Schubert, Schumann, Purcell, Bach, Weber, Mendelssohn, Wagner, Rossini, English Church Composers.

Art Hand-Books.

A new series of Illustrated Text-Books of Art Education. Edited by E. J. Poynter, R.A. Each volume contains numerous illustrations, and is strongly bound for the use of students. Price, per volume, $2.

I. PAINTING. Classic and Italian. By E. J. Poynter and P. R. Head.

II. —— German, Flemish, and Dutch. By H. W. Buxton.

III. —— English and American. By H. W. Buxton.

IV. —— French and Spanish. By G. Smith.

V. ARCHITECTURE. Classic and Early Christian. By T. R. Smith.

VI. —— Gothic and Renaissance. By T. R. Smith.

VII. SCULPTURE. Antique, Egyptian, and Greek. By G. Redford.

VIII. —— Renaissance and Modern. By G. Redford.

Biographies of the Great Artists.

Specially prepared for Schools, Amateurs, and Students of Art. Each volume contains about 16 illustrations, including a portrait of the master, and is strongly bound in decorated cloth. Price, per volume, $1.25, unless marked otherwise, viz.:

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

SOME RECENT

Successful Books

Robert Louis Stevenson's Latest Romance.

The Black Arrow.

A Tale of the Two Roses. By Robert Louis Stevenson. With twelve full-page Illustrations by Will H. Low and Alfred Brennan. 1 vol., 12mo, paper, 50 cents; cloth, $1.00.

"A thoroughly Stevensonian creation, a romance that glows and tingles with originality, and moves with an adventurous alacrity that cannot fail to delight all lovers of romantic fiction."—*The Brooklyn Times.*

"Anything more brilliant, bold and gallant than this story, more rich with the full pulse of life and the fine courage of a high heart, it would be difficult to imagine."—*The New York World.*

The Spell of Ashtaroth.

By Duffield Osborne. 1 vol., 12mo, $1.00.

"A romance equalled by few for the vividness of its descriptions, its originality, its rich Orientalism, and its rapid succession of startling and spectacular events."—*The Chicago Interior.*

"The most original and striking work of fiction that has appeared during the first half of the present year."—*The Indianapolis News.*

Bonaventure.

A Prose Pastoral of Acadian Louisiana. By George W. Cable. 1 vol., 12mo. $1.25.

"Charming in conception, delightful in style, and sweet and wholesome throughout."—*The Albany Argus.*

"A masterly piece of workmanship."—*The New York Commercial Advertiser.*

"It is safe to say that Mr. Cable has never produced anything so delightful and so artistic as 'Bonaventure.'"—*The North American Review.*

The Tailor-Made Girl;

Her Friends, Her Fashions, and Her Follies. By Philip H. Welch. Illustrated by C. Jay Taylor. 1 vol., obiong folio, $1.00.

"The foibles and weaknesses of fashionable society have never been satirized so faithfully and keenly, and yet with such an utter absence of ill-nature or cynicism."—*Philadelphia Record.*

"Full of cleverness."—*Boston Herald.*

"It will be found a well-spring of fun in every household."—*Boston Traveller.*

In Ole Virginia.

Marse Chan, and Other Stories. By Thomas Nelson Page. 1 vol., 12mo, $1.25.

"These tales at once undeceive a Northern mind, which may have thought nothing good in literature could come from the Southern Nazareth. They are, indeed, quite competent to found a literature in their line. There is unmistakably the light of genius shining out of them."—*The Brooklyn Eagle.*

"Some of the completest and most satisfactory pictures of old Virginia life."—*The Richmond State.*

"A series of tales and sketches scarcely equalled in tenderness, pathos, and humor by anything that Southern authors have yet produced."—*The New York Sun.*

Society in Rome under the Cæsars.

By William Ralph Inge, M.A. 12mo, $1.25.

"Every page is brimful of interest. Mr. Inge deals with the religion, philosophy, morality, government, and society, literature and art, education, daily life, amusements, and luxuries of those eventful days in such a manner as to make those sturdy Romans live again in his pages."—*Chicago Herald.*

"The work is one of great merit, and is most readable and entertaining."—*Philadelphia Telegraph.*

*** For sale by all bookstores, or sent postpaid, on receipt of price, by*

CHARLES SCRIBNER'S SONS,

743–745 Broadway, New York.

The Nation

VOL. XLVII.—NO. 1211. THURSDAY, SEPTEMBER 13, 1888. PRICE 10 CENTS.

WORKS ON PRESENT ISSUES.

Industrial Liberty,

An analysis of the existing condition of the United States, with special reference to the relations to the public of Railways and Trusts. By John M. Bonham. Octavo, cloth, $1.75.

"Mr. Bonham's work stands almost alone in treating industrial questions solely on the basis of principles, and as such it deserves careful study, as well as for its calm, temperate, lucid, and comprehensive method of treatment. It is doubtful if the baleful methods of the modern 'trusts' have ever been so lucidly set forth."—*Chicago Times.*

"The chapters on corporations present the dangers of the loss from sight of the governing idea with which they were first chartered more clearly and forcibly than any writings that have appeared."—*Boston Globe.*

"Mr. Bonham writes with force and intelligence upon economic questions, and his work is a valuable addition to the works relating to this subject. . . . His sketch of the progress of the industrial forces in England and of the sturdy but hopeless struggle of conservatism to preserve the present land tenure, with its restrictions upon alienation, is exceedingly interesting."—*New York Sun.*

"The reader [of Mr. Bonham's 'Industrial Liberty'] will be struck by the author's earnestness and felicity of expression. All that he has to say of industrial corporations and the influence of 'trusts' may be read with profit and pleasure."—*Philadelphia Press.*

"There has been no such masterly and searching exposition of the unwarranted methods of the 'trusts' and corporate management."—*Springfield Republican.*

"The able and intelligent manner in which the subject of political economy is treated in these pages will commend it to the attention of business as well as literary men."—*Pittsburgh Chronicle and Telegraph.*

"The chapters on 'The Railway and Trust' and the 'Influence of Trusts' are just and incisive criticisms of some of the worst of the organized evils inflicted upon the people by corporate power."—*Richmond The State.*

"[Mr. Bonham has written] a book that will be valuable to all who are interested in the great practical problems brought about by the growth of corporations in this country."—*San Francisco Chronicle.*

"A strong, thoughtful, and penetrating work on the greatest of modern problems."—*Richmond The Critic.*

"In this book Mr. Bonham deals with matters of vital interest and of pressing urgency. He is a vigorous thinker, a clear writer, and a man of positive convictions."—*Washington Post.*

"The book is the work of a careful thinker, one who never hesitates to go where his logic leads him. It is written with an earnestness of conviction that compels attention. . . . Mr. Bonham is constantly suggestive and stimulating, and he has argued his side of the question with force and cogency."—*Boston Advertiser.*

THE PRESIDENT'S MESSAGE (OF 1887), SETTING forth the issues to be decided in the pending Presidential election.

"Questions of the Day" Edition, with full Annotations by R. R. Bowker. Octavo, paper, 25 cts.

Illustrated Large-Type Edition, with 18 full-page illustrations from original designs by Thomas Nast. Square octavo, paper, 25 cents.

THE TARIFF HISTORY OF THE UNITED STATES. By F. W. Taussig, Assistant Professor of Political Economy in Harvard University. 12mo, cloth extra, $1.25.

"A fair, full, and conservative statement of the case by a most competent authority."—*Baltimore Sun.*

"A careful study of a wide range of facts, covering our whole national history."—*Christian Register.*

PRACTICAL ECONOMICS. A Series of Essays respecting certain of the Recent Economic Experiences of the United States. By David A. Wells. Octavo, $1.50.

"They present in permanent form a mass of information about the actual working of the protective system which nobody but Mr. Wells possesses."—*N. Y. Times.*

OUR MERCHANT MARINE: How it Rose, Increased, Became Great, Declined and Decayed. With an inquiry into the conditions essential to its resuscitation and future prosperity. By David A. Wells. Octavo, cloth. $1.00.

"It contains, in a compact form, everything that is necessary to an understanding of the subject. After a presentation of the facts so lucid and so complete as those which Mr. Wells makes, little argument is necessary."—*N. Y. World.*

THE DISTRIBUTION OF PRODUCTS; or, The Mechanism of Exchange. Three Essays. What Makes the Rate of Wages? The Bank? The Railway, the Farmer, and the Public. By Edward Atkinson. New edition, revised and enlarged, with new statistical material. 8vo, cloth.

"It would be difficult to mention another book that gives so effective a presentation of the present conditions and methods of industry, and of the marvels that have been wrought in the arts of production and transportation during the past fifty years."—*Advertiser, Boston.*

THE DESTRUCTIVE INFLUENCE OF THE TARIFF upon Manufacture and Commerce, and the Facts and Figures relating Thereto. By J. Schoenhof. Octavo, cloth, 75 cents; paper, 40 cents.

"Packed with well-arranged figures and condensed arguments."—*The Nation.*

THE INDUSTRIAL SITUATION AND THE QUESTION of Wages. A Study in Social Physiology. By J. Schoenhof, author of 'Destructive Influence of the Tariff,' etc. 8vo, cloth, $1.00.

TAXATION; ITS PRINCIPLES AND METHODS. A translation of 'The First Principles of Finance,' By Luigi Cossa, Ph.D., of the University of Pavia. With an Introduction and Notes by Horace White. Together with a compilation of the State tax system of New York and Pennsylvania. Second edition. Octavo, cloth, $1.00.

"It supplies a much-needed tool for students in economics. It is marked by a clear definition, orderly arrangement, exact classification, and its notes contain valuable illustrative matter. My only regret upon reading it is that there is no practicable means of making an accurate knowledge of its contents a condition of membership in all municipal councils, State Legislatures, and the National Congress."—*Prof. James F. Colby, Dartmouth College.*

THE AMERICAN ELECTORAL SYSTEM. An Analysis of its Character and its History. By Charles A. O'Neill of the New York Bar. 12mo, cloth, $1.50.

"Mr. O'Neill's discussion of the relative merits of various electoral systems is vigorous, intelligent, and impartial."—*Philadelphia Press.*

"Full of valuable suggestions, and deserves a careful reading by all who are interested in our political system."—*Boston Traveller.*

THE CONSTITUTIONAL HISTORY AND POLITICAL Development of the United States. An Analytical Study. By Simon Sterne of the New York Bar. Second edition, revised with additions. 12mo, cloth, $1.25.

"A volume that will be prized by every conscientious student of political history."—*Evening Wisconsin.*

"An able and instructive resume of the political history of our country. . . . A book which every American should read, . . . Contains just the data needed by the voter."—*Rutland Standard.*

IN THE QUESTIONS OF THE DAY SERIES.

NO. 51. THE RELATION OF THE TARIFF TO WAGES. By David A. Wells.

NO. 50. TARIFF CHATS. By Henry J. Philpott.

"It is the best thing in our tariff literature for just the popular effect it aims at."—*Prof. W. G. Sumner, Yale College.*

"Clear, interesting, and cogent."—*David A. Wells.*

NO. 49. ESSAYS ON PRACTICAL POLITICS. By Theodore Roosevelt. 8vo, 75 cents.

Lists of standard and recent publications in Economic and Political Science, including the "Questions of the Day" series, and the works of Wells, Taussig, Bastiat, Schoenhof, Sumner, and other authorities, mailed on application.

G. P. PUTNAM'S SONS, 27 and 29 West 23d St., New York.

MRS. PIATT'S SCHOOL FOR YOUNG Ladies.—The next school year begins Thursday, Sept. 20th, 1888. Applications should be made early.

OHIO, Cincinnati, Walnut Hills.

MISS NOURSE WILL REOPEN HER English and French Family and Day School Sept. 26, 1888. Pupils may take special work, or the full course of study, fitting for College Examinations.

OHIO, Cincinnati, No. 166 W. Seventh St.

THE SCHOOL FOR GIRLS ESTAB- lished by Miss Storer and Miss Lupton in 1881, and conducted by Miss Lupton for the past two years, will open for its eighth year Sept. 26. Preparation for college is made a specialty. The official circular from Harvard College shows that this school is the only private school in the West whose pupils have passed without condition their examinations for women identical with the examinations for admission to Harvard College.

A few resident pupils are received.

PENNSYLVANIA, Bryn Mawr.

BRYN MAWR COLLEGE.—A COL- lege for women, ten miles from Philadelphia. Offers graduate and undergraduate courses in Sanskrit, Greek, Latin, Mathematics, English, Anglo-Saxon, French, Old French, Italian, Spanish, German, including Gothic and Old High German, History, Political Science, Physics, Chemistry, Biology, including Botany, and lectures on Philosophy. Gymnasium, with Dr. Sargent's apparatus complete. Fellowships (value $450) in Greek, English, Mathematics, History, and Biology.

For Program address as above.

PENNSYLVANIA, Chester.

PENNSYLVANIA MILITARY ACA- demy. 27th year opens September 19. A MILITARY COLLEGE with four graduate courses: CIVIL ENGINEERING, CHEMISTRY, ARCHITECTURE, and ARTS. Degrees conferred in each, respectively C. E., B.S., B.AR., and A.B. A thoroughly organized Preparatory Department. For Circular, with full information, address Col. CHAS. E. HYATT, Pres't.

PENNSYLVANIA, Germantown.

MISS MARY E. STEVENS' BOARD- ing and Day School, 202 and 204 W. Chelten Ave., begins its 20th year Sept. 20, 1888. The school has been *approved* by Bryn Mawr College, and Miss Stevens is *authorized* to prepare students for the entrance examinations. Pupils pass the examinations in this school.

PENNSYLVANIA, Philadelphia, Germantown.

FRANKLIN SCHOOL FOR BOYS. Chartered 1887; reopened Sept. 20. Register and full information on application.

GEORGE A. PERRY, A.M., Head Master.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for Young Ladies reopens Sept. 28, 1888.

Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1434 Pine St.

MADEMOISELLE BONAME'S French Home School for six young ladies, reopens Sept. 26. Thorough course in English and French.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

PENNSYLVANIA, Swarthmore.

SWARTHMORE COLLEGE OPENS 9TH MONTH, 11TH. Thirty minutes from Broad Street Station, Philadelphia. Under the care of Friends. *Full college course for both sexes.* Classical, Scientific, and Literary. Also, a Manual Training and Preparatory School. Healthful location, large grounds, extensive buildings and apparatus. For Catalogue and full particulars, address

EDWARD H. MAGILL, LL.D., President.

RHODE ISLAND, Providence, 60 Barnes St.

THOMAS CHASE, LL.D., WILL PRE- pare one or two students for any college. With board. Half-country site.

VIRGINIA, Lexington.

VIRGINIA MILITARY INSTITUTE. —The fiftieth session of this well-known State Institution will open on September 12 proximo. It provides a system of thorough military training, a distinctive course of academic instruction, and technical instruction in the several branches of Applied Science, thus enabling a graduate in the Academic School to gain a professional degree as Bachelor of Science or Civil Engineer.

These advantages are secured on terms not exceeding $36 per month, as the average of the entire course, including clothing in addition to the ordinary college necessaries. For catalogue apply to

GEN. FRANCIS H. SMITH, Superintendent.

VIRGINIA, Norfolk.

THE NORFOLK ACADEMY PRE- pares boys for College or Business. Open September 26, 1888. Terms $200 to $250.

R. W. TUNSTALL, B.A., Principal.

Address till Sept. 10, Mountain Lake, Giles Co., Va

VIRGINIA, Norfolk, opposite Old Point Comfort.

IS YOUR DAUGHTER DELICATE? Build her up by sending her to school in this delightful, healthful winter climate. Full collegiate courses, music, art; equipment, $60,000. Attractive home school. Personal care. Address

NORFOLK COLLEGE.

GERMANY, Wiesbaden.

EDUCATION IN GERMANY, WIES- baden College. Thorough German and French. Preparation for University. Boys can be met at New York. Refers to Prof. M. L. D'Ooge, Ann Arbor, Mich., Mr. L. Cushing of Yale College, Mr. A. Loeb, 204 La Salle St., Chicago. For circulars apply to BRENTANO'S, 5 Union Square, New York; 101 State St., Chicago; 1015 Pennsylvania Ave., Washington, D. C.

Teachers, etc.

A FEW YOUNG LADIES FITTING for college will be received into the family of the Principal of Paterson Seminary. References are Wellesley and many others. A. B. WIGGINS, A.M., Prin. MISS MARY C. WIGGIN, A.B., Lady Prin., Paterson, N. J.

A GOOD CHANCE FOR DELICATE Boys.—A gentleman (graduate of Harvard) would like a few young boys to educate with his own children in the country. Preparation for Harvard or the Institute of Technology. Highest references. Correspondence invited. Address

G. L. STOWELL, Portsmouth, N. H.

A GRADUATE OF THE MASSA- chusetts Institute of Technology of some years' standing would like to teach in a preparatory or other scientific school. Address G. F. R., 10 Jay St., Cambridgeport, Mass.

A HARVARD A.B. TUTORS BACK- ward boys. TUTOR, 2 Bible House, New York.

A WILLIAMS GRADUATE DESIRES preparatory or college tutoring in New York city. Experience in private tutoring; one year in preparatory school, and one as instructor in Williams College. Refers to Pres't Carter and Williams Professors. Address W. D. M., care of Nation.

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

G. B. GLEASON, A.M., TUTOR FOR Harvard. Summer address, Natick, Mass.

HOLMES HINKLEY, A.M., PRI- vate Tutor, 19 Ware St., Cambridge, Mass.

WANTED.—BY A GRADUATE OF Smith College, a position as teacher in a private school or as governess in a private family. Has had experience and can give the best of references. Address Smith College, care of the Nation.

Wants.

A YOUNG LADY DESIRES A POSI- tion as companion to a lady. No objection to travelling. Address "E. M.," Nation Office.

WANTED—A TUTOR TO COACH a boy of sixteen this coming winter, in the south of France—a boy who has passed his first half Harvard Exams. Address with particulars,

J. A. B., 22 Congress St., Boston.

School Agencies.

BARDEEN'S SCHOOL BULLETIN Agency, Syracuse, N. Y., may be depended on to furnish suitable teachers *and to inform no others.*

THE BOSTON TEACHERS' AGENCY supplies Teachers to Schools, positions to Teachers. Circular free.

E. O. FISK & Co., 7 Trement Place, Boston.

Professional.

L. J. B. LINCOLN, PRESIDENT OF the Deerfield Summer School of History and Romance, will accept a limited number of engagements for his course of twelve lectures upon American Literature. Deerfield, Mass.

COLUMBIA COLLEGE.

SCHOOL OF POLITICAL SCIENCE.

The prime aim of this school is the development of all branches of the political sciences. It offers eight courses in political and constitutional history, nine in political economy, five in constitutional and administrative law, four in diplomacy and international law, three in Roman law and comparative jurisprudence, two in political philosophy, and one in bibliography—in all, forty-four hours per week through the academic year. The full course of study covers three years. For admission as candidate for a degree, the applicant must have satisfactorily completed the regular course of study in this college, or in some other maintaining an equivalent curriculum, to the end of the junior year. Special students admitted to any course without examination upon payment of proportional fee. For circular of information apply to Registrar, 49th St. and Madison Ave., N. Y. city.

F. A. P. BARNARD, LL.D., D.C.L.,

President of Columbia College.

Every Voter Should Read

THE PRESIDENT'S MESSAGE (of 1887), setting forth the issues to be decided in the pending Presidential election.

"QUESTIONS OF THE DAY" EDITION, with full Annotations by R. R. Bowker. Octavo, paper, 25 cents.

ILLUSTRATED LARGE-TYPE EDITION, with eighteen full-page illustrations from original designs by Thomas Nast. Square octavo, paper, 25 cents.

List of recent publications on the Tariff, and in Economical and Political Science, by Wells, Taussig, Sumner, Schoenhof, Moore, Sterne, and others, mailed on application.

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Microscopes, Acoustic Cane for Deafness, Ear Cornets, etc. H. WALDSTEIN, Optician, 41 Union Square, New York. Catalogues by enclosing stamp. Established 1840.

Scribner & Welford's

NEW BOOKS.

Correspondence Between Wagner and Liszt (1841-1861).

Translated from the German by Dr. Francis Hueffer. Two vols., large crown 8vo, cloth, $5.00.

This Correspondence gives us a deeper insight into the character and aspirations of Wagner than any other existing biography of the master. These letters take the same rank of importance in Music as those of Goethe and Schiller in Literature, and will be of permanent value.

Life in the Confederate Army.

Being the Observations and Experiences of an Alien in the South during the American Civil War. By William Watson. 12mo, cloth, $2.00.

GENERAL CONTENTS—The South Before the War—The Secession Movement—Life in the Confederate Army—In the South during the War.

Louise De Keroualle, Duchess of Portsmouth,

In the Court of Charles II.; or, How the Duke of Richmond Gained His Pension. Compiled from State Papers in the Archives of the French Foreign Office by H. Forneron. With a Preface by Mrs. G. M. Crawford of Paris. With six engraved Portraits of Court Beauties, from the Paintings at Hampton Court Palace. 8vo, cloth, extra, $3.50.

"An interesting record of a very strange and humiliating period in English history. Even now, when two centuries are past, one burns with anger and shame to read how the French King kept his diplomacy steadily at work to secure his aim."—*Pall Mall Gazette.*

New Work by Prof. Henry Drummond,

AUTHOR OF

'Natural Law in the Spiritual World.'

Tropical Africa.

By Henry Drummond, F.R.S.E., F.G.S. With six Maps and Illustrations. Cloth, $1.50.

GLASGOW HERALD.

"No one who has read that remarkable volume, 'Natural Law in the Spiritual World,' requires to be told that Professor Drummond is a keen observer, and it is certainly not a slight advantage, when great questions are stirring, to have the clear and candid opinions which so accomplished and able a traveller has gathered on the spot concerning the future of Africa."

THE SCOTSMAN.

"There is nothing heavy or redundant in his book. It is lively and interesting from the first page to the last."

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE.

With Dictionaries and other Books of Reference.

Comprising in all translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin, and Greek,

700 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

VICTOR HUGO'S DRAMATIC WORKS. HERNANI—RUY BLAS—THE KING'S DIVERSION. Translated by Mrs. Newton Crosland and F. L. Slous. $1.40.

THE LETTERS AND WORKS OF LADY MARY WORTLEY MONTAGU. Edited by her great-grandson, Lord Wharncliffe; with additions and corrections derived from original MSS., Illustrative Notes, and a Memoir by W. Moy Thomas. New Edition, Revised, in Two Vols., with Portraits. $4.

"A most convenient reprint of Mr. Moy Thomas's admirable edition."—*Athenæum.*

PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

*** The above books sent upon receipt of advertised price. Catalogues of our regular stock, also full lists of all Bohn's Libraries, will be mailed, if desired, to those interested.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Published To-Day:

Volume Sixth Ready of Dr. Schaff's great work,

The History of the Christian Church.—Vol. VI.

By Philip Schaff, D.D. The German Reformation A. D. 1517-1530. Vol. I. 8vo, $4.

Brilliant and vigorous, this volume will add much to the author's work which has already won for itself a high place among the great theological works of recent years. It covers the most interesting period in the history of the Christian Church, and will make an independent work of the very highest value.

A New and Uniform Edition.

J. T. Headley's Historical Works.

"He breathes into events the breath of life; he brings his readers into the immediate presence of the act he describes; his words have a burning, rushing power; and you can no more doubt the reality of his pictures than you could have doubted the reality of the original scenes, had you been in the midst of them."—*The New York Tribune.*

The following six vols., 12mo, in a box, $7.50; singly, $1.25.

WASHINGTON AND HIS GENERALS. With numerous steel-plate engravings. 2 vols., $2.50.

NAPOLEON AND HIS MARSHALS. With numerous steel-plate engravings. 2 vols., $2.50.

THE IMPERIAL GUARD OF NAPOLEON. With portrait on steel. 1 vol., $1.25.

THE LIFE OF OLIVER CROMWELL. With portrait on steel. 1 vol., $1.25.

Completion of Thomas Stevens's Great Work. Second Volume Now Ready.

Around the World on a Bicycle.

By Thomas Stevens. With over 200 illustrations and colored frontispiece of author in Vol. I. In 2 vols., 8vo, $8.00; single volumes, $4.00.

With the publication of the second volume, this unique and the most fascinating work of its kind ever published will be completed. It is a work that should be placed foremost in the library of every Bicyclist, or any one interested in a journey never before equalled for its daring exploits and heroic courage. The work constitutes a library in itself, and has been conceded to be the most entertaining book published for many years. The second volume carries the plucky rider through Persia, India, China, and Japan, and the humor and vivacity of his narrative make the book thoroughly readable. The illustrations are numerous and spirited.

Marvels of Animal Life Series.

By Charles F. Holder. 3 vols., 8vo, each profusely illustrated, singly, $1.75; the set, $5.00.

The marvellously strange forms of animal life that exist or have existed in the earth, air, or sea, supply Mr. Holder with a theme of entrancing interest for every boy. The style is popular; there is a mass of that information that will fascinate the interest of every boy, and at the same time be helpful to him.

LIVING LIGHTS. A Popular Account of Phosphorescent Animals and Vegetables. With 27 full-page illustrations, $1.75.

MARVELS OF ANIMAL LIFE. With 24 full-page illustrations, $1.75.

THE IVORY KING. A Popular History of the Elephant and its Allies. With 24 full-page illustrations, $1.75.

*** For sale by all booksellers, or sent post-paid, on receipt of price, by*

CHARLES SCRIBNER'S SONS,

743-745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 13, 1888.

The Week.

We can recall no Presidential campaign since slavery was abolished that has been marked by such abnegations of manhood in the higher counsels of the nation as the present. The passage of the anti-Chinese bill in the Senate with only three dissenting votes, after a message had been received from the President saying that the treaty had not been rejected by the Chinese Government, but only held for further consideration, caps the climax. When this message was received, Mr. Stewart of Nevada wanted to know if we were going to put up with an affront like that. Held for consideration! Just Heaven! was such insolence ever heard of? Here was a treaty that had been in the hands of the Chinese authorities a whole week, perhaps even ten days. Not ratified yet? Let us teach these red dragons a lesson in punctuality. There is a commercial treaty lying around loose in Washington—a treaty with Mexico, we believe—that has been held for consideration about four years, and is not yet finally acted upon. Yet we are going to teach the world that treaties are made to be approved or disapproved at the drop of the hat. And the whole Senate, except a minority too small to be counted, voted with Stewart of Nevada. The Senator who sinned most against the light was Mr. Dawes of Massachusetts, the friend of the red man. The Senator who showed most manliness was Mr. Gorman of Maryland—a wonderful see-saw indeed. We owe it to Mr. Gorman that there is still a chance to save some remnant of self-respect out of this fearful degradation.

The Republicans have carried Maine by about the same majority as they had in 1884. Mr. Blaine telegraphs that "it is not simply a great victory, it is almost a political revolution." The *Tribune* says, "Never was there a more certain harbinger of victory all along the line in November." Something very like this happened four years ago, as the following parallel from the *Tribune's* editorial columns of then and now will show:

TRIBUNE, SEPT. 11, 1884.

The news from Maine grows better and better. The Republicans of that State have achieved what Mr. Blaine has justly called "an unparalleled triumph." . . . Well done, Maine! *The defeat of Cleveland is writ large in what she accomplished on Monday.*

TRIBUNE, SEPT. 11, 1888.

The verdict of Maine is a magnificent response to the victories in Vermont, Oregon, and Rhode Island. . . . Free trade and truckling to Canadian interests have found no favor in Maine, whose right to the motto "Dirigo" can no longer be challenged. *Never was there a more certain harbinger of victory all along the line in November.*

We are free to say that we think the *Tribune's* interpretation of the returns is as nearly accurate now as it was four years ago. To our mind the figures simply show that party lines in Maine remain substantially as they were in the last Presidential campaign. This may rejoice the Republicans, and it may not. It may show several things, but the fact which it discloses most plainly is that there is no "cyclone of fear" among the Democratic voters; and we have the authority of so eminent a Republican leader as Mr. Chauncey M. Depew that unless there be such a cyclone, there will be small chance of Republican success in November.

Gen. Harrison's letter of acceptance, as the effort of a man in middle life to deal with a complicated subject to which he has never given any attention, and which is forced on his consideration by circumstances, deserves respectful treatment. It is, however, difficult to criticise it at all without seeming to be uncivil, because any criticism of it will seem rather an examination of Gen. Harrison's mental equipment than of his political economy. Political economy he cannot be said to have. His views about the tariff are the commonplaces which a busy lawyer has probably picked up in conversation or inherited. It is clear enough that he has not studied the question at all. The probabilities seem to be that his mind is as unfitted for such study as that of some men is for the study of mathematics. For instance, what most troubles him in the Mills bill is not "the length of the step" which he thinks this bill makes, but "the direction of it." That is, he does not see what great harm it will do *per se*, but what alarms him is, that he thinks it will lead to a "placing of the tariff laws on a purely revenue basis," or "practical free trade—free trade in the English sense." But it must be apparent, even to a child, that if the Mills bill produces the dreadful effects on trade and industry which its opponents say it will, no other step in the direction of free trade will ever be made. The country will be satisfied with the result of the experiment. The old duties will be restored, and the revenue reformers and "the British free-traders" brought to confusion. So that it is the length of the step, and not the direction, which is really the important thing.

Behind this little logical slip, there is evidently that feeling about the sacredness of the tariff as a valuable national possession, rather than as a form of taxation, which one meets with all over the country among persons who have not given much attention to economical questions—the feeling that the tariff is—like the Gospel, or like education, or like chastisement by a loving parent—something good for people whether they like it or not, or want it or not. To Gen. Harrison, apparently, a country which lowered its tariff, or got rid of it, would be like a country which had relapsed into heathenism, or had plunged into debauchery through the teachings of wicked men. He reproves, for instance, "those who teach that the import duty on foreign goods sold in our market is paid by the consumer," not so much because what they say is not true, as because "it discredits in the minds of others our system of levying duties on competing foreign products." In other words, it strikes him as one of "Bob" Ingersoll's lectures, or derision of the Scriptures, strikes a pious and moral man. This state of mind is interesting, but it is psychologically rather than economically interesting. Gen. Harrison's refusal to "stop to refute this theory as to the effect of our tariff duties," on the ground that those who advance it "are students of maxims rather than of markets," we must treat with silent respect. We think he is quite right in his reserve. A letter of acceptance is hardly the place for such a discussion, and if it were, Gen. Harrison could not carry the controversy very far without a loss of dignity, because the "students of maxims" are tough customers, and he would get but little glory out of a tussle with them.

A very neat exposure of Mr. Blaine's habitual charlatanry is made by the Boston *Herald*. In his recent speech before the citizens of Eastport, Maine, Mr. Blaine congratulated them on their wonderful recuperative energy, as displayed in building anew their town after the great fire a few years ago, and informed them that they could not have done this but for the assistance which they received from the protective tariff. Having done this, says the *Herald*, Mr. Blaine proceeded to hold up for their execration the Mills bill, showing them how it invited Canadians to bring in without duty every form of timber, hewn and sawed and squared and sided. The *Herald* reminds Mr. Blaine that in the record of the Forty-ninth Congress he will find a petition, signed by the Selectmen of Eastport, and dated immediately after the fire, asking Congress to come to the relief of the stricken town, and permit all building materials to be brought in free of duty in order that the work of rebuilding might be done without the burden of protective duties. This petition was presented to Congress by that roaring protectionist, Capt. Boutelle, who accompanied it with a bill granting what the petition asked. Boutelle made a speech in its favor, in the course of which he called attention to the fact that the bill only followed the precedent which had been established when another Maine town, Portland, had been a sufferer by a great fire in 1866.

There are a great many people in a muddle-headed condition about the tariff, owing to the necessity of maintaining for campaign purposes that it enables the manufacturer both to pay high wages and to charge low prices. There is probably nobody who is more muddled on the whole question than Senator Hoar. He has just been doing some "voicing" in the New York *Tribune*, in which he on Monday delivered himself of the following sapient opinion:

"Neither is it true that the tariff increases the burden upon the necessaries of life to the working people. Not more than 15 or 20 per cent. of all the articles which a well-to-do workingman requires for use in his family consists of articles on which there is any duty at all, and of a large part of that per cent. the price of the article is as cheap in this country as it is abroad, so that the tariff does not increase it at all, while the wages of the workingmen in consequence of the tariff are from 40 to 100 per cent. higher.

"The working people of America will easily be made to see these things—indeed, they see them now—and the President's letter will be regarded by them as a feeble attempt to mislead them."

Now, if 80 per cent. of the articles consumed by the bulk of the population are not touched by the tariff, and the cost of the remaining 20 per cent. is not raised by the tariff, how in the name of common sense does the tariff enable the manufacturer to put up the wages of workingmen in this country from 40 to 100 per cent. over those paid to workingmen abroad? The tariff is not an unseen influence, like spiritual regeneration, or a tonic, like acid phosphates, to be taken internally. It does a manufacturer good by enabling him to get higher prices for his wares, and his own story is that, because he gets higher prices for his wares, he is enabled to pay higher wages. But if Senator Hoar be right, where do the higher wages come from? Not from the price, because that is about the same here as abroad. Is it possible that we are in the presence of a miracle? Were these tariff verses recited at the Tariff Convention in this city four years ago really a hymn?

"Protection, oh Protection, the joyful sound proclaim
Till each remotest nation has heard the Tariff's name!"

An amusing but very interesting explanation is offered by a United States Senator, of the reason why the Senate does not produce its tariff bill. It is neither more nor less than the very reasonable fear that, when the bill saw the light, the President would send in a message recommending its passage, for the relief of the Treasury and of commerce and industry. This, coming on top of the retaliation message, would of course be a terrible blow, and would make the position of the Republican party in the canvass even more ridiculous than it is. We say the fear is a reasonable one, because, the passage of the Mills bill being apparently impossible this session, the President would probably jump at any chance that offered of keeping down the surplus, even if the measure did not in all respects meet his views, and trust to getting something better next year, when the path of revision had once been fairly entered on. The more one thinks of it, the more extraordinary it seems that the Republicans in Congress did not in the beginning concoct a revision bill of their own, and run it in opposition to the Mills bill. Their failure to see the need of this is in fact one of the best omens of the crisis. It looks as if Providence had, after much forbearance, decided on their destruction.

James P. Foster, President of the Republican League of the United States, is still after "fat," and, judging by the breathless character of his latest appeal, the chase is getting desperate. He declares that if he can only get "fat" enough, he will show that the League is the "greatest engine of modern political warfare." If he will allow us to differ with him, we will venture the opinion that he has already made it such an engine by the production of his "Fat" circular alone. There is no such campaign document in existence as that is, and none which has had such a circulation, especially by the enemy. Foster's present scheme is for $1 subscriptions, and he offers the following powerful inducements:

"Every subscriber to this fund will receive an elegant souvenir which will be worth the money he has given, and the League will allow you to retain for the use of your club 25 per cent. of all the subscriptions you may receive.

"To every club which secures $200 before the 25th day of September the League will present an elegant silk banner, with pole, cords, etc., containing the official emblem of the League; an elegant affair which any club may be proud to possess."

Why not offer a Waterbury watch, or an Unabridged Dictionary, or a Library of Universal Knowledge in return for one-dollar subscriptions? What will be left of the dollar after the 25 per cent. reduction has been made and the "elegant souvenir" and "elegant silk banner with poles, cord, etc.," have been paid for?

We repeat that we think a good electoral law ought to make the circulation of fraudulent or forged quotations or letters, with the view of influencing votes thereby, a criminal offence. Under the law of this State at present, if Mr. H. K. Thurber were to "falsely sign the name of the officer of a corporation or of any other person to a letter, message, or other paper," or "*utter or circulate such a letter, message, or other paper*, knowing that the same has been so falsely signed," with "the intent of affecting the market price of the public funds of this State or any State," or "the market price of *any merchandise or commodity whatever*"—say, groceries—he would expose himself to a fine of $5,000 or imprisonment in the penitentiary for not more three years (N. Y. Penal Code, sec. 435). If such were the intent of the leaflet he has been circulating, he would get three years for his *Times* forgery, and be a ruined and disgraced man. But because the intent of his leaflet is not to run up the price of groceries, or of stocks and bonds, but simply to affect the action of his countrymen on a vast question of government, involving hundreds of millions of dollars, he has been allowed to go on his way and snap his fingers at the police.

The Republican outlook in Minnesota is threatening, to say the least. The farmers of the State made a formal appeal to the Republican Convention, which met last week, to adopt the following as the tariff plank of the platform:

"We protest against the doctrine of high protection, and demand a judicious and radical reduction of the present tariff. We are opposed to free whiskey and tobacco while we are compelled to pay high taxes on sugar and lumber."

This request was not granted, but instead a platform was adopted which approved the national Republican platform in one part and repudiated it in another, and a candidate for Governor was nominated who is especially obnoxious to the farming and other industrial interests of the State. Two newspapers representing these interests have bolted from the ticket, and announce their intention to support the Democratic candidate. What the ultimate result will be is, of course, uncertain. The Democrats claim that it gives them a good prospect of carrying the State, but the Republicans deny this. A most humiliating aspect of the situation is the attitude of the leading Republican newspaper of the State, the St. Paul *Pioneer-Press*. It has for years been an able advocate of tariff reform, but since the Chicago Convention it has been trying to make its readers believe that there is nothing inconsistent between its former teachings and the declarations of that platform.

By his manly and straightforward stand on the high-license question, Warner Miller is making it easy for independent voters to support him. His speech at Little Valley on Saturday was a much more explicit and courageous utterance on this point than the Republican platform's. He refused to quibble over the terms tax or license, declaring himself squarely in favor of high license, and adding: "In the coming contest I do not hesitate to say that I prefer to be beaten upon that question rather than succeed by subterfuge and double-dealing." He went on to say that the liquor interests of the State had openly and formally taken the opposite ground, and had forced the issue between themselves and the rest of the people. Their undisguised championship of Gov. Hill, and his undisguised willingness to do their bidding, have also helped to make this question the leading one of the campaign. Mr. Miller is a shrewd politician as well as an honest man. He wisely puts his tariff views out of the contest, for as Governor he would have nothing to do with that question. He stands before the people of this State as the pledged defender of orderly and honest government, and as such is the exact opposite of Gov. Hill. On that issue, every reputable voter in the State, of every party and of no party, ought to have no difficulty in deciding as to which of the two men shall have his vote.

While there is a great deal of force in the Republican taunt that no self-respecting voter can take much pleasure in supporting a party which is capable of nominating a man like "Dave" Hill for Governor, still it should be borne in mind that the Republican party has been guilty of a like offence of even larger proportions. Bad as Hill's nomination will be as a revelation of party depravity, it will not be so bad as was Blaine's nomination for the Presidency by the Republican party. We venture to hope, also, that Hill's candidacy will not involve the humiliating spectacle which Blaine's did of men of high character and correct principles taking

the stump, defending his dishonesty, and declaring that they could see nothing in his career of lying and jobbery which unfitted him for public office. Hill belongs to the same variety of statesman as Blaine, and his renomination for office will be, as Blaine's nomination was, only a fresh evidence that the working machinery of political parties, if left to itself without fear of consequences, pays small heed to moral qualifications in candidates. The only restraint, in other words, which the orderly and respectable elements in American politics can exert upon the machine-workers in either party is by uniting against every bad candidate and making his election impossible.

The *World* says that Gov. Hill's faults have been "grossly exaggerated." Well, which faults? It is not possible to have exaggerated his main fault of taking money from a contractor to pay his campaign notes. There are certain "faults" one cannot "exaggerate," and this is one of them. When a Governor of a great State connives at gross jobbery in order to make $10,000, one cannot say in palliation, as one may say of the theft of a watch, that he did it because he was hungry, or out of work, or had a sick wife, or was led astray by evil companions. Men who are elected Governors of States are supposed to have risen out of the atmosphere in which criminals plead necessity or temptation in extenuation. We are not arguing that Mr. Hill ought to go to jail, or be fined, or impeached, or subjected to any sort of penalty. We simply say that to confer on him a second time the great honor of the Governorship would be a defiance of the morality of the community such as no party in this country has ever perpetrated, except the Republican party when it nominated James G. Blaine for the Presidency. There is always something very comic in the notion that you are persecuting a man if you do not want him raised to the highest place in the State or nation.

The way in which men like Senator Blackburn go about denouncing the President's civil-service-reform policy is a striking illustration of the difficulties the President has had to contend with in carrying it out. A great many prominent Democratic politicians, like a great many prominent Republican politicians, feel about it just as Senator Blackburn does, and work against it privately, but do not, like Senator Blackburn, blurt out their feelings in public places. They are, however, like Senator Blackburn, generally elderly men, who will never get reconciled to anything but the spoils system, and will die mourning over its decline. Its complete expulsion from the public service need only be looked for from the generation which has grown up since the war. The older men like the system in which they were bred, and will not admit, even to themselves, that conditions which favored their own rise into power or eminence can really be bad.

In considering our relations with Canada, it should be borne in mind that that country is just as badly bestridden and bedevilled with the doctrine of "protection to home industry" as we are. One of the outcroppings of this sentiment, and one of the deft imitations of our own practice, has lately been disclosed in an executive order requiring the collection of duties on boxes and other coverings in which green fruit is shipped to Canada. Green fruit, plants, and bulbs were made free between the two countries by reciprocal legislation last year, and for a time things went well. But lately an order has been issued by the Canadian authorities to their customs officers to collect duties on the boxes, bags, or other coverings, just as we, after the Treaty of Washington went in force, collected duties on lobster cans, although the lobsters were admitted free of duty. It is reported that the British Minister at Washington has remonstrated with the Canadian Government against this evasion. Another bit of protectionism is the rebate of tolls allowed to Canadian vessels passing through the Welland Canal, to which President Cleveland called attention in his recent message. This is intended to protect Montreal grain-shippers. There is no excuse for this discrimination. It is a clear violation of the treaty, and it should either be stopped or the same medicine should be offered to Canada that she offers to us.

The accounts—apparently authentic—which come from Germany, touching the manners and customs of the young Emperor, are undoubtedly enough to make sober-minded people uneasy. He started the other day, at four in the morning, with an aide-de-camp, to several of the cavalry barracks in the neighborhood of Berlin, had "boots and saddles" sounded, and ordered the regiments to march promptly to a point seven miles outside the city, to which he went at full gallop and waited for them, watch in hand. His little sons, too, live in uniform, with high boots, sabres, and spurs, and their plays consist of the attack and defence of little redoubts, and military exercises under the superintendence of two or three gendarmes. These things somewhat resemble the eccentricities of the father of the Great Frederick, and are probably intended to show that the new ruler is a true Hohenzollern, but they seem sadly out of place in an industrial age, and naturally set people asking, What next? or rather, What will happen after Bismarck goes? The great preponderence given to the sovereign in the Prussian Constitution works well as long as the sovereign is a capable and prudent man, surrounded by wise counsellors; but the capable and prudent sovereigns and the wise counsellors die, and the hare-brained young fellows get their innings, and sometimes make an awful mess of it. In earlier days, when the state was made up of farmers, priests, and soldiers, and credit, and commerce, and manufactures counted for little, the brilliant young military monarchs were mischievous enough, heaven knows, but harmless compared to what they might be now if let loose among the infinite complications of modern society. The great trouble Austria had to contend with between 1848 and 1866 was, as an Austrian statesman said, that she had a "young and chivalrous Emperor," who ran on for twenty years before he had sense hammered into him, and became a sober-minded, peaceable constitutional monarch; but it took Sadowa as well as Magenta and Solferino to do it.

The British Government has just concluded a remarkable experiment in the art of naval warfare, by means of manœuvres between two divisions of the fleet, one supposed to be "the enemy" which the military men are always so dreadfully afraid of, and the other the defender of the coast. The enemy was blockaded in an Irish port, but managed to escape, and then either burned the shipping or levied contributions on all the leading ports of the kingdom, including Liverpool. In fact, if the result showed anything, it showed that it would be impossible, with any force the kingdom could muster, to prevent an active and enterprising squadron from inflicting enormous damage all along the coasts. It has brought home to the British public more clearly than ever before the very unpleasant truth that pitched battles between great fleets will be by no means the prominent or important feature of the next great naval war; that the worst of it, by far, will be the devastation wrought by cruisers, and that the strongest maritime Power in our day is really the Power which has least property afloat, and fewest unprotected seaports.

The resolution of the English Trades Union Congress in favor of "the nationalization of land" doubtless does not mean much, but it is a natural outcome of what are called the Allotment Acts of recent years, through which local authorities are empowered under certain conditions to appropriate land in small lots to be let to workingmen—to say nothing of the very exceptional treatment of the Irish land question. The expropriation of individual owners for the benefit of other people, and the interference of the Legislature in the contracts between landlord and tenant, are both impressive acknowledgments that land is a very peculiar kind of property, with which the State may take peculiar liberties, and it is not surprising that the workingmen have taken the lesson to heart, and think that there is something more to be got out of it. But what gives the land question its importance, both in England and Ireland, is the fact that it has until now been a monopoly in the hands of a small number of owners, who were able to exact rent for its use. Rent is, however, rapidly disappearing under the competition of the remoter parts of the globe, and when it has gone, the land will no longer dazzle workingmen or anybody else in England. What makes them think its nationalization would be a good thing is the fact that they have seen the land hitherto supporting in great luxury and leisure a large class besides the cultivators. But this class is gradually disappearing.

MR. CLEVELAND'S LETTER OF ACCEPTANCE.

THE Republican newspapers have been long anxious to see Mr. Cleveland's letter accepting his renomination, and have latterly been inclined to chide him for delay in writing it. They now have it in full, and there yet remain two months in which to analyze it. We venture to predict that they will not like it. We suspect that they could have endured a still greater delay in the production of it. No campaign document of the year will make so strong an impression, for although the arguments presented do not differ in any marked way from those of other debaters on the same side, they are stated in a very felicitous manner for reaching the ear of the common people, and the rostrum from which they are delivered is, of course, the most commanding of all. Mr. Cleveland's statement of the issue presented by the free-whiskey clause of the Republican platform is perfectly fair, and his comment upon it appeals powerfully to the common sense of the people.

"The implication," he says, "contained in this party declaration, that desperate measures are justified or necessary to save from destruction or surrender what is termed our protective system, should confuse no one. The existence of such a system is *entirely consistent with the regulation of the extent to which it should be applied* and the correction of its abuses. Of course, in a country as great as ours, with such a wonderful variety of interests, often leading in entirely different directions, it is difficult if not impossible to settle upon a perfect tariff plan. But in accomplishing the reform we have entered upon, the necessity of which is so obvious, I believe we should not be content with a reduction of revenue involving the prohibition of importations and the removal of the internal tax upon whiskey."

Here is the issue of the campaign in a nutshell. We have a protective system. No party, nobody, considers it perfect. The Republican party in 1884 promised to revise it and correct its inequalities. But after neglecting this duty for years, and after preventing anybody else from doing it, the party has taken the ground that the existing tariff is a sacred thing, and that its protective features cannot be amended at all except in the way of increasing the taxes. The duties on particular articles may vary all the way from 10 to 100 per cent., but these inequalities can only be corrected by lifting the lower ones to the level of the higher—never by reducing the higher in any degree whatever. Rather than reduce any such tax, let tobacco and whiskey be made free.

This position is so absurd, so utterly nonsensical, that it needs only the touch which the President gives it to show us what it really is. It is like one of those ancient mummies that have the semblance of the human form till somebody breaks the crust and lets in the air, when the whole thing collapses and turns to dust. The President says that the existence of the protective system is entirely consistent with steps for its adjustment to the present exigency of a surplus revenue. "Nothing of the kind," says the Chicago platform. "The existence of a protective system is consistent only with increased rates of duty and a repeal of the whiskey tax."

There are some situations in politics which upset the gravity of impartial witnesses, and this is one of them. It is impossible to add anything to its comic features. It is possible only to point out the incongruity of things in a few plain words, and leave the rest to the common sense of plain people. This is what the President has done in his letter of acceptance. More than this it would have been useless to attempt. "It is a condition and not a theory that confronts us," he said in his message to Congress. How the Republican party would meet this condition is stated in the Chicago platform. "We would meet it," say the Republicans, "when it becomes flagrant and unbearable, by adding to the taxes on the necessaries of life when imported from abroad, and by repealing those on intoxicating drinks when produced in our own distilleries." There is the cap-sheaf of your protective system. There is its crown of glory. Mr. Cleveland holds up this crown of glory as a spectacle for mankind, and says that he is content to abide by the judgment of the American people upon the principles of his message, as contrasted with those of the advocates of dearer food and clothing and cheaper drinks.

TARIFF REFORM A MORAL ISSUE.

WITH one or two exceptions, the religious newspapers are pretty consistently refraining from taking any part in the canvass. This is due, they tell us, not to the disastrous nature of their fooling with political questions four years ago, but to their clear conviction that there is no moral issue involved in the coming election. In 1884, they say, there was such an issue—the personal character of the candidates. Then they felt called upon to speak out. But now that it is a mere question of economic policy, a choice between opposing theories of the tariff, they think there is no reason for their impairing their religious influence by assuming a partisan position.

Far be it from us to quarrel with this conclusion. There are the best of reasons why the religious press, as such, should abstain from partisan activity. But we cannot at all admit that the reason offered is one of them. It is an altogether antiquated and inadequate conception of morality that is unable to see that the pending issue of tariff reform is, in large part, a moral issue. To deny that it is, smacks of what may be called the lurid school of moralists—we mean the men who feel an appeal to their moral instincts only when it is a clear case of heaven against hell. For them to be able to recognize right and wrong on the two sides of a battle, it must be an Armageddon. Right must be enveloped in a heavenly halo, or they do not know it, and wrong must be wrapped in sulphurous gloom, or they will not be sure of it. This is very largely, we suppose, the attitude of the Prohibitionists. They are men who, so to speak, pine for a moral issue—and they want it to be one that they can see a mile away. Since the Republican party has ceased to stir their enthusiasm, as it did in the days when it stood for human liberty, they have been casting about for a new cause to awaken their passionate devotion, and they have apparently found it. They regard it as the height of absurdity to talk about a question of custom-house regulations, as they call it, being a question largely moral.

Yet tariff reform is a moral issue of a most positive and commanding sort. We may even say that it is so on whichever side of the question a man takes his position — provided he takes it honestly; for every honest and intelligent voter, next November, will believe that he is voting for national prosperity. But national prosperity means national improvement in morals. No teaching of scientific ethics is more clear than just this intimate connection between the physical condition and the moral state. Thus it has been shown, for example, that suicide varies with the food supply. The introduction of gas in the streets of London was followed by an immediate decrease in public crime. We have to distinguish here between morals and religiosity. In times of national distress the churches are more resorted to, it is true, than in periods of prosperity. From this fact it has been inferred that a commercial panic, like that of 1857, is a great quickener of morality because it is of church attendance. But this is to overlook the immense increase of crime, which is always the other pole of the social movement originated by public calamity, and also to be blind to the true influence of a series of prosperous years in raising the standard of comfort and of intelligence, in ameliorating manners and putting a premium upon good habits. The surest way of hitting the moral is to aim at the physical, and the citizen who is really persuaded that the prosperity of the country is to hinge, very largely, upon the result of the voting two months from now, may be certain that the morals of the people will be affected in the most important ways.

In fact, if we admit that the reasoning of the advocates of tariff reform is sound, we cannot well deny that they have ground for entering into the contest with the loftiest moral enthusiasm. It is conducive to morality to have public measures rightly named and clearly understood by the people. A part of the work of tariff-reformers, in the present campaign, consists in exposing hypocrisy and deception. They are helping to fix the label "favoritism," "class legislation," "bounty system," on the thing that has falsely been called "protection." They stand for economy in national administration, and economy is a public virtue and a source of private morality. They are striving to restore our true political ideal of equality before the law, instead of the present system of legislation for the benefit of the few at the expense of the many. They are working to prevent, in the most direct way possible, the creation of permanent class distinctions in this country, and of persistent social antagonisms. They labor for simpler and directer political

methods, for the better distribution of wealth, for a more steadily expansive business success, and for a more constant employment and contentment of laboring men. And it is no wonder that they feel all their moral earnestness enlisted in the struggle to secure such worthy ends, since they are well assured that that way lies a higher degree of social well-being and a better public morality.

If proof were still wanting that this "grovelling dispute over taxes," as it has been called by a moralist of the lurid school, has in it the power to stir the moral nature, it might be seen in the more striking party changes which it is causing. Every election brings desertions from one side or the other. There are always the mercenaries who jump the way they think the cat is going to, and the men who "vote for Kane." There are plenty of them in this campaign, no doubt. But the remarkable thing about it is the great number of unselfish and thoughtful men between whom and their party this tariff question has thrust a sharp sword. To break up old party associations and attachments is no easy thing for such men. It means a violent wrench for them. It means reproach and, often, obloquy. They dread these things, and they brave them only under the imperative command laid upon them by conscience.

ONE-CENT LETTER POSTAGE.

One of the measures to which the Republican party stands committed by its platform is the reduction of letter postage to one cent an ounce. The proposal is an attractive one, but, considering its origin, it should be scrutinized with care. The dominant element in that party is determined above all things to maintain the tariff. To this end it is willing to remit the tax on whiskey, and to this end it is willing to favor any expenditure of money that is likely to prove unremunerative. At present it is necessary to raise by taxation a sum estimated at $4,000,000 a year, and really considerably more, in order to meet the deficit in the revenues of the Post-office. It is obvious that if this deficit can be increased by a reduction of postage, the tariff will be so much more secure. Such a result would be entirely consistent with a policy that aims to deceive the people as to the real cost of their government. It would be merely offering as a gratuity what must be paid for by increased taxation—a process always economically wasteful and generally politically corrupting.

The New York *Tribune* has recently undertaken to defend this measure upon two grounds. It declares that cheap postage means the rapid diffusion of intelligence; and that as the Republican party is the party of intelligence, it naturally favors cheap postage, while the Democratic party, as the party of ignorance, opposes it. This argument, however grateful to the intelligence of the readers of the *Tribune*, can hardly be regarded as conclusive. The question involved is, whether those who use the post shall pay for the service what it costs and when they get it, or whether they shall get it for less than it costs, and let the deficiency fall on the revenue raised by taxation. To allow a man to send a letter for one cent when it costs more, and then to tax him to make up the loss, is properly not to cheapen postage, but to make it more expensive by the amount lost in collecting the tax.

Under our present system of tariff taxation, the burden of a deficiency in postal revenue falls heaviest upon those who write the fewest letters. Letters are written chiefly by business men and by persons of wealth and leisure. The mass of the common people are not great letter-writers. Their simple affairs do not require much correspondence, and their incessant toil does not admit of it. For the Government to carry letters at less than cost is to make the poor pay for a convenience used especially by the well-to-do. It is true that such a convenience indirectly benefits all classes, but the same is true of every appliance that encourages intercourse. Railroads lead to the rapid diffusion of intelligence and of wealth, but that is no reason why those who travel should not pay their fares, or why those who send freight should send it for nothing.

The other argument by which the *Tribune* supports this measure is, that the deficiency that it will create will be temporary. If this were true, it would settle the question, for all that is demanded by justice is that the Postal Department shall be self-supporting. A large profit is obtained from this source, it is true, by Great Britain, but this profit is obviously a tax, and such a tax would be so unpopular in this country that it is idle to consider its merits. If letters can be carried for one cent an ounce without loss, the country will unquestionably demand that they shall be carried at that rate, and the demand will be complied with under those circumstances at least as readily by the Democratic as by the Republican party.

The argument, however, is not valid. It proceeds upon the assumption that since a reduction in the rate of postage has usually been followed by such an increase of business as to make up the loss of revenue, therefore the reduction of letter postage to one cent an ounce will be followed by this result. But it is easy to see the fallacy of this. Up to a certain point, in almost any industry, a larger business can be done at relatively less expense, and therefore at a lower rate. Beyond that point the ratio of expense to business is comparatively steady. If the rate is fixed too low, the more business increases the greater the loss in doing it. These truths are so elementary that it would hardly be worth while to state them were it not for a popular impression that there is something peculiar about the postal business, and that somehow it is impossible for its rates to be fixed so low that they will not pay its expenses. The reduction of rates has been so enormous as to furnish considerable support to this belief, but its absurdity can be shown by reference to a single fact. The rate of postage for newspapers and periodicals is now so low that they are carried at a loss, and this loss increases with the increase of this class of matter. According to the estimate of the Postmaster-General, it now constitutes nearly one-third of the weight of the mails, while it brings in about one-fortieth of the revenue. If the other two-thirds paid the same rate of postage, the revenue of the Post-office would be about $4,000,000 instead of $46,000,000. Although the reports of the postal service do not furnish much information on the subject, it is yet possible to prove from them that a reduction of letter postage to one cent an ounce would probably bring it below the point where an increase of business brings an increase of profit. The revenue of the office is derived almost exclusively from stamps, and amounts to some $45,700,000 from this source. The amount derived from second-class matter is positively known to be $1,364,000. The amount derived from fourth-class matter cannot be definitely fixed, but we may adopt the official conjecture that it is $2,000,000. As to third-class matter, it is impossible to be accurate, but, from a variety of circumstances, it is probable that $5,000,000 would be an exaggerated estimate of its amount. Postal cards produce $3,570,000. Putting the total of these items at $12,000,000, we have remaining about $33,700,000 as the revenue derived from first-class matter.

The expenditure of the office is about $52,000,000 yearly, and of this we may say roughly that $25,000,000 is on account of transportation and other expenses that vary directly with the amount of business, and the rest is on account of salaries and wages. If, now, the rate of postage were reduced as proposed, and in consequence the amount of first-class matter doubled, the revenue would stand at the same figure as at present, $46,000,000. Estimating the first-class matter as constituting one-half of the present weight of the mail, the transportation account would then be $37,500,000. If the salary account remained the same, the total expenditure would be $64,500,000, a deficit of nearly $19,000,000. If the amount of first-class matter quadrupled, the revenue would rise to about $80,000,000, the transportation account to over $62,000,000, and, even on the extravagant supposition that the salary account was not increased, the deficit would be about $10,000,000. Reasoning from the past rate of increase of the salary account, the deficit would be far larger, and would increase with the increase of business.

While these estimates are largely conjectural, they may be depended upon sufficiently to justify the conclusion that one-cent letter postage, at the present cost of transportation, and with the present rate of postage on second-class matter, would be an expensive luxury. The *Tribune* suggests that Republican orators would do well to remind their hearers that a Republican Congress would mean one-cent postage. We trust that the suggestion will be acted on, feeling sufficient confidence in the intelligence of their hearers to believe that they will reflect that one-cent postage will have to be paid for in taxes, that these taxes come principally out of the earnings of poor people, and that well-to-do people will get the principal benefit of the change.

A LOW OPINION OF THE CHACE BILL.

THE August number of *Belford's Magazine* contains an editorial contribution on "International Copyright," which exhibits a gloomy view of the future of that question, and is especially severe upon the Chace bill. "The authors want in an international copyright," according to this article, "what the people are not only ignorant of, but would set their multitudinous countenance against were they enlightened." And the prospects are no brighter as regards Congress. A lugubrious picture is drawn of the abject drudgery imposed upon a member of Congress by his constituency, and the writer exclaims: "Think of such a life, and the man engaged in it being called upon to consider cases of abstract justice—in other words, to hear an earnest advocate of a moral right lying outside of the Solon's immediate business. Such advocate is regarded justly as a crank and a bore. To avoid him the member dives down alleys and hides in the cloak-room, or the barber-shop, or less savory localities, and blasphemes." The first two sections of Mr. Spencer's chapter on "The Right of Property in Ideas," are quoted from his 'Social Statics,' as containing all that there is to be said on the subject of the moral obligation to respect intellectual property; but as out of the whole number of Senators, Members, and Delegates in Congress (according to our author, who is, presumably, Mr. Don Piatt himself) there are "only thirteen who know who Herbert Spencer is, and only five who have read anything from his pen, one can clearly see not only the little influence the ablest thinker of the century has upon our law-making body, but how wide apart are the literary guild and Congress. . . . We must not be understood as giving the cold shoulder to what these gifted sons of the pen are so earnest in denouncing," Mr. Piatt explains. "We are only striving to show the utter hopelessness of their attempt to get a remedy from Congress." Even if the widest information could be diffused, however, it is thought doubtful if the effect would amount to much, and the explanation of this and the reason for the severe denunciation of the Chace bill are stated as follows:

"For the last quarter of a century the public conscience has been dulled and all business debauched by a policy that makes politics mere trickery and business a system of theft. When the Government entered the field of private enterprise and sought to build a privileged class on taxation, it was guilty of a fraud that has poisoned the people, and we have in a great measure destroyed all honest dealing. The book-publishers, for example, suffer no shame in acknowledging that their business is theft, and their great accumulations mere plunder; for they have given and are giving the people cheap books. This is enough for the Congressmen, and the bill agreed on leaves the stealing intact. That is, it shifts denial of international copyright from the Government to the publishers. If the foreign author will, within a certain time after producing his book in a foreign country, secure an American publisher, and have the same printed on American paper by American printers, he may possess the poor privilege of calling his own property his own. Of course this will be followed by a pool or Trust among our publishers, and the international copyright will be a statute to benefit the thieving publishers. What heretofore has been mere neglect will thereafter have the sanction of law. All new books by untried authors will be at the mercy of the publishers, and open to plunder by the Typographical Union and the Paper Trust. The advocates of this measure claim that this bill passed to a law will be a recognition of the right. We can see nothing of the sort in the impudent and iniquitous measure. It simply sanctions by law all that has been sanctioned by time, and lifts the thieves into recognition as respectable men. The assurance of a claim from publishers who are already protected by a high tariff on foreign books—a tax on knowledge—fairly stuns one."

In the last paragraph of this article it is insisted that the law of trade-marks affords to literary property all the protection that can be asked for; and this view is said to have received the sanction of the ablest lawyers of the country. But although so high an authority as Jeremiah Sullivan Black is named as having held this opinion, it is difficult to believe that authors would, under trade-mark law, secure adequate protection for their productions. It is undoubtedly true that the title of a book may be protected as a trade-mark, and in isolated cases this protection of the title may practically secure the book from piracy, because the reprinting of the work under any other title would be unprofitable. A good example of such a case is that of the only English book protected by the courts of this country, namely, the celebrated 'Chatterbox.' Its title is registered as a trade-mark, and as the popularity of the book—an annual volume of selections with illustrations—depends upon the reputation acquired by the particular series of selections so named, the publisher is granted a property right in the title, and the use of this designation, or any near imitation of it, for some other book of selections is prohibited, as well as the use of it in connection with a reprint of the work itself. But it is to be noted that this prohibition does not extend to the book aside from the title. As Mr. Justice Wheeler very plainly stated in the opinion rendered in the case of Estes vs. Williams (21 *Federal Reporter*, 189): "There being no copyright to prevent, the defendants claim the right to so print and publish the series of books [the various 'Chatterbox' volumes] in this country. There is no question but that the defendants have the right to reprint the compositions and illustrations contained in these books, including the titles of the several pieces and pictures."

But if the law as laid down in this case were applied, for example, to a work by Alfred Tennyson, who might have secured a trade-mark property in its title, it will easily be seen that in the absence of an international copyright the author's trade-mark protection would avail him nothing, because the text of the work could still be reprinted, and the cunning pirate would only need to give the fraudulent edition some such designation as 'The Latest Poem by the Poet-Laureate of England,' to secure its ready identification by the public, and a consequent sale for it, to the author's loss. There would seem to be a clear difference of principle involved. As Mr. Sebastian, in his work on 'Trade-Marks,' says: "A trade-mark does not protect the *substance* of the article to which it is attached from being imitated, but it identifies an article and indicates the source to which that article is to be attributed." But what the author first of all requires is protection for the substance of his book. The name he gives it is of secondary importance, and may be next to no title at all, as 'The Writings of John Smith,' for example. And it is worthy of notice that the statutes created to protect his *book* do not afford any protection to his title, except as the title is an integral part of the book.

CONVICTS AND DEMAGOGUES.

THE Legislature of the State of New York is not a body that commands high respect. The public views the beginning of its sessions with apprehension and their close with relief. It has passed many bad laws, but it has perhaps never passed a law so bad as the recent act concerning the prisons. As a combination of reckless cruelty, of economic folly, and of base subserviency to the lowest element in our politics, this measure is unsurpassed. By its provisions the use of machinery in all the penal institutions of the State is prohibited, and the sale of such products as the inmates thus handicapped might still produce is made illegal. The result is, that the prisoners are now locked in their cells, the machinery of the prisons is idle, and the workshops are deserted. This is the immediate result, but the consequences of depriving men of employment are remote as well as immediate. They will appear in an increase of sickness, insanity, and death among the convicts. They will also appear when convicts are discharged, or rather turned loose upon society, to make such a living as can be made in these days by men untrained in the use of machinery.

One of the features of that ably managed institution, the Elmira Reformatory, is the publication by the inmates of a weekly newspaper called the *Summary*. Every one who has read this paper will testify that it is—from a literary point of view, at least—up to the average of the press of the country, and that it is singularly clean, sensible, and able in its management. It might properly be recommended for general circulation, but such a recommendation would be useless. It is now clearly illegal either to sell or to give a copy of the paper to any person whatsoever, even to an inmate of the Reformatory where it is composed. There are trade schools in this institution where young men have been taught such arts as would enable them to earn their own support when discharged. These schools must be suppressed, for there is no authority for the expenditure of money for the purchase of the materials or the payment of the instructors which they require. It may be added that it is contrary to the spirit of our legislation that such training should be given to convicts. It only serves to make their competition more dangerous to "Labor" when they are freed from restraint.

We have referred to the *Summary*, however, not for the purpose of arousing sympathy over its fate, but to call attention to certain appeals that have appeared recently in its columns. It may be stated by way of explanation that the Superintendent of the Elmira Reformatory provides a letter-box, into which the inmates are allowed to drop communications addressed to him upon such subjects as they choose, and that the appeals which we quote below are specimens taken from a large number of similar tenor:

"Can you find me employment, and oblige one who had rather work than remain idle?"

"I have lain all day looking at the wall. Will you please let me have some work?"

"Please give me something to do—*anything*."

"I hope you will be able to find some work for me, no matter how low or menial. Before I came here I detested work. Now I am almost crazy for something to do."

"Could you not find me something to do? It is harder to kill time now than it ever was to put up my task in the foundry."

"Be so kind as to give me a job. I am a good hand at painting. Rather work than remain idle."

"Can you find me a place to work somewhere? I am almost dead after being idle so long. I had rather work day and night than to remain idle. Please give me work, hard work. The day seems two days."

"Please give me work at painting or anything else. I cannot sleep at night."

"Do please let me have some work."

We will not insult the intelligence of our readers by arguing that whatever offences these young men may have committed, they are yet human beings and ought not to be treated with wanton cruelty. It is impossible that any one should seriously maintain that convicts ought not to be permitted to work, or that it is not the duty of the State to make them work. What we do urge is, that it is the immediate duty of all conscientious citizens to let their representatives know that they must stop their shameful trifling with the lives and interests of several thousand of the most helpless of their fellow-creatures. These men should be made to understand that there are other votes to be thought of besides those of a few unprincipled manufacturers and labor agitators. They should be required to explain publicly the reasons for their action. They should be compelled to answer without evasion or equivocation the following questions: (1.) Must not the convicts be supported? (2.) If so, must they not be supported either by their own labor or by that of law-abiding citizens? (3.) If they are not to be supported by their own labor, how are other laborers benefited by being made to work for the support of idle convicts?

Let us put the case as plainly as possible, and ask, If there were two communities in all respects similar, in one of which the prisoners supported themselves, while in the other they were supported at the public expense, whether the rate of wages would not be lower in the latter community, and if not, why not? The talk of the competition of the products of convict labor with those of free labor is a capital *reductio ad absurdum* of the theory of protection. The products of the convicts are bartered for those of other laborers. The other laborers therefore get an equivalent for the goods transferred to and consumed by the convicts. Put a stop to the labor of the convicts, and the free laborers are still compelled by the taxing power of the State to transfer the same quantity of their products to the convicts for their consumption, but they now get as an equivalent—nothing. And it is by such measures as this that our legislators show their sympathy with "Labor"! The situation is described with grim humor in the following extract from an article on the subject by Mr. Eugene Smith, the Secretary of the New York Prison Association:

"In Great Britain the standing grievance of the Labor party has been for many years the large budget required for the support of the royal family. The tax levied for this object has excited a deeper discontent, and has stirred up more disloyal and riotous demonstrations on the part of the laboring classes, than perhaps any other public burden imposed on the English people. It has been a matter of national satisfaction in the United States that we had no regal establishment to be maintained at the public expense. But now come the special advocates of free labor and propose to place on the American people a burden of taxation far heavier than the burden of royalty: to erect into a dependent and unproductive class, which shall be housed, fed, and clothed out of the public Treasury, a body of men more numerous than the royal family with all its dependencies. And all this they demand as a boon to the laboring man! Does the Labor party in Great Britain and Ireland object to supporting a dependent class because it is royal? or does the Labor party in the United States insist on supporting a dependent class because it is criminal? And if the burden takes the form of taxation, what difference does it make whether the class supported is royal or criminal?"

POETS AND COÖPERATIVES.

On the Bay of Spezia, August, 1888.

I come from Casa Magni, and am writing in the shadow of the ilex and walnut trees under whose dark, massive, intermingled foliage Shelley wrote most of his poems after he left Pisa in 1822 till he suffered the sea change. There was no spot in the whole world that I had so longed to visit, had been so near and yet (through mere chance) left unvisited, and a mere chance has brought me here to-day, namely, an invitation from the workingmen of Spezia, Lerici, and San Terenzio to launch the third steamer that they have built with their own capital, and, we may truly say, with the sweat of their brow. A second invitation, from a Russian lady, Dr. Paper, lodged me in the house overlooking Casa Magni and the very room in which Shelley slept.

Can you wonder that my first thought was to ascertain who now was the owner of that house, and whether it still could be visited, as, hearing that the new owner was an Englishman, I feared me much to receive a "no"? But all such fear was put to flight by a courteous permission to visit the house and wander in the rooms at will from Mrs. Pearse, whose husband has purchased the whole property—that is to say, the ilex and olive woods, and the large house on the summit behind, which "Mary" tells us was, in her time, falling into ruin, as the proprietor was insane and his malady prevented its being finished. That house upon the hill is now complete, and a delicious summer residence it must be, as it is now let. The new proprietors actually inhabit the house that Shelley dwelt in, which is not included in the purchase, and which unfortunately the owner is allowing to go utterly to ruin. There it is exactly as the Shelleys left it, and indeed as they found it when Shelley arrived at Lerici on the 28th of April, 1822—a white house with arches, which had once been a Jesuit convent, sheltered by the steep, wooded hill behind, on the edge of the cove in the depth of which nestles the fishing village of San Terenzio. A small house it is for one family, as the unpaved ground floor which Shelley used for storing boat-gear and fishing-tackle, and which is now filled with huge olive jars, is uninhabitable; yet as no other house could be found for the Williamses, Shelley gave them half of his, and here on the 1st of May, 1822, the whole party took possession of their new abode.

It would be difficult to imagine a more perfect poet's home, with the sea which (though tideless), owing to an almost constant ground swell, dashes and foams against its walls—a sea now gray and hoary, now violet or green or blue, oftenest golden, as the sturdy rowers cleave the waves with their oars, and the sun shines down into the clefts.

The view from the veranda which surrounds the house is, even for Italy, we will not say unrivalled, but certainly it cannot be outrivalled. The horizon is bounded by the meeting line "'twixt sea and sky." To the left the picturesque castle of Lerici overlooks the little town of the same name, where the water laps the basement of the white, flat-roofed houses and is generally calm and quiet in its port, so that when boats and steamers cannot near San Terenzio, in Lerici they can always enter and land their passengers and freight. And now we look eastward with our eyes fixed, as Shelley's were for days and days, on that opening between Monte Tino and Porto Venere. There it was that, on the 12th of May, Shelley descried from the terrace "a strange sail coming round the point," a sail strange even to Maglian, the kindly harbormaster. It was the long-expected, alas! fatal, boat, built by Captain Roberts, who had also built the *Bolivar* for Lord Byron at Genoa. Too heavy a swell was swinging upon the shore at San Terenzio; so, though the weather was cloudy and threatening, Shelley and Williams walked to Lerici, "made a stretch off the land to try her, found that she fetched whatever she looked at, that in short they had a perfect plaything for the summer." Only there was one vexation: Trelawny had named the boat *Don Juan*, whereas Mary and Shelley had named her the *Ariel*, and Lord Byron, offended at the change, had written to Roberts to have the name painted on the mainsail. "For days and nights, full twenty-one," writes Mary, "did Shelley and Edward ponder on her anabaptism and the washing out of her primeval stain; turpentine, spirits of wine, *bucato*, all were tried, and it became dappled, and no more. At length a piece has been taken out and reefs put, so that the sail does not look the worse." Eight and forty days afterwards Shelley left his "divine bay" on board the *Ariel*, and at nine o'clock on the first day of July she cast anchor alongside the *Bolivar*, Byron's yacht, in the port of Leghorn. Eight days later, dawn was ushered in with a thunder-storm, but it rolled away, and all again was fair; but before the sun had set on the sea that he loved better even than the sun, our singing god had looked his last on sea and sky and sweetest earth, telling us for the last time

" . . . the wondrous story
How all things are transfigured except love."

What an old story it is—sixty-six years old this summer; yet you can fancy it happened yesterday, so vividly, in her passionate anguish, has Mary told the tale, completed by Trelawny.

The absurd story trumped up by Sir Vincent Eyre, "that an old fisherman who had died twelve years before at Sarzana, confessed to a priest that he was one of five who, seeing the English boat in great danger, thinking that Byron was on board and that they should find gold," etc., etc., is so utterly ridiculous that Trelawny must have been in his dotage to have given it the least credence. It was always known, from the time that Captain Roberts raised the *Ariel* from fifteen fathoms of water, that the gunwale was stove in and a great hole knocked in the stern timbers; but what does that prove? That there had been a collision, an accidental collision. One has but to sail or row on this sea in a squall, as we did yesterday, to realize that sailors, even though they be Ligurian sailors, than whom the world knows no braver, would have quite enough to do to hold their own, and that all thought of plunder would be lost in the struggle for dear life. And the day on which Shelley was lost, all eyewitnesses agree in telling how the sun was obscured by mists, how it was dark long before sunset, how sea and sky were black as blackest night. It would be too horrible to believe that Shelley's loving heart, his sweet, love-beaming eyes, were saddened by the sight of such a crime—a crime which, under the circumstances, could not have been committed, and therefore we may say it *was* not. Surely it is grief enough to have lost him just as he had begun to be his best and greatest self, without "piling the agony" up higher in that melodramatic fashion. Much pleasanter it is to dwell on the fact that Shelley lived out his last days in gladness and in such beautiful surroundings, and that he found his death in the sea he loved so well—his grave in that very spot of which he wrote: "The cemetery is an open space among the ruins, under the pyramid which is the tomb of Cestius, and the massive walls and towers now mouldering and desolate which formed the circuit of ancient Rome—the ruins covered even in winter with violets and daisies; it might make one in love with death to think that one should be buried in so sweet a place."

Very curious is Mary's detestation of this lovely place; in her horror there is surely something of presentiment, and the horror colors all her descriptions of this primitive but certainly not barbarous people. "The natives," she writes, "were wilder than the place; our near neighbors of San Terenzio were more like savages than any I have ever lived among. Many a night they passed on the beach singing or rather howling, the women dancing about among the waves that broke at their feet, the men leaning against the rocks, joining in their loud, wild chorus." All which merely means that the fishermen's wives, grandfathers, and children used, then as now, to wait upon the rocks and along the shore for the return of the husbands, fathers, and sons from their often dangerous voyages. "No provisions," she complains, "could be got nearer than Sarzana, and even there the supply was very deficient; nor, had we been wrecked upon an island in the South Seas, could we have felt ourselves further from civilization and comfort." Even to-day the inhabitants of San Terenzio live chiefly upon bread, fruit, and fish; but as there is now quite a little colony of Italians, Russians, American, and English who come every summer during the bathing season, housekeeping is a far less toilsome task than it was in Mary's time. You get excellent butcher's meat, the water is fresh and sparkling, and the wine of the hills is as good as you need want.

To-day San Terenzio is in full festival, as we have just returned from the launch of the *Alleanza del Golfo*, built at Lerici and sent off the stocks into the foaming, dancing waves in the presence of some 15,000 workingmen and their invited guests, who from dawn this morning until four P. M. have been steaming and rowing into the little town from every village and hamlet overhanging the coast, as from Spezia herself. This is the third steamer built by the coöperative society of workmen with their own saved-up capital, and in part by their own handiwork on festivals and evenings. Coöperation in Italy has considerable difficulty in holding its own against the "dissolving views" of Socialists, Communists, Anarchists, and Nihilists, who, though they have never succeeded in getting any fact accomplished, evince real genius in putting spokes into other people's wheels. But at least half of the workingmen of Liguria are thoroughgoing Mazzinians—politically, economically, if not always religiously; and coöperation was one of Mazzini's favorite factors of progress, Cattaneo also maintaining that any miracle may be accomplished "by associated minds."

Just five years ago, in the little hamlet of Solaro, overhanging the Gulf, five workingmen met to discuss the possibility of putting by their savings in sufficient sums and in sufficient numbers to build a steamer of their own to carry the operatives to and from their work in Spezia, at the Arsenal, or at the great lead foundry of Pertusola. Great difficulties had to be overcome, and much persuasive patience exhausted, before they could put together $10,000 with which to build the *Workman's Union*, which was launched just three years ago. She was a complete success, and, though carrying passengers for a third less than her competitors, in a year the profits were sufficient to build the sister vessel, the *Emilia Henfrey*, and again the *Alliance* launched to-day. The paid-up social capital amounts to-day to $40,000, and the coöperatives have decided at once to lay down a fourth steamer. Besides the ordinary traffic to and from Spezia, the Government pays them 500 francs a month for taking the invalid marines to and from the hospital at Porto Venere. Thus coöperation in the Gulf of Spezia has achieved a signal triumph.

After the launch, which was really a beautiful spectacle—seventy associations with their bands and colors filing in and taking up their station round the finished vessel, with her colors flying and her steam up, though still on the stocks—an old man approached me, wishing to present to me his son, the professor. "I am Poggi Felice," quoth he. Then we remembered that he was one of the fourteen workmen whose hands we clasped thirty years ago on board the *Cagliari*, as they were starting with Pisacane for the glorious but fatal expedition of Sapri to free Naples from the Bourbon. They failed, those brave ones: six were cut to pieces with their leaders, Pisacane and Falcone; the rest, after being condemned to death, were confined with their third leader, Nicotera, in the underground dungeons of Favignana. But their failure was the forerunner of the success of the "Thousand." Pisacane and his followers were the pioneers of Garibaldi and the successful liberators of Sicily and Naples. Garibaldi it was who liberated them from Favignana, and, once free, they immediately enlisted in the crack corps of the Genoese sharpshooters, and at the battle of Milazzo one was killed and five were wounded. Of these five Poggi was one; three are dead, and one, Carlo Rota, I am told, I shall find at San Pier D'Arena, where he is the head and soul of coöperation among the workmen.

San Pier d'Arena.—Voltri, August 18.

This letter, commenced in Shelley's ilex woods overhanging the Bay of Spezia, has, after some days of wandering along the coast, to be finished at San Pier d'Arena and posted at Voltri. Here coöperation is indeed flourishing, for the workmen have four different cooperative societies—the Society of Mutual Aid, the Coöperative Stores, the Building Society, and the Coöperative Iron Foundry. The stores have nothing particular except that their accounts are kept as I have never seen any other accounts kept, public or private, for clearness or precision. You can go through their books for the last twenty years, and see for yourself the amount of capital, of losses, profits, and how the dividends are distributed. At present their capital amounts to $45,000, besides the reserve fund of $10,000, and of another $2,000 calculated for the wear and tear of machinery, utensils, and furniture. Their profits for the last six months are a clear $5,000, divided thus: 7 per cent. on all the paid-up shares, 3½ per cent. on all the purchases made at the stores. Each share costs $4, and no one can own more than fifty shares. These stores have nine sub-stores, all kept by members, who give in their accounts daily and balance them every three months. The comestibles are few but excellent—wine, bread, *paste* (maccaroni), flour, cheese, coffee, sugar, biscuits, eggs, and dried mushrooms. Once they tried butcher's meat, but made as dismal a failure as their English brethren, lost $2,000, and shut up shop at once. They make no point of underselling the ordinary shopkeepers, marking their goods at barely less by 5 per cent. At first the women were opposed to the system because they could not get credit, but the 3½ per cent. returned to them for every hundred francs spent overcame all opposition. The stores are opened to all non-members, who, beginning with next year, are also to receive 3 per cent. on their purchases. The iron foundry is also a success, and has a capital of $80,000. The home of the Mutual Aid Society is really an elegant building, with reading-rooms, bathroom, dispensary, a doctor who attends daily from twelve till two, and a hall capable of holding two thousand people.

But what we consider the triumph of coöperation in San Pier d'Arena is the Building Society. Workingmen's homes in Italy, especially in cities, and of all cities in Naples, are generally unfit for human habitation. Piggeries, dog-kennels, fowl-houses, not to speak of stables, are often cleaner and less populated. In one room we have found, not only in underground Naples, but in cities such as Adria, eleven human beings huddled together—living, sleeping, feeding, etc., between four square walls with mud pavement, and often only with a hole in the roof for the smoke to escape. How, we ask, is cleanliness or morality to be taught or learned? How can a tired workingman be expected to exchange the delights of a pothouse for the din, filth, and confusion of his so-called home? Now these workingmen's houses, built by the coöperatives of San Pier d'Arena, are really palatial residences. Each apartment has three bedrooms, a sitting-room, a kitchen, closets, and (*rara avis*) a water-closet. The members wanting an apartment pay fifteen cents a week until the palace is completed. In each of the palaces, nine stories high (so built because of the enormous price of

ground), you have from thirty to thirty-six apartments, each supposed to cost $1,000. For each of these, duly numbered, lots are drawn, so that fate decides whether you shall live on a terrace or on a ground floor (some reduction, however, being made for these extremities), or whether the stairs you have to climb shall be 30 or 200. When once the apartment is ready for habitation, the inmates pay five dollars a month till they have cleared off the $1,000, when the apartment is their very own. Often a small family will take an apartment and let off the bedrooms to other workmen with their wives, keeping the sitting-room and kitchen in common. Carlo Rota, Pisacane's companion, one of the five wounded at Milazzo, is the President of the Coöperative Associations, and, with Armirotti, the workingmen's member of Parliament, took us over all the buildings and gave us these details, which we have thought really well worth recording.

Of Voltri I will only say that we are guests in the Mameli palace, now belonging to Nicola, the brother of Goffredo, Italy's soldier poet, whose "Fratelli d'Italia, l'Italia è desta" was the war hymn of every Italian volunteer who fought and died that Italy might live and claim for her own Rome, for which Goffredo himself fought and fell in 1849, and where he too is buried—not with Shelley in the heretic cemetery, but in Campo Varano, where Pio Nono also sleeps the sleep that knows no waking. J. W. M.

THE TEMPLE OF PAPHIAN APHRODITE.—II.

PARIS, August 7.

THE most amazing statement on page 210 of 'Cyprus' is now to come: "The southeast wall," that is, of the "peribolos," of which (as we read not many lines above) only a few blocks are extant, "I ascertained, by excavating its whole length, was 690 feet long." Evidently there is some confusion here. If there are only a few blocks of this wall extant, then it is not 690 feet long. Called upon to decide between our author's two statements, I have assured myself, by observation on the site, that the former and not the latter gives the truth. I understand that all attempts to find traces of this extended wall have proved without result. If Gen. di Cesnola had refreshed his memory, in the preparation of his ground-plan of the temple, by consulting Von Hammer's plan, I am sure that he would have altered his views about this peribolos, or outside wall. Von Hammer's plan represents a steep hill, near the brow of which he supposes the temple to have stood. The peribolos wall of Gen. di Cesnola has to plunge down into the valley and run off at an almost breakneck slope, before these 690 feet can be accounted for. The best proof, however, that there has been some mistake, is that this wall exists nowhere, either above or below ground. Gen. di Cesnola's assertion that "of this 'peribolos' only a few blocks are extant," is further confirmed because, of the 272 feet on the west of which he speaks, hardly a quarter can now be found. Hence, when our author says, "The length of the west side I could only trace as far as 272 feet," and "The length of the other two sides I was unable to ascertain," we are ready with a question. For what good reason do the four sides of this non-proven peribolos wall appear upon his plan? The length of two of these sides, our author says, he could not ascertain, and he is not sure that they exist. A very small fraction of this 272 feet on the west can be found. As to the length of the fourth side, his statement that he excavated 690 feet of it is discredited, first, by his own declaration that "Of the whole peribolos only a few blocks are extant," and, next, by the facts, which convince every visitor of Old Paphos that this wall of 690 feet is a physical absurdity. Thus the outside and larger parallelogram of the plan, given on page 212, and described on page 210 of 'Cyprus,' does not correspond with the remains discoverable upon the site of the temple, and its four sides should be dispensed with. If additional proof were needed, it would be this. The few extant blocks which form the southwest corner of this non-proven peribolos wall do not now lie, and never have lain, on lines parallel with any of the lines of Gen. di Cesnola's inner and smaller parallelogram, which is supposed to represent the temple proper—what various people have ventured to speak of as its cella. Of this inappropriate use of the term "cella" our author is innocent, but not of having forgotten the wisest and truest thing which his eighth chapter contains, namely, that an enormous mass of accumulated rubbish required removal from the site of the temple at Old Paphos.

This rubbish Gen. di Cesnola admits that he did not remove. How, then, can he expect us to follow him when, on page 211, he says: "The walls of the temple itself . . . I was able to trace correctly, by dint of patience. Though very little is seen above ground," adds he, "yet, strange to say, the four corner-stones are still standing." This is indeed strange to say, for of these four "corner-stones" only two have ever been at the corner of any building, and not one was ever at the corner of the temple. Furthermore, I satisfied myself on the spot that, if these four corners, two of which were not and are not corners, were made the corners of a building, that building would not be a parallelogram, and would not have the dimensions given for the temple in 'Cyprus.' Therefore the inner and smaller parallelogram of the plan on page 212 must be called in question. One of the walls, for instance, taken there to be the south wall of the temple, proves to be the outer wall of a vast porch lying south of the temple; and so I might continue. I said that Von Hammer, and consequently Engel, was, in respect of size, nearer the facts with his plan than the author of 'Cyprus.' This is true, because the south wall of what Von Hammer considered the Umfangsmauer, or peribolos of the temple, corresponds to the outer wall of this portico. Now, the length of this wall is within bowshot of what Von Hammer gives as the length of the peribolos. But still, Van Hammer exaggerates; his outside wall is 100 by 150 paces. This is more oblong than is Gen. di Cesnola's temple, 221 feet long by 167 broad. I imagine, however, that Von Hammer would not vouch for the accuracy of his measurements within an inch or two, as General di Cesnola does for his.

The difference is great between General di Cesnola's temple and the only structure which now has undeniable claim to be considered to represent the real temple. It is therefore deeply to be regretted that the wholly impossible plan of General di Cesnola's 'Cyprus' should have found a place in the third volume of Perrot and Chipiez. Like the temple of the plan on page 212, the real temple is oblong, but its interior width is about 18 feet, against 167 on the plan in 'Cyprus,' and its interior length is about 58 feet, against 221 in our author's plan. The walls of this most ancient shrine are 4½ feet thick. If the points of the compass are well given on my sketch-plan of the temple, its orientation is about that of the shrine of "El Maabed," as given by M. Ernest Renan in his 'Mission de Phénicie.' This shrine is at Marathus, in the part of Syria from which Cinyras is fabled to have come.

But to return to page 211 of 'Cyprus.' I am convinced there is error in the statement that "the corner-stone of the northwest side" (*i. e.*, of the temple) "has a hole in it thirteen inches in diameter." It is, however, perfectly true that "a similar hole also exists in the southwest corner," *i. e.*, the only corner of the supposed outer wall. Not only is there one, but there are many holes in this "southwest corner." I rejoice that General di Cesnola escapes a part of the responsibility for his statement that "these strange holes, which go through the whole stone, may have been connected with" the oracle of the great Paphian temple. The description of these holes, a misleading one, is our author's, but the notion about the oracle is cited as the opinion of Dr. Friedrichs, who visited General di Cesnola at Paphos. The General is, however, himself responsible for this, the last statement upon his page 211 with which I shall quarrel. "From this spot," *i. e.*, the corner in question, "if a person stand upon this huge perforated stone, he can produce a clear and fine echo of a phrase of three or four words, pronounced in a moderate tone of voice." To this let me add, that if a person stands a short distance away from the "huge perforated stone," he can also produce the same echo. In fact, it was proved to me that the echo was due to the existence of the Lusignan castle not far off. Remove that mediæval building and the echo disappears. But what could an echo have to do with an oracle? Nay, more, what could these holes have to do with an oracle? Our author's account of them, with his subsequent word, "perforated," suggests that these holes were visible from the outside, or came through to the outside. This is not the case. Ross gives the best account of them, saying that the stones have "deep cuts on their inner side, which served to give a hold to the implements used in moving them." He mentions similar holes in the stones of temples in Sicily, an island where the Phœnicians have also left many traces of their presence.

Neither General di Cesnola nor his friend Dr. Friedrichs invented this notion about the oracle. That, again, can be found in Von Hammer's book, published at Vienna in 1811. It would seem that Dr. Friedrichs inoculated our author with all the errors contained in Von Hammer's brilliant but hasty sketch. The notion of granite at Old Paphos is a casual slip of Von Hammer's, who likewise originated the peribolos, and described these holes definitely as "grosse Löcher die von *aussen nach innen* in einer krummen Linie gebohrt sind." Then he gives, in much more plausible form than our author's, the suggestion of communication from inside the temple with people outside, and also suggests a connection with oracles. The whole theory fails when it is remembered that these holes cannot be reached or seen from the outside, and that they end nowhere. They all—and there are many of them—start from the inside into the vertical side of a stone, and, after turning awhile within, come out upon its horizontal side. This is usually the lower horizontal side. These holes are not very dissimilar in their course from some of the wonderful loop tunnels in the St. Gotthard Railway. They all issue in a line at right angles to that of their entrance, and their issue is always against the surface of the next stone. Hence Ross seems to be nearest to the truth. They cannot have been of use after the wall was constructed, and may have served in the transportation of the blocks.

Turning now to page 213, we find our author speaking of the plain between Koukliá and the shore; this, he says, "must formerly have been wooded." I do not know why the word "must" is justifiable here, but perhaps what immediately follows will explain. This plain, we read, "was doubtless the grove spoken of by Homer." Homer mentions a precinct, which may, of course, have contained a grove, but there is nowhere in Homer mention of a grove at Paphos. And, finally, we come to Von Hammer's last error, revised and enlarged by General di Cesnola. Near the sea, but not by any means so near as the most completely misleading picture on page 214 would have us suppose, stand two curious stones five feet apart, which Messrs. Guillemard and Hogarth at one time believed might have been parts of some ancient wine press or oil press. Von Hammer saw these; called the oblong holes (which are their most remarkable feature) windows; and said they were remains of the ancient port of Old Paphos. Near them Von Hammer describes a pit filled with all manner of architectural fragments. These last, he suggests, belonged possibly to an ancient temple, at which perhaps the yearly procession from New Paphos paused, and where its members may have made preliminary sacrifice before going up the hill to the temple of Old Paphos. Von Hammer also says that here was the spot where Aphrodite rose from the waves, and indulges in a great deal of very charming and evidently irresponsible rhetoric. Our author, however, coming afterwards, declares that the two stones which, according to Von Hammer, belonged to the port, were a part of the temple. He takes it for granted that a building there would be "the temple," whereas Von Hammer invented the notion of the temple, and also that of the stopping of the procession there. Strabo tells of the procession and of the great temple at Old Paphos, but not a word of the stop at the bottom of the hill nor of a temple there. Therefore a much more definite description of the two "fabrics," which General di Cesnola says he discovered, is desirable before any one can be expected to believe that in antiquity there was anything on the spot of greater religious importance than a farm and an oil mill.

And now, for the last time, I will find further fault with this very misguiding eighth chapter. Once upon page 214, and again upon the following page, General di Cesnola mentions the river Bocarus. I cannot sympathize with the false modesty which prompts our author to say "the river Bocarus, now called by another name." The modern name of the small stream that flows at the bottom of the hill is the Diarrhizos. It is all the more necessary to use this modern name since the name Bocarus has no connection with any river or anything else upon the island of Cyprus. It is the only river name, preserved from antiquity, which undoubtedly belongs in the island of Salamis off the coast of Attica. All the maps, and nearly all modern reference books, are in error on this small geographical point; therefore, General di Cesnola errs here in a numerous and goodly company. I said that he repeated all the errors of Von Hammer, but this is not true in respect of the modern name of this river. Von Hammer misspells it "Dyarizos," and gives a grotesquely false derivation. This encourages him to believe that on going up the hill to Old Paphos he heard the murmuring of two brooks, which are not there; and behold! the sound of rushing waters is added to the many decorative fictions with which he furnishes forth the ancient precinct and the temple of Paphian Aphrodite. Engel follows Von Hammer here, but, with an uneasiness which does honor to his insight, endeavors to prove the existence of these two never-failing, ever-murmuring, nonexistent brooks by a most laughably irrelevant quotation from Ioannes Cameniata. As M. de Mas-Latrie has most truly said, Engel did not add much to our knowledge of the ancient geography of Cyprus. That has remained stationary, or nearly so, since the 28th of May, 1762, when D'Anville presented to the French Academy his Greco-Venetian map of the island, with comments which have formed ever since the basis of the distribution of ancient names in Cyprus. One mistake, unavoidable in 1762—it appears on D'Anville's map, but is very plausibly veiled in his comments—is the lumping together of the highest mountain in Cyprus, Troodos, which lies northeast of the site of Old Paphos, and of Mt. Santa Croce or Stavrovuni, which lies almost east of the same site. This last height seems to the passer-by the highest mountain in the island. Strabo undoubtedly called it Mount Olympus, and knew nothing of the Troodos.

Of the river Bocarus and the comedy of dryasdust errors which led to its importation into Cypriote topography, and also of the goodly company of mountains named Olympus on various maps of Cyprus, I shall treat at length elsewhere. It is enough to say here that General di Cesnola forgets the not inconsiderable heights beginning on Cape Arnaut (Acamas), which lies northwest of Koukliá, when he says: "East of Koukliá commences that range of lofty mountains, the highest of which, now called Troodos, was known as Mount Olympus." He also forgets that Mt. Troodos was not known to the ancient geographers who speak of Cyprus.

In closing our author's book at the end of chapter the eighth, I may surely say with some justification that I wish this chapter had never been written. It is possible, though I fear it is not made probable by what is to be found in the other chapters of 'Cyprus,' that, had General di Cesnola mistrusted his own observation less, had he been less prone to see upon the site of Old Paphos what Von Hammer and Engel invited him to see, had he dilated with his own emotions exclusively, he might have come nearer to the truth. Far from it he certainly would still have remained in any case, since he never saw the temple at all, but left it as he found it, buried under many tons of earth.

In closing, an expression of gratitude to friends at Koukliá is certainly called for. Without the kind and generously afforded assistance which they, who had lived upon the site for months, extended, I should never have been able in three days to declare my independence, or to prepare at any time the long catalogue of errors just given. Without them I never could have helped others towards the hidden truth about the hidden shrine of Aphrodite at Old Paphos. I speak advisedly, since the shrine is still hidden, and will be until full publication of all the researches which were ended at the beginning of last May, and which began last January. Much as I owe to the kindness of others, I would not make any one responsible for what I have just said excepting myself alone. I trust that I have said nothing of moment which the coming numbers of the *Hellenic Journal* will not substantiate; and my confidence is based upon the care with which I studied the remains at Old Paphos during the last three days that excavations were there in progress. I had the pleasure of being present when the last Greek inscription was added to the wonderful store which has rewarded the labors of nearly half a year. The last of a number of Cypriote inscriptions was also found during my stay at Koukliá.

While I have been writing, the memories of kindness received at every turn during my tour in Cyprus have been constantly recurring. And now they are so vivid that I am sure of but one thing: I know that those who have never been in Cyprus will hardly get from my words a picture of the warmth of welcome which there awaits the traveller. Again and again I am tempted to rejoice at the absence of hotels, which procured me such a heart-warming experience, and the near acquaintance of those who must otherwise have been strangers. I but add my testimony to that of Professor Sayce, and of many others who have known the almost more than English hospitality of the English in Cyprus.

Finally, I recommend all classical scholars in search of unsolved problems in history, topography, and archæology to betake themselves to Cyprus; but let them make haste. There are those now there who will soon have all these questions solved. L. D.

Correspondence.

MR. GOLDWIN SMITH ON THE MISERY OF LONDON.

To the Editor of The Nation:

Sir: On my return home after a long absence, I have seen the notice of my 'Trip to England' in your number of August 2. You say, "knowing something of Mr. Goldwin Smith's reputation, they (the readers of the book) will be prepared to find in it a certain amount of curious doctrine, both social and political. . . . They will not be very much surprised to find him making light of the terrible misery of London, on the ground that it has been exaggerated for the purposes of literary sensation." It is here implied not only that I have made light of terrible misery, but that to do this is characteristic of me. I will beg permission to quote the entire passage, a sentence of which, it will be seen, is here misquoted, and will leave your readers to judge whether the imputation is well founded:

"Everybody has something to say about the painful contrast between the extremes of wealth and poverty in London; and people from new countries, where the pressure on the means of subsistence is as yet comparatively little felt, are very apt to turn up their hands and eyes, and thank heaven that they are not as those English. *Painful the contrast is, and hideous some of the low quarters of London are*, above all at night, when the fatal gin-palaces flare, and round them gather sickly and ragged forms coming to barter perhaps the last garment or the bread of to-morrow for an hour of excitement and oblivion. But in the first place we must remember, that *pictures of London misery have been sought out and presented in the most glaring colors for the purposes of literary sensation.* In the second place, we must remember, that among five millions there is inevitably much distress, caused not only by want, but by disease, intemperance, crime, and accidents, for which the community is not to blame. In the third place, we must remember, the great immigration of needy, or worse than needy, foreigners already mentioned. Charity, we find on inquiry, is active; often in those crowded and noisome alleys we shall meet its gentle ministers, and we shall be told that they pass safely on their mission even through the worst haunts of crime. Nor does the number of the destitute and suffering after all bear any proportion to the number of those for whom the great city provides a livelihood, and who are living in decency and comfort, with all the opportunities of domestic happiness and all the appliances of the most advanced civilization. The misery of London is more repulsive than that of some other cities in its aspect, partly on account of the dinginess produced by the smoke, partly because it is crowded into such close quarters. The streets being, like those of ancient cities generally, too narrow and crooked for street railways, the people are compelled

to live close to the centres of employment, especially to the docks. *Still, when all allowances have been made, the bad quarters of London are a sad sight, and one which it may be morally useful to Dives amidst his purple and fine linen to have seen. They are sources of social and political danger, too, as recent outbreaks of their squalid turbulence have proved. They are the English Faubourg St.-Antoine.*" (P. 46.)

The italics, of course, are not in the book.

Your obedient servant, GOLDWIN SMITH.

TORONTO, September 4, 1888.

REPUBLICAN INTOLERANCE.

TO THE EDITOR OF THE NATION:

SIR: One can easily understand how powerfully the intelligent and cultured classes of the North were drawn towards the Republican party in its younger days. To a believer in personal and political freedom, it undoubtedly did present attractions which were not to be found elsewhere. If that character had been maintained, it would no doubt be as strong in the intellectual centres of the country now as it was in days gone by. But instead of this, we find the Republican managers of to-day not only appealing directly to ignorance and prejudice for support, but even resorting to the most contemptible methods imaginable to suppress intelligent discussion.

A new illustration of this fact has recently come within the knowledge of the writer. In Denison University, the Baptist College of Ohio, R. S. Colwell, Professor of Greek, has been teaching political economy for some years. Though originally a protectionist, careful study of the subject convinced him that he was wrong, and brought him to the other side. Since the present campaign seemed to him to involve no other issue of so great importance as the tariff question, he naturally concluded to support the principles in which he believes, and, at the earnest request of a great many citizens, has made a few speeches in favor of tariff reform. Not being able to meet his arguments, the Newark *American*, the Republican county organ, manifested its chagrin in a personal attack so full of impotent abuse and bad English as to disgust the better class of Republicans as well as Democrats.

The editor of the Granville *Times*, the only other Republican paper in the community, at first resented such tactics, as calculated to make it impossible for an educated man to belong to the party; but the bulldozing element of the party seems to have suppressed his better judgment, for he is now engaged in the attempt to silence the Professor by inducing Republicans to boycott the College. As is usual in such cases, this petty persecution bids fair to defeat its own end. Republicans who have accepted high tariff as a party principle, without much reflection, are beginning to raise the question whether a doctrine which needs such methods of defence can be worth defending.

* * *

CAMPAIGN LYING.

TO THE EDITOR OF THE NATION:

SIR: A daily paper has remarked within a few days, that "The Republican organs, that is, the honest ones, are slowly and painfully taking back the claim that the London *Times* ever said" a certain widely quoted thing, namely, that "The only use England has for an Irishman is when he emigrates to the United States, and votes for free trade." Whether or not the *North American Review* wishes itself to be classed among the "honest" Republican organs, or not, we cannot say. Certainly, however, the astonished reader who finds the above spurious citation in the September number of this *Review*, as the basis of five extended "Irish comments on an English text," can hardly be blamed for doubting its non-partisan character. The same number, it is true, contains an article on the other side, to which no other signature than "A Democrat" is appended.

It is not, however, to the giving place to the statement of opposing views that objection may be fairly taken; the motto, "Tros Tyriusve mihi nullo discrimine agetur" (almost the sole relic of the *Review* in the days when Felton, Bowen, and Hillard gave it its tone), could be appealed to as warrant for that. But the printing of the "text" above cited, which even the daily newspapers are tardily abandoning, is a painfully discreditable performance. It is, moreover, not very edifying to find, among the five signers to these "Comments," the name of one college professor, albeit he is the one duly engaged on the Wharton Foundation to teach a certain definite dogma. CIVIS.

MR. EDWARD ATKINSON'S REPORT ON BIMETALLISM.

TO THE EDITOR OF THE NATION:

SIR: I have reason to know that my report on bimetallism in Europe is much valued by teachers and students in political economy as a book of reference, for the reason that the greater part of the volume is taken up by Taussig's admirable translation of Soetbeer's 'Materialen,' and the reports of leading geologists and mining engineers on the production of gold and silver.

I have a large number of copies of this report at my disposal, and shall be glad to send one to any teacher or student or librarian who will send me his address with stamps for eight cents for the postage.

I make this offer at the suggestion of one of my friends who thought the pile of reports ought not to remain unused.

Yours very truly, EDWARD ATKINSON.

BOSTON, September 8, 1888.

THE NEW FINE-ART MUSEUM IN DETROIT.

TO THE EDITOR OF THE NATION:

SIR: A brief account of the building and successful opening of the new Art Museum in Detroit may be of interest to your readers. In the fall of 1882 a plan was proposed for holding an art loan exhibition, which it was hoped might lead to the establishment of a permanent art museum. In September of the following year the exhibition opened with a collection of something more than a thousand paintings and water-colors, drawn chiefly from the private collections of this city and of Cleveland, with contributions from numerous art dealers and artists living at a greater distance. The success of the exhibition was not to be measured solely by the artistic merit of its paintings, although this was considerably above the average of such collections. The attendance was large, over 134,000, and the influence of the exhibition, in quickening the interest of the public and in kindling the enthusiasm of a few art lovers, has been very great. Before the close of it the work of raising money for a permanent building was begun, and at the end of January, 1884, $40,000 had been raised in subscriptions of $1,000 each, the forty subscribers forming a corporation which has since increased its capital to $100,000 and erected the present building. While this work was in progress, a second exhibition was held in the spring of 1886, smaller than the first, but of greater average merit and equally successful. The result of the two exhibitions, and of the earnest and intelligent coöperation of the local newspapers, has been a widespread interest in the success of the undertaking, and the gradual education of the popular taste, I believe, to the point of really appreciating the fine collection which is presented to the public view in the opening of the new museum.

The building is a good example of late Romanesque architecture, substantial, fire-proof, and well adapted to its uses. There are already a few valuable paintings in the possession of the Museum—a "Marriage of St. Catharine," the gift of Pope Leo XIII.; a "Martyrdom of St. Andrew" by Murillo, a Claude Lorraine, Rembrandt Peale's "Court of Death," and several modern paintings of some merit. It was thought best to supplement these at the opening by a new loan exhibition of choice works, and Mr. George I. Seney of New York kindly allowed the use of a hundred of the most valuable paintings of his collection, and these, with fifty or sixty additional works from private galleries in this city, form a fairly representative exhibition of the work of that group of modern French artists whose influence dominates the art of our day—Corot, Daubigny, Dupré, Diaz, Rousseau, Decamps, Troyon, and their successors, Breton, Benj. Constant, Alfred Stevens, and others. Only the three masters, Millet, Gérôme, and Meissonier, are wanting, but their influence is present in the work of their pupils.

Some notion of German art may be gleaned from Achenbach, Knaus, Meyer von Bremen, Gabriel Max, and Munkacsy, who are represented, while Israels and Clays, Wahlberg and Salmson, Villegas and Escosura, Boughton and Burgess, Inness and George Fuller, give glimpses of what has been done in other parts of the world. Yet it remains an exhibition of modern French art, and such an exhibition as has rarely been seen in the West, and its opening is therefore an event of more than local importance.

The intelligent efforts and generous enthusiasm of the forty "immortals" who have provided us with this feast deserve great praise, and the example of an art museum founded and sustained by the coöperation of a number of people of moderate wealth may be an inspiration to some of the larger cities, which are waiting for a millionaire to die and leave such an institution founded as a monument to his memory. WM. W. HUDSON.

DETROIT, MICH., September 3, 1888.

Notes.

HARPER & BROS. publish directly 'Peninsular California,' by Charles Nordhoff, handsomely illustrated; 'The Land Beyond the Forest [Transylvania],' by Mme. E. Gerard; and a fifth number of the 'Franklin Square Song Collection.'

Ticknor & Co.'s fall announcements include 'Four Years with the Army of the Potomac,' by Gen. Regis De Trobriand; 'A Short History of the Secession War,' by Rossiter Johnson; 'The Other Side of War,' being letters from the headquarters of the U. S. Sanitary Commission with the Army of the Potomac, campaign of 1862, by Miss Kate P. Wormeley; 'Pen and Powder,' by Franc B. Wilkie of the Chicago *Times*; 'Songs and Ballads of the Old Plantation,' by Joel Chandler Harris and Eli Shepherd; three quarto illustrated editions of the popular songs "Marching through Georgia," "Nelly was a Lady," and

"Massa's in the Cold, Cold Ground"; Tennyson's 'Dream of Fair Women,' illustrated; 'Letters of Felix Mendelssohn to Ignaz and Charlotte Moscheles,' translated and edited by Felix Moscheles; a new volume of Essays by the late E. P. Whipple; 'Stories and Sketches,' by John Boyle O'Reilly; 'A Man Story,' by E. W. Howe; 'Steadfast,' by Rose Terry Cooke; 'Safe Building,' by Louis De Coppet Berg; and 'Ancient and Modern Lighthouses,' fully illustrated, by Major D. P. Heap.

The late Lester Wallack's "Memories of the Last Fifty Years" will appear in the October *Scribner's*.

G. P. Putnam's Sons have reissued in a neat and compact form, for popular sale, the ninth volume of Mr. Henry Cabot Lodge's edition of the works of Alexander Hamilton. This contains the 'Federalist.' The sole difference in the two issues is the omission of the irrelevant table of errata for the first eight volumes, and the list of omitted letters.

With the text of the late Helen Jackson's 'The Procession of Flowers in Colorado' our readers are doubtless familiar, and they will recall with pleasure the vividness of the coloring and the faithfulness of the sketch. But magazine articles are ephemeral, and, after their short lives, usually sink into the incomplete but grateful oblivion of 'Poole's Index to Periodical Literature.' The experiment of testing somewhat further their hold upon life by subjecting them to the ordeal of republication, is always an anxious one. No author, however, could reasonably ask to have the task of republication intrusted to more loving and judicious hands than those which have endeavored to preserve this work by "H. H.," in the form in which it comes to us from Roberts Bros., Boston. Twelve water-color drawings of a high degree of merit, by Miss Alice A. Stewart, have been placed by hand as marginal decorations on the generous pages in each copy of the limited edition. All of them are easily recognizable as the more attractive of the Colorado flowers described in the text, and all, with possibly one exception, have been drawn from specimens which a botanist would regard as characteristic. The heavy paper, good printing, and elegant binding harmonize completely with the text and the delineations.

As population and manufactures grow, so does the resulting material refuse augment, and its disposal becomes an ever-increasing problem for the sanitary engineer. The unsuccessful efforts at its solution are numerous, and the failures are costly, both in money and health. The latest and perhaps the best general discussion of it is Mr. J. W. Slater's 'Sewage Treatment, Purification, and Utilization' (London: Whittaker & Co.; New York: D. Van Nostrand), which, although written with special reference to British conditions, sets forth general principles that are applicable elsewhere under similar conditions. The author writes as an expert of twenty years' experience, and very wisely concludes "that there is no one process universally applicable." The volume discusses all recognized methods intelligently and with apparent fairness, though with decidedly expressed opinions, and we recommend it to an honorable place in the sanitarian's library.

Of theatrical autobiographies there is never any dearth, but just now the great success of 'Mr. and Mrs. Bancroft On and Off the Stage' has greatly stimulated their production in England. Two of the most recent are little pamphlets sketching the careers of two of the comic songsters or entertainers of London—'Corney Grain, by Himself' (London: John Murray), and 'A Society Clown,' by George Grossmith (Bristol: J. W. Arrowsmith). Both Mr. Grain and Mr. Grossmith are pleasantly innocent in their frank autobiographies, and inoffensively interested in themselves. Mr. Grain is a partner in the German Reed show, and Mr. Grossmith is the original *Sir Joseph Porter* and *Koko* in the Gilbert and Sullivan operettas; but both performers give entertainments in private houses—a regular business in London, where a dull society has to hire its amusers. To a cynical critic the chapters in which these gentlemen describe their relations to the society they delight, and their own adventures and misadventures therein, are much the most entertaining. Not a few of their little anecdotes a social observer might find typical. To the future historian of the English stage—if such a being shall ever exist—Mr. Grossmith's chapter on the rehearsing and performing of the Gilbert and Sullivan operettas will be useful.

M. Edouard Rod will be remembered as the author of an extremely sombre and pessimistic book which appeared some years ago under the title 'La Course à la Mort,' and which showed much ability. The author is still a young man, about thirty, and for several years has been Professor of Comparative Literature in the University of Geneva, and life now seems to have a healthy interest for him—at least in its literary aspects. He has collected some of his more recent papers into a volume: 'Études sur le dix-neuvième siècle—Giacomo Leopardi' (Paris: Perrin; Boston: Schoenhof). The article upon Leopardi is, however, only one among nearly a dozen which make up the volume; some of the more attractive of the others being "Les Véristes italiens," "Richard Wagner et l'Esthéthique allemande," and "Les Préraphaélites anglais."

The more noteworthy articles in the June and July numbers of the *Centralblatt für Bibliothekswesen* include a contribution to the Gutenberg-Coster controversy by A. Wyss, who disputes the conclusions of Hessels, and points out some of the weak places in the arguments of the Costerians; a note by J. Gildemeister, giving references to some Oriental works in which mention is made of the discovery of America; an article by Dr. Falk on the probable author of the colophon in the Catholicon of 1460, which is generally ascribed to Gutenberg, but which he believes was written by Conrad Humery; and a useful descriptive summary of the principal bibliographical works published in Belgium in 1887. The August number contains the first instalment of a full and interesting account of the discovery, by G. Merula, in 1494, of some twenty-five classical manuscripts in the Benedictine monastery of Bobbio.

The June number of the *Export Journal* (Leipzig) completes the first year of this polyglot "International Circular for the Book, Paper, and Printing Trades"; and Mr. Hedeler, the editor and publisher, deserves a word of commendation for the skill with which he has given fresh interest to each successive number, and a reference value to the yearly volume. Among the contents of more than temporary interest and value, may be mentioned the recent tariffs of Italy, Rumania, and the several British colonies of Australasia; the full text, in French, German, and English, of the International Copyright Union; and much information concerning the international (Smithsonian) exchange of books, by P. F. Richter, an intelligent and industrious librarian in the Royal Library at Dresden. Also, descriptive accounts of the publishing houses of Brockhaus, Baron Tauchnitz (Leipzig), Kröner Brothers (Stuttgart), Quantin (Paris), Sampson Low, and the Bible Society (London), Ricordi, and Hoepli (Milan), and two United States firms, Benziger & Co. and L. Prang & Co.

A Pottery and Porcelain Exhibition, with a competition for American workmen, will be opened by the Trustees of the Pennsylvania Museum and School of Industrial Art in Memorial Hall, Fairmount Park, Philadelphia, on October 16, closing on November 13. This is intended to be the first of an annual series of competitive exhibitions, taking up in turn all the various art industries. The Trustees have a yearly income of about $1,000, derived from a fund given by the late Joseph C. Temple for this purpose. For particulars the Secretary should be addressed at Memorial Hall. The enterprise seems in every way laudable.

—Mr. Mallock gives us, in his essay on Cyprus in *Scribner's* for September, a pretty illustration of the strong hold that a plausible error has on popular belief. There has been, he says, a general destruction of the forests in Cyprus, and, as a consequence, there has been "a great diminution of the rainfall." It is hardly likely that Mr. Mallock has studied with any care the mooted question involved in this unhesitating assertion; indeed, he may not know that it is in discussion among specialists in forestry and meteorology. Yet the relation of cause and effect is stated in his entertaining story with as much confidence as if it were a matter of direct record, like the destruction of the Abbey of Bella Pais by the Turks. Now, as soon as one begins to examine this matter, he will find that the diminution of rainfall as a consequence of forest-cutting in the countries around the Mediterranean is not proved by any valid line of argument. The possibility of the reverse relation does not seem to enter the popular mind; the desire to find an immediate cause for any suspected effect is too strong to be satisfied with remote and slow processes. But it is certainly possible that a decrease of rainfall consequent on a change in natural and widespread conditions could prevent the natural reforesting of a region from which the trees are cut off. May not this be the case in Cyprus? As to the "great diminution of the rainfall," this is pure imagination. There has doubtless been some decrease, for the geologic evidence of gradual desiccation is almost universal; but there is no evidence to show that the rainfall of the Mediterranean region was *much* greater than now in historic times. The best studies of the physical conditions of Greece in the classic period fail to discover that it was then a rainy country; as long as the country has been known it has had its droughts, and it has needed careful cultivation to secure good returns. When Cyprus was a power in the world, and gathered tribute from foreign nations to make good its natural deficiencies, it must have been a thrifty island; but, with the loss of power, there has been a steady decay of thrift. It is a difficult matter to manage a farm in a dry region. The farmer must be undisturbed in his work, and must have a good market near at hand; then let him but keep his irrigating canals in good repair, and, with a moderate rainfall, he will transform a dusty country into a garden. Cut down the forests, and the streams rise in freshets with every shower, and run dry in fair weather. The freshets wash out breaches in the canals, and the water is wasted. Barbarous invaders are as destructive as floods.

—The Report of the Factory Inspectors of the State of New York for the year 1887 contains a brief account of the proceedings of those officers and a large quantity of padding. Some twenty-five pages are devoted to an essay

upon the injury to health caused by the dust generated in the various manufactures—taken, apparently, from the Report of the Board of Health, and relating to matters wholly outside of the duties of the factory inspector. Nearly as many more are occupied with a detailed account of the addresses and proceedings at a meeting of factory inspectors held at Philadelphia, which was not attended by the inspectors of this State. Over a hundred pages are filled with extracts from the statute-books of other States, American and European, bearing upon the regulation of factory labor. The sixty pages of tables are merely office memoranda, and their meaning could have been given in a few lines. We call this matter padding, not because it might not have value in the hands of a commission appointed to report upon the regulation of factory labor, but because our factory inspectors are not competent to deal with such a subject. If intelligent and upright men can be obtained who will report what they have seen and done, and not attempt to make out a general policy of legislation, their reports upon our factories will have value. But while appointments are made as at present in this State, it cannot be expected that the suggestions of office-holders should command attention. Our factory inspector is not required by his position to devise a system of public education, and, judging from his report, he does not seem to be personally qualified to do so. So far as it is possible to judge of the work done by the inspectors from this record, we should say that it was of considerable value in causing the erection of fire-escapes, in compelling regard to decency, and in restricting the employment of young children. But the insolent tone in which some of the inspectors refer to their success in compelling manufacturers to adopt their interpretation of the law, shows how much the success of paternal legislation depends upon the character of those who carry it out.

—The tenth volume of the Proceedings of the Royal Library at Stockholm (*Kongl. Bibliotekets Handlingar*) contains the report of the Librarian, Dr. G. E. Klemming, and volume 2, for 1887, of the 'Accessions-Katalog.' This important library, the Riks-Bibliotek, or National Library of Sweden, was removed in the fall of 1877 from the Royal Palace to the most modern library structure in Scandinavia, a fine building beautifully situated in "Humlegaarden," an old park of considerable extent. It contained at that time about 200,000 volumes, besides a great many pamphlets, considerable collections of maps and engravings, and nearly 8,000 manuscripts. This library, which aims to contain as complete a collection as possible of Swedish literature, supplemented by the more important scientific and literary works published in foreign countries, is, by royal decree of November 9, 1877, divided into two chief divisions—the Swedish and the foreign. Of the accessions for 1887, according to the Report, 12,791 numbers (books, pamphlets, periodicals, maps, etc.) belonged to the first division, while to the foreign department 879 distinct works were added, consisting of 1,055 volumes and parts of volumes, and 264 pamphlets. The Swedish ordinance relating to the freedom of the press requires that a copy of everything printed in Sweden shall be sent to each of the two university libraries and to the library at Stockholm, and the officers of the latter institution are taking active measures to see that this deposit, so far as their library is concerned, is complete for each year. The Librarian reports that for 1886 nearly everything has been received, and he furnishes a table classifying the products of the printing-press of the country for that year. From this we learn that 524 new books were published in 862 volumes, and 664 works in process of publication were continued in 1,302 volumes or parts, while 6,280 pamphlets of less than 100 pages were printed. These figures do not include magazines and newspapers, of which there were 537 in course of publication during the year, 93 being new. As regards the subjects of the new books, fiction leads with 94 new novels, theology following with 81 new works, while 40 books were devoted to education, 35 belonged in the class of polite literature, and there were 25 biographies and 21 philological works.

—The list of accessions is an interesting experiment in coöperative cataloguing. Besides the Royal Library, Sweden possesses three others of importance—the university libraries at Lund and Upsala, and the library of the Royal Swedish Academy, the last containing the largest collection of books relating to the natural sciences in Sweden. There are, in addition, others of considerable size devoted to special literatures. But none of these, excepting the University library at Upsala (since 1850) and the library of the University at Lund (since 1853), have published lists of their accessions, and need was felt of some ready means of ascertaining, more especially, what new foreign literature was received at these various institutions. In 1886, therefore, an effort was made to secure through coöperation the preparation and publication of an annual catalogue which should indicate the books received at each of the more important libraries in the country. After some preliminary conferences a plan was formulated and carried into effect, and early in 1887 the first volume was published by the Royal Library, edited by one of its officers, Mr. Erik Wilhelm Dahlgren, containing the titles of all the books printed outside of Sweden which were received during 1886 at seven libraries, viz., the four already named, and the libraries of the Medical-Surgical Institute of Stockholm, the Academy of Belles-lettres, History and Antiquities, and the General Staff of the Army. The second volume, for 1887, which is contained in the *Handlingar* recently published, and is also issued separately within its own covers, is prepared upon the same general plan, but, in addition to the seven libraries represented in volume one, eight others are included, among them the library of the Swedish Parliament, and the libraries of two art institutions at Stockholm. While this publication is without doubt useful in Sweden, its value abroad would be greatly increased by the inclusion of books printed in that country. An annual catalogue of Swedish literature, published by authority, would be very valuable, not only for present use, but for future reference. The Royal Library, whose Swedish division is almost perfect, is well equipped for the production of a work similar to the annual catalogue of Norwegian books issued by the University of Norway, and it would be an act of graceful liberality upon the part of the Swedish Government, and but a well-deserved recognition of Mr. Dahlgren's competent services, if such annual appropriations were made for this work as would enable him to include each year the titles of all publications produced in Sweden.

—Among the accessions for 1887 we note an item of more than passing interest to Americans —namely, seventy-eight volumes printed in the United States in the Swedish language. These chiefly supplement the collection of Swedish periodicals published in this country made by Prof. T. N. Hasselquist of Augustana College, Rock Island, Ill., and now preserved in the Royal Library. A catalogue ('Svenska Tidningar och Tidskrifter utgifna inom Nord-Amerikas Förenta Stater: Bibliografisk öfversigt af Bernhard [Wilhelm] Lundstedt') was published in 1886, at which time the collection numbered 163 journals. The titles of these are recorded in chronological order from 1851, when *Skandinaven* was issued in New York city, to 1886; and an index of places shows their geographical distribution over sixteen States and Territories. Chicago is indicated as the centre of Swedish journalism in this country; no less than fifty-three different newspapers having appeared there from 1856 to 1886, while other cities in Illinois have been places of publication for twenty-one more. In New York and Minnesota occurs the next highest number, twenty-three for each State; fifteen papers appearing in the two cities of St. Paul and Minneapolis, and sixteen having been published during thirty-five years in New York city. In 1872-73 a single newspaper in Swedish was published in Maine, and one was begun in Washington Territory in 1885. None seem to have appeared further south than Missouri, five titles being credited to that State. Mr. Lundstedt's work is most painstaking, each title being prepared with elaborate care, every detail of the slightest importance being given, including the subscription price; the size of the printed page of each paper is stated in centimetres. At the end is a list of deficiencies; and should any one possessing copies of Swedish-American papers be willing to spare them to complete this unique collection, they may address Professor Hasselquist, or Mr. Lundstedt, Royal Library, Stockholm.

—Notwithstanding the Scotch prisoners sent by Cromwell to Boston, and the Huguenots who took refuge there, New England, in the judgment of Palfrey, was preëminently homogeneous and English, in fact, a new England. Proofs of an early race prejudice may be gathered in the State House archives in Boston. Some of them have never been printed. The following quaint sentence chronicles a jealousy of the Irish, and also shows the custom of persons selling themselves to pay their passage. It is from the report of a "Committee appointed by the General Court of the Colony of Massachusetts to consider proposals for the public benefit." Its date is October 29, 1654, and the signers were Daniel Gookin, Thomas Savage, Roger Clap, Richard Russell, and Francis Norton:

"This Court considering y^e^ Cruel and malignant Spirit y^t^ have from tyme to tyme byn manifest in y^e^ Irish Nation against y^e^ English Nation doe heerby declare thye pr^o^hibition of any Irish men women or children into this Jurisdiction on the penalty of fifty pounds sterling to each Inhabitant y^t^ shall buy off any merchant, ship m^r^ or other agent any such pson or psns soe transported by y^m^ w^ch^ fine shall be by the Cuntrys marshall on conviction off some magistrate or Court leavedd and be to the use of y^e^ Informer one third and two thirds to y^e^ Cuntry. This act to bee in force six months after publication of this order."

GEORGE PERKINS MARSH.

Life and Letters of George Perkins Marsh. Compiled by Caroline Crane Marsh. In two volumes. Vol. I. Charles Scribner's Sons. 1888.

'THE Life and Letters of George Perkins Marsh' takes us back to the beginning of this century. He was born in 1801, very near the time when Daniel Webster came to Woodstock to study law with Mr. Marsh's father, who had, three or four years before, been appointed United States District Attorney by General

Washington. He was born into one of the best of the professional families which then dominated New England. Leaders in all the learned professions were among his kinsfolk. His cousin, James Marsh, was President of the University of Vermont, and a leader of American thought in the exploration of German philosophy as interpreted by Coleridge. George P. Marsh was the flower of the family. When he was appointed Minister to Italy in 1861, he was the most eminent of American scholars, and one of the most eminent of American statesmen, and he remained at that post for twenty-one fruitful and honorable years. Writers of twenty or thirty years ago generally designate him as a philologist, the new 'Cyclopædia of American Biography' designates him as a diplomatist, and in both characters he deserves a memorial volume.

The present volume is due to the pious labors of his wife, and it deals most with his personal character, his growth and life as a man. The first part is the most interesting. He was a universal genius, it seems. The author narrates with classic simplicity and clearness anecdotes which show his early love for nature, the plastic arts, music, mechanics, languages, books, science. He was very fond of working with tools and watching workmen, but his great delight was, like Macaulay's, to lie on his elbows and read a book. The 'Encyclopædia Britannica' was his favorite at the age of seven, and to have the undisturbed enjoyment of it he used to drag it under dark tables. Before he was observed he had ruined his eyes. He was not allowed to read freely again till he was eleven, and he had to use glasses all the rest of his life. Meantime, he had made remarkable development in hearing. His passion for music was strong, his sensibility for the most delicate musical notes was quick, he knew the notes of all the birds; all loud or harsh sounds gave him acute physical pain—the sounds of church bells among the rest. He learned Latin and Greek *viva voce*, his brothers reading them to him. In this way the habits were acquired which made him so remarkable a linguist. He could speak any language as soon as he could read it fluently. When he heard a language spoken by natives, he always joined in the conversation, and showed as wonderful power of reproducing vocal sounds as of catching them.

He entered Dartmouth College in 1816. He had been a few months at Phillips Academy, Andover, in 1815, but his father said he never knew how or when George prepared for college. He passed in with credit. That might well be: his father was a trustee, and the Marsh boys were well known in Hanover; an elder brother had lately graduated with the highest honors. But he was at once recognized by his classmates as a prodigy of scholarship, and next to Rufus Choate, who was two classes before him, and unapproachable in brilliancy, he was the hero of his day in college. He handled the mathematics like a Newton, read immensely in Greek and Latin, "read the Greek poets and historians with as much ease as an ordinary man would read a newspaper," plunged into Italian, Spanish, Portuguese, French, German; and yet it is said that he never spoke of his college life in after years except to blame himself for wasted time, or to praise Choate or some other fellow-student. After graduating at the head of his class, he taught school a while, in the old New England fashion, like John Adams, and Daniel Webster, and Rufus Choate, and the rest. Choate was a college tutor. But Marsh was a failure; he soon had enough of teaching to last him through life. Long afterwards he was offered professorships at Harvard and elsewhere, but he was not to be tempted. "What can I say more?" he writes in 1859. "I hate boys, hate tuition, hate forms, and possess only one qualification for the place, namely, poverty."

He studied law and practised for about twenty years. In 1843 he was elected a representative in the Congress of the United States. These twenty years were the fruitful period of his philological life. He very early became interested in the northern races from whom the English are descended, and applied himself to the study of their languages and literature and antiquities. In 1832 (1832–1864) he was in frequent correspondence with Prof. Rafn of the University of Copenhagen, writing indifferently in English and Danish. In 1838 he printed an Icelandic grammar. He collected the rarest books in these northern languages and read them. He also wrote articles about them, and delivered orations—or, at least, an oration, a great one, delivered before the Philomathesian Society of Middlebury, Vermont, in 1843. At that time these languages and literatures, the Anglo-Saxon and Icelandic, were as remote from common scholarly knowledge as Algonkin or Choctaw. The swarm of German scholars had not yet lighted upon them. Grimm's knowledge of 'Beowulf' was talked of much as Mr. Trumbull's knowledge of Eliot's Bible is now. Four or five Englishmen were working with Grimm or after him. The Kembles were lamenting that John Mitchell Kemble was nothing better than the chief of Anglo-Saxonists in England. No one of them was to be compared for a moment with Mr. Marsh in general mental vigor or special linguistic genius. His published works are eminently fresh and original, not professorial, not of any school, not discussions of other students' views, but clear statements of what he saw with his own eyes in his own copies of the original works, with the comments of an American thinker. His 'Lectures on the English Language,' delivered before the post-graduates of Columbia College in 1859, and 'Lectures on the Origin and History of the English Language and Its Early Literature,' delivered before the Lowell Institute in 1860, were almost extemporaneous utterances from the stores of his earlier studies, but they were everywhere recognized as the best books of their kind, and they are still counted among the books which no gentleman's library can be without. Philologists, who have been in the habit of thinking of Mr. Marsh mainly as the chief of the American scholars of his time, may be disappointed to find that the life and letters have the briefest reference to his linguistic life. No part of his philological correspondence is given, and apparently little of it has been recovered. He never kept a journal, and seldom talked about his past. He had conscientious scruples about it, it seems; so that the data for a biography as a mental record are very scanty. We have to thank the memory of the accomplished friend who shared his hours of study for such record as is preserved.

Mr. Marsh was a member of the House of Representatives from 1843 to 1849, the time of the annexation of Texas, the Mexican war, and the organization of the Smithsonian Institution. We get a lively picture of the life at Washington in those days, with many interesting anecdotes. One is worth copying. An English friend inquired of Mr. Marsh "how much his Congressional elections had cost him." His answer was, "Not so much as a glass of wine. I never asked a man to my house for the sake of his vote, nor, so far as I can now remember, did I ever do any man any service with that end in view. In my State such things are not necessary." In 1849 Mr. Marsh was appointed Minister to Turkey. He returned to America in 1854. Half the volume is occupied with letters of this period. Kossuth and Koszta figure in it, and sketches of life in Constantinople and Athens, and of travels in Egypt and Palestine and Europe.

The rest of this first volume is devoted to the eight following years of Presidents Pierce and Buchanan, and closes with Mr. Marsh's appointment, by President Lincoln, as Minister to Italy in 1861. He had declined a Senatorship from Vermont, and other inviting positions, under the compulsion of pecuniary embarrassment. He had in his early life engaged in building up a village of woollen factories. Changes in the tariff had ruined him; after a struggle of many years, he finally gave up all his property to his creditors, and "at the age of fifty-nine began the world with a debt of ten thousand dollars in good new notes, and not a shilling to pay it with." He put all his talents to the exchangers, wrote for the periodicals, delivered lectures. He did not succeed as a popular lecturer. He spoke quietly and rapidly, and spoke close-packed sense—most likely, also, a good many long words.

Most men of any size have different aspects from the spear side and the spindle side. This book is a spindle-side view of Mr. Marsh. He was a big, vehement, masterful man among men, full of vitality and good cheer, and a certain ponderous wit or humor. But no man was tenderer towards woman. Reverence for woman was common to the Puritans of New England, and with good reason. It was a marked trait of the Marshes, and strongly accented in George P. Marsh. As a child, he "manifested a strong predilection for the companionship of girls rather than of boys"; in later life "he invariably shunned *gentlemen's* parties"; his letters are written to ladies by preference. He finds it easier to write to them, he says, even when he means the letters for their husbands. His public addresses abound in eloquent paragraphs in their honor. His wife he made his inseparable companion. Through the largest part of this book she is spoken of as unable to walk or stand, but means are found to take her over the continents, through galleries of art, through deserts, up mountain peaks supposed to be inaccessible, the strong arms of her husband being always ready. His biography is in one sense her reminiscences, and it is none the less charming for that. In one respect, however, it is a painful book. Mr. Marsh's suffering from the sickness and death of his kinsfolk and friends is so acute and so frequent as to make one feel as though woe were always impending.

Mr. Marsh was always an early riser. His working time was between five and nine in the morning. He struck an average when he was a lawyer by sleeping in his office while his partner listened to bores; in the House of Representatives it was a standing pleasantry to predict when J. Q. Adams and G. P. Marsh would go to sleep. He read as fast as another man would turn the leaves of a book, and his habit was to begin in the middle and read both ways. He read many books at once, changing from one to another every hour or so. In his familiar letters he is much of a polyglot, and a punster, of course. He sends Mr. Baird "some, bestimi I suppose, that *hibernate* in summer. It's a real hibernicism, isn't it?" A great many letters, by the way, are to Mr. Baird of the Smithsonian—letters of friendship mainly, but filled with an amateur's talk about natural science, which is not Mr. Marsh's best aspect. He speaks of some one as thinking him strong in punctuation, and not wholly ignorant of Low Dutch, but in "science" a dummy. He was

not that. He was a true lover of nature. It was one of his favorite thoughts that this love naturally grows deeper and warmer in old age. His last great book is on man and nature—'The Earth as Modified by Human Action.'

A second volume is to tell the story of the twenty-one fruitful years which Mr. Marsh spent as Minister to Italy.

MEMORIALS OF ARCHBISHOP TRENCH.

Richard Chenevix Trench, Archbishop: Letters and Memorials. Edited by the author of 'Charles Lowder.' 2 vols. London: Kegan Paul, Trench & Co. 1888.

THESE "Letters and Memorials" are a very inadequate record of a man who was distinguished and remarkable in a variety of ways. Dr. Trench was a poet and a theologian; and as Archbishop of Dublin the difficult task devolved upon him of reconstituting the Anglican Church in Ireland after the passing of Mr. Gladstone's measure of disestablishment. Previous to his promotion to the Archiepiscopal see, he had been Dean of Westminster, and these ecclesiastical offices (conjointly with the position he occupied in the world of letters) brought him into contact with all that was most distinguished, intellectually or socially, in the England of his day. The biography of such a man would have been replete with interest, but the Archbishop, it appears, had laid an injunction upon his family—or had, at any rate, very emphatically expressed his desire—that after his death no record of his life should be given to the world. His widow has obeyed this injunction in the letter, though hardly in the spirit. The "Letters and Memorials" contained in the two volumes we are noticing do not profess to be a life of the Archbishop. They are only a selection from his correspondence and journals, with just so much of connecting narrative as to make their contents intelligible to the general reader. They constitute, in other words, a bad and imperfect biography. Far better would it have been, in our judgment, either absolutely to obey the wishes of the Archbishop or altogether to have disregarded them. The present work is a needless and unprofitable addition to that huge mass of printed matter purporting to be books, but which are such only in name and outward appearance, like Charles Lamb's backgammon boards.

The future Archbishop of Dublin was born in that city on September 5, 1807. He was, however, Irish only through the accident of his birth. His parents were of French extraction, and his life, until he became Archbishop, was almost wholly spent in England. For young men of thoughtful and imaginative temperaments, the England of the first forty years of this century must have been a highly stimulating atmosphere in which to live. It was a period of heroic achievements by sea and land, of a wonderful outbreak of genius at home. By the long and at last victorious struggle which Great Britain had maintained against the power of Napoleon, she had established for herself a foremost place among the nations; and, simultaneously with this, Byron, Shelley, Keats, Scott, Wordsworth, and Coleridge appeared in a constellation of genius second only to the brightness of the Elizabethan era. The effect of these occurrences upon the minds of Trench and his companions is discoverable in the youthful correspondence published in these volumes. In his university days at Cambridge he was one of a small society of young men nearly all of whom rose to eminence in after days. John Sterling, Arthur Hallam, Alfred Tennyson, Frederick Maurice, and Trench himself are the best known names among them. Others were John Kemble, Spedding, Venables, Charles Buller, Richard Milnes. The most interesting portion of these "Memorials" consists of the letters which in these early days passed between Trench and his friends, Sterling, Maurice, Hallam, Kemble, and others. A devouring earnestness, a passion for reforming the world, are the characteristics common to each member of this group of friends. They feed their minds on the poetry of Wordsworth and the philosophy of Coleridge. They write at immense length to each other upon the state of their respective souls. They are filled with faith in the great possibilities shortly to emerge from the bosom of time. They are all champions of liberty and the enemies of tyranny, and in this double character the future Archbishop, together with other youthful and ardent spirits, actually sailed from England in company with a band of refugee Spanish patriots for the purpose of overthrowing the Spanish monarchy. He had a narrow escape from being shot—a fate which overtook every member of this unlucky party with the exception of Trench and Kemble. At the same time, he was as far as possible from being a revolutionist of the French destructive type.

"To me," he writes in 1831, shortly after his return from Spain, "it seems that an aristocracy is necessary as the representative of the continuity of the consciousness of a nation. Unless there be something in a country not embraced by the birth and death of the fleeting generation which at any moment may compose it, you may have a horde, you may have a sovereign people, but you cannot have a nation. If it be a nation, it must look before and after. This, as of an individual, is its highest humanity. And there is no way that we can be called off from the demands of the ever importunate present; there is no way of binding it with indissoluble links to the past and future unless you preserve this body, in whom, after a manner, is involved the history of the past and prophecy of the future. Believing this, I would welcome the fiercest civil war before a government of clubs and unions."

Trench entered holy orders in the year 1832. From that time until his translation to the See of Dublin in 1863, he floated prosperously along the stream of ecclesiastical preferment, and it was during these thirty years that the greater part of his theological works were written. He was, of course, strongly opposed to the act for the disestablishment of the English Church in Ireland, and it does credit to his political foresight that he discerned the far-reaching consequences of that policy a great deal more clearly than did Mr. Gladstone or any other of its supporters. The following prophetic extract from a charge of his delivered in 1868 is quoted in the 'Memorials':

"When our establishment is denounced as a badge of conquest, what is this but the saying, in a way which is meant should irritate some portion of the Irish people, that the past has bequeathed its results to the present? But so it has done everywhere, and in ten thousand ways. In the historic life of nations there is no escaping the dominion of the past. If it be attempted to ignore its verdicts, to reverse its decisions, to undo what it has done, a far larger task will have to be taken in hand than merely the overthrow of our establishment. The possession by Protestant landlords of seven-eighths of the soil of Ireland—is not that a badge of conquest far more impressive, and with social and political results immeasurably more significant, than any which we can offer? Must that, also, close? Might not the whole present framework of things, the Viceroyalty, nay, the Royalty itself, which is behind the Viceroyalty, by the same right, or by a better, be termed badges of conquest; and, if all which keeps record of the great decisions of the past must needs be abolished, the removal of these on the same plea be demanded? When is a movement like this to stop? This much is certain, that, if once allowed, it will not stop exactly where those intend and desire who have set it agoing, any more than the rock which has been detached from the mountain-top will pause upon its side exactly where he who impelled it may desire."

Failing to avert disestablishment, the Archbishop addressed himself with unabated courage to the task of reconstructing the shattered Church after the blow had fallen. A more difficult and harassing task for a man of the Archbishop's temperament and convictions never devolved upon mortal man. He was a High Churchman, logically, if not explicitly, committed to the depressing tenet that outside of the Anglican Church there was small hope of the salvation of the devoutest Christian. To the Anglican Church belonged the Apostolical succession, on which depended the regenerating power of the sacrament of Baptism, and the real Presence in that of the Holy Communion. For the disestablished Church in Ireland to do aught in the process of reconstitution which might cut it off from communion with the Church in England, was tantamount, in the eyes of the Archbishop, to its destruction as a church, and its reduction to the level of a dissenting sect. The Irish laity, on the other hand, with whom he had to work, regarded the very things which the Archbishop held essential to the life of a church as survivals of Papacy, and drew, at least, this consolation from the fact of disestablishment—that now they could purge the Irish Church from all contamination by them. Further to aggravate the difficulties of the situation, there were behind the Archbishop his High-Church friends in England—Dr. Pusey, Canon Liddon, Wilberforce of Winchester—anxiously watching the strife, and shrieking out at intervals that the Irish Church would be no longer a church if this or that thing came to pass. Under these circumstances, Dr. Trench would seem to have acted with a rare combination of tact, firmness, and judgment, and he succeeded ultimately in bringing the Irish Church out of the fray considerably mutilated in the ecclesiastical sense, yet not so grossly defaced but that a High Churchman in England might condescend still to recognize her as a poor relative.

In conclusion, we must express our strong disapproval of a miscellaneous correspondence of this kind being given to the public without either an adequate table of contents or anything answering to an index. Scattered through the letters, especially those from Mr. John Sterling, which are the pleasantest and most suggestive among them, there are many things one would like to recall; but, without an index, they are almost as irrecoverable as the proverbial needle in the bundle of hay.

A Century of Ballads. Collected, Edited, and Illustrated in Facsimile of the Originals, by John Ashton. Boston: Houghton, Mifflin & Co.

The English and Scottish Popular Ballads. Edited by Francis James Child. Part V. Houghton, Mifflin & Co.

MR. ASHTON has been known for some years past as a professional book-maker, who has devoted himself in particular, though he has not confined himself, to the illustration of the seventeenth and eighteenth centuries. The first of the volumes under review is one of his latest productions. It consists of about eighty poems arranged under the nine various headings of Social, Supernatural, Historical, Love, Drinking, Sea, Naval and Military, Sporting, and Local and Miscellaneous Ballads. They all belong or seem to belong to the seventeenth century; for in most cases nothing is given to fix positively the date.

The work is got up in sumptuous style, and

the expense bestowed upon it is in striking contrast with the character of its contents. Looked at from a literary point of view, the poems contained in it are about as worthless as those of any collection that industrious dulness has ever succeeded in gathering together. It would perhaps be no more than justice to give it precedence over all similar collections that have been made. These ballads may, indeed, be supposed to have some value as illustrating the manners and feelings of the past, and this is the special claim to consideration which their compiler sets up for them. Still, even in this respect they will be found in most cases to be of as little importance as they are of interest. It needs no one to come from the dead to tell us that some parents have opposed the wishes of their children in the matter of marriage, that some husbands have been drunkards and brutes, that some wives have been shrews, and that, in fine, human nature has in former centuries exhibited itself in the same agreeable or disagreeable ways that it does in the nineteenth. The truth is, these ballads seem to have been selected almost entirely for the cuts with which they were headed. Upon the faithful reproduction of these in facsimile Mr. Ashton prides himself unreservedly. As works of art it is not necessary to discuss their merits. It is sufficient to say that while the volume appears to have been got up for their sake, it has not been so ostensibly; and it militates accordingly against the eternal fitness of things that literary matter so utterly wretched should be clothed in a guise so elegant.

The original matter which the editor has prefixed to the collection of ballads is marked by some novel and surprising information, and by criticism which is even more novel and surprising than the information. There is this to be said for it, that it contains one piece which surpasses in literary value anything and everything else to be found in the book. This is "The Nut-Brown Maid," which "pretty poem," as Mr. Ashton calls it, he gives in full, as it might not be familiar to some of his readers, and he is honestly of opinion that it "is worthy of a place in the literature of its century." This betokens a judicious attitude of mind. It is clear that enthusiasm of the sort which comes from the late discovery of what is known to every one else will never lead Mr. Ashton astray. His general criticism of this piece, and the information collected in his Introduction, tend to impress firmly upon us the conviction that in the course of his seventeenth-century investigations he is likely to alight upon a certain epic called "Paradise Lost," which he will be disposed to consider a pretty good thing —at least a pretty good thing for its time and of its kind. Only in case he undertakes to print his discovery, it is to be hoped that he will edit it with more care and knowledge than he has bestowed upon "The Nut-Brown Maid." The obvious errors of the original are here not once corrected, and the words he selects for explanation either require none or are explained wrongly when they do. Some of the blunders made are of the grossest sort. *The ton*, for instance, which is a common form for 'the one,' is gravely rendered by "the town," and the interjection *loo*, a variant form of "lo," is interpreted 'loved.' As the only poem worth reading in this quarto of three hundred and fifty pages, it is annoying to have it reproduced in this slipshod fashion.

It is always pleasant to pass from the work of the compiler to that of the scholar. In this instance the leap is one of the longest conceivable. In the fifth part of the collection of English and Scottish Ballads now under notice we have a further outcome of the researches of the one man who, in the ballads of our tongue, is the greatest authority now living, and it is not too much to say the greatest authority that has ever lived. The progress of the work has been so often noticed in these columns that there is little opportunity left to speak in new terms of the finish and perfection with which everything connected with the subject has been treated, as well as of the exhaustive learning that has been brought to bear upon every particular poem that is printed. The part before us consists of forty-two ballads, almost all of which belong to the Robin Hood cycle. It is interesting to observe how in these the usual law of the development of the hero's reputation has been reversed; how, in the events recorded in the later pieces as contrasted with the earlier, the prowess of the famous outlaw steadily diminishes instead of increasing. The readers of 'Ivanhoe' will note, too, several of the places from which Scott derived his incidents. Of a more wide-reaching interest is the introduction to the ballad of "Adam Bell, Clym of the Clough, and William of Cloudesley." It is a mine of information in regard to the widely diffused series of stories connected with the shooting at an apple, or some other object, in close proximity to a living person, of which the most famous exemplar is the legend of William Tell. But the whole volume, like those which have preceded it, is full of illustrative matter, in which the learning of the East and the West has been brought together so as to shed light upon the subject of which the particular ballad treats. It is gratifying to see this great work going on steadily to its completion, for it is preëminently one of the kind that will never have to be done a second time. In this instance the worth of the contents will admit of any extent of external decoration, and the beautiful form in which the publishers have produced the collection corresponds fitly to its internal value.

The Photographic Negative, written as a practical guide to the preparation of sensitive surfaces, etc. By the Rev. W. H. Burbank. Scovill Manufacturing Co. 1888.

THERE is a defect running through the literature of photography, with few exceptions (and these mainly books of scientific investigators who had something new to say, and, being in earnest, said it in the fewest words possible, or at least with no idle repetition), which we wish to press home on the minds of the professional writers on photography, for it is making their literature a nuisance. We mean the extravagant tendency to pad their books out to large dimensions by the insertion of matters already worn out by repetition, and often of no practical value—apparently because the really important matter is so little that, if the work were limited to it, the dimensions of the volume would be incommensurate with the ambition of the author. What is necessary to be said with regard to practical photography, and would be of real utility to the learner, could be said in a book of half the bulk of this, which is devoted to the production of the negative, and, after all, does not say one word on the most important point in reference to this particular subject. But the photographic author, being generally a tyro in letters, magnifies the importance of his office, and cannot satisfy his aspirations with a small book, such as would result from the exclusion of all matter not really of moment. He therefore goes over all the well-known ground of past experience, and loads his book with pages of information as profitable as the geography of Ptolemy.

The author of this book, for instance, goes through all the details of some twenty-odd negative processes, some of which never had any value, as, for instance, Canon Beechey's, Capt. Abney's, Sutton's, Vogel's, the Gum-gallic, and some others of doubtful utility, while the greater part by far have now only an historic interest, and not more than three of the whole have any practical existence for the photographer. The old wet collodion, the simple washed collodion emulsion, and the gelatine processes are all that any person can require for practical purposes; and even from the enormous number of modifications made by the crowd of experimenters in the three or four distinct processes, our author's selections have been rather at random than from any knowledge of their actual working qualities. Thus, of Canon Beechey's process, which was only a trivial modification of the collodio-bromide emulsion, he says that it possessed "technical qualities of about one-half the sensitiveness of wet plates," which is simply absurd; the best of the processes of this type never passing the fifth of the sensitiveness of wet plates. The principal fact remaining of Capt. Abney's processes (for he discovered several, none of which were of any worth) is that the adoption of one of them resulted in losing all the photographic results of one of the eclipse expeditions. The author recommends Vogel's combined emulsion process, not seeming to know that it was a nostrum, and easily exploded in practical working out, and certainly never having tried it, which must have been the case with regard to most of the processes he describes.

Under remarks on exposure, etc., the author says that "the time of exposure is inversely as the distance of the objects to be photographed. To this law is due the reproduction of the effect known as aerial perspective"! This passes human comprehension, and throws a very grave imputation on the author's elementary scientific education, to say the least. There is no such law to begin with, and "the effect known as aerial perspective" is due simply to the intervention of illuminated vapor between the observer and the distance. An object five miles away is photographed as quickly as one ten miles away; but when objects are brought within very close range of the lens the focus is lengthened, and then the exposure of the plates is prolonged according to another law, stated correctly by the author: "The time of the exposure varies directly as the focal lengths of the objectives (lenses)"; but there is no approach to the variation indicated in the other "law."

The historical part of the book is extremely incomplete as history and imperfect as description. The tannin process, as discovered and first put into practice by Major Russell, was a pure bromide process, and it was afterwards applied to iodo-bromide. The collodio-bromide emulsion was not in the least due to Gaudin, though he had suggested something like it; and in the entire history no mention is made of the important practical discovery that an emulsion made with an excess of nitrate of silver possesses a degree of sensitiveness so much greater than that of the first emulsion of Sayce and Bolton, that it changed the character of all the work done with emulsions. The whole of this portion of the book is cursory, and evidently only wanted to swell out the volume.

With regard to the really important subject of the so-called orthochromatic film-plates, the author really gives no original information, nor does he approach the subject in a way to enable the reader to benefit by his experience, if he have any—which seems to

be a matter of question. The whole subject of equalizing the values of colors as rendered by photography is still a very obscure one, and there is grave doubt if there is any chemical effect in the action of the dyes used; that the color of the dye has any connection with increased sensitiveness to the relative color, is clearly not the case. This will be made evident by exposing a picture in which the colors require compensation to the yellow sunset light to be photographed, when the same effect will be found as is caused by the tint on the film, which again must be aided by a yellow screen in front of the lens—an additional indication that the effect produced is optical and not chemical. We remember twenty-five years ago that a photographer in Rome introduced the practice of photographing the old masters with the colored glass in front of his lens. When the subject comes to be thoroughly investigated by scientific method, it will probably be found that the orthochromatic effect is due to certain relations between exposure and development, as is said to be the opinion of Angerer of Vienna, one of the most successful of the picture photographers, the dye added to the film having simply the effect of unequally prolonging the exposure necessary. The orthchromatic plate fails on the spectrum.

But one subject on which the author might have given a much-needed light is that of the character of the negative required for special process-work, the manner of getting the best results for the one or the other of the numerous processes now in use—on all which he says nothing. Yet this is one of the most important elements in the business and one of the least understood, and on which, therefore, new and luminous instructions are needed.

Martin Van Buren. By Edward M. Shepard. [American Statesmen.] Boston: Houghton, Mifflin & Co. 1888.

WHATEVER judgment may be passed upon Van Buren by the readers of this book, they can certainly have but one opinion concerning the author: he has produced a masterpiece. We are at a loss whether to admire more the form or the substance of his work. Not many of our professed men of letters surpass him in mere literary skill—in facility of expression and in the art of setting forth facts in an interesting way. Very few of our historians equal him in the power of characterizing a political era, or in the breadth of the view which he takes of our political development. The problem of explaining the relations of the cliques that struggled for the control of the government of the State of New York is especially difficult, nor is it, in our judgment, an attractive one, but Mr. Shepard's familiarity with these details enables the reader to follow him with intelligence and with pleasure.

It must be said that the personality which furnishes the title to this book is not a striking one. Martin Van Buren was unquestionably a man of polished manners ("a perfect imitation of a gentleman," Bacourt called him) and decorous life. His legal attainments were considerable, and his statesmanship was dignified. But he had none of the strongly marked features that withstand the effacing influences of time. Perhaps it would be impossible to paint his portrait otherwise than in faint colors, and, in fact, Mr. Shepard scarcely attempts to inform us as to his private life or as to his personal relations. He presents him almost exclusively as a "statesman," and we think that his judgment is sound in this, not only because of the title of the series, but also because of the limitations of the individual. With this end in view he begins naturally with an account of the political theories and tendencies prevalent at the opening of Van Buren's career, and then passes to the great questions with which he was called to deal—the relations of the Government to the banks and to slavery.

To a considerable extent Mr. Shepard finds himself committed to a vindication. Van Buren had been trained among the fierce factional contests of New York politics, and had been taught neither to give nor to ask quarter. It would have been strange had he repudiated the maxim, *Væ victis;* and yet, as Mr. Shepard shows, he was more merciful than most of his contemporaries. Mr. Shepard is so ardent a civil-service reformer that he seems to us to be needlessly concerned about Van Buren's reputation on this point. The spirit of the Federalists was so contrary to that of democracy, and the bitterness of party feeling at that day was so intense, that it is at least doubtful if it was not necessary that all Federalists should be hunted out of office. In such a seething political caldron, most office-holders were, it is safe to say, "offensive partisans," and, as was the case in 1861, the people would not tolerate the retention in office of men who held views that were looked upon as little less than treasonable. Under Lincoln, it must be remembered, the changes were far more sweeping than ever before.

As to the charges of insincerity and double-dealing commonly made against Van Buren, Mr. Shepard wholly rejects them, and rejects them after having examined the evidence. He entered upon the investigation supposing the charges to be true, and found that they could not be supported. We may say that he has at least shifted the burden of proof. His plea is an extremely able one, and we will only urge against it the rather remarkable unanimity of contemporary opinion. It must be said, too, that the reader is not altogether free from the feeling that Mr. Shepard holds a brief, and that his attitude is not absolutely judicial. We do not object to this, for Van Buren is certainly entitled to the benefit of counsel, but we think that the judgment of his contemporaries is a circumstance that requires a little more consideration than Mr. Shepard gives it.

Upon some points, however, Mr. Shepard's argument is certainly triumphant. This man accused of insincerity and duplicity actually distinguished himself upon two occasions by devotion to principle. On both occasions his course was unpopular, and he knew that it would be probably fatal to his political future, but he did not flinch from the sacrifice. The first of those occasions was when, after the panic of 1837, he insisted upon financial conservatism and sobriety on the part of the Government, against a howling mob of ruined jobbers and speculators. It cost him his reëlection in 1840. The second was when he declared that slave territory should not be enlarged by the annexation of Texas. This cost him his renomination in 1844.

As to Van Buren's rank among our Presidents, Mr. Shepard justly declares that he does not belong among the mediocrities or accidents of the White House—among Monroe, Harrison, Tyler, Polk, Taylor, Fillmore, and Pierce. Nor is he upon the same plane as Jackson and the elder Adams. We are inclined to add that he is likely to stand much higher in the judgment of posterity than he would have, had it not been for Mr. Shepard's book. Viewed as a rhetorical achievement alone, this essay is admirable; and it certainly casts a strong and not unpleasing light upon a rather dark period in our political history.

An Introduction to the Study of the Middle Ages (375-814). By Ephraim Emerton, Ph.D., Professor of History in Harvard University. Boston: Ginn & Co. 1888. 8vo, pp. 268.

THE four hundred and fifty years or so between Constantine and Charlemagne form one of the most interesting and important as well as one of the most perplexing periods of history. It was the period of the transition from the ancient to the modern world, marked by three independent phases of transformation, any one of them vital enough to make an epoch in the history of humanity—the Christianization of Europe, the breaking up of the Roman Empire into new monarchies of German nationality, and a complete revolution in government and institutions. With the last of these, with the final establishment of feudalism, we have the Middle Ages proper. The merging of nationalities and the substitution of the Christian for the pagan ideal of life were slow and obscure processes; but the aspect of the period, at once the most difficult and the least understood, is in regard to the growth of feudal institutions. We have not until now possessed any book which would serve as a guide to this period from this three-fold point of view. These are historical treatises in abundance, ranging in fulness from Gibbon's great work to Mr. Curteis's excellent compendium; but no book specifically designed to meet the wants of the student. It is Mr. Emerton's great merit that he has carefully defined his field of labor, limiting himself to just these centuries, and for the most part to just the three points of view which we have indicated—the way in which the German nationality took possession of the Empire, the way in which the Christian Church took possession of society, and the way in which a new type of government was evolved, to meet the needs of a new type of society. This last subject necessarily carries him a little beyond the limits which he had set for himself. Feudalism came after Charlemagne, but could not be neglected; we have therefore a chapter following those upon Charlemagne, upon "The Beginnings of the Feudal System."

The book is distinctively a guide to students, not a final and complete account of its subject, although as a *history* it has high merit and a certain completeness within its limits. The Introduction is entitled "Suggestions to Teachers," and is followed by a list of books of a general character. Each chapter, moreover, begins with a well-selected list of books, containing, wherever necessary, a judicious appreciation of the works cited, whether as authorities or as modern works. For the modern literature we will say that it might have been well to make these discriminating remarks more general and detailed. A chronological table and an index complete the volume.

The part of the work which is most new, or which at all events contains most matter that is not generally accessible, is those chapters which treat of the period of the Frank Empire, chapters vii to xiv; especially, we think, that upon Germanic Ideas of Law, and the two historical chapters which treat of Charles Martel and Pepin. The two chapters upon Charlemagne contain an admirable and lucid account of the work of this great man, while that upon Feudalism is, we have no doubt, the best and clearest analysis of that institution to be found in the English language. The maps deserve special mention, as being about the first historical maps of Europe produced in this country of genuine and original merit. They are not copied from other works, but are specially designed to illustrate this book. The first is the Rhine-Danube Frontier before "The Great Mi-

grations"; here we should suppose that the Vandals ought to have been placed further west, on the other side of the Danube. The second is "Lines of March of the German Tribes." It seems to us misleading to commence the Ostrogoth line of march in Pannonia, as if this were their original seat. The successive points of the several migrations are indicated by dates; we would suggest that the date of the Burgundian settlement at Worms should be added. The map of "The Germans in the Empire" (for A. D. 500—by the way, dates ought to be affixed to the maps) contains useful dates on the face of the map for the settlement and occupation of the several countries. The maps of the "Frankish Kingdom under the Merovingians" and "under the Carolingians" will be very acceptable to students, as containing really accurate and intelligible boundary lines, as well as all the detail which they need. The last map, "Church Centres in Europe in the time of Charlemagne," contains material which we believe is not elsewhere accessible in English.

Life on the Congo. By the Rev. W. Holman Bentley. London: Religious Tract Society. Illustrated. Pp. 126, 8vo.

Mr. Bentley is of the Baptist Mission. His book is not descriptive, but relates mainly to the habits, customs, and beliefs of the natives. He appears to be a careful observer and has collected many interesting facts. Incidentally he writes more favorably of the climate than most travellers to this region, having been on the Congo two years and a half before he was attacked by fever. He also relates an interesting conversation with one of the negroes from the upper river in regard to the repeated attacks upon Stanley during his first expedition on its waters. These were due, according to this man, not to hostility, but simply to emulation. Each tribe heard that the tribes above had fought with the strangers, and accordingly they did the same. Of the native language, one of the many forms of the Bantu, he says, "The most marked feature is the euphonic concord, a principle by which the characteristic prefix of the noun is attached to the pronouns and adjectives qualifying it, and to the verb of which it is the subject. Thus, *ma*tadi *ma*ma *ma*mpwena *ma*mpembe *me*jitanga beni; these great white stones are very heavy." He quotes with approval the statement made in Mr. R. N. Cust's work on the African languages, that "its grammatical principles are founded on the most systematic and philosophical basis, and the number of words may be multiplied to an almost indefinite extent." His experience also confirms the truth of Mr. Stanley's assertion that the Congo native is a born trader. He says, "A five-year-old boy will somehow get three or four strings of beads, and with them will buy a small chicken. After a few months of patient care, it is worth eight or ten strings, and his capital is doubled." He is soon able to buy a small pig, and with the proceeds of this, of rat hunting and barter with other boys, he at last gets capital enough to make a trading trip to the coast. All this time he lives, apart from his parents, in a house with the other boys of the village. "The right of inheritance is from uncle to nephew; thus a man's slaves and real property go to the eldest son of his eldest sister, or the next of kin on such lines." A man's children, on the other hand, are the property of his wife's relatives, and he has "little or no control over them."

The Congo week consists of four days, the markets, which are apparently their measure of time, being held every fourth or eighth day. The laws of the market are stringent. "No one is allowed to come armed, no one may catch a debtor on market day, no one may use a knife against another in a passion. The penalty for all these offences is death, and many muzzles of buried guns stick up in the market places to warn other rowdies against a like fate." The natives have no religion, unless the simple belief in a Supreme Being, whom they neither fear nor worship, can be so regarded. They have great faith in the power of charms (to which, however, they do not attribute any personality, and so do not worship them, as some travellers have asserted) as well as in witchcraft, which enters into every relation of life, and is the fruitful source of numerous murders. The author describes two curious customs prevailing among them, Ndembo and Nkimba. In the former, young people, chiefly, are attacked by hysteria, and are carried away to an enclosed place outside of the village. Though supposed to be dead, they are supplied with food by their parents or friends, and after a time, varying from three months to three years, on the payment of certain doctor's fees, they are brought to life again. Returning to their homes, they pretend entire ignorance of everything which they have previously known, even to the mastication of food, which is done for them. The other is a species of freemason society established for mutual help and protection, having an initiation ceremonial and a mysterious language. This the novice learns during a seclusion of from six months to two years, required for this purpose. Mr. Bentley says that this language has evidently been made, but upon what principles he is still unable to discover, although he has collected two hundred words and forty sentences. "The vocabulary is limited, and is characterized by the system of alliteral concord." This society is spreading among the natives on the south bank of the Congo, and has been in some ways useful to the missionaries.

Elementary Treatise on Analytical Mechanics. By William G. Peck, Ph.D., LL.D., Professor of Mathematics, Mechanics, and Astronomy in Columbia College. A. S. Barnes & Co.

About thirty years ago Prof. Peck published a treatise on the 'Elements of Mechanics for the use of Colleges, Academies, and High Schools.' The elementary text-books then in use were too simple for advanced students, and, from their non-mathematical character, furnished a very inadequate basis for future study and investigation on the part of the student himself. The more thorough and complete treatises were too difficult for beginners, and too extensive for use as text-books. There was too wide a gap between the elementary and the complete treatises, which Prof. Peck's book was intended to fill. It was in many respects an admirable work, but it was not quite adapted to the educational conditions then existing in this country. It was in advance of the times. The processes of the differential and integral calculus were frequently introduced, and at that time the number of students who had studied the calculus was very small, and of these a still smaller proportion were able to make any intelligent use of its methods. In nearly if not quite all our colleges the calculus was an "optional" study, and the choice almost invariably fell on anything rather than the calculus. The result was that in our academies and high schools, although the teachers were to a large extent college graduates, the calculus was a branch of mathematics unknown and untaught. Accordingly, a year after its publication, Prof. Peck added to his book an appendix, in which the more important principles of mechanics were demonstrated by the processes employed in those branches of mathematics usually studied, and those portions of the work which might be omitted "without impairing the unity of the subject" were pointed out. This, however, did not prove entirely satisfactory. Teachers did not like to use, and pupils did not care to buy, a text-book a considerable portion of which was unintelligible and useless. It was evident that not only students in high schools and academies, but also those in technical schools and undergraduates in colleges, required a text-book constructed on a lower mathematical level. To meet this demand, Prof. Peck published in 1870 a substantially new work. The general plan of the book was the same as that of the former, but it was entirely rewritten, and analytical geometry was the upper limit of the mathematical knowledge assumed to be possessed by those making use of the work. Less than this it was impossible to assume without abandoning the attempt to treat mathematically any but the simplest problems of the science. But even for this the times were not yet ripe.

Over seventeen years have elapsed between the date of the preface of the work last mentioned and that of the one which now claims our attention. During that period the progress of the United States has been in no direction more marked than in the great increase in the number of students of the higher branches of science, including mathematics. Though analytical geometry and the calculus are still optional studies in most institutions, yet there are probably ten persons now who make them serious objects of study where there was one when Prof. Peck's treatise was first published. He has again entirely rewritten it. It is no larger than at first. It is still an elementary treatise in so far as it deals with the elementary conceptions which lie at the foundation of the science, but it is not a "popular" exposition of those conceptions. It is a thoroughly scientific work, and intended for those who wish to study, not merely to read about, mechanics. As the word "Analytical" introduced in the title indicates, the book is written from a mathematical standpoint. The methods of the differential and integral calculus are freely applied. The only concession to any want of knowledge or of memory on the part of the pupil is an occasional reference to a paragraph of the author's treatise on that subject. The work contains no historical information, discusses no philosophical questions, indulges in no metaphysical speculation. A large part of it might with very little change be moulded exactly into the form of Euclid's elements.

A thoroughly competent teacher, with a class of pupils who have sufficient knowledge of analytical geometry and the calculus to understand the meaning of the formulas and their transformations, has here an admirable text-book. The publishers have done their duty in the mechanical execution of the volume, and it is in that respect a great improvement on the two previous works.

Social Life and Literature Fifty Years Ago. Boston: Cupples & Hurd. 1888.

This little volume is an old man's word for his own times; and it must be acknowledged, even by the flippant criticism of the new age, that the retort is not without a certain grave force. It is not the change of literary fashion which has annoyed this gentleman of the old school, but the attack upon his own tastes and the vio-

lence done to great reputations. The process of pushing the fathers from their stools seems to him to be going on with indecent haste, with superciliousness in some quarters, and with a temper, in others, as unjust as it is patronizing. Doubtless when Mr. Lathrop spoke of Irving's style as "patent-leather Addisonian," and of his humor as smacking of college-boy's wit, he did not realize that Irving has not been dead so long to others as he seems to him; and this very just reproof from a contemporary who remembers Irving's fame at its height, and can quote Scott and Dickens against the young critic's opinion, may be as surprising to him as a voice from the tombs. Mr. James, too, may be startled; for it is a voice from old Salem, in true earnest, and the speaker has much cause for complaint against the international novelist who has used Salem as the very type and symbol of the narrowness and lack of resource which belonged to New England fifty years ago as Mr. James sees it. But not only has Mr. Lathrop written flippantly of Irving, and Mr. James satirically of old Salem; others have spoken of Hillard and of Ticknor in a way that shows only too plainly how far the world has left those honorable men behind, and every literary circle knows what scant courtesy and how short a shrift the immortal shades of Thackeray, Dickens, and Scott have lately received.

It is this general spirit of depreciation, together with a certain forgetfulness, that has called out this protest in behalf of antiquity—that is, of Irving, Scott, Dickens, and Thackeray, Ticknor, and that society which produced the coterie of the "Five of Clubs," to wit, Longfellow, Sumner, Felton, Hillard, and Cleveland. We are reminded that these scholars and gentlemen lived a long time ago—before "Pinafore" and Sullivan, the prince of pugilists, before athletics in colleges, newspaper interviewing, salvation armies, spiritualism, faith cures, Christian science, Canadian refugees, and stock gambling; but they made friends with the good opinion of their day, were respected by the best minds, and made their age remembered in literature, if it shall be remembered at all. They stood, in a word, for the culture of their times, and our friendly octogenarian who reminds us of all this, will have it that their culture was really respectable, and their achievement quite the equal of anything his latter days have seen. He seems disposed to class the literary spirit of to-day with that melancholy list of innovations beginning with "Pinafore" and ending with stock gambling. We indulge the hope that matters have not gone to such an extreme, though times have changed as times will. Meanwhile, in the crush of popular reputations made and lost as rapidly as fortunes in Wall Street, this sharp and well-deserved reminder of what stature men had in Nestor's day will be appreciated by a long-suffering but silent public, who, library statistics tell us, persist in reading the old books; and possibly the critics might do well to give it a bit of attention themselves.

The Structure and Classification of the Mesozoic Mammalia. By Henry Fairfield Osborn. Philadelphia: Academy of Natural Sciences. 1888. 4to. Illustrated.

THE Mesozoic are the earliest known mammals; ordinarily the class is said to have begun with them. Their sizes ranged from that of a small mouse to that of a large house rat. The determinations have been based on teeth and jaws; little else of the skeletons has been unearthed. Five of the genera are Triassic; about thirty are Jurassic. The variety of types among them, and their degrees of comparative advancement, prove them to be descendants of lines of mammalian ancestors reaching still further back. In other words, there were mammals much earlier than any of the primitive insectivores and marsupials yet brought to light. Dr. Buckland, in his paper on Megalosaurus (1823), mentions the jaw of a small mammal from the Stonesfield slates of the Oolite, which, on the authority of Cuvier, he refers to Didelphys, the Opossum; this was their first notice. Afterwards they were reported from different parts of the Old World. In 1871, Prof. Owen brought together what was known at the time in his 'Monograph of the Fossil Mammalia of the Mesozoic Formations.' An American genus, Dromotherium, from the Triassic of North Carolina, had been made known by Prof. Emmons in 1857. Prof. Marsh obtained others from the Jurassic of Wyoming in 1878, and since then has considerably increased the list, adding six new genera and nine new species in his most important contribution, 'American Jurassic Mammals' (1887). Besides those mentioned, others have made discoveries in widely separated localities.

Like that of Owen, the work of Prof. Osborn is an attempt at an exhaustive study of all relating to Mesozoic mammals that has been brought forward up to the date of publication. In it he aims, so far as may be done from teeth and jaws, (1) to present the features of the genera, (2) to present the principles of classification, and (3) to discuss the affinities, origin, and succession. What relates to the features is mainly compilation, the author having no material not previously worked over. All of the genera are described and figured. The principles of classification do not differ materially from those adopted by predecessors. It is in the discussion that we find most of what the author can claim as original. In this, and in that it greatly facilitates the study of these fossils, lies the importance of the work. The few localities that have been touched upon have yielded just enough to prove that we have hardly more than begun upon an extensive group of well-differentiated genera, concerning which present conclusions as to possible lines of succession or origin are certain to be modified if not disestablished by more knowledge.

BOOKS OF THE WEEK.

Bolton, Mrs. S. K. Famous American Statesmen. T. Y. Crowell & Co.
Clason, A. W. Seven Conventions. D. Appleton & Co. $1.
Eggleston, E. History of the United States and its People. D. Appleton & Co. $1.25.
Farmer, Mrs. L. H. The Life of La Fayette. T. Y. Crowell & Co.
Henslow, Rev. G. The Origin of Floral Structures through Insect and Other Agencies. D. Appleton & Co. $1.75.
Russell, W. C. The Mystery of the *Ocean Star*. D. Appleton & Co. 50 cents.

MURRAY'S REGENT HOUSE BOOKSHOP

Is the place for rare and valuable Books, at remarkably low prices. Catalogues issued frequently and posted gratis to any applicant. Address 15 MELBOURNE ST., NOTTINGHAM, ENGLAND. Orders may be sent through Messrs. G. P. PUTNAM'S SONS or Mr. B. F. STEVENS of New York and London.

F. W. CHRISTERN,

254 Fifth Avenue, between 28th and 29th Sts., New York.

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

FOREIGN BOOKS.—Russian, Polish, Hungarian, Swedish, Danish, Hebrew, French, German, etc. H. ROSENTHAL & CO., 14 Cooper Union, N. Y.

NOW READY:

Eclectic Physical Geography.

12mo, cloth, 332 pages. 30 single and double-page charts and maps; 151 cuts and diagrams.

The 'Eclectic Physical Geography' differs widely from those in general use.

1. The Charts are distinct and graphically accurate. Each chart presents but a single set of physical features.
2. No scientific knowledge on the part of the young student is assumed.
3. The order of treatment is natural and logical.
4. Phenomena are not simply described, but are traced to proximate causes.
5. The treatment of *Erosion* is not dismissed with the usual brief paragraph. Nearly every chapter finds in erosion a cause or an effect.
6. It discards the theory that the secular cooling and contraction of the planet is the main cause of the present relief of the globe.
7. The chapters on *Life* and on *Weather* and *Climate* are full and in conformity to modern science.

The scientific accuracy of the book is attested by eminent specialists.

Introduction and Sample Copy, price, $1.00; Exchange price, 60 cents.

Van Antwerp, Bragg & Co.,

Cincinnati, New York, Boston.

Dr. Sauveur's Educational Works.

"You are striking at the root of the evil by showing how to teach, and by inspiring with your example, as well as with your books, many most intelligent persons to begin on a new basis the work of instruction."—*Pres. D. C. Gilman.*

"I believe that the common methods of teaching languages, ancient or modern, to children and young persons, need to be profoundly changed, and changed in the direction of your 'Natural Method.'"—*Pres. Charles W. Eliot.*

"The HENESS-SAUVEUR SYSTEM is the rational way to lead the pupil to understand, speak, read, and write a foreign tongue. I would call it the Natural Method. In the hands of a spirited teacher it produces marvellous results, enabling the reader to think and express himself unconsciously in the new language he is acquiring, and to appreciate its genius and feel its niceties.

"I think it can be carried out even in the largest classes; it is so good and simple that I hope it will be fairly tried by teachers of languages. I desire to say this because I was never convinced of its practicability and excellence myself until I tried it."—*Ferdinand Bôcher, Professor of Modern Languages in Harvard College.*

CIRCULARS AND INTRODUCTION PRICE SENT ON APPLICATION BY

DR. L. SAUVEUR, Copley Terrace, Roxbury, Mass.

THE IDEAL FRENCH READER. **La France.** *Notes d'un Américan Recueillies et Mises en Ordre par* A. DE ROUGEMONT.

An Entertaining and Instructive Reading-Book for French Classes.

Cloth, 188 pages, $1.00.

"I shall take every opportunity that may present itself to recommend its use."—*Prof. W. D. Whitney, Yale College.*

"In seventeen short chapters we are told (in French) all about the soil, climate, population, industries, social classes, and principal cities of France; and in twenty-two chapters more, the educational system, the language and universities, the literature, the arts, the sciences, religion, and domestic life of France are discussed."—*The Critic, N. Y.*

"We are using 'La France,' and with increasing pleasure and profit."—*Louis Pollens, Prof. Mod. Lang., Dartmouth Coll., Hanover, N. H.*

"It is almost the *ideal* book for which I have been looking, and I propose to introduce it immediately as a text-book."—*Prof. W. L. Montague, Amherst Coll.*

"In using this as a text-book in a French class, it is obvious that two important objects are accomplished simultaneously, and two objects which properly belong together. The student gains from it both a reading knowledge of the language and a desirable fund of information of the people and institutions of the country."—*The Christian Union.*

Correspondence is invited by the publishers with reference to the adoption of 'La France' for class use. Specimen copies for examination with a view to its introduction will be sent, postpaid, to any teacher or school officer on receipt of 60 cents. Liberal discounts made on orders for first supply.

SAFETY FUND TRUST

DEPOSIT CERTIFICATES.

This Company issues Safety Fund Trust Deposit Certificates, payable ten years after date of issue, in the following amounts:

$300,	requiring 20 deposits of	$10	semi-annually.
$600,	requiring 20 deposits of	$20	semi-annually.
$900,	requiring 20 deposits of	$30	semi-annually.
$1,200,	requiring 20 deposits of	$40	semi-annually.
$1,500,	requiring 20 deposits of	$50	semi-annually.
$1,800,	requiring 20 deposits of	$60	semi-annually.
$2,100,	requiring 20 deposits of	$70	semi-annually.
$2,400,	requiring 20 deposits of	$80	semi-annually.
$2,700,	requiring 20 deposits of	$90	semi-annually.
$3,000,	requiring 20 deposits of	$100	semi-annually.

These Safety Fund Deposit Certificates are the direct obligation of the Company.

THE ENTIRE AMOUNT of all deposits on these Safety Fund Trust Deposit Certificates is invested as a SPECIAL Trust Fund, separate and apart from the general assets of the Company, for the security of the depositors, in mortgage loans negotiated by the Kansas Investment Company, together with all interest accumulations, until the funds shall amount to double the amount of the Company's obligation on all outstanding certificates.

If the holder should wish to discontinue further deposits at any time before the full twenty deposits have been made, the Deposit Certificates will be worth, at the expiration of their term, an amount equal to all the deposits made thereon, together with interest at the rate of 4 per cent. per annum (compounded semi-annually) from the respective dates of each.

INSURE YOUR LIFE

AS YOU

INSURE YOUR PROPERTY,

each year by itself, but with the right to renew the insurance as long as you live by payments adjusted to the cost of the risk during the term paid for only; avoids the unnecessarily heavy outlay required by level or unchanging premiums. The renewable term policy of the PROVIDENT SAVINGS LIFE ASSURANCE SOCIETY, 120 Broadway (Equitable Building), New York, is the safest, the fairest, and the most economical contract for life insurance attainable. Among all the life insurance companies the PROVIDENT SAVINGS shows the largest ratio of assets to liabilities, and the smallest ratios of death claims and expenses. Maximum security. Minimum cost.

The Nation

VOL. XLVII.—NO. 1212. THURSDAY, SEPTEMBER 20, 1888. PRICE 10 CENTS.

Four Great Dictionaries.

Liddell and Scott's Greek Lexicon. Revised and Enlarged.

A Greek-English Lexicon. Compiled by HENRY GEORGE LIDDELL, D.D., Dean of Christ Church, Oxford, and ROBERT SCOTT, D.D., Dean of Rochester, late Master of Balliol College, Oxford. Seventh Edition, Revised and Augmented throughout, with the Co-operation of HENRY DRISLER, Jay Professor of Greek in Columbia College, New York. 4to, Sheep, $10 00.

It is truly a magnificent work. . . . It would be difficult to say wherein it falls short of the *ideal* of a Greek-English Lexicon. I shall use it constantly myself, and shall take great pleasure in recommending it to my classes.—Professor W. S. TYLER, *Amherst College.*

Harper's Latin Dictionary.

A New Latin Dictionary, Founded on the Translation of "Freund's Latin-German Lexicon." Edited by E. A. ANDREWS, LL.D. Revised, Enlarged, and in great part Rewritten by CHARLTON T. LEWIS, Ph.D., and CHARLES SHORT, LL.D., Royal 8vo, Sheep, $6 50; Full Russia, $10 00.

A more complete guide to the entire literature than any previous work. In regard to the Latin orthography, the present Dictionary, moreover, claims the attention of students as the only work which embodies the results of recent investigations by philologists who are accepted as authorities. . . . In the collection, classification, and definition of the words in the Latin language, to which they have devoted an immense amount of research in order to supply the deficiency, the editors have evinced no less critical sagacity than intelligent industry.—*N. Y. Tribune.*

Stormonth's English Dictionary.

A Dictionary of the English Language, Pronouncing, Etymological, and Explanatory, embracing Scientific and other Terms, Numerous Familiar Terms, and a Copious Selection of Old English Words. By the Rev. JAMES STORMONTH. The Pronunciation Carefully Revised by the Rev. P. H. PHELP, M.A., Cantab. Imperial 8vo, Cloth, $6 00; Half Roan, $7 00; Full Sheep, $7 50.

A model performance, in which the scholar will take as much delight as will the school children, the family circle, and the busy man of affairs who has occasion to look up a word. . . . If an office, school-room, or family can have but one dictionary, Stormonth's is the best.—*Boston Advertiser.*

Thayer's Greek-English Lexicon.

Greek-English Lexicon of the New Testament; being Grimm's Wilke's Clavis Novi Testamenti, Translated, Revised, and Enlarged by JOSEPH HENRY THAYER, D.D., Bussey Professor of New Testament Criticism and Interpretation in the Divinity School of Harvard University. 4to, Cloth, $5 00; Half Roan, $6 00; Full Sheep, $6 50.

To the present volume, as the joint product of the best German and American scholarship, the judgment passed in Germany upon Professor Grimm's work is most appropriate: "It is not only unquestionably the best among existing New Testament lexicons, but, apart from all comparisons, it is a work of the highest intrinsic merit."—*Christian Union*, N. Y.

☞ *The above works are for sale by all booksellers, or will be sent by* HARPER & BROTHERS, *postage prepaid, to any part of the United States or Canada, on receipt of the price.*

"You are striking at the root of the evil by showing how to teach, and by inspiring with your example, as well as with your books, many most intelligent persons to begin on a new basis the work of instruction."—*Pres. D. C. Gilman.*

"I believe that the common methods of teaching languages, ancient or modern, to children and young persons, need to be profoundly changed, and changed in the direction of your 'Natural Method.'"—*Pres. Charles W. Eliot.*

"The HENESS-SAUVEUR SYSTEM is the rational way to lead the pupil to understand, speak, read, and write a foreign tongue. I would call it the Natural Method. In the hands of a spirited teacher it produces marvellous results, enabling the reader to think and express himself unconsciously in the new language he is acquiring, and to appreciate its genius and feel its niceties.

"I think it can be carried out even in the largest classes; it is so good and simple that I hope it will be fairly tried by teachers of languages. I desire to say this because I was never convinced of its practicability and excellence myself until I tried it."—*Ferdinand Bôcher, Professor of Modern Languages in Harvard College.*

CIRCULARS AND INTRODUCTION PRICE SENT ON APPLICATION BY

DR. L. SAUVEUR, Copley Terrace, Roxbury, Mass.

Teachers, etc.

A GOOD CHANCE FOR DELICATE Boys.—A gentleman (graduate of Harvard) would like a few young boys to educate with his own children in the country. Preparation for Harvard or the Institute of Technology. Highest references. Correspondence invited. Address
G. L. STOWELL, Portsmouth, N. H.

A HARVARD A.B. TUTORS BACK- ward boys. TUTOR, 2 Bible House, New York.

A LADY IN ENGLAND OFFERS A refined English home and education with her own children (in English, French, Music, and Drawing) to the daughters of gentlemen. Terms, inclusive of holidays, £200 per annum. Very highest references given and required. Address MRS. MARILLIER, Messrs. Holt, Lawrie & Co., 17 Whitehall Place, London, England.

A WILLIAMS GRADUATE DESIRES preparatory or college tutoring in New York city. Experience in private tutoring; one year in preparatory school, and one as instructor in Williams College. Refers to Pres't Carter and Williams Professors. Address W. D. M., care of Nation.

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

CORRESPONDENCE IS DESIRED with an American student who is to be in some German city by December next and could assist a youth in completing his final preparation for Harvard College. Address "P," Box 5333, Boston, Mass.

HOLMES HINKLEY, A.M., PRI- vate Tutor, 19 Ware St., Cambridge, Mass.

WANTED.—BY A GRADUATE OF Smith College, a position as teacher in a private school or as governess in a private family. Has had experience and can give the best of references. Address Smith College, care of the Nation.

Wants.

A YOUNG LADY DESIRES A POSI- tion as companion to a lady. No objection to travelling. Address "E. M.," Nation Office.

School Agencies.

BARDEEN'S SCHOOL BULLETIN Agency, Syracuse, N. Y., may be depended on to furnish suitable teachers *and to inform no others.*

THE BOSTON TEACHERS' AGENCY supplies Teachers to Schools, positions to Teachers. Circular free.
E. O. FISK & Co., 7 Tremont Place, Boston.

COLUMBIA COLLEGE.

SCHOOL OF POLITICAL SCIENCE.

The prime aim of this school is the development of all branches of the political sciences. It offers eight courses in political and constitutional history, nine in political economy, five in constitutional and administrative law, four in diplomacy and international law, three in Roman law and comparative jurisprudence, two in political philosophy, and one in bibliography—in all, forty-four hours per week through the academic year. The full course of study covers three years. For admission as candidate for a degree, the applicant must have satisfactorily completed the regular course of study in this college, or in some other maintaining an equivalent curriculum, to the end of the junior year. Special students admitted to any course without examination upon payment of proportional fee. For circular of information apply to Registrar, 49th St. and Madison Ave., N. Y. city.

F. A. P. BARNARD, LL.D., D.C.L.,
President of Columbia College.

GOLD MEDAL, PARIS, 1878.
BAKER'S
Breakfast Cocoa.

Warranted *absolutely pure Cocoa,* from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.
Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

BOOKS! BOOKS!! BOOKS!!!

MURRAY'S REGENT HOUSE BOOKSHOP

Is the place for rare and valuable Books, at remarkably low prices. Catalogues issued frequently and posted gratis to any applicant. Address 15 MELBOURNE ST., NOTTINGHAM, ENGLAND. Orders may be sent through Messrs. G. P. PUTNAM'S SONS or Mr. B. F. STEVENS of New York and London.

Scribner & Welford's

NEW BOOKS.

Volume IV. of the Henry Irving Shakespeare.

The Complete Works of William Shakespeare.

Edited by Henry Irving and Frank Marshall. With Notes and Introductions to each Play by F. A. Marshall and other Shakespearean scholars, and over 600 Illustrations by Gordon Browne. To be completed in 8 vols., square royal 8vo, decorated cloth, price per vol., $3.00. Vol. IV. includes King Henry V., The Merry Wives of Windsor, Much Ado About Nothing, As You Like It, Twelfth Night. Vols. I., II., and III. already published. *And the other volumes will follow at intervals of three months.*

The chief features of the Henry Irving Shakespeare are a general introduction by Henry Irving; prefaces to each play, consisting of literary history, stage history, and critical remarks by Mr. Marshall and other Shakespearean scholars; numerous and important notes, etc., etc., and over 600 illustrations by Gordon Browne, a son of "Phiz."

Chronicles of Bow Street Police Office.

With an account of the Magistrates, Runners, and Police, and a selection of the most interesting cases. By Percy Fitzgerald, F.S.A. With numerous illustrations. Two volumes, 8vo, $7.50.

Random Recollections of Courts and Society by a Cosmopolitan.

8vo, Cloth, $3.00.

Lessons on Decorative Design.

An Elementary Text-Book of Principles and Practice. By Frank G. Jackson. Illustrated. 8vo, cloth, $2.25.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE.

With Dictionaries and other Books of Reference.

Comprising in all translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin, and Greek,

700 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

VICTOR HUGO'S DRAMATIC WORKS. HERNANI—RUY BLAS—THE KING'S DIVERSION. Translated by Mrs. Newton Crosland and F. L. Slous. $1.40.

THE LETTERS AND WORKS OF LADY MARY WORTLEY MONTAGU. Edited by her great-grandson, Lord Wharncliffe; with additions and corrections derived from original MSS., Illustrative Notes, and a Memoir by W. Moy Thomas. New Edition, Revised, in Two Vols., with Portraits. $4.

"A most convenient reprint of Mr. Moy Thomas's admirable edition."—*Athenæum.*

AN EGYPTIAN PRINCESS. An Historical Novel. By Georg Ebers. Translated by Emma S. Buchheim. $1.40.

"The translator's rendering is easy and elegant."—*Morning Post.*

ADAM SMITH'S THE WEALTH OF NATIONS. An Inquiry into the Nature and Causes of. Reprinted from the Sixth Edition. With an Introduction by Ernest Belfort Bax. Two vols., $4.

SENECA (L. ANNÆUS) ON BENEFITS. Addressed to Æbutius Liberalis. Translated by Aubrey Stewart, M.A. $1.40.

"This is a faithful rendering of the 'De Beneficiis' in plain but Academic English."—*St. James's Gazette.*

RANKE'S HISTORY OF THE LATIN AND TEUTONIC NATIONS. Translated by P. A. Ashworth. $1.40.

HEINE'S TRAVEL-PICTURES. Translated by Francis Storr. $1.40.

"Mr. Storr's brilliant version."—*Academy.*

GOETHE'S CORRESPONDENCE WITH ZELTER. Selected, Translated, and Edited by A. D. Coleridge, M.A. $1.40.

THE STUDENT'S HANDBOOK OF HISTORICAL GEOLOGY. By A. J. Jukes-Browne, B.A., F.G.S. $2.40.

PAUSANIAS'S DESCRIPTION OF GREECE. Translated by A. R. Shilleto, M.A. 2 vols. $4.

HOFFMANN'S TALES. The Serapion Brethren. First Portion. Translated by Lieut.-Col. A. Ewing. $1.40.

HAUFF'S TALES. The Caravan—The Sheik of Alexandria—The Inn in the Spessart. Translated by S. Mendel. $1.40.

GOLDSMITH'S WORKS. A New Edition. By J. W. M. Gibbs. 5 vols. $7.

A SELECTION.

ANTONINUS.—THE THOUGHTS OF M. AURELIUS. $1.40.
ADDISON'S WORKS. 6 vols. $8.
BAX'S MANUAL OF THE HISTORY OF PHILOSOPHY. $2.
BOSWELL'S LIFE OF JOHNSON (Centenary Edition, edited by Napier). 6 vols. $8.40.

LESSING'S DRAMATIC WORKS. 2 vols. Translated.
MILTON'S PROSE WORKS. 5 vols.
MOLIERE'S DRAMATIC WORKS. 2 vols. Translated. $4.20.
PEPYS'S DIARY. 4 vols. $8.
PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

*** The above books sent upon receipt of advertised price. Catalogues of our regular stock, also full lists of all Bohn's Libraries, will be mailed, if desired, to those interested.*

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

Published To-Day:

A Timely and Important Work.

CITIZEN'S ATLAS OF American Politics.

1789-1888. With a series of over 150 colored maps and charts. By Fletcher W. Hewes, author of 'Scribner's Statistical Atlas of the United States.'

LARGE FOLIO, $2.00.

Never before has the literature of American politics received so valuable a contribution as in this work. By a series of maps and charts is given a survey of the whole range of American political history as wonderful for its completeness as for its simplicity and convenience for common use. Without the labor of study or research, every point of national progress for 100 years is presented to the eye and at once understood. By the adoption of graphic methods of illustration, the great tariff problem of to-day offers in this work its simplest explanation and material for a ready understanding. As a meagre idea of its contents, this work illustrates by text, chart, and map:

THE HISTORY OF THE POLITICAL PARTIES—STATE VOTES FOR 60 YEARS—THE TARIFF RATE FOR 100 YEARS BACK—DUTY, REVENUE, AND IMPORTATION OF 40 YEARS—WAGES AND TARIFF, AND COST OF LIVING SINCE 1850—PRESIDENTIAL ELECTIONS OF 60 YEARS—STRENGTH OF FOREIGN POPULATION IN ELECTIONS — DISTRIBUTION OF MANUFACTURERS AND WOOL PRODUCT ILLUSTRATED IN COUNTY MAP—PARTY PLATFORMS SINCE 1789—GENERAL AND POLITICAL HISTORY, 1636-1888, etc., etc., etc.

AGENTS WANTED IN EVERY CITY AND TOWN.

*** For sale by all booksellers, or sent postpaid, upon receipt of price, by*

CHARLES SCRIBNER'S SONS,
743–745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 20, 1888.

The Week.

THERE is one feature in the present discussion which ought, we should think, to fill the more intelligent Republicans with honest shame, and that is the importance attached to the opinions of English newspapers—importance so great that quotations from them of the most commonplace kind have actually been forged or garbled, and made to do duty in the very fore-front of the protectionist battle. It would seem as if the high-tariff men really had no body of economical doctrine of their own, and could not maintain a single economical proposition on its merits, or without showing that Englishmen are opposed to it or dislike it, or refute an economical proposition without showing that some Englishman of note has defended it or relied on it. It is not, of course, surprising that attempts are made to capture the Irish vote by advocating things on the ground that they are disagreeable to Englishmen; but that Americans should find it difficult or impossible to frame or revise their own system of taxation without finding out how Englishmen feel on the subject, is, we think, on the whole a most humiliating spectacle. In fact, we cannot recall anything in modern politics quite like it. People often shape, have shaped, and must continue to shape their foreign policy by reference to the aims, opinions, or wishes of foreigners; but domestic taxation has always hitherto been considered a matter on which home opinion was all-sufficient. But taxing one's self to spite foreigners is something absolutely new in the art of government. As a piece of self-immolation it beats hollow biting one's own nose off. Is there nobody among the high-tariff doctors who is able to draft a tax bill and prove its soundness without producing a pocketful of cuttings from English newspapers to show that he has made no mistake?

The Boston *Journal*, that funny old party hack, in the course of an attempt to extenuate the recent forged quotations by maintaining that if the English newspapers to which the quotations have been ascribed, did not say this, they said something like it, declares that "the Democratic charges of 'infamous forgery' in this connection are extremely heated and hasty." But if the writer will reflect on the matter a little, we think he will perceive that there is a marked difference between forgeries and misquotations made during a Presidential canvass for the purpose of influencing votes, and those which he is doubtless in the habit of making himself in off years, when there is no serious business before the country. In this State, for instance, there is no law against spreading false news or forged letters or documents if you do it simply for fun, or in the ordinary course of journalistic business; but if you do it in order to raise the price of any commodity, even peanuts or candy, you go to jail. That is, when the direct consequence of your lying will be to cause your fellow-citizens pecuniary loss, you are punished for it, while if you lie, like "Ananias," simply through excess of animal spirits or to show what a live journalist you are, or in the hope of making a contemporary feel badly, nobody takes any notice of it. So, also, your stories about the things you see in the London *Times* and *Spectator* and *Economist*, and other wicked British sheets, may be anything you please in ordinary years, when they have no direct influence on action. But when you produce them for the express purpose of deceiving people into voting one way instead of another, on a certain day, so as to seriously influence the administration and legislation of your country, you surely will not deny, in calm moments, that when caught, you ought, were the law what it should be, to go to jail, and that the victims of your wiles are excusable in feeling "heated and hasty" towards you.

This topic is almost a ridiculous one for a newspaper intended for adults; and yet the circulation of these silly fibs about the English press and the Cobden Club among workingmen is almost the only thing with which the friends of tariff reform have to contend in this canvass. For economical arguments against the President's position or the Mills bill we look everywhere in vain. There are none in the protectionist newspapers, magazines, or speeches. When you ask them how they would dispose of the surplus, how they know that the tariff raises wages, why wages are higher in free-trade England than protectionist France or Germany, on what the rate of wages depends, they simply run away and shout "Cobden Club," "Free-trader," and "London *Times*." And yet there is no doubt that these mendacious colored cards, which recall the lowest appeals to ignorance and prejudice ever made to a mob in the days of slavery, do work mischief, and may influence the national decision on a great question of financial policy. And the pity of it is that these appeals come from the party of "virtue and temperance"!

We approve of Senator Sherman's resolution directing the Committee on Foreign Relations to examine and report upon the relations of the United States with Great Britain and Canada, with such measures as are expedient to promote friendly commercial and political intercourse between them. We also approve of the plan to give them leave to sit during the recess of Congress. We doubt not that Mr. Sherman's intentions are honorable. He sincerely desires to bring about a commercial union between the United States and Canada as a leading step to political union. He perceives, and has all along perceived, that retaliation, whether of the kind proposed in the act of 1887, or of the kind more recently proposed by the President and passed by the House, will be a hindrance to any kind of union, commercial or political. He stated in a newspaper interview the other day that the House bill ought not to pass the Senate, and that the House Republicans had acted a cowardly part in not making a fight against it. As the bill has been referred to the committee of which he is chairman, it becomes pretty plain that it will *not* become a law before the Presidential election. Probably the Senator's resolution directing the Committee on Foreign Relations to consider the whole subject, with leave to sit during the recess of Congress, is the device agreed upon by Republican Senators to stave off the Retaliation Bill with the least amount of damage to the party.

Under our present tariff, what with the high price of wool, the high price of woollen cloth, and the high price of manufactured clothing, the manufacture of shoddy for the clothing of the poor has become a great and flourishing industry. The sole reason why it flourishes is that good woollen cloth is so dear that it is out of the reach of a large body of poor people. No human being would buy shoddy if he could afford wool. No man would wear a shoddy coat if he could afford a woollen one. No kind of coat becomes shabby and ragged so soon as a shoddy coat. The aim of every friend of his kind to-day, in the United States and in every other country, should be to kill the shoddy manufacture, to make it unprofitable, to banish it from the land, to deliver every American citizen from the humiliating necessity of wearing shoddy, and make every American citizen ashamed to manufacture it. That in this favored land a large body of the people should be clad in it is surely a national disgrace. In spite of all this, however, seventeen firms have signed a circular actually pretending that they have a vested right to clothe the poor American in shoddy whether he likes it or not; to get the Government to stop him on his way to the market to get a good woollen suit, and fine him heavily if he refuses to put on a suit of shoddy. Nay, they will not even let him get cheaper shoddy than theirs. If they catch him going to a European for ten pounds of shoddy, they seize him and fine him one dollar for not buying their shoddy.

There are three points in Gen. Harrison's letter which we think cannot be too earnestly considered. They comprise his belief that it will not be necessary to repeal the internal-revenue taxes in order to preserve intact our protective system, and his recommendations for so reducing the surplus as to make such repeal unnecessary. We place these points side by side with what his recommendations really call for:

HARRISON'S PROPOSALS.	THEIR REAL MEANING.
We are not likely to be called upon, I think, to make a present choice between the surrender of our protective system and the entire repeal of the internal taxes. Such a contingency, in view of the present relation of expenditures to revenue, is remote.	Preservation of the present high tariff, ranging from 30 to 130 per cent. ad valorem, or levying an average tax of 47.10 per cent. on dutiable goods.
The surplus now in the Treasury should be used in the purchase of bonds.	Reduction of the surplus by payment of the public debt in advance of maturity, at premiums ranging from 7 to 29¾ per cent.
The nation, not less than the States, is dependent for prosperity and security upon the intelligence and morality of the people. This common interest very early suggested national aid in the establishment and endowment of schools and colleges in the new States. There is, I believe, a present exigency that calls for still more liberal and direct appropriations in aid of common-school education in the States.	Passage of the Blair bill, taking $77,000,000 from the Treasury.

There is supposed to be a large mercantile interest in New York yearning for increased trade with South America. They made some noise in the campaign of 1884. Mr. Blaine's fervid utterances on that subject when he was Secretary of State, we remember, were frequently quoted at that time. Well, it seems as though we were on the eve of this jubilee, since we learn from the Buenos Ayres *Standard* that Mr. Charles Lix-Kleet, in behalf of the Chamber of Commerce of that city, is putting up two sets of samples of wool produced in the Argentine Republic, suitable for the manufacturers of the United States, one set intended as a gift to President Cleveland and the other for the Argentine Consul at New York, to be by him placed on exhibition. There are sixteen samples, and each sample has a descriptive list attached showing the breed of sheep, the province where grown, and the amount of shrinkage in scouring and preparing it for the mill. All this, the *Standard* says, is in consequence of the passage of the Mills bill in the House, for, although the bill may be thrown out by the Senate, the *Standard* is convinced that wool will be put on the free list before long, and that "Argentine raw wools will be shipped from this port in thousands of bales *as in the old days*, when, with a more liberal tariff, the States filled our roads with her ships, and, in the aggregate of our imports and exports, figured for 20 per cent., while to-day she stands at the bottom of the ladder at 6 per cent." Is not this a dreadful outlook? Has Mr. Lix-Kleet no bowels?

Another infant industry that seems in danger of being extinguished for want of protection is that of milking cows. The Mills bill put "fresh milk" on the free list. The present duty on fresh milk is 10 per cent. It is thus that an infant American industry is protected at the expense of the American infants who drink the milk. Instantly there was a great splutter on the Republican side of the House about the injustice to the American farmer of a measure which proposed to "inundate" the country with foreign fresh milk. Mr. Lyman of Iowa was particularly prompt to repel this "direct attack upon the farmers of my section." Mr. Bacon of New York accordingly took pains to procure from the Treasury Department the statistics of fresh-milk importation, and found that all the milk imported, except a mere trifle, was entered at Detroit and Port Huron, Michigan, and Burlington, Vermont, and that the total importations for the fiscal year 1888 were of the value of only $5,038. As fresh milk is not sent from central Iowa to eastern Michigan, or northern Vermont, Mr. Lyman's constituents must have breathed more freely when they saw the result of Mr. Bacon's researches. Probably Mr. Lyman agreed with Gen. Harrison that it is not the *step* that is to be feared, so much as the direction of it, and that the same principle that would make fresh milk free would, in the end, put Indian corn and salt pork on the free list, to the everlasting ruin of Iowa farmers.

Mr. Theo. Foulk of Westchester, Pa., puts some questions respecting the duty on nickel, saying that there is a story current in Westchester that foreign nickel has driven American nickel out of the market, in consequence of the want of any duty on that article in the existing tariff. The history of tariff legislation on this subject is rather interesting, and is worth recounting. In the general tariff of 1861 (the Morrill tariff) nickel was put on the free list. Previously to that time it had been subject to a duty of 5 per cent. under the clause "metals not otherwise provided for." In 1862, when the Morrill tariff was under revision, a Pennsylvania Congressman (Mr. Thayer, we believe) made the important announcement that a nickel mine had been discovered in this country, and he moved, therefore, that nickel be subjected to a duty of 50 per cent. ad valorem. In other words, since nickel had been discovered in this country, it ought to be made more difficult for American citizens to obtain that metal than it was before. Mr. Morrill of Vermont stoutly opposed this suggestion, saying that nickel was largely used in the manufacture of German silver, and that it was unjust to put such a tax on the raw material of an important industry. Nevertheless, he would consent to a moderate duty. The duty was finally fixed at 10 per cent. While this debate was in progress, a colloquy took place between Thaddeus Stevens and a fellow-Congressman which created a great deal of merriment, but naturally it did not get into the *Congressional Globe*. The latter protested to Mr. Stevens that it would be better and cheaper for the Government to buy this nickel mine outright than to put such a duty on the article as Mr. Thayer proposed. "O," replied the sardonic leader of the House, "*let them buy it the other way.*" That is what they have been doing ever since, but they do not own it yet.

The duty settled upon in the revision of the Morrill tariff in 1862 was 10 per cent. A few years later it was raised to 15 per cent. In 1870 it was raised to 30 cents per pound, and it stood at that rate until 1883, when it was reduced to 15 cents per pound, that being the existing rate. The Mills bill proposes to reduce it to 10 cents per pound. The owner of the nickel mine in question is (or was) Mr. Joseph Wharton of Philadelphia, who wrote a letter a few days ago on the subject of professorships of political economy in American colleges, bewailing the shortsightedness of rich men who give money to institutions of learning without stipulating that they should teach the sound doctrine that the American people should patronize their own nickel mines, etc., etc. Now, the answer to Mr. Wharton is that the American people do not own any nickel mines. He owns them. His argument is, that American colleges should be coerced to teach our ingenuous youth to prevent themselves from buying any nickel but his, and to fine themselves and their neighbors at the rate of fifteen cents per pound if they do — all this in conjunction with other suitable fines, penalties, and forfeitures for the buying of wool, salt, jute bagging, etc. The trouble is, that the colleges will not do what Mr. Wharton wants to have done, even under coercion. Being institutions of science, they are bound to teach science. Protectionism is not science. It is the art of taxing the many for the benefit of the few, and persuading the many that the dollars come back to them through the clouds, or in the night time, or by magic, for nobody has ever been able to tell how the money comes back or to prove that it comes back at all. Politicians may teach this hocus-pocus; colleges will not.

We take much pleasure in informing Mr. James P. Foster, President of the Republican League of the United States, that his celebrated "Fat" Circular has been translated into Danish, and is about to be widely distributed among the Scandinavian portion of our population in various parts of the country. We shall be glad to furnish Mr. Foster with an early copy of the translation, and to be favored with any suggestions which he may make about the idiomatic construction of his famous saying, "These are strong words, and bitter, but they are true." The accomplished translator has had considerable trouble in finding a Danish synonym for the word "cravenal," and also in bringing out clearly in the foreign tongue the full significance of the term "fat"; but he is convinced that he has succeeded fairly well in both cases. Mr. Foster will of course be glad to see these and other features of the translation. We are glad to inform him at this time of this spreading of his fame into other languages, for he is suffering, as all other great men always have done, from the jealousy of his contemporaries. The National Republican Committee, rumor says, are declaring that Foster is a "nuisance," and has what they call the "big-head trouble;" but he must not mind them. It is our unprejudiced opinion that Foster's work in the campaign is far

more useful for good than that of the National Republican Committee.

The striking feature of the election for Governor in Arkansas is the large increase in the opposition vote, without any corresponding decrease in the Democratic vote. Thus, while the Democratic vote is 8,564 in excess of the same vote in 1886, the opposition vote shows a gain of 30,163. The Democratic vote is 1,659 less than it was in 1884, and the opposition vote shows an increase of 28,696. The explanation of this is two fold. The Republicans this year supported the Union-Labor candidate for Governor, putting no ticket of their own into the field, and in 1886 a third candidate, one Wheeler, received 19,169 votes. The changes not thus accounted for are due to Democratic indifference and local faction fights. The Little Rock *Gazette* (Dem.) says of the result: "The time has not come yet in our elections when it is thought that the State ticket cannot take care of itself, with a safe trading margin for the hard-pressed local tickets. We read the signs of the times incorrectly if this election do not prove a decisive turning-point in our politics. There will be more life and vigor and wise management, less personal politics and fewer factional divisions, than before in the last ten years, and our majorities will increase in proportion."

The political situation in this State is rather worse than it was when Tweed was plundering in the city and the Canal Ring was plundering at Albany. We say that it is rather worse, because the Governor of the State at that time was personally an honest man. It has been proved in a public investigation, and is not denied, that this man Hill received $10,000 of the money of the taxpayers of New York city to pay a note which he gave for campaign purposes. If this is not wrong, nothing is wrong. If this act can be condoned by the voters, anything can be condoned. If the taxpayers of the rural districts think that because this money was taken from the taxpayers of the city, and not from them, therefore their money is safe with Mr. Hill in the Governor's chair, they are very green. If they think that society and law and government can be carried on when such transactions are endorsed and ratified at the polls, they are grievously mistaken. For our part, we will not, either directly or indirectly, either actively or passively, contribute to the reëlection of Mr. Hill. We shall advise all Independents and all good citizens of whatever political faith to vote for Warner Miller. We think that the State will give its electoral vote to Cleveland and Thurman in spite of this bad nomination; but whatever may be the consequences, we will not, either by silence or otherwise, join in undermining the foundations of social order by putting Mr. Hill again in the Governor's chair.

We regret to see that there are no signs of the support of Mr. Hewitt by the Republican party organization in case he takes the field as the opponent of an undesirable Tammany candidate. On the contrary, the organs of the Republican Machine are already calling for a straight Republican candidate, on the old pretence that in case of a Democratic split such a candidate might be elected. This is the familiar Machine scheme of securing a basis for a "deal." There is no desire in it for anything else. The advocates of the straight ticket are perfectly well aware that there is not the slightest hope of success. They are well aware, also, that its presence in the field will be a direct help to the success of the Tammany ticket. Yet they will put it forth this year, as they have repeatedly done before, in the hope of thus getting, through "deals" and "dickers," a share in the "spoils." Mr. Roosevelt was brought forward in this way two years ago, with no hope of his success, for, as he himself confessed after election, he only ran to preserve the party organization. To do this, he and his party ran the risk of defeating Mr. Hewitt and electing Mr. George.

Mr. Richard A. Proctor's death is a very tragic and pathetic incident, and shows how little security against infection there is in any district in which yellow fever is prevalent. But we trust it was a bit of reporter's coloring which made the doctors predict his death "within ten or twelve hours" as soon as they saw him, although he was then only in the first stage of the disease; and made it seem as if the main interest of his case afterwards lay in its following the usual course, and that all that was done for him was, to use the language of the *Times's* report, "to watch the case, first in the interest of the public, second in that of the Health Department, and third in that of the eminent patient." There was surely some doctor present, ready and willing to watch the case first in the interest of "the eminent patient," and leave the other order of watching to somebody else. In other words, there was surely some effort made to save Mr. Proctor's life. Yellow fever is not a necessarily fatal disease: the majority of persons attacked by it recover. We feel sure he was not treated simply as an interesting case, and let die in order to verify a diagnosis.

The first meeting of the Judicial Commission in London on Monday brought out in a striking way the oddity of the course the *Times* has been pursuing towards the Parnellites. The charges it has been making against them were definite enough for use in political warfare, and definite enough to stand a libel suit on, but not by any means definite enough to put into a formal indictment. Consequently, when the counsel for the *Times* was called on by the Court to assume the rôle of a prosecutor, and to divide his case into formal specifications, he was quite taken aback, and tried hard to occupy the place of an *amicus curiæ*, assisting the Court with "information" in an "inquisition;" but this the judges would not allow. The order granting to each side full access to the papers and documents of the other side is also very important, and naturally enough each side professes the utmost satisfaction with it, although the *Times* resisted it in the beginning. Which side it will hurt most it is hard to say. The "proofs" of the *Times* are undoubtedly of a very flimsy description, as regards the Irish members of Parliament, however much discredit they may bring on the National League and some of its branches; but, on the other hand, the overhauling of the books and papers of the League may bring to light some discreditable things of which the *Times* has never heard. This contingency, however, would have more importance if the case were to be tried before a jury, which would be more or less influenced by extraneous matter. On men like Judge Hannen it will have no effect at all. What has been established by the proceedings thus far is, that the *Times* must formulate charges and prove them, and that both sides must submit to the Court everything bearing on the investigation, however private and confidential — which means, among other things, that the *Times* must tell where it got the letters ascribed to Parnell.

The Pope is again in serious trouble with the Italian Government. He has sent a circular despatch through his nuncios to the various European governments, describing in strong terms the increasing annoyances and inconveniences of his situation in the Vatican. One of the things which trouble him is neither more nor less than the adoption of a new penal code in Italy, which provides severe penalties for everybody convicted of destroying, or trying even in words to destroy, the territorial integrity of the kingdom. This of course covers the case of all persons advocating publicly the restoration of the temporal power, a class which includes a great many priests and bishops. Moreover, a recent decision of the Italian Council of State makes imperative, in order to give them validity as regards Church property or functions, the registration in the usual manner of all decrees, or orders, or decisions issuing from the Vatican. Failing such registration, the courts are to treat them as null and void. This the Pope treats as a direct blow at the "exterritoriality" which is supposed to have been guaranteed to him. These are positive and definable griefs. There are others which, though not positive, are none the less real. The admission of Italy to the Triple Alliance, and the friendly way in which Austria and Germany treat her, also wounds the Pope, and makes him feel that there is not much real feeling behind the compliments which the Powers lavish on him, and the deference with which his place in the world is spoken of. His recent Encyclical, too, in which he pointed out the snares and fallacies and dangers of modern Liberalism, has somehow fallen very flat. Nobody has paid much attention to it. The newspapers have not even discussed it. Finally, the people of Rome, who have hitherto been supposed faithful to the Papal tradition, have gone and elected for the first time a Municipal Council with a Liberal majority. It is not wonderful that under these circumstances he should begin to talk once more of removing to some place where his purely spiritual character would come out in stronger relief.

"ALMOST A POLITICAL REVOLUTION."

THE complete returns from Maine are now at hand, and an analysis of them will show how much ground there was for Mr. Blaine's claim that the result was "almost a political revolution." We give the figures side by side with those of the September election in 1884:

Governor.	1888.	Governor.	1884.
Burleigh (Rep.)	79,603	Robie (Rep.)	78,912
Putnam (Dem.)	61,108	Redman (Dem.)	59,061
Cushing (Prohib.)	2,971	Eustis (Prohib.)	1,190
Simmons (Labor)	979	Eaton (G'b'k.)	3,234
Total	144,661	Total	142,397

Republican plurality in 1884	19,851
Republican plurality in 1888	18,495
Republican loss on plurality	1,356
Republican increase on total vote of 1884	691
Democratic increase on total vote of 1884	2,047

These figures tell the story so plainly that it is scarcely necessary to comment upon them. The reader will search them in vain for any evidence of Mr. Blaine's "revolution," or for any evidence of his other assertion that "many Democrats turned against the Mills bill." If there were such conversions, there must have been a large Republican defection to offset them. Instead of being "stampeded" by the free-trade cry, the Democrats have more than held their own. They have increased their total vote of four years ago by more than 3 per cent., while the Republicans have increased theirs less than 1 per cent. Whatever this may be evidence of, it is not a sign that the Democratic party is weaker than it was before the tariff-reform issue was raised.

The significance of this result is very great when we consider the peculiar advantages which Maine presented as a field for Republican gains this year. On the fishery issue and the question of free lumber alone, there was reason for thinking that inroads might be made upon the Democratic strength. Mr. Blaine evidently thought so, for he made those questions very prominent in his speeches, all of which were confined almost entirely to them and to the dangers of free trade. The Republicans had the advantage of his personal efforts in their campaign, he bringing to the work all the prestige of his first appearance after a European tour, in which he had observed personally the baleful effects of free trade abroad.

Furthermore, the election was held before the national campaign had been fairly begun, and before there had been anything which could be called an adequate presentation of the Democratic side of the tariff question. The National Democratic Committee sent no speakers into Maine to answer Mr. Blaine's arguments. Almost the only outside Democratic orator who went there was Col. Fellows, and we have never heard him spoken of as a persuasive orator upon economic questions. In addition to Mr. Blaine's personal leadership, the Republicans had the aid of one of the most thoroughly organized political machines in the country, and the skill in the working of it which comes only with long practice. Yet, with all these advantages, they have failed to carry the State by as large a plurality as they had four years ago, though the total vote now is over 2,000 larger than it was then. They have failed, not only to draw away any of the Democratic strength, but to secure more than half of their share of the increased vote.

We are not disposed to insist that this result is a "certain harbinger of victory all along the line in November" for the Democrats, but the figures certainly fail to sustain the *Tribune's* claim that it is such a "harbinger" for the Republicans. Calmly interpreted, it means simply that both parties stand substantially to-day as they stood four years ago—that is, the tariff issue has not perceptibly changed the party lines. There have undoubtedly been changes back and forth, but these have about evenly offset each other. This being the case, the Maine election, so far as it has significance, shows that the advantages in the November election are in favor of the Democrats. Nobody questioned, before Mr. Cleveland's tariff message in December last, that he would be reëlected if renominated. The doubt which has since been felt was due entirely to the inability to ascertain just how much could be accomplished by the free-trade bugaboo. Oregon seemed to indicate that the Democratic strength could be seriously diminished by it. Vermont failed to give such indication, because, whatever the issue, that State is always overwhelmingly Republican. For the first time unmistakable light on the subject comes from Maine. Taken in connection with the fact that there are still nearly two months before election, that those two months will be given up to the most energetic efforts to educate the voters upon the tariff issue, and to dispel whatever may remain of the doubt raised by the Republican misrepresentations and silly "British" forgeries, we think the friends of tariff reform can possess their souls in patience, and await without trepidation the progress of events.

COMFORT FOR THE TIMID.

THE great objection to the Mills bill in the eyes of a good many Republicans is the one which has found such strong expression in Gen. Harrison's letter of acceptance, namely, that, coming from a party more or less favorable in theory to free trade, it would in Democratic hands eventually lead to free trade. In other words, he finds fault with it not so much — to use his own words — on account of the length of the step which the bill makes, as "the direction of it." In this, there is no doubt, he utters what is in the minds of a great many people who are in favor of a moderate tariff reduction, and who do not really believe that the reductions made by the Mills bill are too great either in amount or number. As a matter of fact, these are not so great in amount as those recommended by the Tariff Commission of 1883, composed entirely of protectionists. What such Republicans say to themselves is, that they would not object to such a bill if it had been drafted or carried by known friends of the principle of protection, who in revising the tariff were sincerely anxious to maintain its protective features; but that, coming from men of whom a large proportion are undoubtedly in favor of a tariff for revenue only, and some of whom are ardent advocates of free trade, they fear the revision now proposed would be used to secure further concessions in the same direction, and finally do away with the tariff altogether. They, in short, put the question which British fathers used in the last century to put to young men who were attentive to their daughters without popping the question—"whether their intentions were honorable."

We touched on this point last week when commenting on Gen. Harrison's letter of acceptance, and we return to it because we really think it is keeping on the fence a good many sincere and intelligent Republicans who do not know much about tariff, and have to take even the facts of the present controversy on trust. They hear so much on both sides that they are bewildered; and, while recognizing, as they cannot help doing, that both parties are committed to tariff revision, are afraid to accept revision from the one they know least about and have the poorest opinion of. Now, to these we take leave to point out—with a perfect understanding of their difficulty—that the Mills bill, even if enacted, could only lead to something worse than the Mills bill through an overthrow of popular government. For no matter what its promoters may wish it to be, or seek to make it, it must remain for the people of the United States simply an experiment. It is, in its very nature, a law whose operation must be open to every eye. Everybody will witness its effects in some sphere or other. If it injures the woollen industry to have wool put on the free list, or the canning and roofing and utensil industry to have tin plates put on the free list, the whole country will know it. If it makes people feel cheap to wear cheap clothes, they will surely let it appear in some way. If it lowers wages and shuts up factories and causes even slight general distress, of course the public will perceive it at once, and all progress in the free-trade direction will be peremptorily arrested. The bill will be repealed, and the old duties will be restored, and perhaps even be raised. The Democrats and the Mugwumps will be discredited to an extraordinary degree, and the return of the Republicans to power for a long period made certain. The "British free-traders," too, will hide their diminished heads and trouble us no more.

"Oh, but," it may be said, "we do not want to run the risk of even such slight damage as you describe. We do not wish to make experiments likely to prove hurtful even in a slight degree." Yes, but it must be remembered, in saying all this, we are assuming that the tariff must be revised by somebody, that both parties are pledged to it, and that the revision of one would differ but little from the revision of the other, and that the main question before the country is—Which shall be trusted with revision? All the evil consequences of the Mills revision which we have commented on above, or other consequences of exactly the

same kind, would follow from *any* revision which lowered duties and enlarged the free list, no matter how good the intentions of the revisers might be. In other words, any revision must be an experiment, and if it works badly, of course it would be abandoned.

But it is impossible for the most charitably disposed to resist the suspicion that a great part of the opposition to the Mills bill is due to the belief that the experiment will succeed; that the country will benefit so much by it that it will ask for more of the same—or, in other words, that the Mills additions to the free list will have somewhat the same result as the addition of hides and quinine had.

SOME CHARGES AND SPECIFICATIONS.

We shall to-day mention a few gentlemen who owe the American people and Gen. Harrison, as the friend of "intelligence and morality," some information or explanation on account of sayings and doings in this canvass. First there is

Depew, Chauncey M.—President of the New York Central Railroad, and noted after-dinner speaker. He, with intent to counteract the influence of the President's message, declared, on the authority of "one of the most eminent business men in Holland," that between the years 1884 and 1888 Holland had changed her revenue system from one of protection to free trade, with disastrous results to the trade and industry of the country; the fact being that no such change had occurred, and that Holland had been from long before Mr. Depew's birth, and was at the time of his declaration, the most free-trade country in Europe. All this in the New York *Tribune* of February 26, 1888.

Mr. Depew returned on Thursday from a European tour. Everybody is glad to see him back. We observe that he made some pleasant observations on landing about his experiences in England, and about the deplorable economical condition of Europe generally, but had not a word to say about Holland, and yet Holland must by this time offer a still better illustration than last year of the danger of changing from a protectionist to a free-trade régime, if the story of that "eminent business man" be true. Why did not Mr. Depew look this person up?

Next we have

Blaine, James G.—Greatest Living Statesman, who on his return home said that the "entire savings" of the wage-workers of Great Britain and Ireland were not so great as the deposits "in the savings banks" of Massachusetts of the wage-workers of that State. On being shown that this was a gross blunder, that he had overlooked the postal savings banks in England, to say nothing of the coöperative associations and Friendly and Building Societies, he went to the 'Encyclopædia Britannica'—to which the *Evening Post* referred him—and there discovered, in the article on Savings Banks, that other people than "wage workers" used the British savings banks. Out of this new information he then actually constructed, not a retraction, nor even a fresh blunder, but apparently a positive falsehood, for he gave the classes of depositors he found in the 'Encyclopædia,' but withheld the proportion the depositors of each class bore to the whole, as furnished by the official statistics, and substituted therefor a proportion of his own, which, he said, was furnished him by "a man" in England, which made it as low as 10 per cent.; or one furnished by somebody else, which made it as high as 25 per cent. This he did with the official figures before his eyes, which showed that of 1,188,147 depositors, 935,195 were tradesmen or their assistants, small farmers, clerks, mechanics, and artisans, domestic servants, charwomen, nurses and laundresses, minors (including apprentices), dress-makers, milliners, shop-women, and female artisans, soldiers, sailors, boatmen, fishermen, policemen, letter-carriers, revenue officers, pensioners, railway men and their wives, excluding 138,858 women described only as "married women, widows, and spinsters," a large proportion of whom are doubtless wage-earners also. All this on the 11th of August, in the State of New York, and 24th of August in the State of Maine.

Next we have

Porter, Robert B.—Sometime member of a Commission to report on the tariff, and now editor of the *Press*, the leading protectionist organ in this city, who, with the view of supporting the proposition that low taxation is bad for agriculture, said:

> "In view of this terrible loss of the productive force of England, is it surprising that a Royal Commission recently said:
>
> "'All increased imports of agricultural produce consequent upon the withdrawal of labor from the cultivation of our own soil, the deterioration of its condition, and the diminution of its products, and all additional tonnage of shipping employed in carrying such imports, are indications not of growth, but of the decay of our productive capacity'"—

the fact being that no Royal Commission ever said anything of the kind, and that the silly passage he here quotes is taken, not from the report of the Royal Commission, but from the dissenting remarks of a minority of four out of the twenty-two members, and these notoriously the most obscure and least competent of the whole. All this in the New York *Independent* of September 6, with manifest intent to deceive. Next comes

Rice, Allen Thorndike.—Amateur Boy, and editor of the *North American Review*, who caused or permitted the appearance of a "symposium" on a text furnished by a pretended extract from the London *Times*, the origin of which he had made no attempt to trace, and for the authenticity of which he had no guarantee, and the publication of which, long after such authenticity had been denied, was manifestly intended to prevent the proper and intelligent discussion of American taxation, and substitute therefor ignorant denunciation of a foreign nation, which has no authority, or jurisdiction, or power of legislation in the United States. All this in his monthly newspaper, on or about the 1st of September, 1888.

THE STAMPEDE IN ST. PAUL.

The Stock Exchange had one of its periodical spasms last Thursday, arising from the passing of a dividend by the Milwaukee and St. Paul Railway Company on its common stock and the reduction of the dividend on its preferred stock. The spasm extended to the whole list of active stocks, including many that show a progressive and undoubted gain in earnings, both gross and net. This feature of the convulsion is nothing to surprise us, since it is human nature to "run" when missiles are falling; and, of course, when we run we drop everything which might impede our flight. "Running" on the Stock Exchange means dropping your property in a hurry. When you have run far enough to see that the missiles were not coming your way at all, you can go back and look for your property, but you will sometimes find that the men who have held it for you while you were away want something for their trouble.

It is not the stampede of the market in general that calls for comment, but the stampede of the St. Paul crowd in particular. It was known some days before the meeting of the St. Paul Directors that no dividend on the common stock had been earned, and the indications were sufficiently plain that if one were declared, it could only be paid by borrowing the money. These facts were published by the *Financial Chronicle* of Saturday, September 8. It is true that the last half of the year is always the period of greatest earnings, and that the returns for this period were not precisely known to the public. But all the indications, and especially the rate wars in the West, pointed to some shrinkage in the last half, if not as great as that of the first. To pay fixed charges and the usual dividends in St. Paul requires considerably more than $10,000,000, and it was known to everybody who had occasion to know, that the net earnings would not reach that figure, even if the second half year should turn out as well as the second half of 1887, as possibly it may yet do. There would be, even in this case, a shrinkage equal to a year's dividend on the common stock, *i. e.*, about $1,500,000. But the Street seems to have been buoyed up, in face of the figures accessible, by the belief that the Directors would nevertheless declare the dividend and raise the money to pay it somehow. In other words, the stock was kept up above 70 on the theory that two and two make five instead of four, and it was not until this belief was dashed by a solemn vote of the Directors that the common stock fell five points, and subsequently five more.

The action of the Directors is to be commended, and it would not call for commendation, but would be looked upon as a matter of course, but for the fact that boards of direction often do the very thing that the St. Paul people were expected to do—declare dividends that have not been earned. It is charged that the St. Paul Board has been a sinner in this way aforetime, and has thus fostered a belief that two and two make five in Wall Street, although only four in the public schools. Whether the charge is true or not,

the investing public are to be congratulated that it is not true this time. There is a law in this State which forbids, under heavy penalties, the declaring of dividends not earned; but, like many other laws which look well in print, it is not enforced in any systematic way. If the Stock Exchange would devote some of the superfluous strength which it exhibits now and then in "running," to the enforcement of this law, there would be a healthier tone in the market, and more legitimate business would come to it from the outer world.

The cause of the shrinkage in St. Paul earnings is the same as that which has afflicted the Burlington, the Northwestern, and other roads, which have for their principal field the fan-shaped territory between Chicago on the east and St. Paul, Omaha, and Kansas City on the west. Too much railroad building has been followed by too much giving away of services. So the candle has been burned at both ends. There have been more roads, and consequently more fixed charges, than were necessary, and the rates have been unduly lowered. Some new business has been created, but not nearly enough to recompense the outlay. In this losing game the Burlington and the St. Paul have been the great sinners and great sufferers. It is not for us to apportion the blame, nor is it necessary that it should be apportioned at all, since the punishment keeps pace with it. Unfortunately it does not stop there. The innocent suffer with the guilty. Nor is it easy to say where the guilt lies. Every one of the Northwestern trunk-line managers will tell you that he never built a mile of road beyond his original trunk line that he was not obliged to build. He means by this that, in order to save his own traffic and to head off somebody else who was going to take it away from him, he has been obliged to build all his extensions, one after another. The problem is apparently insoluble. At all events it has not yet been solved, although the ablest men in the country, moved by the strongest of all possible motives, have given their best efforts to it for a great many years. It cannot be said, however, that society at large has been a sufferer from this multiplication of the means of transport. On the contrary it has been a gainer.

The stampede in St. Paul will be less disastrous than it would have been if the Directors had voted for a dividend not earned — that is, for a dividend that would necessitate borrowing, and a consequent enlargement of fixed charges for all future time. The trouble in that case would have been far more serious, and would have impaired public confidence in all railroad management. As the case now stands, each property may rest upon its own merits. The business outlook has not been altered by anything that has taken place inside the St. Paul Board of Directors or inside the Stock Exchange. The only doubtful element in the fall trade—the possible curtailment of the corn crop by frost—has been almost wholly removed. The prospect is, upon the whole, favorable to a large and remunerative trade, and even the St. Paul Road, as its Vice-President says, will have every car and engine called into the highest state of activity.

LOOSE PSYCHICAL RESEARCH.

THE last number of the Proceedings of the English Society for Psychical Research is largely given up to French experimentation, and in particular more than one-half of it (151 pages) is the contribution of M. Charles Richet. It has been objected to the English society that its members are chiefly literary men, and that they are for that reason incapable of forming just ideas as to the nature of evidence. M. Richet is a scientific man, a Professor of Physiology of the Medical Faculty of Paris, and the editor of the *Revue Scientifique;* but, in spite of that, he exhibits a plentiful lack of scientific caution in his reasoning processes. It is a first principle of evidence that if testimony is of a worthless character to begin with, it is not strengthened by the fact that there is a large amount of it to be had. But M. Richet is of a different opinion. "Comprendrait-on," he says, "que tous ces recueils, *Sphinx*, . . . *Light*, *Banner of Light*, etc., ne fûssent remplis que d'impostures et d'illusions?" Most people would very readily comprehend that it is perfectly possible for a large amount of evidence to exist of such a kind that a car-load of it is of exactly the same weight as the smallest assignable quantity. There are plenty of people in the world whose testimony in regard to matters of any intricacy is absolutely without value, and there is no reason why, if it amuses them to do so, they should not spend their money in securing the publication of their worthless opinions to an unlimited extent. The Boston papers have recently contained accounts of the exposure of a "materializing" medium, a Mrs. Cowen, in a corner of whose room was found a trap-door communicating with an adjoining room by means of a trap-door in that room and a hole in a brick partition in the cellar. They publish side by side with the exposure several long articles from the *Banner of Light* describing the extreme rigidity of the tests under which this medium "materialized," and stating that the most sceptical had been convinced that there was no possibility of fraud in her manifestations. It is never safe to take it for granted that pretended evidence is real evidence merely because it has appeared in print. The ordinary man is by habit and education totally unfit for detecting the tricks of skilful impostors, and M. Richet shows very little knowledge of the capabilities of human nature if he "regards it as *impossible* that this immense illusion should prolong itself for nearly a century without there being some truth behind it."

There is another fundamental principle that has escaped the notice of M. Richet. It is that coincidences which appear only after the event are absolutely worthless, except to suggest further investigation. There are hardly any two objects in the world which will not be found to have some quality in common if one allows himself to search among all possible qualities. It is only when the quality is predesignate, that is, when one is in search of that particular quality, that its repeated occurrence is worthy of remark. For instance, Mr. Peirce writes down the numbers representing the ages of the first five poets in a Dictionary of Biography, and, by casting about among all possible mathematical properties, finds several curious ones which they have in common. This is not strange; but if the ages of several other poets, when examined for this particular property, were found to possess it, then one would begin to suspect that there is some law of nature regulating the age at which a poet dies. One of M. Richet's experiments consists in giving a drawing of a globe surmounted by a cross in a sealed envelope to a patient, who thereupon makes a drawing of a chalice. Although there is no resemblance between them, "one will be astonished to see," says M. Richet, that they are both religious figures. But, in fact, hardly any one in his senses will feel the slightest shade of astonishment at this. Two of his subjects are named Alice and Eugénie. Alice predicts, in a state of trance, that one of M. Richet's children will be sick within a fortnight, with a pain *in the right shoulder and the neck*. Three days later, M. Richet goes to Eugénie, who perceives that one of the children is about to be sick with bronchitis and diarrhea. Nothing happens to the children; they remain in perfect health, but Eugénie's mother has an attack of rheumatism, with pain *in the right shoulder and in the neck*. The italics are M. Richet's, but he is mistaken in thinking that such a coincidence as this is deserving of italics.

Under the head of *action à distance*, M. Richet relates that he mistakes some one on the street for a M. Lacassagne, who a few hours later actually appears in his office; and again that he speaks with a friend of his of a certain former teacher whom they had in common, and soon afterwards they meet this teacher on the street. These occurrences strike M. Richet as very marvellous, and he proceeds to calculate the probability of their being due to chance. In doing so, he makes an extraordinary blunder —the same in principle in the two cases— which it may be of interest to point out. He says that he has probably mistaken some one else for M. Lacassagne not more than once in ten years, so that the chance of doing so on a given day may be taken to be one in 3,000. As he has actually met him perhaps once in every two years, the chance of meeting him on a given day may be put at one in 700. "Consequently," says M. Richet, "the probability that this day shall coincide with that on which I thought I saw him is one in 2,100,000" (*i. e.*, 700x3,000). As if it were a bit more improbable that he should see him on a day on which he had mistaken somebody else for him than on any other day! In reality, one in 2,100,000 would be the probability of both mistakenly thinking he saw him and actually seeing him on a day previously fixed upon independently by some third person. Such ignorance of the theory of probability as this article discloses can only be paralleled by M. Richet's former article on the same subject, which appeared some five years ago in the *Revue Philosophique*, and which he says appears to him to have now become "à peu près classique."

It is far from being the case that all of M. Richet's experiments are open to such elementary objections as the ones which we have singled out. Some of them have the appearance of being sufficiently "irreproachable," to use his favorite word. But the things which the promoters of psychical research ask us to believe in are so extraordinary, and so contrary to all sane experience hitherto, that it is absolutely indispensable that whoever describes them to us should be totally free from the erroneous ways of thinking which are common to the vulgar. There is plenty of irresponsible testimony in favor of supernaturalism in existence already, and the only reason that the Society for Psychical Research has gained the ear of a wider audience is, that its experimental work has been conducted after the fashion of scientific work of the best kind, and that it has been commented upon by persons

of thoroughly trained mental powers. The most that can be said for M. Richet's additions to their labors is, that they do not suffice to disprove the existence of subtler forms of force than are now known to exist. His article is in striking contrast to the two admirable papers which the late Edmund Gurney contributed to the same number of the Proceedings.

THE RELATIONS OF FRANCE AND ITALY.

PARIS, September 7, 1888.

THERE is a difficulty between France and Italy, which has been brought to a climax by the question of the Capitulations at Massowah in the Red Sea. But in order better to understand how a technical discussion on the question of the Capitulations can have assumed such vast proportions, it is well to recall the origin of the present misunderstanding between the two countries.

It is well known that before the war of 1870 the Imperial Government of Napoleon had concluded with Italy the so-called September convention. Napoleon III., who had done so much for the liberation of Italy, and who, by his neutral and expectant policy, afterwards allowed the work of unification, had never dared to give Rome as a capital to the new kingdom. Victor Emmanuel remained in Florence, biding his time. He had feelings of great gratitude towards France; he respected the September convention. The events of 1870 changed the situation; France withdrew her troops, and the Italian armies entered Rome, which has ever since remained the capital of Italy.

The Republican Government of France was not disposed to complain of the violation of a treaty signed by Napoleon III. Though it had not yet taken an anti-clerical color, though Gambetta had not yet said, "Le cléricalisme, c'est l'ennemi," the Republic did not feel called upon to defend the temporal power of the Pope. Though the Chamber at Versailles contained many influential members attached to the Catholic cause, no protest was made against the action of the Italian Government; the accomplished facts were accepted, and the Duke Decazes entered into amicable relations with the Quirinal as well as with the Vatican. The Duc de Broglie, who is one of the leaders of the Catholic party in France, did the same, and no serious difficulty arose between the two countries during the days of the Conservative Republic and of the Presidency of Marshal MacMahon.

The relations of France and Italy remained so good that some political schemers revived at times the old dream of an alliance of the Latin races, of France, Italy, and Spain. Such was not the dream of the most important Italian statesmen. The first among them who, with his usual frankness, expressed a preference for the alliance of Italy with the German Powers, especially with Prussia, was Minghetti. This idea soon entered into the Italian mind. Though at times there was a contrary movement, though *Italia irredenta* threatened Austria, it may be said that as soon as Prince Bismarck succeeded in forming a close alliance between the two German empires, it became the object and ambition of Italy to enter into this alliance.

Let us go back to the time of the Treaty of Berlin. Count Corti represented Italy at the green table of the Congress. One evening he dined, not with Prince Bismarck, but with one of his trusty subordinates, who said to Count Corti: "We are trying to give satisfaction to everybody. Austria, your ancient enemy, and now your friend, will receive ample satisfaction; we think it very just that Italy should have some compensation. The Prince Chancellor is of this mind; what should you think of Tunis?" Upon this, Count Corti jumped to his feet and said: "Is the Prince Chancellor so determined to have us go to war with France?" This outburst put an end to the conversation. "If you take it in that way, let us speak no more of it." Tunis, which had been refused in this manner by Count Corti, was offered afterwards to France, and France seized the first opportunity to take it.

Tunis became from that moment the apple of discord between France and Italy. Everything else was forgotten—Magenta, Solferino, became empty words; "the equilibrium in the Mediterranean" replaced them. The Italian press represented Tunis and Bizerta as the new Carthage which threatened Rome. Count Corti became the victim of the rising opposition to France; as soon as Crispi came into power, he dismissed him in the most brutal manner, though Corti had served his country honorably for so many years. Crispi is the true representative of a new policy: he has nothing in common with the statesmen of the old school of Cavour; he is not a man of the North, of Piedmont, even of Tuscany; he has the fiery temper of a Sicilian. He was for a long time a lawyer in Palermo; as a true Sicilian, he looks on the African shore with feelings of envy. He would gladly say, "Delenda est Carthago."

The question of Massowah has embittered him even more than he was already. It seemed at first that nothing was easier for Italy than to take possession of some point on the Red Sea, and to secure a post of observation on what is now the high road of commerce between Asia and Europe. At the time when England tried to take possession of Khartum and to save Gordon, Italy, uninvited by her, volunteered to join her on the Upper Nile. These projects were knocked on the head by the death of Gordon and by the withdrawal of the English troops from the Upper Nile. Italy has ever since remained on her rock of Massowah, fighting unsuccessfully at times against the Negus of Abyssinia; her garrisons have been decimated by disease; she has spent millions of lire without any profit on a barren land, and cannot see the end of her sacrifices. Discontented with fate and with herself, she has become discontented with France; this question of the Capitulations at Massowah seemed to her "the unkindest cut of all."

There are, I am informed, two Frenchmen only at Massowah; there are also forty Greeks, who, in the absence of a Greek Consul, are placed under the protection of the French Consul—for we had a Consul at Massowah, though we hardly knew it, and it is rather unfortunate that we did have one, for, as the Greeks insisted upon keeping the privileges of the Capitulations, the French Consul was bound to extend these privileges to them, and the French Government was bound to stand by its Consul and by the Capitulations. And so arose a question which might have remained academic if the two governments had been amicably disposed, but which rapidly became an important political question, as Signor Crispi found in it an opportunity for a hostile demonstration against France.

All those who have read the notes of Crispi on this question of the Capitulations of Massowah must acknowledge that they were not conceived in the ordinary style of diplomatic documents; they were aggressive and almost insulting. I was so much moved by their tone that I asked one of my old Italian friends if Crispi was, in this circumstance, obeying his own personal feelings only, or was really representing the sentiments of the Italian people. My friend was candid enough to tell me that Crispi could not have spoken differently; that not only he had public opinion with him, but that he was pushed on by public opinion, and could not resist it. He added that Italy was extremely angry with us; that, after we had taken the immense territory of Tunis, Italy raised no serious difficulty about the Capitulations in Tunisia, though there were as many as a thousand Italians living in Tunis; that France ought to have given every facility to the Italian Government at Massowah, instead of increasing her great difficulties. The press of the peninsula had become all the more bitter against the French Government the more these difficulties at Massowah wounded the pride of the Italian nation; and things had come to that pass that if Crispi had not spoken very loudly, he could not have remained in power.

This was said to me at the time when Crispi was on his way to Friedrichsruhe to confer with the Prince Chancellor of Germany. There was much uneasiness felt in France on the subject of this meeting, and it seemed to many that the Italian Premier had gone to his German ally to ask permission to begin the great struggle with France. These fears were exaggerated. Nobody knows exactly what was said at Friederichsruhe, but what we know for certain is, that the triparţite alliance or league concluded between Prussia, Austria, and Italy was essentially formed in the interest of peace, and it does not depend upon Italy to alter its defensive character and make it offensive. Of course, it is difficult at times to draw a precise line between an offensive and a defensive policy, but if it ever became the manifest interest of Prussia, the most powerful of the three allied Powers, to precipitate events, then such a question as that of the Capitulations would not be chosen as a pretext for the commencement of hostilities, since, on such a question, the great Powers are obliged to side technically with the nation that stands by the old treaties. The Porte has already come forward and taken sides against Italy. Russia, England, even Austria, cannot well oppose the doctrine set forth in the memoranda of the French Government.

It is to be hoped that the present difficulty will blow over. What remains, however, and what deserves attention, is the revival of the old feeling in Italy which used to be called misogallism. We can but deplore this. Let us not return to the old days when Gioberti wrote his "Rinnovamento," and judged France with so much injustice and severity; to the days when Leopardi could write these lines:

> "Taccio gli altri nemici e l'altre doglie,
> Ma non la Francia scelerata e nera,
> Per cui presso alle soglie
> Vide la Patria tua l'ultima sera."

France can threaten nobody; she has no intention of offending Italy; she could show by positive documents that the policy of Italy with regard to herself has changed, not only since 1870, but since 1866. Sadowa was the turning point. Italy remembered the old saying of Guicciardini, "Va dove si vince." I read in a despatch of Nigra's, written on the 11th of June, 1866, under Napoleon III., "The military aid of France is no longer desired in Italy." This is perfectly conceivable; we have always admired the proud "Italia farà da se" of Charles Albert; but can we forget that it was followed by Novara? Italy ought to reflect well before tracing the lines of a political programme which would include a systematic and definitive hostility to France. Neutrality would be, for her, the best and the safest policy.

CORSICA AND SAVOY.

PARIS, September 5, 1888.

THE marriage of the Duke of Aosta and the Princess Maria-Letitia Napoleon, in view of the possibility of his surviving both his brother, King Humbert, and his nephew, the Prince of Naples, that fair youth of eighteen, shy and conscious, and in feeble health, may well prove to be to Prince Napoleon the consolation of his old age. His Imperial Highness has gauged well the possible advantages to be derived from this alliance by the family of the Bonapartes; his parental joy need not be diminished if, during the wedding ceremonies at Turin, he should witness a recrudescence of the popularity which attended him in that city after the Italian campaign of 1859, when "Viva Napoleone, il nostro liberatore!" flew from mouth to mouth. After feeling the void around him growing wider and wider, as the people receded from his personality, it will not be disagreeable to Prince Napoleon, by way of a change, to find himself made much of.

Although well-assorted unions between highnesses are viewed by European eyes as much as ever as guarantees for the hopes and aspirations of their partisans, the calculations in this instance are too flagrantly premature. As if to make them less evident, the marriage is represented as one of inclination. Princess Letitia, says a courtly press, declares her aversion to contracts of political interest, citing candidly enough the uncongeniality of her own parents as an example she should regret to imitate. While the plausibility of this statement is somewhat compromised by the twenty years' seniority of the bridegroom, and his unromantic kinship—being her mother's own brother—it may be said that the young Princess, spite of her austere education, could not have been forced into the marriage against her will. She has a dash of her great-uncle in her, and this element is doubtless responsible for the amicable relation that exists between her and her father. She is the only one of his family with whom he is in accord. A friend remarks that one day, after a pretty lively family altercation which ended in defeat for Prince Napoleon, he naïvely ejaculated: "Où donc a-t-elle pris cette tête-là?" A manifestation of her will is evident in a special condition of her marriage imposed by herself, viz., that she shall be at liberty to receive and to visit, as frequently as she desires, her brother Victor, to whom she is devoted.

In appearance Princess Letitia is a thorough Bonaparte. Tall and vigorous, with marvellous black eyes and hair, clear features set well in relief by an ivory-white complexion characteristic of the Bonapartes, she personifies that fine type of young Roman women so admired by artists. In her graceful bearing she recalls her grandmother, Queen Catherine of Würtemberg, the model wife and mother whose exquisite nature all have appreciated since her private correspondence has been published at Stuttgart. Being French, Princess Letitia received a French education at the College of the Nuns of the Adoration of the Sacred Heart at Turin. She speaks German, English, and Italian with great facility, and, like most modern young women, can "make up" a landscape palette. Above all, she is a fine musician; her voice, remarkable in quality, is well cultivated, and will charm the guests of the Palazzo della Cisterna as it has charmed the congregations of the chapel of the nuns, where she sang every Sunday. But instead of the elegant Parisienne as report has represented her, one will be nearer the truth if he fancy Princess Letitia Napoleon clad in a combination garb very little removed in cut and color from the dress of the Carmelites, in whose company she and her mother attended mass every morning. A fanciful legend has also made of her a kind of Diana Vernon, skimming on horseback over the rugged surroundings of Moncalieri—an extremely romantic note, but inexact. Few so-called girlish whims have been indulged, but simple tastes mildly enforced.

Altogether, the life at Moncalieri might have been for its gayety that of two châtelaines of the fourteenth century. The château is an ancient *rendez-vous-de-chasse* situated some sixteen miles from Turin. It has too much the look of barracks to be architecturally beautiful, but it stands in one of those Italian landscapes of which the eye never tires—a peaceful valley bathed by the River Po, the sky meeting a chain of the Alps. All the children of Victor Emmanuel have been brought up in this retreat. Clotilde, Humbert, Amadeus, Maria-Pia played in those vast halls hung with the life-size portraits of the ancestors of the House of Savoy, from Humbert of the white hands down to Charles Albert. When the eldest daughter of the *re galantuomo* left France, after the arrest of her husband in 1872, she was given Moncalieri, and there also her two sons would have been educated if it had not been decided that they should follow the political fortune of their father.

Princess Clotilde sent her children to Italy in the care of one of her ladies of honor in the year 1870, after the proclamation of the republic, and Prince Amadeus came to the frontier to receive them. This incident must remain a curious souvenir in the events of to-day; he was at that time a young man of twenty-five, newly married, and Princess Letitia a baby four years old. The personal reminiscences she left in Paris are therefore very shadowy, but the souvenirs presented of her mother, now Princess Clotilde, are ever-enduring. The always becoming attitude of the daughter of Victor Emmanuel, her dignified departure from the Palais Royal, her retirement at Moncalieri, throw a halo round her, elevating the character of the woman to that of a saint; in her case royalty has been paid the great compliment of being held secondary to virtues.

When this marriage was announced, the ladies of France loyal to the Napoleonic cause felt unwilling to let the occasion pass without a testimonial of their sympathy and fidelity. A subscription was started, and the Committee ordered the present—I was going to say from the Crown jewellers—the old house of Bapst & Falize, who, under a monarchical régime, would by right of succession have the handling of the Crown treasure. While the subscription was still open, a rather curious evolution in thought took place. The etiquette of ordinary beings offering wedding presents to royalty was questioned, as if the circumstance was without precedent since scions of reigning houses have taken to private life in exile. The long list of priceless knick-knacks inscribed under aristocratic and financial names that figured on the occasion of the marriage of the Princess Amélie d'Orléans cannot have been forgotten. It was not then thought that the donors who so satisfactorily indulged their vanity, were guilty of the crime of *lèse-majesté*. But the subscription for the Princess Letitia's gift revealed scruples hitherto overlooked. Some of the ladies—willing enough to untie their purse strings—questioned the decorum of the proceeding, and felt shy of contributing to the splendors of a royal corbeille. The rule of antique monarchy was recalled, when the King never received, nor even loaned, but always gave, to be true to his prestige.

No better example than Amadeus's short reign in Spain is needed to prove how disappointed the constituents of royalty can feel when the rôle of King is not followed to the letter. It was not so much for his love of pleasure that the young King was censured. The Spaniards reproached him with treating too lightly the dignity of his position, with wanting to act like a simple citizen who, embarrassed with a crown, places it under his arm. But Amadeus preferred not reigning to governing violently. Therefore, as he was neither loved nor feared, and in sympathy with none of the parties, he abdicated at the end of two years. After this political episode the Duke of Aosta retired to private life, and his services to his country are limited to the general inspectorship of the cavalry regiments, and playing proxy to his brother the King at all minor state ceremonies. His first wife left him three sons, and one of the largest fortunes in Italy.

It remains to be seen if, in the present union, France will find an advocate who will foster in Italy the realization of the Napoleonic dream—the brotherhood of the two countries; or if M. Thiers's prophetic words, that "Italy's gratitude to France will only last as long as her weakness," will hold good to the end.

LE COCQ DE LAUTREPPE.

THE ISLAND OF CIRCE.

S. FELICE CIRCEO (Island of Circe), August 19, 1888.

YOUR correspondent "E. S." (*Nation*, No. 1205) points out the singularity of Greek history in the interruption of its chain of evidence during the period of Turkish subjection, and the contrast with Italy, where, as he intimates, every ruin and village has its record from the earliest Roman historical times down. In Greece, on the contrary, during the centuries between the decline of the Western Empire and the revival of Neo-Hellenism, there is no history of any importance except Byzantine; and Greece proper under the Byzantine rule is so completely unknown that the existence of the Parthenon was a discovery of modern times, and it has been possible to rediscover Byzantine colonies whose existence had never been suspected, on the ruins of the oldest Greek cities, and even to attribute to them a prehistoric origin—although we begin to find that there was scarcely an ancient site which was not occupied during the latter years of the Byzantine supremacy. This oblivion is not, however, due to the Turkish conquest and slavery, but goes further back, and probably began with the devastations and depopulation of the Slavic invasion and the consequent isolation of Greece proper, while the piracy and ravage of the Crusades and the conquests of Venice, actuated by the most venomous religious rancor, completed a prostration which the Turkish contest only continued. The original population was probably exterminated over the greater part of the actual Greek territory, and of course there was a complete break in tradition. This probably was the case as early as the thirteenth century; for the ruins on the site of Tiryns which Schliemann took for archaic (*i. e.*, Pelasgic), are in fact totally Byzantine, with bricks such as we find in the buildings of the twelfth and thirteenth century, and a mosaic floor of a barbarous kind which could only have been made in the lowest state of an art that came into existence in Greece in the first centuries of the Roman conquest. The Turks only came in with the conquest of Constantinople in the middle of the fifteenth century.

But there is a curious parallel to this break in the Greek historical record in that which takes place in the Italian prehistoric, and which is not less interesting because, instead of written documents and the interruption of them, the only evidence we have is of stone, of which we have yet only partially read the meaning. The earliest traditions of Italian civilization run very closely with the evidence of the constructions which remain from its primitive stages, and we can now even trace the original Umbrian and his successor and colleague the Pelasgian down to the establishment of Umbro-Pelasgic domination in Italy, with a tolerable probability. Then comes the break I allude to, and the traditions so utterly disappear that there is nothing to show with definiteness when the Etruscans came in and the Pelasgi disappeared.

In a letter to the *Nation* from Rieti, I made some references to the documents of the stone age still remaining in that mountain district, which seems to have been the great field of the Pelasgic development in Italy, and of which the fullest agglomeration does not coincide, as was for a long time supposed, with the Etruscan imperial limits, but with the Latin, as we see them defined in the alliances and movements of the Latin tribes in their wars with Rome, and especially in the great league whose defeat settled the question of Roman supremacy. The centre of this league was Sulmo (now Solmona), a city in the very heart of the Abruzzi, and equally removed from the domination of the Etruscan on one side and the Greek on the other. These Latin tribes emerge from the historical and traditional void into which the Pelasgi have gone; of the beginnings of the one and the end of the other we are equally ignorant. But the constructions and other prehistoric documents (of which, and of the way to read which, we are, thanks to the intelligent system of research adopted by the Italian Ministry of Public Instruction, every day learning more), taken in connection with the indications of tradition in the early Greek and Latin writers, show, as the probable solution of the problem, that the mysterious race which founded Italian civilization and left behind it 400 walled cities in central and southern Italy, with not even the shadow of its name, was simply the great Italic stock to which belonged the mass of the populations who, in the epoch of the earliest classical record—*circa* 700–600 B. C.—occupied the country between Etruria and Magna Grecia; and that, though they had been driven down from the north by the Etruscans, and from the south by the Hellenes, they had, in this great natural fortress, maintained their independence and a certain confederation.

I may have, in other communications to the *Nation*, called attention to the fact that whenever, in the earliest classical tradition, Zeus is called in question, it is as the type of Pelasgic civilization; and I am inclined to think that the tradition of the Saturnian epoch in Italy and its seven great cities refers to the same movement, Saturn and Zeus being to a certain extent bound together—the Saturnian cities being the communities of the golden age of Italy to which succeeds the empire of Jupiter (Zeus Pater), who remains the supreme god of the Pelasgic stock in Greece as in Italy, and whose presence in early local tradition is always marked, so far as my own researches go, at least, by the presence of the ruins known as Pelasgic or Cyclopean. It is another allied fact that the greatest part and the finest examples of those remains occur in the provinces once held by the Latin league. They give way to progress in many places, and a later form of construction occurs which might be called Latin, as it is only found in a distinctive state in some of the Latin cities, as at Antium, and, as I mentioned, at Reate, and, across the plain at one edge of which I am writing, at Terracina, the ancient Anxur.

But a more renowned city in the mythical days was Circeum, the city of Circe, to which Ulysses comes in his wanderings, though he evidently had only the vaguest traditions of the country, and was not aware that there was a city. It was then on an island, and the geological record, taken in connection with the traditional, is one of the most interesting combinations of myth and science I know of. The city is noticed as existing during the wars of Rome with the Latin tribes, and even in the social wars; but, except some ruins of imperial character, I have been able to find nothing of the Roman epoch. Taking Circeum as a part of the sub-Latin district in which come also the adjoining Antium and Anxur, one may say that it marks the break between the Pelasgic and Latin in the most emphatic manner; for while at the latter places the Latin masonry is unmistakable, in the former there is nothing which tells of an intermediate state between the Pelasgic and the Roman. Tradition is equally silent as to this period, for we only hear of Italy as known to the Greeks again in the early days of Rome, when the Corinthian vase-painters came to Tarquinia. It may be supposed that there was no history because there were no historians; but why tradition should be so completely silent, is more difficult to explain. I am not going to attempt to explain it here. Circeum is of itself a sufficiently interesting study.

That the island of Circe was at one time an island in fact, is not left to the assertion of Homeric tradition, for the examination of one of the caves on the coast shows that at one time the present coast line was at least thirty feet lower than it is now; and as the plain which connects the mountain with the mainland is largely occupied by the Pontine marshes, which are scarcely above the sea-level, a depression of the district to the distance of little more than half that would make it an island again. The remains of the Pelasgic city are most interesting and important, though so unknown that it has been a long time in dispute where Circeum stood. The modern village of S. Felice Circeo stands on an angle of the old *enceinte;* and on three sides of the present constructions the foundations of the houses which form the exterior defence (as in all the poorer mediæval towns) are based on the original Pelasgic wall, of which, in some parts, as much as six feet in height remains. It is of the rudest type, but is unmistakable. From this level plateau, about 400 feet above the sea, the land rises gently towards the mountain which overhangs it, and the wall may be traced following the elevation until it meets a precipice, on the top of which, at an elevation of 1,000 feet, is the plateau where the citadel is built. It is the usual plan on which the Pelasgic cities were built, but it is rare that they extend over such an amount of land as here. The slope lies exposed to the east, and is in great part, even in its present neglected condition, of remarkable fertility, and so well adapted to fruit culture that in the Middle Ages it was renowned for the variety and quality of its fruits. Of these we now find only the grape, which grows anywhere in Italy; a pear which grows without culture; blackberries, and the modern tomato, the culture of which is the main resource of a miserable and fever-stricken population. Yet the circuit of the ancient walls must be above two miles; and when one looks at the massive work that could only be the result of a highly organized and numerous population, and at the extent of the ancient city, one of so many, it is impossible not to draw the conclusion that ancient Italy was more densely populated than we have conceived.

I have said that the foundations of the ancient walls on which the present village is built are of the rudest form of Pelasgic, or what is generally known as Cyclopean—*i. e.*, of stone unworked in any way; and this is the case with most of the curtain which connected the lower with the upper town or citadel. But the latter is of the most elaborate and perfect polygonal masonry, and a gate still remaining is very similar to the little gate at Mykenæ. A portion of the wall still stands nearly twenty feet high. This town must date far back of the Homeric traditions, and belongs to the period when Æa was an island and the Tyrrhenian sea rolled where now are the Pontine marshes. But in the days of the early conquests of Rome under Tarquin—perhaps before—the Pometian plains were among the most coveted objects of Roman desire, and the principal source of the Roman grain supply. They are never spoken of as the Pometian (Pontine) marshes, and they were fought over and taken and retaken generation after generation; and the details of the operations show that even if there was such a feature as marsh in the Pometian district, it was of slight importance, and did not prevent Pometium from being one of the strongest and wealthiest cities of Latium, so that when Tarquinius Superbus captured it he made a booty of 4,000 talents of gold and silver. The plain is now so near the level of the sea that the drainage of the marshes is practically impossible, and the malaria makes every year new ravages in the diminishing towns around them.

The record, then, is of a redemption from the sea and a resumption going on and perhaps not yet complete, with a corresponding fluctuation of population, through which a city that must have numbered its people by many thousands, is reduced to a corner of its old area and a small fraction of what it once held. And the evidence is, that all over this part of Italy—from Tuscany down to Campania at least—the same diminution has been going on since the Roman Empire. The Pontine plains are said once to have held twenty-three cities where now only miserable fever-stricken villages, half-a-dozen or so, and these diminishing in population, are to be found. Of these old cities Circeum must have been one of the most important; Tarquin is said to have put his own son over it, and the simple fact that its fortifications are not renewed in masonry of a later time is an indication that it was not treated as many of the Latin cities were, for it figures in the wars of Sylla and Marius, and then probably met its destruction. Of the great Pometium we know nothing—not even its site; but of the other cities only Cora seems to have rivalled this in extent and the importance of its works. The gateway is of the most massive workmanship, and it is not at all uncommon to find blocks of stone in the walls ten feet long, and the wall itself was ten feet thick. But the gateway—the only one I could discover—is only five feet wide, and of the same width is all that remains of the main street.

I should not forget to mention that one feature of the ruins of Circeum is a port of which I do not remember any similar construction. It was guarded by two towers not connected with the city in any way that I can discover. There is a basin, now high and dry, opposite them, and this has been made use of in the imperial times, so that it is now impossible to investigate its original character; but it was necessary to the site, as the shore is rocky

and did not permit the drawing up of the ships on the strand, as was the custom in the Homeric age, and still is with craft of the dimensions of those which then ruled the seas.

What may be the origin of the myth of the magic of Circe it is hardly possible even to conjecture, yet I hold that in all cases there is some root for the old superstitions. I can even fancy that in a different condition of the climate, as when the rainfall was much greater than now, as it must have been anciently, the extreme dryness which is now the ruin of Circeum (the summer being quite rainless) might have been a delightful perpetual summer, enchanting to all who entered into its influence, and that an enervating sense of the luxury of existence might have overcome the mariner who fell on these shores. As Reinach has shown that a rational basis for the myth of the lotophagi is to be found in the date fruit, we may conjecture that a similar condition of the Circean existence was the basis of the witchery of Æa.

To those interested in the archæology of the Roman Empire, there is nothing of importance at Circeum itself; but at the other end of the long mountain which was the island of Æa, there is the *piscina* of Lucullus in tolerable preservation and still one of the most important fisheries on the Italian coast. The mediæval town was absolutely destroyed during the wars between Rome and Naples, and rebuilt entirely in the middle of the sixteenth century, so that, except the foundations of the Pelasgic walls, there is nothing older than 1550, and the village is one of the least picturesque one can see in all Italy. W. J. S.

Correspondence.

THE MORAL ISSUE IN TARIFF REFORM.

To the Editor of The Nation:

Sir: Your editorial in the *Nation* of the 13th, treating tariff reform as a moral issue, is timely and to the point. It has thus far been treated by the press generally in a purely selfish way. The argument *ad captandum* has been too much employed, and the appeal to personal interests has savored too much of the Pennsylvania manner of presenting the advantages of so-called protection. In a political campaign where there is real necessity of presenting truth in some tentative form to those who have not been "students of maxims," and among a people who have been taught to despise the political philosopher as a dreamer or theorist, and look to some successful but not unlikely illiterate "practical man" as the fount of knowledge, there may exist good cause for this manner of disregarding the ethics involved; and yet the very general opinion of those who have been working for commercial freedom for years, is to the effect that more success has accompanied an appeal to the moral nature of those interested in the question than any other form of argument. It has been the great secret of Mr. Hurd's addresses. His eloquence is never so convincing as when, abandoning particulars and statistics, he urges the injustice and moral turpitude of the system of spoliation whose misnomer is protection. The theme of his every discourse is Liberty, and he is very free to admit that his greatest success in making tariff-reformers is when speaking on that line. Prof. Perry has for years taught free trade as a social duty, and has ever sought to impress upon the minds of his classes the morality, or want of it, involved in any system of taxation which unjustly deprives one of the full fruits of his labor.

The tariff, if it does anything, works an unnatural distribution. This means an unnatural interference in personal rights, and whatever touches such rights has no right to plead exemption from moral judgments.

Chas. E. Wheeler.

Toledo, O., September 15, 1888.

THE PHILANTHROPY OF PROTECTION.

To the Editor of The Nation:

Sir: How hard it is to get you to put in your paper one word for Protection, I know from the talk of some persons who have always shrunk from even asking you for fair treatment; but Protection is a religion, and, like other religions, aims to benefit not one country (still less one class), but all mankind. You may fail to see the motive that actuates the true protectionist (for there are protectionists falsely so called); but beware how you refuse a hearing to a man whose heart is in the cause.

For just see what has been done by the United States for the world through our efforts. By excluding from other countries our natural products, we have promoted the prosperity of those countries. Details are not to be expected in a newspaper communication; nor, in fact, are they necessary. You have but to open your cyclopædias or geographies or gazetteers to see what marvellous changes have taken place in South America, in Australia, in New Zealand, in Africa, even in Europe. Are you so blinded by your theories and maxims as not to see that it is the *fact* of Protection that has wrought these changes? Just imagine where England would be if the blighting influence of free trade had not been counteracted and even, in some measure, overborne by our exertions in her behalf. It is time to cease calling protectionists selfish. Courageously, cheerfully, exultantly have we devoted our incomes and our earnings to this cause. The world has witnessed no nobler spectacle than that of millions of hard-working men and women putting away from themselves a large share of their substance in furtherance of this sacred purpose. Were we only true to the duty imposed on us, did we but cherish in our hearts this trust which it is ours to maintain, then would we take measures to exclude our productions from foreign countries more rigorously than now. This would diversify their industries. They could make for themselves what they get from us, and quit making what they send us. England would blossom like a garden; and the English manufacturers would have a home-market, a sale for their output at their own doors. If protection benefits us, must it not likewise benefit them? It is the law of action and reaction in the moral world. Strange that a truth so simple, an obvious deduction from a law of nature, should have been overlooked even by protectionists themselves. Andrew Ingraham.

New Bedford, Mass., September 13, 1888.

PROTECTION AND STRIKES.

To the Editor of The Nation:

Sir: Our protectionists are, indeed, most remarkable beings. The majority of them have perhaps never fully realized how clever they are, and how brilliant is the discovery the world owes to them. It is an infallible system for protecting labor against the injustice of our social organization, which continually threatens the laborer with starvation wages, that calls for our gratitude. Such a system, brought to perfection, would be the final solution of the social question. Its logical outcome is, that if taxation be increased by means of a prohibitory tariff tending to the exclusion of all foreign products, then pauperism will at once disappear, strikes and boycotts be relegated to a dreary past, peace and harmony prevail between laborer and employer; the laborer will have all the work wanted, never lose a day by hard times, nor suffer a reduction of wages; his wife, no longer his competitor, will become his companion and helpmeet, and his children, happily innocent of the fact that an existence has to be struggled for, will flourish within the sacred precincts of a true home.

What a fine prospect to the protected laborer! What a pity that such a theory should be contradicted by stubborn facts! How close to this ideal we approached under the régime of protection will appear from a consideration of the following statistics, compiled from the third annual report of the Commissioner of Labor on "Strikes and Lockouts": Within the six years 1880-1886, in twenty-eight enumerated industries, there were concerned in strikes and lockouts 1,484,026 laborers, with a loss to employers and employees of $94,136,254. Five protected industries alone, viz., boots and shoes, clothing, metals and metallic works, mining, cotton and woollen goods, contribute the following figures to the total: Laborers participating in strikes and lockouts, 715,406, *i. e.*, about 50 per cent. of the total; loss to employers and employees, $49,427,143, more than 50 per cent. This figure does not include the assistance afforded to the striking laborers in these five industries, which amounted to $1,939,375, and represents so much loss and privation to other wage-earners. Out of 6,038 strikes in these five industries, 5,247, or 87 per cent., arose from the question of wages. One cannot estimate the tears, the distress, the starvation, the disturbance of all our industries under the régime of protection implied by these few figures. What a salvation to the laborer is protection! Louis Ka.

September 28, 1888.

THE FORGED ASIATIC TERRACOTTAS.

To the Editor of The Nation:

Sir: The writer of "Archæologists vs. Experts," in the *Nation* of August 23, states that there are still a number of authorities eager to maintain the authenticity of the Cymæan, Ephesian, etc., terracotta groups. This is not quite the case. There actually exists—setting aside the dealers and the non-professional archæologists—but *one* authority in favor of these celebrated counterfeits; that authority is M. Froehner, who wrote the letter to the *Athenæum* alluded to in your article. I take the opportunity to add that M. Kekulé, the well-known professor of archæology in Bonn, quite recently wrote to me that he had never believed in the authenticity of *any* so-called Asiatic group. From a purely scientific point of view, the question must be considered as solved. Who are the forgers? That is quite another problem, which offers but a slight interest for science.

Truly yours, Salomon Reinach.

Château de St.-Germain-en-Laye, Sept. 4, 1888.

Notes.

G. P. Putnam's Sons add to their series of "Questions of the Day" 'The Relation of the Tariff to Wages: A Short and Simple Catechism,' by David A. Wells; 'The Tariff and its

Evils,' by John H. Allen; and 'American Prisons in the Tenth U. S. Census,' by Frederick A. Wines. They further announce 'Business,' by James Platt, after the 75th English edition; 'Glimpses of the Future,' by David G. Croly; and a rhymed version of the first six books of the 'Aeneid,' by Henry Hamilton.

Houghton, Mifflin & Co.'s autumn announcements include 'The Poetic and Prose Works of John G. Whittier,' in seven volumes, with two etched and three engraved portraits, the poems having been rearranged, classified, and revised by the author, with notes and an appendix consisting of poems heretofore omitted by Mr. Whittier from the successive general collections of his verse; a new biographical series of "American Religious Leaders," as, Jonathan Edwards (by Prof. A. V. G. Allen), Charles Hodge (by President Patton of Princeton), Francis Wayland (by Prof. J. S. Murray), Archbishop Hughes (by John G. Shea), Theodore Parker (by John Fiske), etc.; 'Indiana: a Redemption from Slavery,' by J. P. Dunn, jr., and 'Ohio,' by Rufus King (in the "American Commonwealths" series); 'The Critical Period of American History, 1783-1789,' by John Fiske; 'Young Sir Harry Vane,' by Prof. James K. Hosmer; 'History of the Old South Church, Boston,' by Hamilton A. Hill, in two volumes, illustrated; 'Colonial Times on Buzzard's Bay,' by W. R. Bliss; 'History of Woodstock, Vermont,' by Henry S. Dana; 'The Life of Delia Bacon,' author of the Baconian theory of Shakspere, by her nephew, Theodore Bacon; 'Ancient Rome in the Light of Recent Discoveries,' by Prof. Rodolfo Lanciani, illustrated; 'The Soul of the Far East,' by Percival Lowell; the first Supplement to 'Poole's Index,' January 1, 1882-1887, by W. F. Poole and W. I. Fletcher; 'Flowers and Fruit,' selections from the writings of Harriet Beecher Stowe; 'After Noontide,' selections by Margaret E. White; 'Books and Men,' essays by Agnes Repplier; 'On Horseback, and Mexican Notes,' by Charles Dudley Warner; Björnson's drama, 'Sigurd Slembe,' translated by Wm. M. Payne; Dante's 'Divina Commedia,' metrically translated by John Augustine Wilstach, in two volumes; a holiday edition of Longfellow's 'Courtship of Miles Standish,' with illustrations by Boughton, Merrill, and others; vols. 9 and 10, 'Literary Curiosities' and 'Topography,' in Mr. G. Laurence Gomme's edition of the *Gentleman's Magazine Library*; 'Poetry, Comedy, and Duty,' by Prof. C. C. Everett; 'The Law of Equivalents, in its relations to Political and Social Ethics,' by Edward Payson; 'Realistic Idealism in Philosophy Itself,' by Nathaniel Holmes; 'The Diatessaron of Tatian,' translated from the Arabic by Prof. A. L. Frothingham, jr.; a new edition of Andrews and Stoddard's 'Latin Grammar,' by Prof. Henry Preble; and the following fiction—'The Despot of Broomsedge Cove,' by Charles Egbert Craddock; 'The Guardians'; 'The McVeys,' by Joseph Kirkland; 'Molly Bishop's Family,' by Catherine Owen; 'The Cheezles,' by Lucy Gibbons Morse; 'The Peckster Professorship,' by J. P. Quincy; and 'Our Phil, and Other Stories,' by Katharine Floyd Dana.

Ginn & Co. announce 'The Elements of Plane Analytic Geometry,' by Prof. John D. Runkle. They have also in press a new edition of Lanman's Sanskrit Reader, with the long-delayed notes (which will also be issued by themselves), together with 'The Voices of Children,' a theoretical and practical guide for the training of them, by W. H. Leib.

W. R. Jenkins will publish here Zola's new novel, 'Le Rêve,' vouched for as "suitable for everybody to read," simultaneously with its coming out in Paris; also, an *édition de luxe*, in French, of Hugo's 'Notre Dame de Paris,' with illustrations, in two volumes, printed at the University Press, Cambridge, Mass. A new series of "Classiques Françaises" will be introduced by several of Molière's and Corneille's plays edited with notes by Prof. Schele de Vere.

Fords, Howard & Hulbert have nearly ready 'Sermons from Plymouth Pulpit,' by Henry Ward Beecher, in four volumes; and 'Spirit and Life,' sermons by the Rev. Amory H. Bradford; and in preparation, 'The Human Mystery in Hamlet,' by Martin W. Cook.

The next volume in Freeman's series of "Historic Towns" will be Mr. Montagu Burrows's 'Cinque-Ports.' It will be published both in London and New York by Longmans, Green & Co.

'Poor's Manual of Railroads' (New York: H. V. and H. W. Poor) has reached its majority, the new issue for the current date being the twenty-first in a series whose value it would be superfluous to insist upon. Among the novel features in the contents is the statement of the new railroad construction of 1886-87-88, furnished by the *Engineering News*, together with a colored map of the United States in which the extensive additions to our ever-spreading system are made strikingly manifest to the eye. The miles of line laid in 1887 (12,668) considerably exceeded those of 1882, the most active year previously on record. Kansas was the scene of one-sixth of this construction, and the centre of the greater part. There are several maps of States in groups, exhibiting railroad systems.

Hardly any volume of the series of Browning's Poetical Works in the new edition carefully looked after by the author (Macmillan) is more characteristic than the fifth. It embraces the dramatic romances and the "Christmas-Eve and Easter-Day." Among the former, such poems of passion as "The Glove," "In a Gondola," and "The Statue and the Bust," are mingled with the "Incident of the French Camp," "Waring," "The Pied Piper of Hamlin," etc. From this collection the poet could be as surely inferred as, by the anatomist, the extinct animal from its solitary fossil member.

G. P. Putnam's Sons have, in connection with Douglas of Edinburgh, published a handsome third edition of Sir G. W. Dasent's 'Popular Tales from the Norse,' a work which has been for thirty years before the public. The appendix is made up of so-called "Ananzi [or Spider] Stories" of the West Indies, in which various affinities with Aryan folk-lore are discernible. One of them, which has a parallel in the Norse, can be matched also in the second "Uncle Remus" series.

The same publishers send us their two promised editions of the President's tariff message of December last—one of the few messages that have had the distinction of passing out of the category of public documents into literature, and becoming salable. That illustrated by Mr. Nast is not so effective as it would be if the cartoons had been based upon the message rather than upon the subject of protection. Mr. R. R. Bowker, on the other hand, has much enhanced the weight of the message by his "annotations," in which he has made good use of past utterances of Republican Presidents, commissions, and platforms; and of Secretary Fairchild's Report. His pamphlet forms No. 48 of the "Questions of the Day" series.

Miss Frances E. Willard's 'Woman in the Pulpit' (Boston: D. Lothrop Co.) is a Scriptural argument in favor of the proposition implied in the title. Perhaps it would be more correctly described as a refutation of Scriptural argument against the ordaining and preaching of women. The publishers say that "whatever views one may hold as to the merits of the case, he will find much material for reflection" in this volume. Our own reflection is, that it is calculated to impeach all appeals to the Bible for the determination not only of similar questions, but of any question. Miss Willard gets over certain obstacles in her way by attacking "literal exegesis," and offering in its place what she calls "reasonable exegesis"; that is, she assumes the right to make any text literal or figurative as she pleases. This she calls "playing fast and loose," in the case of her adversaries, who have exercised the same privilege of determining what are and what are not "proof texts." She thinks that exegesis will never be put on a right basis till women have an equal share in it with men. Perhaps not, but her present contribution does not lead us to expect so much as she does from this coöperation. However, she is able to quote several divines on her side on the main question.

The fifth volume of the *Forum* is a stout volume of 700 pages. Its index imperfectly reveals the contents for want of being analytic. We make out that the leading topics of discussion, by writers of greater or less prominence, have been the reduction of the surplus, protection, the Southern question, legislative control of intemperance and of railroads, copyright, the public schools, municipal reform, Romanism, etc. Foreign topics are not numerous—"Scotland of To-day," by Prof. John Stuart Blackie, "Irish Landlordism," by Michael Davitt, and Bishop Chatard's "Temporal Power and the Papacy" being the solitary examples, unless we include Mr. Higginson's "English and American Manners."

The newly issued annual report of the Commissioner of Pensions for the current year is remarkable for a map of the United States, showing (besides other data) the population of each in 1860, the number of volunteers and bounty men, and the number of pensioners. The total of these last on July 1, 1888, for the whole country was 452,557—our standing army. New York's share is almost exactly one-tenth of this number; Ohio and Pennsylvania fall but little behind, and are nearly equal to each other. Indiana, Illinois, and Massachusetts follow in order. The once slaveholding States, loyal and disloyal, foot up one-seventh (68,178), Missouri leading off with 18,955, only some 200 less than her neighbor and former victim, Kansas.

The first number of the third volume of the Papers of the American Historical Association (G. P. Putnam's Sons) contains a report of the proceedings of the Association at Boston and Cambridge in May of last year. The most permanently valuable papers are those by Mr. Justin Winsor on the MS. sources of American history in the conspicuous collections extant, and by Mr. A. B. Hart on the biography of a river and harbor bill. In connection with Dr. H. B. Adams's memorial sketch of Leopold von Ranke, the writer prints for the first time a contribution towards a bibliography of the great historian. Prof. C. W. Bennett tells of the nature and extent of the Ranke library secured for Syracuse University. Of curious interest is Mr. H. C. Lea's communicated extract from the 'Analecta Franciscana,' being a letter from Hispaniola by a missionary of that order in the year 1500, when "a certain admiral, captain, and chief placed there, ill-treating those new men, taking their goods and wives, and capturing their virgin daughters, was sent to Spain in chains and replaced by another." There is a noticeably large proportion of foreign topics in the Proceedings, and a noticeable absence of

American papers on the period subsequent to the Revolution.

Without a prospectus or announcement of any kind, the first number of *University Studies* has been published by the University of Nebraska at Lincoln (July, 1888). It is an excellent beginning. The first paper is "On the Transparency of the Ether," by D. B. Brace; the second, "On the Propriety of Retaining the Eighth Verb-Class in Sanskrit," by A. H. Edgren. The last, by J. A. Fontaine, "On the History of the Auxiliary Verbs in the Romance Languages," is a very learned and serious piece of work, that will well repay study.

Young Hearts is the fresh title selected for a new juvenile monthly launched this month in this city (62 Cedar St.). Typographically, it has been conceived with good judgment.

Vacation being over, the Syracuse *Academy* reappears, in its September issue. Mr. Briggs's amusing paper on "The Harvard Admission Examination in English" is the most noteworthy. The editor awards high praise to President Eliot's paper in the August *Atlantic* on the shortening of school programmes, as "the most important educational document of the year."

The late Michael Heilprin has an affectionate tribute paid to him by the Rev. J. W. Chadwick in the September number of the Boston *Unitarian Review*. The notice contains not a few particulars which we think have not seen the light in other outlines of the life of that lamented scholar.

The September *Portfolio* (Macmillan) gives a large measure of its space to living English artists—at one extreme of years, to James Clarke Hook; at another, to the very promising young sculptor, Harry Bates, several of whose pieces are reproduced with fidelity. Mr. Hamerton gives us his Fourth Conversation on Book Illustration, which (under the title "Technical Necessities") takes a wide range. We learn what "Tone" is in illustration, and how wood-engravings surpass pen-and-ink drawings in this regard; what sort of treatment is appropriate for poetry, what for novels, books of travel, scientific works, etc. Here are some of the dicta—by the "Artist" of the talkers: "The absolutely perfect illustration of a poem in which landscape was mentioned, would be in water-color, with the inconvenience that there could only be a single copy"; by the "Critic": "Mezzotint, which is useless for scientific purposes, is excellent in those books which belong to the category of the Fine Arts"; by the same: "It is in the highest degree remarkable that at a time when etching had fallen into almost complete disrepute as a fine art, it was resorted to by the illustrators of novels merely for the facility of its line and the fidelity with which the line could be printed after the biting."

From the International News Co. we have late issues of *Paris Illustré*, in French, with the announcement that early in October an English edition will begin to appear simultaneously with the French. By reason of its first-rate color-prints, this weekly holds an exceptional position among journals of its class.

It is with not a little surprise that we see America supplying France with dances; but so it is. M. J. Lagus, professor of dancing at Pau, has just put forth a 'Nouveau Guide des Danses françaises et américaines' (Paris: Sauvaitre; New York: Brentano), in which we find explained and exemplified a "Nouveau quadrille américain" and the "boston-valse." In describing the latter, M. Lagus declares that "il est difficile d'arriver à être excellent bostonneur. . . . Un peu de constance et beaucoup de pratique suffiront pour imiter les Américains, qui exécutent cette danse avec une souplesse, une élégance et une grâce vraiment prodigieuses."

'Souvenirs d'un Homme de Lettres' is the title of the sequel of M. Alphonse Daudet's 'Trente Ans de Paris' to be published shortly in French, illustrated in the fashion which has made the Tartarin books doubly delightful.

In a recent mention of Ginn & Co.'s school edition of Franklin's Autobiography, we mistakenly implied that no notice was taken of his anti-slavery endeavors in his latter years. We still think, however, that they did not receive due prominence at the hands of the editor.

—The new circular of the Selden Society again draws attention to the excellent objects which that body has in hand, viz.: (1.) The printing of manuscripts and of new editions and translations of books having an important bearing on English legal history; (2.) The collection of materials for dictionaries of Anglo-French and Law Terms; (3.) The collection of materials for a history of English law. The students of our early law know well the need of these things. The Society has not yet a large membership. Although small, it is one which embodies much learning and distinction, as the circular sufficiently indicates. Of course the work of the Society must depend upon the number of its members, whose annual fees are its sole means of support. Nothing is paid by the Society for salaries, and no liability is incurred by joining it, beyond the annual subscription. Any person whatever may become a member by sending this annual subscription of one guinea, or $5.18 (which falls due on January first of each year), to the General Secretary, Prof. J. B. Thayer of the Harvard Law School, Cambridge, Mass., or to any of the local secretaries. The local secretary for New York is Mr. Alexander Tison, 40 Wall Street. The circular may be had of the same persons. All lawyers may well count it as a debt to their profession to become members of the Selden Society. It makes its appeal also to historical and philological students, and indeed to all lovers of good learning.

—Of the first volume of the Society's publications, 'Select Pleas of the Crown—A. D. 1200–1225,' selected and translated by F. W. Maitland, we spoke in the *Nation* of May 31 last. The second volume will contain selections made by the same accomplished hand from the earliest Manorial Rolls extant, viz., those of the thirteenth and fourteenth centuries. Of the extremely valuable and interesting details which must lie buried in these unpublished records of local country life and manners, as well as of early custom and law, one may get some impression from the Quo Warranto cases of the time of Edward III., about A. D. 1330, in Keilwey's Reports, where the lords of certain manors were called on to show the extent and kind of jurisdiction which they claimed, and by what right they claimed it. See especially case 14, on page 141, b. In Pike's 'History of Crime,' volume 1, pp. 450, 451, and in the second volume of Palgrave's 'History of the English Commonwealth,' one may also see illustrations of what went on in the small local courts. "The first stages of a criminal prosecution," says the new circular of the Selden Society, "often take place in the local courts; and the pettier offences are punished there, the King's courts hardly as yet interfering with any crime which falls short of felony. The mediæval law as to offences answering to our modern misdemeanors and offences punishable upon summary conviction, must be found in the rolls of the local courts, which were in truth the police courts of the neighborhood. . . . In short, the whole legal life, and much of the social life, of a mediæval village is recorded in one way or another upon the manor rolls." The 'Select Pleas of the Crown' will be continued hereafter. At present it is thought desirable to give variety to the work of the Society by a volume from the Manor Rolls. If the number of subscribers is large enough, more than one volume will be issued in respect of the year's subscription.

—The recently issued April–May number of the *Bulletin du Bibliophile* makes its appearance with a black border in memory of its editor and publisher, Léon Techener, whose death occurred on the 23d of May, after a long and painful illness. A special number of the *Bulletin* is devoted to an appreciative sketch of his life and labors, from the pen of Baron Ernouf, one of his collaborators. The regular number contains the conclusion of a catalogue of the French publications which bear the imprint, well known to bibliophiles, "À Cologne chez Pierre Marteau"; an article by C. M. Briquet on the utility of water-marks from a bibliographical point of view; and an interesting summary of the results of the recent sale of the Baron de la Roche la Carelle's library. The catalogue contained 550 numbers, and the proceeds of the sale were 540,000 francs. An examination of the catalogue shows that the prices obtained were in most cases exceptionally high, even for these days of high prices, and entitle this sale to rank among the most successful ones of recent years. The famous manuscript book of Hours, with the beautiful miniatures attributed to Memling, which sold for 20,800 francs at the Didot sale in 1878, was bought by E. Paillet for 22,250 francs. It is evident that the bindings of the seventeenth and eighteenth centuries are still eagerly sought after by collectors; and as the specimens in this collection were in an unusually fine state of preservation the competition was keen. Padeloup and Derome seem to be the favorites; thus, a copy of the 'Offices de la Toussaint' (Paris, 1720.12°) in a magnificent mosaic binding, considered to be the most perfect specimen of Padeloup's work, and bought at the Pichon sale in 1870 for 1,800 francs, brought the astonishing sum of 18,600 francs. A copy of La Fontaine's 'Fables' brought 61 francs at the Nodier sale in 1844, 235 francs at the Pichon sale in 1870, and 805 francs in 1888. One of Derome's bindings was sold in 1837 for 200 francs, in 1869 for 1,450 francs, and in 1888 for 1,880. A fine specimen of Le Gascon's binding, which was bought at Brunet's sale in 1869 for 2,125 francs, sold for 7,150. On the other hand, the infatuation which raged a few years ago for the bindings of Trautz-Bauzonnet seems to have had its day, if this sale affords us any criterion; thus, specimens of his binding which were sold for 3,020 and 1,900 francs at the Pichon sale in 1870 brought only 1,580 and 830 francs in this sale. Another, which sold for 5,000 francs in 1877, brought only 3,055. It is interesting to trace the growth and decline of this rage for his bindings in the history of a specimen of his workmanship, which was sold for 70 francs at the Meon sale in 1804, for 1,800 francs at the Pichon sale in 1870, for 5,900 francs at the Didot sale ten years ago, but which now brings only 2,205 francs. Turning again to the older binders, we find one of Boyet's bindings which was sold at the Pixérécourt sale in 1839 for 260 francs, at the Pichon sale for 1,600, now bringing 3,500 francs.

—The latest number of the *Zeitschrift für deutsches Altertum* (xxxii, pp. 196–334) contains a very searching and scholarly article by Zimmer, on the traces of Germanic (Dano-

Norwegian) influence in Irish heroic legend. We can give only a few points. Irish history may be divided into three periods: the period prior to the conversion to Christianity, down to 400 A. D.—a purely indigenous state, in which the elements of heroic tradition were formed; second, the period of migration and expansion, notably towards Scotland and Wales, down to the end of the seventh century; third, from 684 A. D. on, a period when the Irish were in turn invaded by Anglo-Saxons, Northmans, and Anglo-Normans. Irish heroic tradition, formed in the first of these periods, was reformed under Christian influences in the second, and cast into the final shape in which we now have it in compilations like the 'Lebor na Huidre' and Leinster Book. This *remaniement* was equivalent to an organic process. It is not until the third period that we discover Germanic influences, and these are evidently misunderstood (and therefore distorted) borrowings from a foreign source. They stand out in marked contrast with the native elements of the great Cuchulinn-Medb cycle. Pages 264-289 treat of Germanic loan-words introduced during this period—*e. g.*, *elta*, 'sword-hilt,' palpably the Danish-Norwegian *helt*- before going over to the specific Iceland form, *hjalt*-. But the cream of the essay for a Germanist will be found on pp. 289 324, where Zimmer shows step by step that the Cuchulinn-cycle contains faded but still recognizable traces (*a*) of the "horny" Sigfrid-myth; (*b*) of the children of the "Mist" (*Nibel-ung*); (*c*) of kinship by blood-drinking (a marked Norse trait); (*d*) of Cuchulinn and four antagonists, holding towards one another the position of Sigfried, Hagen, Gunther, Giselher, Gernot; (*e*) of Hagen's elfish nature reflected in Cuchulinn; (*f*) of the *Tarnkappe*, cap (here mantle) of invisibility; (*g*) of the *ægis-hjalm*, helmet of terror. Zimmer infers that the Irish learned from the Vikings the later, Low-German version of the Nibelung story, as now preserved in the 'Thidreks-saga.' The circumstance that the Irish must have known the story *before* 975 A. D. (an allusion to it being found in a poem by Cinaed, who died in that year), is a fresh confirmation of Edzardi's view, that the story migrated in this shape from Lower Germany to Scandinavia prior to the tenth century.

—Zimmer refers more than once to a previous paper by him, in the *Preussische Jahrbücher* for January, 1887, upon the part played by the Irish element in mediæval culture. We should have called our readers' attention long ago to this remarkable paper. It is of an altogether different character from the present, inasmuch as it deals with known facts of ecclesiastical history. Although it does not contain much that is strictly novel, it gives a graphic picture of the successive groups of Irish missionary monks, their labors in France, Italy, Switzerland, and Germany, their strength, their weaknesses. The author's style is clearness itself, his grouping and illumination of cardinal facts and features are masterly. We cannot attempt to condense what is already so concise. We can only express the wish that the paper may be translated into English. Nowhere else will the reader find such a trustworthy statement of what the Irish accomplished for the early middle ages.

—In Chiapas, a Mexican State bordering on Guatemala and traversed by the upper course of the Grijalva River, a language called Chiapaneco is spoken, which, at an earlier period, is known to have sent an offshoot into Central America. At present the area of the Chiapanec language is limited to a few towns, and the knowledge which linguists have had of it has been rather scanty. It was exhibited in several small books composed by Spanish missionaries, two of which were made public by Mr. Alphonse Pinart in 1875; but its grammatic structure was not fully disclosed by them. Mr. Lucien Adam, the Americanist, recently heard of the existence of two treatises written by Fray Ivan Nuñez in 1633, in this language, and, having utilized them, succeeded in obtaining a much more enlarged knowledge of its structural peculiarities than could previously be had. The curious phonetic processes of the initial syllables also receive more light by his investigations, which have been made public under the title 'La Langue chiapanègue.' The substantives of the language are divided into two classes, the first of which is called *tighe*, and comprises all living beings and a few inanimate objects; the second, *ticao*, embraces all other inanimate things. That there is also a grammatical difference between the two is stated further on. The non-possessive state is marked in each substantive by *n*- prefixed, which also occurs in the Otomi dialects further to the northwest. When the noun is in the possessive state in some of the substantives, we find a strange mode of pointing it out independently of the *suffixed* possessive pronoun, by prefixing *nj*-, *nba*-, *ma*-, *njhi*-, and other syllables to the noun standing in the singular, *copa*-, *co*- to the noun in the plural number. In the verbal inflection there is an exclusive and an inclusive form for the first person in the plural, and this also exists in the pronoun. The inflection of the transitive verb differs somewhat from that of the intransitive, and is based upon a difference of the suffixed personal pronouns. Tenses and modes are formed either by temporal prefixes or by particles placed after the verb, and in many instances by auxiliary verbs. Derivative verbs are formed exclusively by prefixion. Although Adam has failed to add a full verbal paradigm to his volume, he has gathered a large number of words into a vocabulary of forty-five pages, and has also parsed and analyzed some of the devotional texts. We regret that none of the Mexican languages has ever been published by means of a scientific alphabet, since the Spanish alphabet, poor in sounds, is unfit to transcribe any of them accurately.

REID'S LIFE OF FORSTER.

Life of the Right Hon. William Edward Forster. By T. Wemyss Reid. 2 vols. London: Chapman & Hall; Philadelphia: J. B. Lippincott Co.

MR. REID has done his work well. His book is not of the first order of biographies, but it is an admirable blending of the private life of a man with sufficient contemporary history to enable us to understand and appreciate his career. As long as the recollections of those events, and the names of the many great and interesting men with whom Forster was associated, remain in the public mind, it will be referred to; and there is much in it that will recommend it to the historian and the searcher after facts to illustrate the annals of our time. For all interested in the history of the abolition movement and the war of 1861-5 so far as it affected British sympathizers, in the struggle for extended education in England, and in late events in Ireland, it has peculiar attractions, and is especially valuable. The story is told "so far as may be in Mr. Forster's own words, in the letters which he addressed to his family and friends, in the diaries which he kept from day to day for a great part of his life. These records speak far more clearly and truthfully than any narrative, however artistic, could do of the character of the man himself." We are given two striking portraits—one from a sketch by Lawrence when Mr. Forster was thirty-three, another (a remarkably characteristic one) from a photograph twenty-three years later, when the cares of the world had marked his countenance. There is a lithograph of the picturesque two-storied thatched cottage where he was born in Dorsetshire, and in the second volume we are shown the interior of his beloved library in his northern home at Wharfeside, in Yorkshire.

William Edward Forster was born in 1818 of the best Quaker blood in England—closely allied to the Gurneys, the Frys, the Buxtons, the Foxes—brought up in the then closely guarded circle of the society distinguished by its costume, speech, and other peculiarities, which, in England, at least, have almost entirely disappeared, and by a philanthropy which has, we hope, now become common to all sects and creeds. We are given a charming picture of the almost cloister-like influences under which the only child was reared in the lovely old home to which the father, William Forster, had brought his bride, Anna Buxton:

"In this modest home husband and wife settled down to a life of quiet happiness, the foundation of which was their mutual devotion to the work to which both had felt themselves to be called [religious ministry]. Poverty of the sordid kind was not permitted to enter their doors, and yet they were very poor, only being able to make both ends meet by the exercise of a rigid economy and self-denial faced with equal courage and contentment by both. Both were very fond of flowers—the wife's preference being, however, for the simple wild flowers of the wayside. . . . It was not, however, in the adornment of their cottage home, in the culture of their innocent natural tastes, that the newly married couple found their chief delight."

They found it in helping their poorer neighbors, and in that work in the ministry to which they felt themselves called. Indeed, Forster may be said to have been born to sympathy with the American slave and with Ireland. His father was, like the whole connection, deeply engaged in the anti-slavery movement. His mother, shortly after her marriage and before his birth, spent three months as a minister in Ireland, and when William was two years old, his father felt called to visit friends in America, where he remained five years. This parting and separation were very bitter to husband and wife.

"My depths have been at times very deep," writes the wife in her first letter to her husband after his departure. "I have felt, indeed; but I must reverently acknowledge that I have been greatly, unexpectedly, supported and comforted again and again, and that in a way so sweet to my feelings. Sometimes I have felt such a cheerful calm I could not doubt where it came from, and then such a lively sense at times that my dearest was only gone for a time, that he is coming back to me. . . . But though this has predominated above expectation, I have indeed had to drink a bitter cup; a very suffering path has this separation been to me, and must I not expect will often be? . . . Our darling boy is finely and truly lovely, so very affectionate in his manner, in such a sweet disposition this last day or two. He puts his hand out when I ask where dear papa is, and says 'Gone.' And when I asked if he loved thee, he answered me, 'Yes.'"

Truly, if those old Quaker conceptions of "calls" and of following "spiritual leadings," often in the very face of reason and sometimes of common sense, brought much suffering and anguish in partings and in trials of all kinds, they brought also well-springs of content and joy in clear-cut conceptions of duty and spiritual guidance.

Under such influences the boy grew up:

"It was of this period of his childhood that Mr. Forster often in after life told with amusement a characteristic anecdote. He was travelling in a coach in the charge of his nurse, when a benevolent old gentleman began to talk to him. 'Where is your papa, my dear?' said his fellow-passenger. 'Papa is preaching in America,' was the reply. 'And where is your mamma?' continued the gentleman. 'Mamma is preaching in Ireland,' was the answer which the astounded stranger received."

They separately paid many visits to both America and Ireland. The father eventually died in Tennessee upon one of these visits—a visit in which his desire for abolition and his yearnings towards his coreligionists in the South were combined. One of the most touching passages in these volumes is the account of Forster's visit late in life to the family with whom his father died, and to his grave.

Young Forster was educated at home. He had not the advantages of the public-school and university training then (more than now) considered essential to great success in life. If he lost in a worldly sense, he gained in others—the spiritual part of his nature was perhaps more developed; he acquired a passionate love for scenery, and a hatred of cruelty to animals and of field sports which rather intensified as years advanced. He was early interested in politics on the Liberal side, and kept a journal. When but twelve he writes regarding a candidate in an election: "Was he to be blamed because the lowest of the mob, who care not on which side they are, have happened to commit excesses on his? Was he to be blamed because that by a few of the true words he had said he had further excited the people? No." Somewhat later, his essays at a private school are suggestive of the future politician: "On the Conduct of England to Uncivilized Nations," "The Advantages to Civilization from Education," "The Causes of the Misery with which Ireland has been and is now Afflicted" (a vigorous indictment of English rule), "The Lawfulness of Rebelling against an Unjust Law."

Under the best and sweetest and wisest influences, the child grew into the lad—the lad into the man. His father's conscientiousness and nervous solicitude regarding his welfare rendered the choice of a business difficult. His uncle, Sir Thomas Fowell Buxton, offered him a place and a certainty of competence in his brewery. This Forster declined from conscientious motives. There were other openings connected with the sale of slave produce where scruples likewise barred a settlement. Finally, at twenty-three, apparently upon borrowed capital, he entered into those partnerships in woolstapling and manufacturing in Bradford which, almost from the first, were successful, and brought him ease and sufficient leisure, and from which he retired a wealthy man some thirty years later. He threw himself with characteristic energy into business and into the public affairs of the town. His character assumed some of the more rugged features we associate with the north of England. He was agitated with all the doubts and interests of a vigorous young mind. He wrote for the *Westminster Review* and other periodicals, and became known in the literary and political world. We are given a delightful and characteristic account of a sojourn which the Carlyles made at his bachelor home. Emerson also visited there.

Mr. Forster's marriage to a daughter of Dr. Arnold of Rugby was a happy one. They had no children; the adoption of an orphaned family of Arnold nephews and nieces gave him much of the affections and interest in life which children of his own would have afforded. His annual Continental tour, extending and lengthening as means and opportunity increased, appear to have been made more with one of his adopted daughters than with his wife. The death of his father and mother perhaps hastened the throwing off the Quakerism which in many respects had ill-suited his vigorous masculine nature. In the burly captain of volunteers going up for a term of musketry instruction at Hyde, we see a striking change from the timid Quaker lad of earlier years. And from Quakerism, and having passed through the religious strivings common to all liberal English thinkers who lived through the Forties, Forster settled down in that apparently sincere acceptance of Christianity as expressed by Episcopalianism, which, in men of his stamp, is a puzzle to so many foreigners. Forster now became a political power in the north of England. His desire to enter Parliament was gratified in 1861. From the first he made his mark. He was just in time to take a decisive stand in the contest then commencing with us. It did not require the appearance of Mr. Cairnes's 'Slave Power,' or the taking of Vicksburg, or the victory at Gettysburg, to induce him to side with the North. From the first his views were clear upon the question at issue. Shortly after his election, lecturing before the Bradford Mechanics' Institute, he said:

"The war arose from the difficulty of solving the problem whether Christian and civilized men should keep numbers of their fellow-creatures in bondage—more particularly when those men were not in a distant country, but living among them in their very homesteads as it were—and keep them as slaves, and treat them as though they were beasts."

His earliest serious interest in public affairs had been when he was called upon to assist his uncle, Sir T. F. Buxton, in arranging for the unfortunate Niger expedition. So his earliest Parliamentary efforts were engaged with Bright and Cobden in the almost forlorn hope of keeping England from openly siding with the Rebellion; and later, in the Cabinet, he was mainly instrumental in preventing the shipwreck of the *Alabama* arbitration. Yet he never abandoned his feelings as an Englishman. He was ready to go to war if Mason and Slidell had not been returned; he was prepared equally to face a future of alienation from the United States if the claims for consequential damages had not been abandoned. His name will always be associated with the English Education Bill of 1870—the carrying through of which was a work any statesman might be proud of—a measure which, at the time of his death, had doubled the number of public schools and trebled the number of scholars in England. It was eminently statesmanlike, eminently what we are accustomed to regard as Anglo-Saxon in its mode of working—based upon no ideal uniform system, but aiming to accomplish the maximum of effect; availing itself as far as possible of old-established systems, with the least possible disturbance to prejudices or vested rights and interests. His refusal to prosecute, while recalling, Gov. Eyre, had earned for him the hostility of many of his philanthropic friends. His measure of education brought him into permanent conflict with many of his old radical associates, who believed he betrayed the cause of progress and enlightenment in refusing to strike a blow through it at the prestige and influence of the clergy. "It was his lot either to be deeply loved or strongly disliked by those with whom he was brought into contact."

Mr. Forster had been all his life interested in Ireland. He paid several sympathetic visits during the famine; he was mainly instrumental in rousing British philanthropic feeling to the gravity of the catastrophe. In 1848 he had written that "the only way to benefit Ireland was to make it a home instead of a prison." He had, after Smith O'Brien's abortive *émeute*, offered an asylum to the father of John Dillon. It was his earnest desire to be numbered among the permanent benefactors of Ireland and her people. He eagerly accepted the Irish Chief Secretaryship as an opportunity to carry into practice his life-long desires. We are not inclined too nicely to apportion the mistakes and want of sympathy that led to his failure in that capacity. Mr. Reid has a simple explanation in the inherent devilment of the Irish leaders and "their dupes." In the cataclysm which long neglect of vital questions had induced, no one in the position of Irish Secretary working through the permanent Castle officials could have succeeded—certainly not Mr. Forster, whose kind motives were encased in a triple English confidence in the capacity of himself and his party to settle the question without regard to the wishes and prejudices of those concerned. Had it been a question affecting Englishmen to the same proportionate extent as Irishmen, Mr. Forster and the Cabinet would have resigned when the "Compensation for Disturbance Bill" was thrown out. The Irish members and people were then in no mood to make it pleasant for any Chief Secretary. They were not always fair to him. His substitution of buckshot for bullets arose from a humane preference for wounding rather than killing; but it was little likely the Irish people would be attracted towards a ruler who discussed in any form the manner in which they should be shot down.

The Irish land question had been made the life-long study of many prominent Irishmen in Ireland who never took any part in national politics. So far as we know, Mr. Forster and the Cabinet to which he belonged approached a settlement without the slightest consultation with such men. In an English struggle of a like character they would never have applied coercion before reform. Subsequent events have proved that it was not altogether sinister motives which induced Mr. Parnell and his friends to advise the Irish farmers to be slow in availing themselves of the Land Act. There was some ground for the Irish people believing that Lord Houghton's dictum, with which Mr. Reid opens one of his chapters, touching the Birmingham Radicals who objected to Forster's success in education ("There is nothing that riles mankind so much as seeing the objects they desire, accomplished by other means than their own"), might be taken home by Mr. Forster himself.

At page 386, vol. ii., Mr. Reid refers to an incident which, after the passage of the Land Act, "added greatly to Forster's anxiety"—the publication, under the authority of the Land Commission, of a pamphlet expounding the advantages of the act, but "in which the suppressed Land League was extolled" (Mr. Fottrell, its author, Solicitor to the Land Commission, lost his appointment of £1,000 a year on the heels of it). A copy of the pamphlet lies before us as we write. We cannot see that the Land League is therein directly extolled. Mr. Fottrell appears to us very naturally and wisely to have endeavored to draw the Irish people to accept the benefits of the act by urging upon them the truth that its principles were the same as those for which Davitt, Parnell, and Dillon contended when they established the Land League. Eight hundred men in prison on his personal fiat, real criminals at large, outrage in full swing, formed a sad conclusion to Mr. Forster's desires for the good of Ireland. There is something pathetic in his clear perception that all hope was at an end of his ever benefiting the land which he in truth loved so well.

With Mr. Gladstone's acceptance of the Kilmainham Treaty, Mr. Forster's official life terminated, and he returned almost with a feeling of relief to social life, his books, his whist-playing, and his travels.

THE GOSPEL OF PROTECTION.

Principles of the Economic Philosophy of Society, Government, and Industry. By Van Buren Denslow, LL.D. Cassell & Co.

In this work the American system of political economy may be said to have attained its most perfect development. Those eminent Philadelphians, Messrs. Elder, Kelley, and Swank, have elaborated portions of the system, and the great Carey undoubtedly conceived it all; but it was reserved for the present author to give it full and rounded completeness. It is true that some of Carey's works apparently exceed this volume in bulk, but we are confident that comparison will show that these 700 closely printed pages contain more assertions and upon a greater variety of topics than are to be found in any 5,000 pages of Carey's. Carey, it must be admitted, sometimes repeated himself. But Dr. Denslow, it will generally be found, when he seems about to repeat himself, skilfully alters his facts. The scope of his book is immense, and he is entitled to proclaim, in the language of *Faust* in the opening of Goethe's play, the encyclopædic character of his studies.

Nor do we think that in the matter of style he will suffer if compared with Carey. There is the same exuberance of expression, the same indifference to the pedantic trammels of logicians, the same frankness in the expression of feeling towards other writers, the same efflorescent invective, the same inimitable humor. What happier combination of refined feeling and tasteful expression can be found than in the allusion to Adam Smith as the "intellectual *valet de chambre* to a nobleman's son"? How the traditionary reputation of the arch free-trader totters under such a blow as this! And what an incomparable mingling of wit and logic is to be found in the following *reductio ad absurdum* of Malthus's law of population:

"The law is, that as the laborer's income expands, his power and tendency to procreate expands at the same rate . . . Hence, if A. T. Stewart married on an income of say $1,000 a year, or say $500 each for himself and wife, the so-called law of Malthus would have required when his income reached $6,000,000 a year that Mrs. Stewart should have borne him 12,000 children. In fact, she did not bear him one. Yet Englishmen like Bonamy Price keep on declaring that the Malthus law has to do with Political Economy, when it is only a form of unconscious humor, designed to enable persons to be most amusing when they imagine they are most authoritative."

It is hardly necessary to say that the hypocritical policy of England is thoroughly exposed by Dr. Denslow. "The Cobden Club adopts as its motto, 'Peace, good will among the nations,' but every sunrise is announced by the reveille of English drums, awakening English soldiers to back with the bayonet some new intrusion on the rights of barbarian races, in order to secure to British factories the profits of selling breech-clouts and wooden gods to some new tribe of heathen, to the prejudice of the local manufacture." India especially has suffered. Before the English conquest, its wealth and prosperity were fabulous. It is now a pauper nation, a burden to those who have fed on its riches. Once it "included, in its population, all ranks and grades of wealth, except the famine-stricken and the suffering." It had "all the appliances of a vast and active interior commerce, engaging the activities and satisfying all the wants of a population larger than that of all Europe." To-day the country "contains virtually a population of 200,000,000 paupers." By a tax of 3,000 per cent. on salt many of these paupers are converted into earth-worms, being compelled by the poverty to which British free trade has reduced them to swallow earth for the sake of the saline particles which it contains.

The fate of Ireland has been almost equally pitiable, and Dr. Denslow succeeds in adding a new and particularly aggravated offence to the long list of English iniquities. It is well known that England taxes imported tobacco very heavily; and to prevent this import duty from causing Irish and Scotch farmers to cultivate tobacco, which, as Dr. Denslow very justly observes, "they could do at an enormous profit, by reason of the duty thus imposed on the foreign article"—the Government makes it a criminal offence to cultivate the plant anywhere in Great Britain. By this suicidal policy, which is fatuously said to take not a penny from the people that does not go to the treasury, the Irish farmer has been robbed of this enormous profit.

"No one can tell how peculiarly the climate of Ireland might have proved to be adapted to the culture of tobacco, if it had been allowed. It might have proved to be as much superior to any other point in the world, for the culture of the leaf, as the Southern States are for the culture of cotton. In that case Ireland could have produced the tobacco crop of the world, and, instead of famine and decline, might have maintained a population of nine to twelve millions of people."

We quote this passage not only as proving the studied injustice of a free-trade government towards its subjects, but also as exhibiting the characteristic tendency of professors of the American system to rely upon facts instead of theories. Nothing can exceed the severity with which Dr. Denslow condemns the use of theories and suppositions by the free-trade writers, and he obviously feels a pride—which could be justified by a hundred passages like that which we have quoted—in the freedom of his own eye from beams of this character. As examples of his facts, we may refer to the statement that Adam Smith says that the profit-maker is a vampire that merely sucks the producer's blood, and maligns capitalists as the crafty purloiners of what they have had no hand in producing; that it is rising profits alone that can ever be the potential cause of rising wages; that the (American) poor usually have more healthy labor and less harassing care, and are more likely to eat well-cooked food, than the rich; that the (English) poor are engrossed with constant cares, and oppressed with half-satisfied wants, fighting their way from day to day, or from meal to meal, in the dull struggle for subsistence; that the doctrine of the balance of trade is true; and that the inventive faculties of English workmen since 1846 are relatively latent.

The cause of this relative latency is, of course, the free-trade policy of England. The abolition of the corn laws diminished the population of Ireland in five years by three-eighths. What is still more striking, the abolition of the corn laws, although it destroyed the profits of the farmers and put a stop to the cultivation of corn upon vast areas, can hardly be admitted to have reduced the price at all. "The average for the five years preceding 1846 was 54s. 11 2-5d., in 1846 it was 54s. 8d., and for the eleven years following 1846 it was 55s. 5¼d., or 8d. higher for the eleven years after the repeal than for the five years before it." With great deference to Dr. Denslow's authority, we yet find it somewhat difficult to reconcile this fact with the fact stated a few lines before, that the average price "for the eleven years 1847 to 1857, inclusive, was 47s. 3d." It seems to be an error of judgment to bring these facts into such close juxtaposition. Doubtless each is true for its own particular use, for the masters of the American system fully understand that truth presents itself in many different aspects, and that these aspects must be selected from with reference to the end in view; but the arrangement chosen by Dr. Denslow might be criticised by an "interested vitriol-thrower"—the term by which he racily designates the hostile reviewer—as not the happiest for his argument.

Lest this criticism should seem unduly severe, we hasten to point out an instance where the disposition of opposite phases of fact is arranged with admirable judgment. In reply to the malicious attempt of the free-traders to stir up strife between workmen and masters by suggesting that if the tariff is to benefit labor, duties should be levied, not upon imported goods, but upon imported laborers, Dr. Denslow states the following conclusive facts:

"In excluding immigrants by wholesale without selection, each industry would be excluding its customers in a larger degree than its competitors. Suppose that, to benefit the wages of shoemakers, we exclude all immigrants. An analysis of those who would come shows that only one in fifty-eight of the immigrants who would come would make shoes. But one in fifty-eight of our entire population makes shoes. Therefore the shoemakers would have shut out fifty-seven customers in order to shut out one competitor. But the fifty-seven customers whom they would have shut out would have added as much to the demand as the one excluded shoemaker would have contributed towards the supply."

Now, we find over 100 pages away from this, in a footnote and in fine print, the fact stated that one shoemaker, working in a boot and shoe factory, furnishes 1,000 men, or more than 1,000 women, with all the boots and shoes they require in a year. Had these facts been stated in close connection, they would obviously have tended to confuse the argument. But as they are stated, it is highly improbable that any one who reads the first will recall it when he reaches the second. In fact, the present generation of readers has become so superficial and fastidious that most of them will probably skip the footnotes altogether, and may even find portions of the text too much for their enfeebled powers of assimilation.

We pass by with great reluctance Dr. Denslow's proof that a man may enrich himself by maintaining a large number of household servants, and many other delightful demonstrations. But we cannot omit all reference to his original treatment of the subject of taxation. It is the peculiarity of taxes that they cannot be proved to be a burden to any one, while their beneficial results can be easily seen. "Neither the statesman nor the citizen, in fact, cares or needs to know who pays the tax." The question is "a mere philosophical and metaphysical subtlety." Thus, if the sale of liquor be taxed,

"a half or a third of the persons that would else engage in it go out of it, thus enlarging the ratio of customers to those that remain, and hence removing from them the tax. . . . The customer will declare that he is not taxed, as he gets his goods of as good quality and at as low a price as before, but from fewer merchants. The persons who go out of the business cannot be said to pay the tax, since they go into other kinds of business and are not in the line from whence the tax comes. The liquor-seller who remains certainly does not pay it, as the increase of custom resulting from driving his competitors out of the business has reimbursed him."

These truths apply to taxes on land and other taxes, but during the present political campaign they are of peculiar interest as affecting the question of the whiskey tax. As it does not raise the price to the consumer it cannot reduce the consumption, so that the Republicans are justified in abolishing it. On the other hand, as it is burdensome to no one and very productive of revenue, the Democrats are justified in retaining it. "The bearings of this observation lays in the application on it." Or, as Dr. Denslow remarks with as much wisdom as scholarship, "*omnium vivum ex ovo* finds its complement in *omnium ovum ex vivo*."

Upon the whole, we can sincerely commend this volume to our readers as containing the very best exposition of protectionism, its theory and its facts, its animus and its methods, that is now in existence or that is likely to be hereafter produced. The passage with which we must conclude our quotations, might well constitute the platform of a protection party and be taught in the political catechism of young Americans:

"Protection is the mountain. It is eternal. Free trade is the mirage. If it advances, it dissolves. It can only make with protection the same kind of an issue as the non-existing and impossible makes with the universal, natural, and inevitable. It is a fight between something and nothing. Protection is an economy; free trade is a give-away, a waste. Protection is constructive; free trade is destructive. . . . Protection investigates, consults, harmonizes, unites. Free trade disintegrates, divides, slanders, besmirches, and disorganizes. Protection collects facts. Free trade is oracular, pompous, and issues dogmas."

SWEET'S HISTORY OF ENGLISH SOUNDS.

A History of English Sounds. By Henry Sweet. Oxford: Clarendon Press; New York: Macmillan. 1888.

In the whole domain of philology there is probably no more discouraging subject than the history of English sound-change. If we consider the modern language, we encounter a multitude of unexplored dialects, scattered over all quarters of the globe, and characterized by vowel shades too numerous to classify and too delicate to define; if we turn to the origins, we find two utterly different elements, one Germanic, the other French—the pronunciation of the one to a great extent uncertain, that of the other still more doubtful. No wonder, then, that while all other branches of linguistic study were flourishing, English historical phonology was long an almost unknown science. So it remained until Ellis began, some twenty years ago, to publish his 'Early English Pronunciation,' a work which of itself places English philology almost on a level with that of other nations.

Ellis's great production is, then, and doubtless always will be our storehouse of information for sixteenth, seventeenth, and eighteenth-century sounds. Still, as is usually the case with books which create a science, it does not entirely meet the needs of any class of readers: for the general student it is too bulky and not sufficiently straightforward, while for the specialist it is scarcely full or trustworthy enough in its examination of the origin and earliest phases of English. In these and some other respects Sweet's 'History of English Sounds,' though largely but an outgrowth of 'Early English Pronunciation,' is a decided improvement. It is remarkably concise, the reading matter occupying only 279 pages; its arrangement is historical, and the earlier stages of the language are satisfactorily treated. Sweet is a man eminently fitted for such work: as a phonetician he has no superior; he has studied living English sounds with more success than any one else; he is justly celebrated as an Anglo-Saxon and Middle English scholar; his wide acquaintance with modern tongues gives him unusual facilities for making comparisons; he attaches due importance to the results of recent scientific research.

Although this 'History of English Sounds' follows the same general plan as the author's earlier work, published among the Transactions of the Philological Society for 1873-4, it is essentially a new book. Under the title 'English Sounds,' the author apparently includes only sounds of Germanic origin; the French element of our language, which received no systematic treatment from Ellis, being scarcely mentioned at all by Sweet.* The chapter on Middle English orthography contains, however, some excellent remarks on Old French pronunciation and spelling. The volume begins with a very concise chapter on phonetics—a statement so brief as to be unintelligible to those not already familiar with Sweet's system. For accurate notation the revised Visible Speech characters are used. Bell's vowel signs, which remain intact, are easy to remember, but the consonant system, the unity of which has been disturbed by necessary changes and additions, requires frequent reference to the table on p. 6. It would, by the way, be well if room could be made in this table for the symbols representing the rounded back open consonants. The numerous diacritics are, at first, especially confusing. Still, this alphabet is certainly the best yet devised for the purpose; it is simpler and more exact than Ellis's Palæotype or Glossotype. Sweet, moreover, uses the familiar Broad Romic characters wherever he finds it possible.

After the summary of the principal facts of phonetics, we have a much longer description of the general tendencies of sound-change. Here the author utilizes to a considerable extent Paul's 'Principien der Sprachgeschichte' and Sievers's 'Phonetik.' He divides sound-mutations into *internal isolative*, *internal combinative*, *acoustic*, and *external* changes. This whole matter of the universal principles of sound-change is extremely uncertain and perplexing. The subject of internal isolative changes is an especially delicate one; and although Sweet handles it with great caution, he cites some examples for which specialists in the various departments would perhaps account by other principles, as, for instance, the change from Latin *teneo*, *valeam* to Italian *tengo*, *valga*. A synopsis of the entire treatise is given on pp. 402-3. Next come very short chapters on the "Origin of Speech-Sounds" and the "Origin of Dialects," the second of which, although it contains nothing absolutely new, is well worth reading. The important subject of sound representation is treated at greater length.

The actual history of English sounds begins with a study (written before the appearance of Brugmann's 'Grundriss') of Indo-European, for which the author uses the less clumsy name *Arian*. In this chapter Keltic is not touched upon at all, and in the exposition of the vowels only Sanskrit, Greek, Latin, and Germanic are cited. The Germanic sounds and the Runes are next taken up, the main points being clearly and briefly stated. In the examination of Runes, Sweet, although his chief authority is Wimmer, favors the theory of their Greek origin. Then we pass on to Old English, which covers some thirty-five pages. Here Sievers is the principal authority followed. Scandinavian requires a special chapter, after which the author traces the mutations of English sounds through Middle English, Modern English (for this Sweet relies mainly on Ellis), and Living English. Throughout the Old and Middle English periods the numerous dialects, with their varied and rapidly changing phonetic tendencies, render a concise statement of the laws of sound-change excessively hard to write and almost equally difficult to follow. In Modern and Living English, matters are simplified by the development of a national language. This standard English was originally the London dialect, which was itself principally East Midland. About the beginning of the eighteenth century, spelling became fixed, and before long it began to exercise a decided influence on the pronunciation. It has not, however, greatly impeded phonetic growth: many important changes are even now going on. In Living English the most striking feature is the power of stress, which alters or destroys unaccented syllables, and develops double forms of those words that are sometimes accented and sometimes unemphatic.

At the back of the book there are several lists and tables. The "First Word-List"—a most valuable contribution to science—contains the Old-English, Middle-English, and present forms of most Anglo-Saxon and Scandinavian words that have been preserved in the language. As these words are arranged not alphabetically but according to the vowels they contain, an alphabetical index is provided. The "Second Word-List" contains modern words in both phonetic and conventional spelling, compared with the Anglo-Saxon originals. Special tables give the various forms of English letters; a comparison of the vowels in Old English, Middle English, and Living English; schemes of the vowels in Old and Middle-English dialects; a comparison of the vowels in late Middle English, the first, second, and third periods of Modern English, and Living English. A list on pp. 265-6 shows the vowel-changes produced in Modern and Living English by a following *r*. These tables are a great help to the reader; several more would be acceptable.

The text is surprisingly free from errors. To the very short list of "Errata" may be added the following: § 121, last line, for *long* read *short*; p. 38, l. 2, for *before* read *after*; p. 63, l. 6, for *what* read *that*; p. 68, third line from the bottom, for *become* read *becomes*; p. 191, l. 2, for *lead* read *led*; § 926, l. 1, for *after* read *before*. In the list of contractions, on pp. 408-9, should be inserted *nl=namely*.

"The most serious defect of the book," says Sweet in his preface, "is that I have not been able to make any general use of the modern English and Scotch dialects, which (with a few brilliant exceptions) have been treated in such a way as to make them worse than useless for purposes of historical philology. American English and Irish English are equally important and equally inaccessible at present." The various American vowel-systems, the modification of vowels before *r*, the fall of *r* not followed by a vowel in some American dialects and its retention (or restoration) in others, the pronunciation of *h* and *wh*, are all highly interesting and important subjects for research. Prof. Primer has made a beginning in his study of "Charleston Provincialisms" (*Phonetische Studien*, I., 3). Now that philologists are directing their attention more and more to living speech, now that modern language-teachers in this country are becoming interested in phonetics (as is shown by the recent formation of a Phonetic Section in the Modern Language

* It has been recently studied by Behrens ('Beiträge zur Geschichte der französischen Sprache in England.' I. Heilbronn. 1886). A course on "The French Element in English" is among the announcements for the coming year at Harvard College.

Association), we may hope that when the time comes for a new edition of Sweet's work our American dialects will no longer be wholly "inaccessible."

Missouri; A Bone of Contention. By Lucien Carr. [American Commonwealths Series.] Boston: Houghton, Mifflin & Co. 1888. 12mo, pp. 377.

Mr. Carr well describes Missouri as a bone of contention, for her position long made her the debatable ground between dissimilar civilizations. In the beginning, when the Mississippi was sought mainly as the pathway to the rich fur trade of the Northwest, her situation by the meeting places of the Missouri and the Ohio with the Mississippi was so favorable that a little group of French settlements sprang up very early, and speedily became a prosperous farming community, characterized by a gentle Arcadian simplicity of nature unchanged until the restless westward movement of the English from the Atlantic colonies reached and revolutionized it. Mr. Carr draws a pleasant picture of those early days. The farmers, and there were none but farmers there, made no pretence to learning, and they had no more use for shops than for books. The fertile soil supplied nearly all their needs. What few other goods they required, some richer tillers of the soil kept packed away in chests in their houses, and anything more that they wanted they could send for to New Orleans or to Philadelphia or Montreal, the next time that a boat began the long and dangerous journey. They were indolent enough, and had no more care for modern progress than they had for Puritan zeal for religion, but they were happy, hospitable, and honest. The pleasure-loving tastes natural to their Gallic temperament were fostered by their prosperity and by their gregarious habit of clustering in villages, and probably there never was a happier community in this country. They had plenty of games and sports, and did not grumble because they had no spinning-wheels or churns. They had no enemies; even the Indians whom they dispossessed could not get up a serious quarrel with them. The nearest thing to a war ended by the disgusted redmen coming to Gen. Trudeau and telling him with delicious frankness:

"We have come to offer you peace. We have been at war with you many moons, and what have we done? Nothing. Our warriors have tried many means to meet yours in battle, but you will not. You dare not fight us. You are a parcel of old women. What can be done with such a people but make peace, since you will not fight? I come therefore to offer you peace, and to bury the hatchet, to brighten the chain, and to again open the way between us."

This idyllic state of things had to come to an end when the Anglo-Saxons arrived; and the great river highway was too great a prize to be long overlooked. But the change in civilization was peaceful, and at first brought rapid growth and wealth; though there soon came a disastrous flurry of speculation, and before long began the long struggle over slavery between the different civilizations of the North and South, the quickly broken compromise, and at last the culmination in civil war. Here again the geographical situation of Missouri, as a wedge entering a vital part of the North, made her one of the first fields of battle, and determined her final possession by that party to which her agricultural character as a corn and not a cotton State inclined her, in spite of the predilection from her Southern ancestry.

Mr. Carr tells the story with a decided prepossession for the Southern party, which generally is no defect, though once or twice it carries him too far. It is too severe a stretch to speak of the shameful mob attack on Lovejoy as justifiable under the natural right of self-defence, or of the seizure of United States property as sanctioned by States' Rights; and the miserable part played by Missouri in the Kansas struggle is far too leniently treated. Still, there is an evident intention to be fair, and to give the facts on which judgment is to be founded.

It is a point on which there is room for a good deal of doubt, whether Missouri would have thrown her lot in with the South if less vigorous measures had been taken by the Federals at the beginning of the war. Her sober reason and her business interests inclined her to the North, but her Southern blood was so inflammable that a straw might have turned the scale. It would not have taken much in 1861 to kindle the mob fury which had burned so hotly against the Mormons and against their Kansas neighbors. But it is well enough to give Missouri the benefit of the doubt. Meanwhile, Northern immigration has changed her character, and given a very far away look to the old pugnacity.

Cæsar's Army: A Study of the Military Art of the Romans in the Last Days of the Republic. By Harry Pratt Judson. Boston: Ginn & Co. 1888. 12mo, pp. 127.

It was a good idea of Prof. Judson's to call his book 'Cæsar's Army,' and aim to give a description of the Roman military system just as it was in the closing years of the Republic, without consideration of the steps by which it was brought to this condition, or, on the other hand, of its later fortunes. There is no more fertile source of misunderstanding in Roman antiquities—whether civil or military—than the habit of confounding different periods, and associating with the age of Cicero and Cæsar institutions that had been long outgrown in their time. We do not doubt that most students who have given any attention to the subject at all have a vague notion that Cæsar's legions, like those of Scipio, were made up of *hastati*, *principes*, and *triarii*. The student of the volume before us will be preserved from that misapprehension. At the same time, we think the book could be made more useful, without sacrificing this merit, by an introduction, which should give a brief statement of the military system as it was in the time of the war with Hannibal, and an appendix which should describe the principal changes under the Empire.

This volume contains the excellent maps and plans adapted by Prof. Judson from Napoleon's 'Life of Cæsar' for Allen and Greenough's edition of Cæsar's 'Gallic War,' and many of the illustrations in that work. The substance, however, while, of course, identical in many points with the notes of that edition, is, as a whole, entirely independent of them. It is a complete and systematic treatise upon the Roman military system in the last century of the Republic, based principally upon Rüstow and Göler, and with many helpful illustrations from modern warfare and judicious discussions of the theories presented. We find occasional infelicities in statement or expression, such as (of a particular method of command, p. 7), "Only the solidity and uniformity of the Roman array made it possible for them"—where "them" has no antecedent. Again, it is misleading to say (p. 6) that each maniple was divided into two centuries, just as each cohort was divided into three maniples. The student certainly would understand that the maniple and century were divisions of the same character, if of different grade; but he is told directly after that the maniple corresponded to the modern company, while the century corresponded to the platoon, being a temporary and shifting division. We cannot accept the argument, on page 14, that the maniples at this period had no standards, these having been superseded by the standard of the cohort. Many scholars, indeed, are of opinion that the *cohort* never had a standard of its own—a view precisely the opposite to that here presented. It seems to us, however, that the introduction by Marius of the standard for legion and cohort would not necessarily supersede the older system, but that the new would more likely be added to the old. The examples given by Mr. Judson certainly do not prove his point.

Trois Empereurs d'Allemagne: Guillaume Ier, Frédéric III., Guillaume II. Par Ernest Lavisse. Paris: Armand Colin et Cie.; New York: F. W. Christern. 1888. 12mo, pp. 295.

Prof. Lavisse has collected in this volume four articles which first appeared in the *Journal des Débats* and the *Revue Bleue*. They are of various degrees of merit. The first chapter, dealing with the Emperor William I., is nothing more nor less than a newspaper article, bristling with turgid rhetoric and setting forth well known and undisputed facts with the excited manner of one who is enriching mankind with some startling and important discovery. The second and third chapters, concerned with Frederick, are less sensational in tone, but the instinct of the penny-a-liner betrays itself when, out of less than a hundred pages set apart to relating Frederick's career, the author expends ten in describing the wedding of the Prince to the Princess Victoria, and ekes out his tale of bricks by translating a portion of the Church of England marriage service. The fourth chapter, having the present Emperor for its subject, and written after his accession on the 15th of June of this year, is really the only part of the book that has value enough to warrant reprinting it. Such value as it has, it owes to the circumstance that comparatively little has as yet been printed in permanent form concerning William II., so that the author is one of the first-comers with useful information about the education and early years of the young ruler. It is due to Prof. Lavisse to note that he possesses the merit, rare in Frenchmen, of writing on German affairs without rancor or chauvinism, and has taken pains to obtain correct information. His countrymen may read his book with profit.

EMMANUEL SWEDENBORG. An Essay. By John Bigelow. Octavo, paper. 50 cents.

New list of publications for the fall season, and separate circulars of works on the Tariff Questions, "Questions of the Day," "Knickerbocker Nuggets," and "Story of the Nations," mailed on application.

HOUGHTON, MIFFLIN & CO.'S NEW BOOKS.

Indiana.

Vol. XII. of American Commonwealths. By J. P. Dunn, Jr. With a map. 16mo, $1.25.

Mr. Dunn is a resident of Indiana, and by adequate knowledge and literary skill is peculiarly competent to write of it. His book is the only record of the official and political life of William Henry Harrison while he was Governor of Indiana Territory, and gives for the first time the details of the struggle over the question of Slavery in that Commonwealth.

The McVeys.

A Novel. By Joseph Kirkland, author of 'Zury.' 16mo, $1.25.

'The McVeys' reintroduces some of the characters which figured in 'Zury,' and is in some respects a continuation of that story, which depicted with wonderful force and fidelity the conditions and experiences of pioneer life in Illinois.

The Law of Equivalents.

In its Relations to Political and Social Ethics. By Edward Payson. 1 vol., crown 8vo, $2.

In this work Mr. Payson shows that the methods of advance in the realms of matter and of morals are entirely unlike, and endeavors to recall the thought of America from its intense devotion to materials pursuits and acquisitions to the far more important objects which demand attention in ethics and social life. He suggests very important considerations with regard to the Family, indicating wherein it differs from Society, the State, the School, the Church. The book treats large subjects in a sincere spirit and with excellent ability.

SIXTH EDITION.

John Ward, Preacher.

By Margaret Deland. $1.50.

"Interesting and remarkable story."—*Archdeacon Farrar.*

IMPORTANT NEW BOOKS

PUBLISHED BY

T. Y. CROWELL & CO.,

No. 13 Astor Place, New York.

VICTOR HUGO'S WORKS.

Over 600 illustrations. Calendered paper. Cloth, gilt top, 15 vols., 12mo, $22.50; half-calf, extra, $45.00; half-crushed morocco, $52.50; half-crushed levant, $60.00.

Les Misérables. 5 vols. *Notre Dame.* 2 vols. *Ninety-three.* 2 vols. *Toilers of the Sea.* 2 vols. *History of a Crime.* 2 vols. *By Order of the King.* 2 vols.

Volumes in this set sold separately in cloth and half-calf bindings.

The above are also furnished in a Popular Edition, 6 vols., cloth, $9.00; or in half calf, 6 vols., $18.00.

In view of the present remarkable reawakening of interest in the works of Victor Hugo, the above edition of his six greatest works will doubtless meet with a warm welcome. They are *all*, without exception, entirely new translations, prepared with the greatest care and deserving of the highest praise. The letter-press and illustrations, as well as the bindings, make them in every way suitable for the library or for gift books.

THE LIFE OF LA FAYETTE.

'The Knight of Liberty,' by Mrs. LYDIA HOYT FARMER, author of 'Boys' Book of Famous Rulers,' etc. Fully illustrated. 12mo, $1.50.

This volume is a studious portrayal of the career of the Knight of Liberty in two worlds and two centuries. America, which is so indebted to this eminent son of France for his Revolutionary aid, will prize the present book. Every student of history should have it.

FAMOUS AMERICAN STATESMEN.

By SARAH K. BOLTON, author of 'Poor Boys Who Became Famous,' etc. With portraits of Washington, Franklin, Jefferson, Hamilton, Webster, Sumner, Garfield, and others. A companion book to 'Famous American Authors.' 12mo, $1.50.

The book has all the elements of popularity. It is simple, honest, pure-minded, and patriotic. It is intended for young readers, and will certainly do them good.

A VALUABLE WORK.

The Pennsylvania Museum
AND
School of Industrial Art.

This Institution intends to hold an Exhibition at the Museum in Memorial Hall, Fairmount Park, Philadelphia, of Pottery and Porcelain made in the United States. The Exhibition will be opened on October 16, 1888, and closed on the 13th of the following month.

All firms and individuals are invited to compete for prizes in money, offered under the terms of the Joseph E. Temple Trust, and all intending to compete should inform the committee as soon as possible.

Those who do not wish to compete are invited to exhibit some of their best productions, with the view of bringing this branch of art before the public.

At least Seven Hundred and Fifty Dollars will be given in prizes for the three best objects of American Art exhibited, the following being considered:
1st. Beauty of Form.
2d. Excellence of Workmanship.
3d. Appropriateness of Decoration.

Any object awarded a prize becomes the property of the Museum, to be always exhibited and labelled as a piece bought by the Joseph E. Temple Fund, in the year of its purchase.

Full information will be given to any one deciding to exhibit.

If desired and claimed, transportation both ways will be paid by the Museum, but the packing must be done by the Exhibitor or some one appointed by the Exhibitor.

The sympathy and coöperation of all interested in this Art Industry are earnestly requested.

Address "Committee on Pottery and Porcelain Exhibition," 205 South 6th St., Philadelphia, Penna.

LONGMANS, GREEN & CO.,

15 EAST SIXTEENTH STREET, NEW YORK.

RECENT FICTION:

A HARD-WON VICTORY. By Grace Denio Litchfield, author of 'Only an Incident,' 'The Knight of the Black Forest,' 'Criss-Cross,' etc. 16mo, cloth, $1.

"Miss Litchfield's earlier works left a distinct and agreeable impression on our minds and caused us to open the new book with favorable expectations, which have not been disappointed. 'A Hard-Won Victory' is a good story. . . . presenting excellent studies of character. An analysis of the popular Murray Hill Pastor, with his worldly-minded spirituality, seems to us especially clever. . . . Its lessons of feminine heroism and self-sacrifice are noble and well conveyed."—*Literary World.*

Also new impressions of

ONLY AN INCIDENT. 16mo, cloth, 75 cents.

THE KNIGHT OF THE BLACK FOREST. 16mo, cloth, 75 cents.

CRISS-CROSS. 16mo, cloth, 75 cents.

LAJLA. Translated from the Norwegian of Prof. J. A. Friis, by Ingerid Markus. 16mo, cloth, $1.

"A most attractive little tale of Northern Norway and the Lapps. . . . The reindeer plays a conspicuous part in the pages of 'Lajla,' necessarily, since he is to the Lapp life, liberty, and currency; and one reads the tale with a bracing sense of driving the fleet animal over crisp snows, lighted by auroral flashes or by the midnight sun."—*N. Y. Nation.*

BEFORE THE DAWN. A Story of Paris and the Jacquerie. By George Dulac. 12mo, cloth extra, pp. 307, $1.50.

"The reader will scarcely find a volume whose chapters are so crowded with mysteries and villanies, and escapades and escapes, and heroism. It is written in a graceful style."—*Chicago Inter-Ocean.*

"Thoroughly clean, while not lacking in exciting incident. . . . A sort of moral writing to be generally encouraged."—*Boston Beacon.*

MISS GREEN'S ROMANCES. New, uniform edition, comprising 'The Leavenworth Case,' 'A Strange Disappearance,' 'Hand and Ring,' 'The Sword of Damocles,' 'The Mill Mystery,' 'X. Y. Z.,' '7 to 12,' 'Behind Closed Doors.' Seven volumes, 16mo, cloth extra, in box, $7.

Of these well-known stories, in their various editions, over a quarter of a million copies have been sold.

READY OCTOBER 7TH:

THE NEW STORY, BY ANNA KATHARINE GREEN.

BEHIND CLOSED DOORS. By Anna Katharine Green, author of 'The Leavenworth Case,' 'A Strange Disappearance,' etc. 16mo, paper, 50 cents; cloth, $1.

HAVE NOW READY:

TALES OF KING ARTHUR AND HIS KNIGHTS OF THE ROUND TABLE. By Margaret Vere Farrington. With 29 illustrations by Fredericks and others. Octavo, cloth. $2.00.

IRISH MELODIES AND SONGS. By Thomas Moore. Illustrated by Maclise. With ornamental borders in colors. 32mo, cloth extra, gilt tops, $1.50. (In the series of "Knickerbocker Nuggets.")

THE COMPLETE ANGLER; OR, THE CONTEMPLATIVE MAN'S RECREATION. Of Isaac Walton and Charles Cotton. Edited by John Major. A new edition, with eight original etchings (including portraits of the authors), and seventy-four engravings on wood, original and selected notes, and a General Index. Also, THE PRACTICAL FLY FISHER. By John Jackson of Tanfield Mill. With 10 plates, representing 120 flies, natural and artificial, delicately colored by hand. One volume, crown octavo, cloth, gilt top, $3.00.

. . . "*It breathes the very spirit of innocence, purity, and simplicity of heart; it would Christianize every discordant, angry passion. Pray acquaint yourself with it.*"—CHARLES LAMB.

"To the grand numerical monuments of this book's universal popularity is now added a sumptuous reprint of the charming Major edition of 1844, with eight beautiful etchings. . . . The woodcuts, fresh and beautiful, are gems of art. The series of plates of flies forms a novel and valuable addition."

FRIENDLY LETTERS TO AMERICAN FARMERS AND OTHERS. By J. S. Moore. Octavo, paper, 25 cents. (Questions of the Day. No. 50.)

HOUGHTON, MIFFLIN & CO.'S

SATURDAY BOOKS.

The Courtship of Miles Standish.

By Henry Wadsworth Longfellow. A Holiday volume, including numerous illustrations by Geo. H. Boughton, F. T. Merrill, and others. In a handsome quarto volume, cloth handsomely stamped, $6.00.

This superb book, in addition to its numerous and engaging art features, contains notes relating to the antiquities of Plymouth, with facsimiles and other pictorial representations of objects of great historic interest. Altogether it is a Holiday volume of decided excellence, beauty, and varied attractions.

Poetry, Comedy, and Duty.

By Charles Carroll Everett, D.D., Professor of Theology in the Divinity School of Harvard University. Crown 8vo, $1.50.

CONTENTS: *Poetry*—The Imagination, The Philosophy of Poetry. The Poetic Aspect of Nature, The Tragic Forces in Life and Literature. *Comedy*—The Philosophy of the Comic. *Duty*—The Ultimate Facts of Ethics, The New Ethics. *Conclusion*—Poetry, Comedy, and Duty considered in their relation to one another.

Professor Everett is well known as an unusually clear thinker, a sound scholar, and a writer of admirable clearness and force. The subjects treated in this book, and the eminent ability and candor which Professor Everett brings to them, will commend it to the best readers.

Books and Men.

By Agnes Repplier. 16mo, $1.25.

CONTENTS: Children, Past and Present; On the Benefits of Superstition; What Children Read; Curiosities of Criticism; The Decay of Sentiment; Some Aspects of Pessimism; The Cavalier.

These essays cannot fail to win the hearty admiration of all discriminating readers by their freshness of view, their wise vein of thought, and their unusual felicity of style.

Sigurd Slembe.

A Drama. By Björnstjerne Björnson. Translated by Wm. M. Payne. Crown 8vo, $1.50.

Björnson's trilogy, "Sigurd Slembe," has been pronounced "the greatest work in Norwegian literature." It is a semi-historical drama, written partly in prose and partly in verse, and dealing with the career of a pretender to the throne of Norway in the twelfth century. Though Björnson's greatest work, it has never before been translated into English, and Mr. Payne's forcible, idiomatic, and graceful translation of it can hardly fail of a hearty welcome.

Hon. Uncle Sam.

BY

VISCOUNT VALROSE,

In this book a well-informed foreigner treats of our leading living orators, journalists, preachers, diplomats, pamphleteers, ladies, cartoonists, financiers, rhymesters, wits, philosophers, poets, in a personal and anecdotic manner.

Price, 50 Cents.

FOR SALE EVERYWHERE.

NOW READY:

Eclectic Physical Geography.

12mo, cloth, 382 pages. 30 single and double-page charts and maps; 151 cuts and diagrams.

The 'Eclectic Physical Geography' differs widely from those in general use.

1. The Charts are distinct and graphically accurate. Each chart presents but a single set of physical features.
2. No scientific knowledge on the part of the young student is assumed.
3. The order of treatment is natural and logical.
4. Phenomena are not simply described, but are traced to proximate causes.
5. The treatment of *Erosion* is not dismissed with the usual brief paragraph. Nearly every chapter finds in erosion a cause or an effect.
6. It discards the theory that the secular cooling and contraction of the planet is the main cause of the present relief of the globe.
7. The chapters on *Life* and on *Weather* and *Climate* are full and in conformity to modern science.

The scientific accuracy of the book is attested by eminent specialists.

Introduction and Sample Copy, price, $1.00; Exchange price, 60 cents.

Van Antwerp, Bragg & Co.,

Cincinnati, New York, Boston.

American Economic Association.

NEW MONOGRAPH.

COLUMBIA COLLEGE.

SCHOOL OF POLITICAL SCIENCE.

The prime aim of this school is the development of all branches of the political sciences. It offers eight courses in political and constitutional history, nine in political economy, five in constitutional and administrative law, four in diplomacy and international law, three in Roman law and comparative jurisprudence, two in political philosophy, and one in bibliography—in all, forty-four hours per week through the academic year. The full course of study covers three years. For admission as candidate for a degree, the applicant must have satisfactorily completed the regular course of study in this college, or in some other maintaining an equivalent curriculum, to the end of the junior year. Special students admitted to any course without examination upon payment of proportional fee. For circular of information apply to Registrar, 49th St. and Madison Ave., N. Y. city.

For information apply to HENRY DRISLER, LL.D., Acting President.

F. A. P. BARNARD, LL.D., D.C.L.,
President of Columbia College.

School Agencies.

BARDEEN'S SCHOOL BULLETIN Agency, Syracuse, N. Y., may be depended on to furnish suitable teachers *and to inform no others.*

THE BOSTON TEACHERS' AGENCY supplies Teachers to Schools, positions to Teachers. Circular free.

E. O. FISK & Co., 7 Tremont Place, Boston.

B. WESTERMANN & CO.,

838 Broadway, New York,

Foreign Booksellers and Importers.

School and Text-books, foreign and American. *Teubner's* Greek and Latin Series.

THIEME-PREUSSER, German-Engl. Dictionary. $4.25.

BRUGMANN. Comparative Grammar. $5 net.

Catalogues on application.

THE DUTIES PROPOSED BY

The Mills Bill,

COMPARED WITH PRESENT DUTIES.

A complete Table of Comparisons will be found in the New York WEEKLY POST of August 30. The same issue contains a reproduction in facsimile of the celebrated "Fat" circular appealing for Republican campaign funds, in which the admission is made that the manufacturers get "practically the sole benefit" of the tariff laws.

A new edition has just been printed to meet the continued demand. Price 3 cents per copy, or $2.50 per hundred, postpaid. Address

THE WEEKLY POST, NEW YORK.

BOOKS! BOOKS!! BOOKS!!!

MURRAY'S REGENT HOUSE BOOKSHOP

Is the place for rare and valuable Books, at remarkably low prices. Catalogues issued frequently and posted gratis to any applicant. Address 15 MELBOURNE ST., NOTTINGHAM, ENGLAND. Orders may be sent through Messrs. G. P. PUTNAM'S SONS or Mr. B. F. STEVENS of New York and London.

F. W. CHRISTERN,

254 Fifth Avenue, between 28th and 29th Sts., New York.

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

Germany.

PROF. A. FLEISCHMANN, *Eldena, Pommern.* Thorough study of German, etc. Summer resort for seabathing. Fine surroundings. Isle of Rügen, University of Greifswald. For circulars address Prof. J. M. Crow, Ph.D., Grinnell, Iowa, or Prof. A. Fleischmann.

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, post-paid, on receipt of 75 cents.

In any family, whether large or small, but es- pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1.25 for two volumes.

Address Publisher of the *Nation.*

JUST PUBLISHED.—THE NATU- ral Method. No. 9, Vol. II. Will be sent on application to students and teachers of languages. Address STERNS SCHOOL OF LANGUAGES OF N.Y. CITY, 27 East 44th Street, New York.

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Microscopes, Acoustic Cane for Deafness, Ear Cornets, etc. H. WALDSTEIN, Optician, 41 Union Square, New York. Catalogues by enclosing stamp. Established 1840.

SCHOOL BOOKS IN FOREIGN LAN- guages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals. CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

FOREIGN BOOKS.—Russian, Polish, Hungarian, Swedish, Danish, Hebrew, French, German, etc. H. ROSENTHAL & CO., 14 Cooper Union, N.Y.

Scribner & Welford's

NEW BOOKS.

The Life and Adventures of Edmund Kean, Tragedian.

By J. Fitzgerald Molloy, Author of 'Life and Adventures of Peg Woffington,' 'Court Life Below Stairs,' etc., etc, 2 vols., crown 8vo, cloth, $5.00.

Volume IV. of the Henry Irving Shakespeare.

The Complete Works of William Shakespeare.

Edited by Henry Irving and Frank Marshall. With Notes and Introductions to each Play by F. A. Marshall and other Shakespearean scholars, and over 600 Illustrations by Gordon Browne. To be completed in 8 vols., square royal 8vo, decorated cloth, price per vol., $3.00. Vol. IV. includes King Henry V., The Merry Wives of Windsor, Much Ado About Nothing, As You Like It, Twelfth Night. Vols. I., II., and III. already published. *And the other volumes will follow at intervals of three months.*

The chief features of the Henry Irving Shakespeare are a general introduction by Henry Irving; prefaces to each play, consisting of literary history, stage history, and critical remarks by Mr. Marshall and other Shakespearean scholars; numerous and important notes, etc., etc., and over 600 illustrations by Gordon Browne, a son of "Phiz."

Princetoniana.

Charles and A. A. Hodge, with Class and Table Talk of Hodge the Younger. By a Scottish Princetonian, the Rev. Charles A. Salmond, M.A., Rothesay. With portraits, etc. Crown 8vo, cloth, $1.25.

"One of the most interesting books that have come for a long time is Princetoniana."—*Philadelphia Press.*

Lessons on Decorative Design.

An Elementary Text-Book of Principles and Practice. By Frank G. Jackson. Illustrated. 8vo, cloth, $2.25.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'" —Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE.

With Dictionaries and other Books of Reference.

Comprising in all translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin and Greek,

700 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

VICTOR HUGO'S DRAMATIC WORKS. HERNANI—RUY BLAS—THE KING'S DIVERSION. Translated by Mrs. Newton Crosland and F. L. Slous. $1.40.

THE LETTERS AND WORKS OF LADY MARY WORTLEY MONTAGU. Edited by her great-grandson, Lord Wharncliffe; with additions and corrections derived from original MSS., Illustrative Notes, and a Memoir by W. Moy Thomas. New Edition, Revised, in Two Vols., with Portraits. $4.

"A most convenient reprint of Mr. Moy Thomas's admirable edition."—*Athenæum.*

AN EGYPTIAN PRINCESS. An Historical Novel. By Georg Ebers. Translated by Emma S. Buchheim. $1.40.

"The translator's rendering is easy and elegant."—*Morning Post.*

ADAM SMITH'S THE WEALTH OF NATIONS. An Inquiry into the Nature and Causes of. Reprinted from the Sixth Edition. With an Introduction by Ernest Belfort Bax. Two vols., $4.

SENECA (L. ANNÆUS) ON BENEFITS. Addressed to Æbutius Liberalis. Translated by Aubrey Stewart, M.A. $1.40.

"This is a faithful rendering of the 'De Beneficiis' in plain but Academic English."—*St. James's Gazette.*

RANKE'S HISTORY OF THE LATIN AND TEUTONIC NATIONS. Translated by P. A. Ashworth. $1.40.

HEINE'S TRAVEL-PICTURES. Translated by Francis Storr. $1.40.

"Mr. Storr's brilliant version."—*Academy.*

GOETHE'S CORRESPONDENCE WITH ZELTER. Selected, Translated, and Edited by A. D. Coleridge, M.A. $1.40.

THE STUDENT'S HANDBOOK OF HISTORICAL GEOLOGY. By A. J. Jukes-Browne, B.A., F.G.S. $2.40.

PAUSANIAS'S DESCRIPTION OF GREECE. Translated by A. R. Shilleto, M.A. 2 vols. $4.

HOFFMANN'S TALES. The Serapion Brethren. First Portion. Translated by Lieut.-Col. A. Ewing. $1.40.

HAUFF'S TALES. The Caravan—The Sheik of Alexandria—The Inn in the Spessart. Translated by S. Mendel. $1.40.

GOLDSMITH'S WORKS. A New Edition. By J. W. M. Gibbs. 5 vols. $7.

A SELECTION.

ANTONINUS, THE THOUGHTS OF M. AURELIUS. $1.40.
ADDISON'S WORKS. 6 vols. $8.
BAX'S MANUAL OF THE HISTORY OF PHILOSOPHY. $2.
BOSWELL'S LIFE OF JOHNSON (Centenary Edition, edited by Napier). 6 vols. $8.40.
COLERIDGE'S WORKS. 6 vols. $8.40.
FAIRHOLT'S COSTUME IN ENGLAND (Dillon). 2 vols. $4.
LESSING'S LAOKOON. Translated.
LESSING'S DRAMATIC WORKS. 2 vols. Translated.
MILTON'S PROSE WORKS. 5 vols.
MOLIERE'S DRAMATIC WORKS. 2 vols. Translated. $4.20.
PEPYS'S DIARY. 4 vols. $8.
PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

**** *The above books sent upon receipt of advertised price. Catalogues of our regular stock, also full lists of all Bohn's Libraries, will be mailed, if desired, to those interested.*

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

OCTOBER NUMBER

READY.

Scribner's Magazine

CONTAINS:

LESTER WALLACK'S MEMORIES OF THE LAST FIFTY YEARS. Being the first of three papers which will appear in successive numbers, covering Mr. Wallack's career as an actor and manager. The present article describes his first appearance on the stage, and his early theatrical experiences, with many anecdotes of the famous actors with whom he came in contact. The illustrations are more than usually interesting, especially a full-page engraving from the last photograph ever made of Mr. Wallack.

PROBLEMS IN AMERICAN POLITICS, by Hon. HUGH MCCULLOCH, ex-Secretary of the Treasury under Lincoln, Johnson, and Arthur, discusses topics which are uppermost in the attention of the public at this time. Among the subjects treated by him are, the Tariff, American Shipping, Immigration, and the Land Laws.

THE RAILROAD IN ITS BUSINESS RELATIONS, by PROF. ARTHUR T. HADLEY of Yale University, is the fifth paper of the popular Railroad Series which has already been so successful. This article concerns the relations of the railroads to the public, as travellers, shippers, and stockholders. It is simple, untechnical, and interesting. The illustrations include portraits of George Stephenson, Commodore Vanderbilt, Thomas A. Scott, John W. Garrett, J. Edgar Thompson, Commissioner Albert Fink, Charles Francis Adams, and Judge Thomas M. Cooley.

THE TEMPLES OF EGYPT, by Mr. EDWARD WILSON, is a delightful paper most richly illustrated. Among them are five full-page illustrations from the author's photographs.

ROBERT LOUIS STEVENSON'S regular paper in the Magazine is this month entitled "Contributions to the History of Fife: Random Memories."

BEHIND THE SCENES OF AN OPERA-HOUSE, is a clever account by GUSTAVE KOBBÉ of the stage of the modern opera-house, showing the devices used to simulate nature, and the wonderful effects accomplished by the ingenious workers behind the curtain. The article is fully illustrated.

CHARITY; A Story, by H. H. BOYESEN, illustrated by pen drawings by Charles H. Stephens.

POEMS, by L. FRANK TOOKER, C. P. CRANCH, and ELIZABETH FAIRCHILD; the serial, "First Harvests," by F. J. STIMSON.

25 Cents a Number. $3.00 a Year.

CHARLES SCRIBNER'S SONS,

743–745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 27, 1888.

The Week.

THE final outcome of the Chinese Treaty trouble is a fresh illustration of the President's luck. The very day he found himself confronted by the question what to do with the Exclusion Bill passed by Congress, the news came that the Chinese Government had definitively refused to ratify the treaty. This refusal is entirely justified by the facts. China did ratify the treaty as originally negotiated. The Senate put amendments into it expressly designed to secure its final rejection by the Chinese, and thus put the President "in a hole." It was almost certain that this design would succeed, but Congress would not wait to see whether it succeeded or not. They actually went to work before hearing from China to legislate as if the treaty had been already rejected by China, and the bill passed and was in the President's hands before China had been heard from. He consequently was on the point of having to choose between vetoing a bill for which there is an undoubted popular demand, and becoming the instrument of offering an insult to a friendly Power such as has not been heard of in the intercourse of civilized nations since the Middle Ages, except as a preliminary to war. It is only the Barbary States of North Africa which have in our day ever treated a friendly Government as Congress proposed to treat China. The rejection of the treaty by China has delivered the President from this dilemma, but it has not saved the country from the discredit of the whole affair.

On Wednesday week Gen. Harrison gave a more precise exposition of his views regarding the surplus than he gave in his letter of acceptance. Apparently, he looks upon the revenue as a fixed sum, instead of an elastic quantity, so that if the income should be reduced below the expenditure until the present surplus is worked off, it would be necessary to increase the taxes a few years hence in order to make both ends meet. This would not be a dreadful thing to do. It would be much better than to go on collecting more money than is needful, since the existence of a surplus is a moving cause of profligate expenditure and personal corruption. What the country most needs now is a *deficit*, as an enforcement to economy. But we must remind Mr. Harrison that the revenue is a progressively increasing sum, even on a given scale of taxation. It increases with the growth of population, and still more with the increase of wealth. All our taxes being taxes on consumption, the national income grows with the number of consumers and also with their means. Hence the dilemma that he presents to the Democratic party is altogether fantastic and imaginary.

"If a Government bond *at the market premium* is a good investment for a capitalist who is free to use his money as he pleases, can it be bad finance for the Government, having money that it cannot use in any other way, to use it in buying up its bonds?" says Gen. Harrison. The gist of his argument is embraced in this sentence, and the chief blunder is here also. It consists in assuming that "the market premium" is an investment premium as to which capitalists and the Government stand on an equality, just as they would in respect of railroad bonds, bank shares, mining shares, Western Union Telegraph stock, and the whole list of securities offered for sale. The fact is, that the market premium is made by the Government's purchases. It is no longer an investment premium. The bond market is cornered. Everybody in Wall Street knows this. The situation is such that it must be cornered. The inducement to corner it is overwhelmingly strong. There being one buyer whose means are unlimited and whose necessities are absolute, and there being a political party, with Gen. Harrison at its head, preventing curtailment of the revenue, and urging bond purchases to get rid of the surplus, all the conditions of a corner and a "squeeze" are pat to the hand of the bond speculators. That is the situation to-day, and what has been the result? The premium on the 4 per cent. bonds has marched steadily upward from 125 or 126 to 130, at which price $3,000,000 have just been taken to avoid a pinch in the money market and to avert a crisis. Upwards of $16,000,000 of *surplus* came into the Treasury in the single month of August. The enormous sum of nearly $10,000,000 has been disbursed by the Government in *premiums* since the 30th of June, 1887.

Gen. Harrison, in a speech at Indianapolis last Saturday, entertained his hearers with some extracts from an English book entitled 'The American Union,' written by a man named Spence, published twenty-six years ago, which he considered of great importance to the citizens of the United States at the present time. It appears that Spence in 1862 took a very unfavorable view of the North in our civil war, and wanted the South to succeed, because the South was for free trade. "I have read those extracts," said Gen. Harrison, "because they seemed to me very suggestive and very instructive. The South offered free trade to Europe in exchange for an expected recognition of their independence by England and France. The offer was very attractive and persuasive to the ruling classes of England. They took Confederate bonds and sent out armed cruisers to prey upon our commerce. They dallied with Southern agents, fed them upon illusive hopes, and thus encouraged the South to protract a hopeless struggle." All this is very sad stuff for a sober-minded man in this present year of grace. Mr. James Spence was an utterly insignificant person, a Liverpool cotton broker, we believe. While he was blowing his pig's whistle, such English free-traders as Bright, Cobden, Mill, and Cairnes were energetically upholding the cause of the North by tongue and pen; and while rich Liverpool cotton brokers were aiding in fitting out Confederate cruisers, the suffering cotton spinners of Lancashire were holding meetings and passing resolutions of sympathy with the cause of the Union. But Gen. Harrison has no recollection of the really great men of England in that crisis, or of the heroic operatives who sided with the North. Nor does he give any heed to the Queen and the Prince Consort, who forbade any concession to Louis Napoleon's scheme for recognizing the Confederacy. He only sees a forgotten book by a forgotten author named Spence.

In spite of the caustic appeals which have been made to Mr. Herbert Radclyffe, Secretary of the Home Market Club of Boston, to induce him to stop the further circulation of the familiar forged extracts from the English papers, he was at last accounts still sending them out by the ton, and was maintaining, in all his replies to remonstrances, that free wool or any other modification of the present tariff meant "ruin" in the interest of British free trade. Yet in a speech which this same Mr. Radclyffe made, no longer ago than 1878, he set forth with great force and truth the benefits which would accrue to this country could our manufacturers get their raw material free. We have seldom seen the case stated more concisely than Mr. Radclyffe put it in this speech: "Whatever tax is upon wool must go upon the goods, must restrict the market for such goods, and must reduce the profit. . . . Give the wool manufacturer his wool at as low a cost as possible, and he will sell his goods at a profit. It will undoubtedly improve his business. Take any manufacturing business, I don't care whether it consumes wool or iron or steel or lumber—whatever the manufacturer uses as a raw material he needs to obtain at as low a rate as possible." Finally, Mr. Radclyffe gives us a British view which sums up the whole matter: "England tried this matter of *false protection by a tax on raw material*. She protected her manufacturers, and placed a high duty on raw materials; but England saw there was no profit in that, and accordingly the protection was reduced upon the manufactured goods and taken off entirely from the raw material, and *at once the manufacturing interests of Great Britain brightened, and it will be so in this country whenever that is done here.*" Now will Mr. Radclyffe publish this speech on a card, illuminate it with a British flag, and circulate that as widely as he has his forgeries and lies?

Mr. Woodburn, Congressman from Nevada, was moved by the success of Congressman Butterworth's experiment to remember

something that he saw in the London *Times* a few years since. This is his recollection, produced in a speech made May 5, 1888:

"A few years since the following paragraph appeared in the London *Times:*

"'A subscription was recently opened to raise funds to circulate free-trade tracts in foreign countries. About £40,000 ($200,000) was subscribed. Some of these tracts are to be printed in New York for circulation in the United States. In addition to the above, $47,000 was subscribed by foreign bankers and importers of this city whose names are in our possession.'"

We need hardly say that this is a lie, and the presumption is that it was invented by Mr. Woodburn. It bears almost every mark of Woodburn, and not one of the London *Times*. No such subscription was ever "opened," and the London *Times* could therefore have made no such announcement unless it desired to court shame and humiliation. The "paragraph" was undoubtedly concocted in Nevada, or thereabouts. The wonder is the Home Market Club has not got hold of it by this time, and we respectfully call their attention to it as a robust and hardy lie suited to poor and squalid neighborhoods.

Six of the professors of the Wesleyan University at Middletown, Ct., most, if not all of whom have been Republicans, have announced their intention of voting for Cleveland this time. We believe the right of professors at universities to vote any ticket but the Republican has long been questioned by high-tariff doctors, because professors, being "theorists" merely, and unacquainted with practical business, are unfit to change their party allegiance; because it is wicked to vote any but the Republican ticket, and therefore a pernicious example to the youths they have in charge; and because it is ungrateful to the various high-tariff men and manufacturers who have at various times given donations to universities or founded them. The conduct of these Wesleyan professors will therefore cause pain and horror in many a counting-room, and will cause many a "clear-headed business man" to ask himself: "What is the use of colleges, anyhow?" We can suggest no remedy except a university test, like the subscription to the Thirty-nine Articles which used to be exacted at Oxford and Cambridge. Give no professorship to any man who is not prepared to sign adhesion to the present tariff and promise to teach it in his lecture-room and in his own family, without criticism or revision.

A remarkable case of political blackmail and blackguardism is the letter addressed to Mr. Thos. M. Osborne, a manufacturer of agricultural implements in Auburn, N. Y., by one Robinson, editor of the Indianapolis *Reporter*. Robinson takes leave to tell Mr. Osborne that he has been informed that he (Osborne) "a former Republican," intends to vote for Cleveland, and that if this is the fact he shall expose him (Osborne) to the farmers of the West as an enemy of American industry and a friend of the British, and all that—meaning, of course, to start a boycott on his trade. He adds that he is informed that Mr. Osborne is the only manufacturer of agricultural implements in the country who holds this unpatriotic position. Therefore he intends to make an example of him. It will be well for Robinson to keep out of the jurisdiction of this State after writing such a letter, because he is liable to be indicted under the boycotting law. Aside from the gross impertinence and blackguardism of the performance, the political economy of Robinson's letter is most wonderful. He assumes that the agricultural classes of the United States, who sell their staple products at Liverpool prices less the cost of transportation, and buy their supplies and tools subject to a tariff tax of 47 per cent., are the real beneficiaries of the tariff, and that they will be so outraged by the goings on of Mr. Osborne that they will stop buying his machines at a word from Robinson of Indianapolis. Why have not the farmers of the West long since boycotted the McCormick Works at Chicago and the Aultman & Taylor Works at Mansfield, O., two nurseries of free trade far exceeding in importance those of Mr. Osborne at Auburn, N. Y.?

Amid the chorus of lamentation about the destructive effects of the Mills bill, which the Republicans say they will not allow to pass, it is pleasant to note that the Dr. Jaeger Sanitary Woollen Co., whose goods are made in Stuttgart, Germany, we believe, announce in a circular that, "*mindful of the possibilities of tariff legislation during the coming year,*" they have decided to make *a general reduction of 25 per cent.* immediately from their present catalogue prices. These goods are both popular and costly. The duty on them is 10 cents per pound and 35 per cent. ad valorem, the whole being equivalent to 62 per cent. ad valorem. A voluntary reduction of 25 per cent., in advance of any tariff change, will be welcomed by a great many people, and will not be looked upon as destructive of any American industry, since this class of goods is not made in the United States. Glancing at the names of the benevolent directors of the Jaeger Sanitary Woollen Company, the first one on the list, we observe, is that of the Hon. S. V. White, Republican Congressman from Brooklyn. What will Mr. White have to say for himself when interrogated about this circular, which anticipates tariff legislation in the direction of lower duties "during the coming year," and puts down prices 25 per cent. in consequence thereof? Why is Mr. White lending his countenance to this foreign concern anyway?

A correspondent, writing on the subject of steel rails, argues as follows:

"If I can understand figures at all, when we pay $32.50 per ton to our own mills, Uncle Sam has the rails *and* the $32.50 also. Can you say nay? When we send $22.50 abroad, we only have the rails. Can you say nay?"

Of course this logic ought to hold good as to *any* variation of prices between the two countries and as to any articles; as, for example, if the foreign price were one cent per ton and the American price $1,000 per ton, or if, the article being tea, the foreigner charged 25 cents per pound and the American producer $25 per pound. Or again, if the foreigner gives us a hundred tons of rails for nothing, we have in that case 100 tons plus $3,250. If we buy the same from Mr. Carnegie, we have the same result, viz.: 100 tons of rails plus $3,250. So we reach the conclusion that the heaping of gifts upon us would add nothing to our wealth. Do you say that the case is not a supposable one? Then take an actual one. After the great Chicago fire a number of British authors and publishers sent several hundreds of volumes of books to that city to form the nucleus of a new public library. These were worth, we will say, $10,000. Now, if the city of Chicago had ordered those books from American publishers, the country would have had the books plus the $10,000. But that is exactly what the country had after the English books came. The city of Chicago had her own $10,000 plus the books. So you see that there must be some fault in your argument, as otherwise it was no advantage to the country, as a whole, to receive this present of books, and it would be none if a similar present had been made to every town in the United States, or to every individual, for that matter. The fault in the argument lies in assuming that the American rail-maker, or the tea-grower, or the book-publisher, would have been idle and doing nothing to add to his own wealth, and thereby to the country's wealth, if he did not have a law compelling the public to pay him more for his goods than they are worth in a free market. We have heard the boast made, and we believe it to be a fact, that Mr. Carnegie can make steel rails in Pennsylvania cheaper than any *other* Englishman or Scotchman can make them in any other part of the world. Another defect of our correspondent's argument, by the way, is, that it holds equally good whether Mr. Carnegie can make rails at a profit at $22.50 per ton or not, and that it is equally valid, as regards the national wealth, if he charges $50 per ton for what costs him only $22.50. We might say much more, but it is always best to leave something to the pupil's ingenuity and original powers.

The need of an educational bill in the United States Senate is rather forcibly illustrated by some remarks made by Senator Blair of New Hampshire the other day on the Copper Trust. Senator Platt of Connecticut had introduced a resolution to investigate this Trust, the chief seat of whose operations is in Paris. Mr. Blair thought that this was a fitting occasion to show that the tariff might be employed to circumvent the Trust. So he said:

"The foreign syndicate controlling the production of the entire world, of course, would furnish the only purchaser of the production of the United States; but if in some way the operations of the foreign syndicate could be excluded from the United States, the United States producer would have the market of the United States; and in controlling the market of the United States he might find the natural employment of his capital and his labor in the production, in this instance, of copper. But if the foreign syndicate is beyond the legislative control of the United States, he is left at liberty to contract with

the American producer, and the American producer is forced to contract with him in order to find a market, because the foreign syndicate may undersell the American producer, unless he chooses to sell to the foreign syndicate, and thus ruin the American producer unless the American producer of copper finds his protection against that foreign competitor by the protective tariff."

In other words, the Calumet and Hecla Mine is compelled to deliver all its copper to the foreign syndicate, not because the syndicate have put the price up to a very high figure, but because they *might* put it down to a very low figure and "undersell the American producer." This calamity, in Mr. Blair's opinion, could be prevented by the protective tariff. This beats Mr. Evarts's exposition of the wool tariff hollow. We do not wonder that Senator Platt declined to be led into such a wilderness by the author of the Blair Educational Bill.

Several inquiries have been addressed to us apropos of Mr. Blaine's official exposition of wages in cotton manufacturing in England and the United States. Some people want to know why we do not compete with England in the cotton-goods trade of the world, if we pay no higher wages than she does and have the raw material free of duty. Others want to know why, under these conditions, England actually sends cotton goods to the United States, and sells them in our market at a profit. An answer to the latter inquiry can be found by examining the trade returns. Cotton goods are of almost infinite variety, and some kinds are not produced in this country at all. For example, out of a total of about $30,000,000 of such importations, laces, braids, cords, trimmings, and insertings count for upwards of $6,000,000, or one-fifth of the whole, hosiery $8,500,000, velvets, velveteens, velvet bindings, ribbons, and vestings about $2,000,000; cotton yarn valued at over eighty cents per pound, $1,000,000. The largest division of cotton-goods importation consists of the articles "not otherwise provided for" in the tariff schedules, upwards of $9,000,000. Thus all of our cotton importations except a trifle are accounted for by articles which do not come into competition with our own manufactures, because they are either not made here at all or are made in insufficient quantity. It is worth remarking that in the "tariff reduction" swindle of 1883 the duty on these finer grades of cotton goods was *raised* from 35 per cent. to 40 per cent. ad valorem.

Turning to the other branch of the inquiry, we remark, first, that we exported in the year 1887 cotton manufactures to the value of $14,929,342. Therefore we do compete with other countries to that extent. Our exportation of cotton goods was one-half as great as our exports of tobacco, two-thirds as great as our exportation of wood and manufactures of wood, more than twice as large as our exports of leather and manufactures of leather, and four times as large as our exports of copper, all of which may be called indigenous industries. Why do we not export more? One reason is that we have not the requisite number of mills to supply fully the home demand. We draw this inference from the fact that new and very large cotton mills are now in course of erection, in spite of the Mills bill and all that that implies, three such being well under way at Fall River alone and a fourth just beginning. Another reason is that cotton machinery is taxed 45 per cent., structural iron 100 per cent. or more, and chemicals, except bleaching powder, 25 per cent. Another reason undoubtedly is that when we went back to high tariffs in 1861, and subsequently, we allowed Great Britain to get the start of us in the cotton-goods trade of the world to such a degree that she now has possession of the principal markets, and everybody knows that mere possession amounts to a great deal. One thing is certain—it is *not* high wages that prevents us from competing with England in cotton manufacturing. We have Mr. Blaine's authority for that statement, and there, for once, Mr. Blaine is right.

There is no doubt that the pressure on President Cleveland to get him to write a letter endorsing Hill's nomination has been actively begun. The emissaries are already on the road. There is serious alarm among Hill's followers touching the effect on his candidacy of the sober second thought of the public, and they are anxiously looking about for the means of counteracting the increasing public disgust. The only thing that could possibly do them any good would be a letter from the President. That it *would* do them any good, however, we refuse to believe. On the contrary, we think it would involve both tickets in common ruin. If Hill is to be elected, it must be on his own character and record. There are very few who know the man, and object to voting for him because they know him, who could be induced to swallow their scruples by anything the President could say about him. On the contrary, we believe any such attempt to cure Hill would aggravate him. The only man in the world who could help Hill would be a man who should prove that he is pure, incorruptible, straightforward, truthful. If any such person appears before the election, he will make Hill's endorsement by everybody else superfluous. In his absence, Hill is a pitiful creature.

Mayor Hewitt's talk on Thursday touching his relations to Tammany was very interesting reading. It appears that Tammany furnished him with lists of people it wished appointed to office, and he failed to satisfy it. He did give Tammany men some offices, however, though not those they desired. His description of Mr. Richard Croker as a man who thinks politics means public office, while he (Mr. Hewitt) thinks it means good government, is singularly correct, but adds nothing to the public knowledge of Mr. Croker. Mr. Hewitt's account of John Kelly as "an honest man under whose control Tammany was a power for good government" is, however, enough to take one's breath away. All researches ever made into Kelly's moral or political condition showed him to be a thoroughly corrupt demagogue or boss, who seemed honest simply by contrast, because he succeeded Tweed. The most important point in Mr. Hewitt's talk is, however, his pledge that if Tammany puts up an unfit man for the Mayoralty, he will allow himself to be run against him.

A very pungent letter from the late Roscoe Conkling about Mr. James G. Blaine, written twenty-two years ago, has been given to the public in the Ithaca *Democrat* by Mr. Peter B. Crandall, with comments and explanations of his own. It is but a specimen of the additional revelations about the "Greatest Living Statesman" with which we should have been deluged had his party been so unlucky as to have his nomination forced on them. There were large stores of such things kept, one may say, in bond, ready to be thrown on the market in case he again offered himself for the suffrages of the nation. Mr. Crandall, now a man of eighty and a Republican from the beginning, finds even Blaine's prominence in the canvass more than he can bear; but most other depositaries of the Blaine record would have been more patient, and have waited till he actually began to run for the Presidency. Had this occurred, instead of the decent, rational, and instructive canvass now going on, and which is, barring the forged quotations, a credit to the country, we should all have been kept busy for three months examining the question whether on such a day the Republican candidate lied, whether on another day he cheated, and whether on another he took a bribe. In view of these things we must all, of every party, give thanks to the Republican Convention for Gen. Harrison. He is not a great man, and his attainments in some fields are small, but there is no need to discuss his personal character, which is in all respects worthy of the great place to which he aspires; and the same remark may be made of Mr. Morton. Consequently we all have time for the discussion of political opinions or ideas, to the immense benefit of the country. No matter how the election goes in November, the gain to the American people from the controversy now raging over the tariff will be great and permanent.

The official figures from the Maine election appear to be saturated with a malicious determination to contradict all the statements made by Mr. Blaine on the evening of election day. We have shown how completely they have disproved his statements that the result was "almost a political revolution," and that "many Democrats turned against the Mills bill." There is one other assertion which remains to be disposed of, and the official figures of the Prohibition vote attend to that. Mr. Blaine closed his despatch to Gen. Harrison with this sentence: "The Prohibition vote falls off everywhere." The official returns give the total Prohibition vote as 3,151, against 1,190 in the September election of 1884, a gain of 1,961, or about 150 per cent.

THE HISTORY OF THE TARIFF.

THE general considerations which bear upon the question of tariff revision are likely to become pretty familiar to a large proportion of our citizens during the present canvass. Even the arguments that concern special phases of the subject, such as the tariff on wool and woollens, on lumber and salt, will be well understood by thousands to whom economic questions were very foreign a few months ago. It would be a great acquisition to the cause of reform if an equal number of citizens could be made acquainted with the facts of our tariff history; for nothing could more effectively shake the trust of a plain man in the soundness of our present system than a knowledge of the devious ways—sometimes haphazard, sometimes tricky—by which our tariff laws have arrived at their present state. Prof. Taussig of Harvard University has put this knowledge within the reach of the general public in his volume on 'The Tariff History of the United States.'

The portion of this history which is of chief interest at this juncture is that which covers the period from 1857 to the present time. How recent is the doctrine which was embodied in the Chicago platform, and which has gradually hardened into its present state through the constantly bolder and bolder demands of the protected interests, may be seen from a few extracts relating to the situation just before the war:

"The country accepted the tariff acts of 1846 and 1857, and was satisfied with them. Except in the years immediately following the passage of the former act, when there was some attempt to induce a return to a more rigid protective system, agitation on the tariff ceased almost entirely. There is no doubt that the period from 1846 to 1860 was a time of great material prosperity—interrupted, but not checked, by the crisis of 1857. It would be going too far to assert that this general prosperity was due chiefly to the liberal character of the tariff. Other causes exercised a great and perhaps a predominant influence. But the moderate tariff undoubtedly was one of the elements that contributed to the general welfare. It may be well to add that prosperity was not confined to any part of the country, or to any branches of industry. Manufactures in general continued to flourish; and the reduction of duties which was made in 1857 had the consent and approbation of the main body of manufacturers."

In all this, Prof. Taussig agrees with Mr. Blaine's history of the same period. It sounds strange enough, in these days, to be told that the lowest tariff we have had for seventy years "had the consent and approbation of the main body of manufacturers." But if one were at all disposed to doubt the accuracy of this statement, his doubts would probably disappear on reading some of the citations from Republican Congressmen concerning the tariff of 1861. Senator Sherman said in a speech in Congress while the bill enacting this tariff was pending: "The manufacturers have asked over and over again to be let alone. The tariff of 1857 is the manufacturers' bill." And Prof. Taussig quotes Mr. Morrill himself, the author of the bill, as saying in late years that the tariff of 1861 "was not asked for, and but coldly welcomed by manufacturers, who always (and justly) fear instability." Finally, we may quote a sentence from a speech by Mr. Rice of Massachusetts, as showing that in 1860 a man could be a protectionist without advocating the highest rates of duty that any interested party might have the effrontery to demand. "The manufacturer," said Mr. Rice, "asks no additional protection. He has learned, among other things, that the greatest evil, next to a ruinous competition from foreign sources, is an excessive protection, which stimulates a like ruinous and irresponsible competition at home."

Nothing in Prof. Taussig's book is more interesting than the history of the gradual change in the spirit of the manufacturers in their demands for protection and of Congress in its attitude towards them. Under the tremendous needs of the national Treasury during the war, no one was disposed to criticise the means by which revenue was made to flow into the nation's coffers. Protective taxation was laid without discrimination and without stint on everything that any interested party desired to have protected. The tariff bill of 1864, which gave us the high war tariff under which, in regard to the great protected industries, we are in the main still living, was introduced in the House June 2 and passed June 4; in the Senate two days were given to its consideration. "The necessity of the situation," says Prof. Taussig, "the critical state of the country, the urgent need of revenue, may have justified this haste, which, it is safe to say, is unexampled in the history of civilized countries. But surely there can be no excuse for making a measure passed in this manner and under these circumstances the foundation of the permanent economic policy of an enlightened people." Concerning the effect of the habits engendered by the legislation of the war upon the tone of public opinion respecting the tariff, and upon the boldness of interested suitors for protection, we cannot do better than to quote Prof. Taussig again:

"Every domestic producer who came before Congress got what he wanted in the way of duties. Protection ran riot; and this, moreover, not merely for the time being. The whole tone of the public mind towards the question of import duties became distorted. Not only during the war, but for several years after it, all feeling of opposition to high import duties almost entirely disappeared. The habit of putting on as high rates as any one asked had become so strong that it could hardly be shaken off; and even after the war, almost any increase of duties demanded by domestic producers was readily made. . . . The line between public duty and private interests was often lost sight of by legislators. . . . When more enlightened and unselfish views began to make their way, and protests were made against the abuses and excessive duties of the war period, these had obtained, as we shall see, too strong a hold to be easily shaken off."

Even more striking than the history of the rise of the high-protection system during the war is that of the increase of some of the most important protective duties after the war. Prof. Taussig singles out, as illustrations of this, the duties on wool and woollens, on steel rails, and on copper. We cannot do justice to these points without going into greater detail than is here practicable. No one can read the story of these duties, told with the conspicuous fairness and lucidity that mark the whole of Prof. Taussig's work, without feeling how idle is the expectation—if, indeed, any indulge it—of anything like rational reform of the tariff system at the hands of those who have been instrumental in making it what it is, or with the consent of those whose fortunes have been built up by its most onerous provisions.

A point which ought not to be forgotten by those who make comparisons between the present rates of duty and those which prevailed during the war, is, that at that time there were heavy internal-revenue taxes on nearly everything we manufactured, and that the rates of duty were distinctly made with a view to compensating for these internal taxes and affording the manufacturer protection besides. No one supposed for a moment that the internal-revenue taxes would be abolished and the protective duties based upon them remain as high as ever. Yet such has been the case. Not only has the war system of protection been left substantially intact; it has, at many points—as in the instances of wool and woollens, copper, and steel rails—been explicitly raised; and in a vast range of cases protection has been virtually increased through the abolition of the internal-revenue taxes. When certain duties were avowedly made to cover and compensate for internal taxation, nothing could be plainer than the implied promise that when that taxation was removed, a corresponding reduction would be made in the duty; but that promise has been completely forgotten. Until the present canvass we had from the Republican party plenty of promises, of a more or less definite character, of tariff reform "within the party." Now the sound of these has nearly died out, and our tariff history has at last reached a crisis in which the contending parties are not protectionists and free-traders, but, on the one hand, those who openly declare that every stone of the incongruous pile which has been built up by protectionists shall be held sacred, and on the other, those who ask the people to resume the exercise of their right to the control of their own taxation.

"DISPUTED QUOTATIONS."

THE Boston *Journal* finds a variety of reasons for holding on to the forged quotations from the English press that have been sent so widely over the country by the "party of moral ideas." The very heading of the *Journal's* article, viz., "As to Certain *Disputed* Quotations," shows the frame of mind in which the subject is taken up—the fact being that the quotations are not "disputed" at all, but are notorious forgeries which nobody now pretends are anything but forgeries. The *Journal* first travels solemnly over the ground taken by the Boston *Advertiser* the other day, that if these quotations are not exactly authentic, they nevertheless express the opinions entertained by the editors. The *Journal* has a new way of putting this fine conceit. It says, "There is nothing intrinsically improbable in the attributing of this phrase to the London *Times*." No, there is nothing intrinsically improbable in *your* attributing it to the London *Times*, even after the *Times* has disavowed it and declared that it never entertained that opinion at all.

But the *Journal* has many excuses besides this. It thinks it altogether likely that this phrase did appear in the London *Times*, although it cannot be found, because "the effort of hunting through the files of such a paper as the London *Times* for a three-line extract would be rather arduous." "The most that can be said," it continues, "is, that no one has found the *date* of the paper containing these words; but it does not follow that the quotation is a forgery." Becoming emboldened by the thought that it is only "the date" that is wanting, it goes on to quote what Congressman Butterworth said. Butterworth having said, not that the London *Times said* so and so, but that he read so and so *in* the *Times*, "a few years ago," the *Journal* advances still a new idea, viz.: "We have been told by some one who professes to know, that the words formed a part of a speech which was reported in the *Times*. We do not vouch for this explanation, but it at least is consistent with the London *Times's* disclaimer of the words, and also with Congressman Butterworth's recollection of reading them in the *Times*." Having given all these reasons for holding on, or not quite letting go, the *Journal* says that it "does not regard the point as of much consequence anyway." Of course not. It is of no consequence to you whether you tell lies or not. But it is of some consequence to the public who read your newspaper.

Now, we have an answer to all your pleas, one after the other. If you think that the "disputed quotation" from the London *Times* contained nothing intrinsically improbable as an expression of the opinions of that paper, you ought to have printed it in this way:

"The only time that England can use an Irishman is when he emigrates to America and votes for free trade."—*Intrinsically Probable Opinion of the London Times.*

If you think it likely that this phrase did appear in the London *Times*, although it cannot now be found, you ought to have printed it thus:

"The only time that England can use an Irishman is when he emigrates to America and votes for free trade."—*London Times, but no copy of the paper can be found.*

If you think that the most that can be said on the other side is, that no one has found "the date" of the paper, you ought to have printed it in this way:

"The only time that England can use an Irishman is when he emigrates to America and votes for free trade."—*London Times, date missing.*

If you believed that the phrase in question was not in an editorial of the *Times*, but in a speech printed by that paper, you should have printed in it this way:

"The only time that England can use an Irishman is when he emigrates to America and votes for free trade."—*Speech printed in London Times, author and date unknown.*

Finally, if you were following Congressman Butterworth and had no other authority than himself, why did you not use the words that he used? Butterworth said:

"A few years ago I read in the London *Times* these words, in speaking of the Irish people: 'The only time that England can use *the Celt* is when he emigrates to America and votes for free trade.'"

Substituting "an Irishman" for "the Celt" was a forgery upon a forgery. It looks like a small matter, but it is really important, because most people know that the London *Times* does not use slang in its editorials. Consequently, the word "Celt" employed in the pretended quotation would have cast doubt upon the whole thing. It would have started inquiry and led to early exposure of the forgery. The Celts are not confined to Ireland. They include also the Scottish, Welsh, Cornish, and Armoric peoples. If a newspaper of the standing of the London *Times* should use the phrase in question, it would be equivalent to saying, "The only time that England can use an Irishman, Scotchman, Welshman, Cornishman, or Channel Islander is when he emigrates to America and votes for free trade." This would not have answered the purposes of the Republican campaign at all; hence the ingenious variation of the language used by Congressman Butterworth.

The brazenness of the Republican committees who continue to circulate these lies after their falsity is proved and acknowledged, and of Republican newspapers like the Boston *Journal* and *Advertiser*, that find excuses for the conduct of the committees like those here recited, does not seem so surprising when we recall the demoralization of the Blaine campaign four years ago. Any newspaper or committee or party that went through that Serbonian bog of lies and quibbles to explain the Mulligan letters, and to reconcile them with an honorable standard of public life, would be well schooled for false quotations from the English press, or false tables of wages, or any other immoral practice that might promise to gain the votes of ignorant people.

ELECTORAL FORGERIES.

We believe there never has, before now, been a canvass in a free country in which the appeals to the voters on one side consisted almost wholly of extracts from foreign newspapers. The Republican canvass this year, in fact, produces little else. Nearly all the cards and handbills which are issued by the hundred thousand from the committee and club-rooms, tell the voter not what American statesmen, or orators, or economists say, but what the London *Times* and *Economist* and *Spectator* and Manchester *Guardian* say. In ordinary times the comments of these newspapers on American affairs are apt to be served up for popular derision on account of their blunders and ineptness touching everything American. But within the past three months they have been cited far and wide as infallible guides for American electors in casting their votes, almost to the total exclusion of all American authorities.

So great, too, is the reliance placed on them by the managers of the Republican canvass that, although there never has been any question that all the leading English journals advocate free trade, and although there need not be the least difficulty in finding passages in their columns illustrative of this advocacy, the Republicans have been actually relying mainly on extracts either forged or garbled, which we have been freely exposing during the past few weeks. The tenacity with which the clubs and committees cling to them in spite of the exposure, the fury and bitterness with which the newspapers receive all requests to withdraw them or apologize, and the equivocation and quibbling by which it is sought to conceal or explain them away, form, we think, one of the most repulsive spectacles ever witnessed in a political contest, even in times of more corruption and excitement than the present. We advise any of our readers who wishes to estimate for himself the importance of these citations (both genuine and forged) to Gen. Harrison's supporters, to examine the arguments in any Republican newspaper which he is in the habit of seeing, or go to the Republican committee-room and look over the documents which they are circulating, and mark off from them the passages which either quote or profess to quote English newspapers, and he will be amazed to see how small and slight a thing the residuum is. The party, in fact, has become intellectually as well as morally such a rump that when it tries to argue, it steals, in spite of itself.

We suggested some time ago, in view of the large part which the forgeries are playing in the canvass, and of the importance evidently attached to them as instruments of persuasion, that the use of forgery or fraudulent quotation during a canvass with intent to deceive voters, should be subjected to the same penalties as bribery or personation. The *Boston Herald* questioned the practicability of anything of the sort, but did not say on what ground. But the idea, we think, finds general favor among all those who care for electoral purity, and we think it occurs to everybody who comes across the forgeries, and sees the mischief they are doing among the less intelligent voters. Mr. George, a hotel proprietor in New Hampshire, when acknowledging the receipt of a bundle of them from the now notorious Radclyffe of the Boston Home Market Club, the other day said:

"I acknowledge receipt from you of a package of protection documents for distribution; also a circular letter informing me that they are not generally called for in New Hampshire, and asking that I put them where they will help 'the cause.' As the documents in question contain a series of forged quotations and other equally reliable information for the faithful, and as I must decline to be an instrument of the Home Market Club in giving circulation to such matters, I have consigned the lot to the flames. I trust if there is not already a law on the statute-books of Massachusetts covering such crimes against good morals, that the next Legislature will enact such measure or measures as will be necessary to protect society."

Our State law on forgery apparently does not touch the offence, because the forgery must have in view some sort of fraud against property. But an amendment covering an attempt to deceive a voter by forgery, or fraudulent quotation, would be very simple. The matter attracted a good deal of attention in 1880, apropos of the Morey letter, which became the subject of a criminal prosecution. That was a letter

purporting to have been written by Gen. Garfield, containing views about labor which were well calculated to cause him the loss of votes, and, consequently, of the Presidency, but would not necessarily have been at all discreditable or injurious under other circumstances. Now it was found, when the writer was caught, that the only way of proceeding against him criminally was by indictment for libel. That this was a serious defect in the law was fully recognized by Judge Noah Davis in his decision of November 14, 1880, holding the forger Philp for trial. He said:

"Had the subject of the forgery in this case been instruments purporting to be obligations of Gen. Garfield, and he publicly declared them to be forgeries, who could thereafter send them forth, and circulate them throughout the commonwealth, with his representation of genuineness, without incurring the penalties of the law? *The difference is purely statutory, and in a moral forum wholly vanishes.* . . . But it is altogether a forgery, perpetrated by some person or body of persons *for the purpose of deceiving the people and defrauding them* and Gen. Garfield of their votes."

"It must be the wish of all honorable minds that this case will lead not only to discovery and exposure of the guilty, but *to the enactment of laws which will prevent or severely punish offences of this character.* Whoever be the guilty in this case, right-thinking men everywhere must look upon the act as an appalling crime, wholly at war with the safety and sanctity of popular government. Fortunately no committee and no body of men hold in their hands the conscience of the people, and no party fealty is strong enough to intercept the sentence of condemnation which honest men of all parties must pronounce upon such guilt."

Moreover, the District Attorney, Bell, laid it down, that the circulation by the Democratic Committee of a forged letter "with the view of injuring Gen. Garfield in the estimation of a portion of the voters of the country while he was running for an honorable office," made them "liable to prosecution for criminal libel." Of course this exactly covers the intent of the Republican Committee and others in circulating the forged extracts from the English papers. They are designed to injure Mr. Cleveland in the estimation of a portion of the voters, and to induce them to vote against him. Throughout the proceedings there was no attempt made to show that the opinions attributed to Gen. Garfield would disgrace him as a man. They were held to be libellous simply because they damaged him as a candidate.

Of course, it may be said that it would not be possible to follow up and punish all the lies or misrepresentations made in the course of an exciting canvass. But we do not propose anything so laborious and probably so futile. We simply propose to have the law of forgery applied to printed or lithographed documents published and circulated with the design of changing votes. To make such application efficacious, we should adopt section 18 of the English Parliamentary Elections Act, which requires that "every bill, placard, and poster having reference to an election shall bear on its face the name and address of the printer and publisher." If we had this change in the law now, either many tons of campaign literature now in circulation would never have seen the light, or Thurber, Radclyffe, and scores of others would be under bonds awaiting trial, or fugitives from justice.

PARTY CHANGES.

As the campaign progresses, evidence accumulates that a great transformation in the membership of parties is in progress. Everywhere one hears of men who either have been Republicans, or would naturally, from their environment, have become Republicans, who will vote the Democratic ticket, and of former Democrats who will support Harrison. The New Haven *News* recently sent letters of inquiry as to the drift of opinion to men of both political parties in Connecticut, and it says of the result: "Each Republican who replied writes of many changes from the Democratic party, and each Democrat knows of many changes from the Republican party. There were no exceptions to this rule in the letters received." The ground for these changes in almost every instance is the attitude of the two parties regarding the issue of tariff reform.

It is exceedingly difficult to form a conclusion as to the effect of this transformation in membership upon the relative proportions of the two parties in any State. One of the correspondents of the New Haven paper remarks with much force· "We all naturally find what we seek; and I think an idea of the drift of opinion gained by comparing the views of different observers will prove nothing except the point of view of a majority of the observers." Moreover, a great many of the changes cannot be detected, since the voters who are changing do not care to advertise the matter.

Some light, however, is cast upon this question by the result of the Maine election. For weeks the leading Republican papers in that State, like the Portland *Press*, Lewiston *Journal*, and Augusta *Journal*, were announcing conversions to their side of former Democrats on the tariff issue—manufacturers who feared that their business would be ruined, employees who dreaded low wages if a "free-trade" policy should be adopted, farmers who were afraid that they should lose the "home market" for agricultural products if the tariff should be reduced. We much regret that we did not have compiled a full list of such changes announced by these papers. They must have reached well into the hundreds, and as every case reported was declared to stand for several similar ones which were not reported, it seems plain that there must have been, according to the Republican theory, thousands of men in the class referred to by Mr. Blaine in this passage of his despatch on the night of election day to Whitelaw Reid: "The question of protection was the only one discussed. *Many Democrats turned against the Mills bill.*"

In the gubernatorial election of 1884 in Maine, the Republicans cast 78,318 votes, and the Democrats 58,503—a Republican plurality of 19,815. Suppose that we consider the "many Democrats" of 1884 who "turned against the Mills bill" and consequently voted the Republican ticket this year, as aggregating 5,000 in number. It follows, of course, that, supposing no other change to have occurred, the Republican vote in 1888 should have risen to 83,318 and the Democratic fallen to 53,503, swelling the Republican plurality to nearly 30,000. But in point of fact the Republican vote rose only to 79,513—a gain of but 1,195; while the Democrats not only did not lose 5,000, or even one, but polled 61,018, a gain of 2,515, reducing the Republican plurality to 18,495. As the Republican papers claim to have proved that thousands of the Democrats of 1884 voted the Republican ticket in 1888, it is plain that more thousands of the Republicans of 1884 voted the Democratic ticket in 1888. If 5,000 former Democrats voted the Republican ticket, it is clear that nearly 6,000 former Republicans must have voted the Democratic ticket, in order to reduce the Republican plurality to the extent which it suffered.

The *Tribune* has brought together in a single issue a large number of such changes from the Democratic party to the Republican on the tariff issue in this State as the Maine Republican papers published in small instalments during the canvass in the latter State. Considering that the vote of New York is eight times as large as that of Maine, the *Tribune's* list is no longer than would be needed to record a proportionate number of changes in this State. As the leading Republican organ in the country may be presumed to have devoted more expense to such a matter than less wealthy and enterprising sheets, the probability is that the *Tribune's* canvass comes much nearer showing the real loss to the Democrats in New York than the Republican organs in Maine were able to do in their State. The *Tribune's* conclusion as to the number of such Democratic deserters in New York is this: "It would be almost impossible to form anything like a reliable estimate of the number of Democrats who have left their party in this State. It certainly goes far up into the thousands."

If we estimate that there were 5,000 former Democrats in Maine who left their party this year, and allow a similar proportion in this State, the number would reach 40,000. But if we apply the Maine basis still further, to changes the other way, it follows that nearly 48,000 former Republicans in New York must be expected to vote the Democratic ticket, which, on the basis of the result in 1884, would give Cleveland the State by a plurality of well up towards 10,000.

But there is every reason to believe that the Democrats will gain relatively far more on the tariff issue in this State than the result shows they did in Maine. The sentiment in favor of tariff reform is ten times as strong in New York as in Maine. The habit and practice of independent voting are ten times as common in New York as in Maine. The obloquy and loss which a former Republican often suffers for voting the Democratic ticket are not one-tenth as much to be dreaded in New York as in Maine. Moreover, the existence of a large class of former Republicans who will support Cleveland on the tariff issue this year is ten times as plain to the casual observer in New York as it was in Maine. The Republican papers in Maine boasted that there were next

to no changes away from their party to counterbalance the many changes away from the Democrats, and indeed we only heard of an occasional case like that of President Hyde of Bowdoin College. But the result shows that Dr. Hyde had abundance of company—that there were, indeed, more Republicans who went with him than there were Democrats who turned against their party. In New York, on the other hand, there is abundant evidence already visible that a very large class of former Republicans will support the Democratic ticket this year.

It was generally admitted before Mr. Cleveland injected the tariff issue into the Presidential campaign that he would be re-elected. After he sent in his message the Republican organs claimed that the party changes which it would produce must defeat him. The Maine election proves that it is the Republicans, and not the Democrats, who have reason to fear the result of these changes.

THE EMPEROR FREDERICK'S DIARY.

THE publication of the diary of the late Emperor Frederick, through one of his friends, Baron Roggenbach, apparently authorized by the Empress Victoria, appears to have had the effect of a bombshell in German politics. It has been popularly supposed, ever since 1866 at least, that although Frederick's tendencies and opinions were liberal, and although he was an able man, nevertheless that he was so completely overborne in his father's counsels by Bismarck that he counted for nothing in the shaping of German policy. The creation of the German Empire he was supposed to have assented to, or, at most, approved of, but to Bismarck was given the whole credit of the idea, as well as of its execution.

It would appear now that even up to Sedan Bismarck hung back from the undertaking, or threw cold water on it, and that it was due to Frederick's persistence that both the King and the Prince were brought over to it. Bismarck, man of blood and iron though he was, was afraid of the South Germans. Frederick was also opposed to the bombardment of Paris, but was unable to maintain himself against the military party headed by Moltke, to whom also, it may be added, was due the equally barbarous bombardment of Strasbourg. The fact would seem to be that Frederick was really the only truly modern man at the German headquarters. The others were almost mediæval in their notions as to the forces which rule modern society. Frederick believed in war as one of those forces, but he also believed that to make war thoroughly efficacious it must be so waged as to leave behind the least possible amount of sting in the minds of the vanquished. The same feeling appears to have made him doubt the wisdom of annexing Alsace and Lorraine. Another illustration of this same freedom from old prepossessions is to be found in the fun he makes of the practice, common among belligerents, of praying for the help of God against the enemy. Each side does this in every war with perfect gravity, and returns thanks for its success, and believes, with more or less fervor, that the Almighty is in its camp, and is taking an active part in directing the operations. The old King believed this firmly, and Bismarck has always maintained that he believed it, but with a twinkle in his eye. We suppose that he holds, with Napoleon, that God is always with the big battalions.

It appears also from the diary that Frederick was determined, whenever he ascended the throne, to establish a thoroughly liberal régime, and make the Ministers responsible to Parliament in the English fashion. It has accordingly been seized on by the German Liberal press as a sort of campaign document, and will undoubtedly greatly encourage the Liberals in resisting the reactionary policy which, as far as one can now see, the present Emperor is likely to pursue. In fact, the publication is probably more important for him than for any other individual. It will do something to dim Bismarck's fame, but Bismarck is a vanishing factor. He is nearing the close of his career, and must exert a diminishing influence on the march of affairs. But the young Emperor is apparently trying to get back to 1866, and it will be a serious matter for him to find himself confronted at every step by his father's shade, and to find the opposition sustained and cheered by his father's political reflections and predictions. The lesson he has yet to learn is the strength of opinion in the modern world, the solvent force it exerts both on traditions and institutions, and the folly of coming into direct collision with it, even at the head of a million of men.

The diary, too, will probably bring home to the German people very keenly what a misfortune the old Emperor's long life was, in spite of its picturesqueness and dignity. His career was really complete and fully rounded at the close of the French war. He had won more than he ever hoped for, and lived to see things he had never dreamed of seeing. Had he died soon after the peace, he would have died full of years and honors, and Frederick would have had time to inaugurate a peaceful and progressive régime, which would probably have diminished the huge armaments under which Germany is groaning, and have removed the dismal forebodings about the political future in which the whole European continent now lives. In earlier days, the Germans would have detected a tremendous judgment on some hidden national sin in the strange fate which kept the old Emperor's lamp flickering feebly almost until his son's was suddenly and fearfully extinguished.

ATHLETICS IN FRANCE.

HARDLY any difference between French and English manners has been more marked since the Revolution of 1789 than the indifference of the French to field sports, and to out-door games and gymnastic exercises generally. For twenty-five years after the overthrow of the old Monarchy, the national activity found expression solely in war, and, when the peace came, the only muscular exercise in vogue among the men was fencing with the small sword or sabre. Nothing was done for athletics in the schools. The Napoleonic "lycées," in which the boys of the middle and upper classes were educated, had no better provision for out-door exercise than small play-grounds surrounded by high walls, in which the boys moped, walked, or romped, under as strict and constant supervision from tutors as the girls in the old-fashioned city boarding-schools. This state of things lasted down to the German war. It unquestionably accounted in a large degree for the devotion of the French to what Matthew Arnold called the goddess Lubricity. The boys were kept in a sort of moral hot-house at school, with nothing to check unhealthy activity of the imagination. When they obtained their liberty on reaching manhood, the only way of exercising it that occurred to them was amorous adventures and irregularities. Hence the ridiculous amount of attention which the French now give to the sexual passion, the amount of writing they devote to it, and the immense prominence given to it in their works of fiction.

According to a writer in the *Figaro*, a considerable change has come over the French youth since the war, partly owing to the impression made on them by the tremendous drubbing they got from the Germans, and partly owing to increased contact with the English, and increased resulting inclination to imitate them. Accordingly, there has appeared on the scene in France a class which they call "Bicepsmen," corresponding to the earlier English "muscular Christians," or "boating men," and our own athletes. The *Figaro* maintains that they are but revivals of an old type—that the smaller country gentlemen, before the Revolution, never allowed themselves to get out of condition, and walked, rode, and shot, and played tennis as much as any do now. But for fifty years after the fall of the Empire, what young Frenchmen sought after was elegance, refinement, and delicacy of feature and complexion and hands; they even did not disdain a little stoop, as a mark of a sedentary or indoor life, and the models among them were those who were most successful in gallantry. This type was known as the "petits crêvés," and was at its best under the Second Empire.

Their place has now been taken by the "Bicepsmen," who, as their name indicates, are essentially English in their standards. Their imagination has been touched by the athletic habits and physical strength of the English gentry. For instance, "what distinguishes an English nobleman is that when he takes a cab, he knows, if he has a row with the cabman, that he can lick him, and, what is better, the cabman knows it too. There is nothing which marks better the distinction between the classes than this, and does more to maintain good relations between them," according to our French authority; and he maintains that in old times there was a race of gentlemen in France, also, who could in case of necessity assert their superiority to the cabmen in the

same manner. The fashion has been revived and is spreading, perhaps owing in part to the terrible decline in the manners of the Parisian cabman which all travellers report.

Costume in France is of the first importance. Accordingly, the "Bicepsman" wears his clothes tight, in order to display more clearly his muscular outline. The frock coat, or coat of any kind with long skirts, which would conceal or attenuate rotundity, is sternly discarded. The short sack, which conceals nothing of which an athlete feels ashamed, is most in favor. His collar, too, is straight but low and close-fitting, marking the outline of the neck. The turn-down collar, fitting loosely, is forbidden, because it looks as if the wearer was not in condition and was afraid of some sort of cerebral congestion. The shoes or boots are of course low-heeled and broad-soled, as befit a man who travels not on his nerves, but on his muscles. The Bicepsman, too, is grave and self-confident, and perhaps even a little defiant in his bearing, and has to be on his guard against displaying his strength rather than letting it be seen. One of them, whom the writer in the *Figaro* happened to see out of his window, exercising with dumb-bells, had the line from his heel to the back of his neck marked by a cleanness, a firmness of design, an absence of hesitation or uncertainty, which spoke volumes as to his general make-up.

Considered in his relations to women, as every French type has to be, it would appear that the Bicepsman is more in favor with ladies who have reached the age of thirty than with the younger ones. The cultivation of the muscles apparently brings with it a certain gravity and sense of responsibility, which diminishes that gayety of the heart and play of the tongue which are necessary to success in the earlier years of love-making. A real Bicepsman, in short, has to be a mature man, a man whose bodily powers are at their best, and whose consciousness of their value has produced a mental calm and gravity of demeanor which very young girls would not appreciate. It will be seen, in fact, that, on the whole, the French athlete is sure to be a bit of an actor.

NOURRISSON'S APOLOGY FOR PASCAL.

PARIS, August 23.

'THE DEFENCE OF PASCAL' is a very singular title for a book. I did not know that Pascal needed any defence. M. Nourrisson, a member of the French Institute, well known for his many philosophical and historical works, has made himself the apologist of the famous author of the 'Provinciales' and the 'Pensées.' He explains the Jansenism of Pascal and his hostility to the Jesuits; he defends him against the accusation of scepticism or pessimism; he enters even into the domain of science, and shows that the scientific work of Pascal has not been appreciated at its full value. In order fully to appreciate the intellectual work of the famous writer, we must, according to the modern method, see him in his *milieu*, and study the relations between the development of his ideas and his life.

Pascal was born in 1623. After a very severe fall of his father, he made his first serious reflections on human destiny, and entered into relations with some ardent Jansenists. He was already twenty-three years old, but had, so far, only been occupied with scientific pursuits; but, from that moment, he turned his mind towards religious and philosophical subjects. He remained, however, a man of the world, and walked in the beaten track. This first shock of his father's malady was not strong enough. "If I had lost my father six years ago," he wrote, in October, 1651, "I should have been a lost man."

He experienced grace a second time, towards the end of 1654. His sister Jacqueline had entered Port Royal, and he unbosomed himself to her: he wished to detach himself from all earthly things, and he placed himself under the spiritual guidance of M. Singlin (whom Sainte-Beuve has so well described in his history of Port Royal), and made his first retreat to Port Royal in January, 1655, where he astonished Saci by his famous conversation on Epictetus and Montaigne. What had taken place between what is called his first and his second and definitive conversion? We know only imperfectly, but we know that Pascal's health was very delicate, that he was of a very nervous and sensitive disposition. It has been said that he gave himself up for a time to worldly pleasures, that he was extravagant, that he gamed, that he was very sensual, and that he ended by having real hallucinations.

M. Nourrisson is very anxious, too anxious, it seems to us, to defend Pascal against these imputations. He will not allow that Pascal was ever fond of cards and games of chance. To be sure, he wrote the 'Règle des Partis,' but this was only an occasion for exercising his mind and for making ingenious calculations. He will not even admit that Pascal was wealthy, for wealth seems to M. Nourrisson a necessary condition of gambling. Pascal's fortune had been diminished by the reduction of rentes (we say conversion in our day), which his father had been obliged to accept. Pascal had also to give her dowry to Jacqueline when she entered Port Royal, and the dowry was not large, as Jacqueline speaks in a letter of "the little which God had given her." He had to pay some large debts contracted by his father (see the 'Recherches sur la maison où Blaise Pascal est né et sur la fortune d'Étienne Pascal,' by B. Gonod. Clermont, 1847). It is true that in her memoir on her uncle ('Mémoire sur la vie de Pascal'), Marguerite Périer writes that when the doctors saw him in a bad state of health, on account of his great application to science, they forbade him all fatiguing work. "He was forced to see the world, to game, and to divert himself." The legend of Pascal's extravagance before his second conversion has no other foundation than the story of an accident that happened at the bridge of Neuilly to a carriage in which was Pascal, and which was drawn by four or six horses. M. Nourrisson supposes that Pascal was that day not in his own carriage, but in the carriage of his friend, the Duke of Roannez, Governor of Poitou. This young duke was himself of a very serious turn of mind; he left his government, transferred his ducal title to his brother-in-law, and ended his life with the Fathers of the Oratory.

M. Nourrisson tries, also, to find out the exact truth about what has been called the "roman de Mlle. de Roannez." Charlotte Gouffier de Boisy de Roannez was born in 1633; she had a very religious disposition and became acquainted with the Port Royalists. Her family took her to the province of Poitou, but in 1657, having returned to Paris, she fled and took the veil at Port Royal under the name of Charlotte de la Passion. (The history of her flight to Port Royal has been told in detail by Hermant Godefroi, Canon of Beauvais, and author of a 'History of Jansenism.') Her family obtained a *lettre de cachet*, and she was obliged to leave Port Royal. She lived from 1657 to 1662 in great seclusion in the Hôtel de Roannez, and the Marquis d'Alluye asked in vain for her hand. She lost in 1664 her spiritual director, Singlin, and fell into what Arnauld, the Jansenist, called a spiritual lethargy. At the age of thirty-four, in 1667, she consented to marry François d'Aubusson de la Feuillade, but she led a very unhappy life. She was constantly ill, her children were ill; she finally died at the age of forty-nine, making in her will a legacy to Port Royal.

What part had Pascal in this sad and melancholy existence? Did he exchange spiritual fears, remorses, hopes, with Mlle. de Roannez? Did he wish to make her his wife, and, as he could not obtain her, did he try to give her over entirely to religion? Some of the letters written by Mlle. de Roannez to her family have been lately published; she protests to her mother, in one of them, that if she has decided to lead a purely religious life, "no person in the world has given her the first thoughts of it, nor contributed in any way to this resolution; it has not been a sermon, or a book, or a speech, but the pure grace of God." M. Nourrisson admits, however, that if Pascal did not push Mlle. de Roannez to the convent, he did all he could to fortify her in her resolution. We have some letters of his to her which are full of Christian considerations. It may also be remarked that the "spiritual lethargy" of Mlle. de Roannez commenced after the death of Pascal, which took place in 1662. On the whole, the "roman de Mlle. de Roannez" reduces itself to very little; M. Nourrisson even seems to us to exaggerate it: he admits that Pascal may have been struck by the beauty of Mlle. de Roannez, but there is no picture of her, and we don't even know if she had any beauty. He alludes to Descartes's admiration of the Princess Palatine Elisabeth, and to Spinoza's passion for the daughter of his Latin master, Van den Ende, the beautiful Miriam. He finds a confirmation of his hypothesis in a 'Discours sur les passions de l'amour,' written towards 1652 or 1653, which is attributed to Pascal, and is probably his work. All this seems rather far fetched, and we really have nothing on which to build a "roman."

Victor Cousin has spoken with unnecessary vehemence of this episode in the life of Pascal; of the "cruel and pious enterprise of Port Royal against Mlle. de Roannez, that noble and amiable person for whom a ferocious zeal disputed so long with the most legitimate natural and worldly ties." Cousin erred also when he attributed the second, the definitive conversion of Pascal to the fear which he experienced when the accident of the bridge at Neuilly took place, and when he came near being thrown into the Seine. "Pascal," said he, "one day saw death face to face, and he took fright. He is afraid of death, he does not want to die; but he addresses himself to what best guarantees the immortality of his soul." We agree with M. Nourrisson that this is a very coarse explanation of the drama which had for its stage the conscience of Pascal. Pascal was not smitten at Neuilly like Saint Paul on the road to Damascus; he had never ceased to entertain philosophical and religious ideas. What is called the second conversion did not take place rapidly, it took place slowly and by degrees. This is quite evident from the account given by Marguerite Périer. It was the work of time, of reflection, of disenchantment. The 'Mémoire

sur la vie de Pascal' is conclusive on this point.

Voltaire considered Pascal a madman, merely because Pascal was religious. "Do not cease," he wrote to his friends, "to repeat that, after the accident on the bridge at Neuilly, Pascal was mad." He reiterates the same thing in his 'Translation of a Letter of Milord Bolingbroke to Milord Cornbury.' He writes: "The 'Pensées' are the work of an enthusiast, and not of a philosopher. If the book which Pascal meditated writing with such materials had been composed, it would have been a monstrous building on a shifting sand. But he could not raise this building, not only because he had little science, but because his brain was deranged in the latter part of his short life." Pascal had really all the science of his time, and he added something to this science; as for his madness (and many will call it genius), Voltaire himself, in a moment of justice, wrote: "Of all these eternal disputants, Pascal alone remains, because he alone was a man of genius. He stands erect on the ruins of his century."

Cousin maintained that Pascal was not a real believer; that he only tried to believe in Christianity—that his faith was not assured. "The doubt before, the doubt after—such was Pascal's fate." It is easier to say that Pascal took a dark view of human destiny, that he was what we call a pessimist—a modern word, unknown by Voltaire, though Voltaire wrote 'Candide,' a most pessimistic work. "It seems to me," wrote the author of 'Candide,' "that when Pascal wrote his 'Pensées,' he intended to show mankind under its most odious form." M. Nourrisson is right when he says that when people accuse Pascal of scepticism, of pessimism, they ought first to give a more precise definition of these terms. The scepticism of Pascal was not the scepticism of the materialistic philosophers of the eighteenth century; his pessimism was not the pessimism of Schopenhauer. M. Nourrisson maintains that in religion Pascal cannot be called a sceptic, that he is a Christian; that in philosophy he is not a sceptic, but a disciple of Descartes, a Cartesian. His argumentation on this second point is very solid. It was essentially the object of Descartes to distinguish and to separate completely theology and philosophy. He was induced to do so partly by his timid circumspection, partly by the boldness of his mind. Pascal bore the mark of the Cartesian philosophy; he also is, in turn, an humble Christian and a bold philosopher.

M. Nourrisson's work, which will be read with interest by all the lovers of our great literature of the seventeenth century, ends with a scientific chapter on the subject of the famous experiment made by Pascal on the Puy-de-Dôme, in order to prove that the air has a certain weight. M. Nourrisson diminishes somewhat Pascal's merit on this point, as he tries to prove that the idea of the experiment originated with Descartes, and that Pascal was induced to make it by the great French philosopher. But, having made the experiment, Pascal was able to find out its laws, and to deduce from it all its consequences and applications.

COUNT TOLSTOI'S INVESTIGATION OF THE GOSPELS.

ST. PETERSBURG, August 15-27, 1888.

LAST winter Mr. Matthew Arnold discussed the writings of Count Lyeff Nikolaievitch Tolstoi in an article in one of the English magazines. I am unable to quote his exact words, because my acquaintance with them is limited to the translation of extracts from them, which were published in a Russian newspaper; but I remember his saying that the fame of the gifted Russian author, as a writer of philosophical and religious books, must eventually rest upon his two volumes which treat of the Gospels. How much Mr. Arnold knew about these books it is impossible to say. I can readily understand that he had heard of them; but that he had heard of them in detail I doubt. They are not available for public judgment. Whether they ever will be so in any country, I do not know. But I can say with absolute certainty that they will always remain in Russia what they are to-day, unknown to all save a select few of the author's friends. No doubt the book would prove acceptable to many others, for various reasons, but it is inaccessible. Manuscripts of some of his other works have circulated here, it is true, in the lack of printed copies, and have become widely known. But this pre-Gutenberg method of procedure is out of the question in the present case, for the reason that the book is too long to readily lend itself to the copyist. Even curiosity has its limits when it has to undergo the ordeal of jotting down inspiration piecemeal, with the consciousness that, after all, one may be pinning one's faith to that version out of several of which the writer would not approve. For I understand that there have been two or three versions, with variations, not important, perhaps, but at least made by the author himself. Taking the bulk of the work and these things into consideration, I do not think that much danger to the creed of orthodox Greek Christians is likely to arise from it; and the mass of Russians, of whatever belief, will not be injured by it in a printed form. It will never be printed so long as the Church and State remain united in Russia, and so long as the Church is the Greek Church. The censor will never give permission, and he is quite right. If there is a State church, the State policy is to protect it from certain dangers and attacks, as much in Russia as in England. In England a bishop is brought to trial for using lighted candles and being more ceremonious with sacred things than the State approves of; in Russia a layman is refused a trial for being too unceremonious with what the State has accepted for the Church. In the present case, the attack is made upon the very root of the Church—the New Testament.

Those persons who have read Count Tolstoi's semi-religious, semi-philosophical works are well aware that he has proceeded very far along the path of unbelief, and have even, probably, wondered at times why he has retained any belief whatever, and just what that belief is. The wonder becomes more profound when one considers this 'Investigation of the Gospels.' In his introduction, he explains how he came to make, as it were, a new rendering of the Scriptures to meet the wants of his own soul:

"Driven to despair," he says, "and to the renunciation of life by reason without faith, I, on awaking once more as a living man, became convinced that this despair is not the common lot of all men, but that men have lived and do live by faith. I saw around me men who possessed that faith, and who drew from it such a conception of life as endowed them with the strength to live calmly and joyously, and to die in the same manner. I tried to order my life in the same manner as the life of believers, I tried to fuse myself with them, to fulfil all that they fulfil in life and in external divine worship, thinking that by this means the meaning of life would be revealed to me. The more closely I approached these people and lived in the same manner as they, and fulfilled all those outward forms of divine worship, the more I felt two forces acting upon me in contrary directions. On the one hand, the sense of life undisturbed by death which satisfied me, revealed itself to me more and more; on the other hand, I saw that in that outward confession of divine faith and worship there was much falsehood. . . . I did not, as yet, doubt that the real truth of life was contained in the teachings of Christianity. My inward discord finally reached such a point that I could not deliberately close my eyes as I had done previously, and I was absolutely forced to examine that doctrine of belief which I desired to appropriate to myself."

After asking explanations of all ranks of the priesthood, the author undertook the study of theological books himself, and came to the conclusion that there is no church, "that the faith which our hierarchy confesses and teaches to the people is not only a lie, but an immoral fraud."

The reader must admit that such appalling frankness on the first page is not calculated to recommend what follows to the authorities. After considering the fact that the faith which has existed for 1,800 years is claimed in its purity by a thousand warring sects, Count Tolstoi turned to the foundation of the faith of all the sects, which is the revelation of Christ to be found in the Gospels. But he rejects the Church's interpretation of the Gospels because of the Trinity and other doctrines, which "cannot find lodgment in any sane mind"; and because there are a thousand equally authoritative interpretations instead of one, while their deductions are absurd. Nevertheless, an interpretation is required, and one in which all shall be able to agree. If the revelation is genuine, it need not fear the light of reason; if it proves to be nonsense, so much the better—we are rid of it. God can do all things but one—utter nonsense.

"By revelation," he says, "I mean that which furnishes an answer to the question which led me to despair and suicide, which cannot be solved by the understanding—What is the meaning of my life? This answer must be intelligible and not controvert the laws of reason; because I should not believe an answer which was contrary to reason. . . . The answer must be such that the meaning attributed to my life should solve all the problems of my life. The answer must be such that I could believe in it with all my soul and inevitably, as I inevitably believe in the existence of eternity. . . . Revelation is the knowledge of that to which man cannot attain by his reason, but which is brought forth for all mankind from the infinity of the beginning of all things. Such, in my opinion, should be the nature of the revelation which produces faith, and such I seek in the tradition concerning Christ, and therefore I turn to it with the strictest, most rational demands."

His statement that he does not read the Old Testament because it is merely a description of the faith of the Jews, which was merely local, from Adam's day to Christ's, and as foreign to us as the faith of the Brahmins, is not especially revolutionary, since the study of the Old Testament is not considered obligatory, nor, perhaps, even altogether desirable, in the Greek Church; but he denies the inspiration of the Old Testament, and accuses the Church of acknowledging this in words, but contradicting it in deeds to such an extent that it would never escape from the dilemma were sound sense in the least degree obligatory. And he blames the Church for having placed the seal of infallibility upon the books, "white, light, and gray" (*i. e.*, those containing more or less pure doctrine, which it recognizes as canonical), thereby depriving itself of the right to combine, exclude, and explain what it has accepted, as it is its duty to do, but as it has not done and does not do. "Hence, the miracles, the Acts of the Apostles, the counsels of Paul about wine, the ravings of the Apocalypse, etc., are all sacred, and, after an existence of 1,800 years, these books now lie before us in the same rough, in-

coherent, imperfect, senseless, contradictory form as ever." In Tolstoi's opinion, the Apocalypse should be entirely, and the Acts of the Apostles in part, rejected, since the miracles related in the latter by Luke, though probably once aids to belief, are now sacrilegious and faith-destroying to the last degree.

Having rejected what precedes the four Gospels as merely historical material, and what follows as simply explanatory matter, Count Tolstoi states that what he shall seek to find in these remaining books is as follows:

"(1) What is intelligible to me, since no one can believe the unintelligible, and incomprehensible knowledge is the same thing as ignorance; (2) that which responds to my question, What am I, and what is God? and (3) What is the chief and only foundation of all revelation? And therefore," he continues, "I shall read incomprehensible, obscure, and half-intelligible passages, not according to my own pleasure, but in such a manner as to render them as compatible as possible with the perfectly clear passages, and to bring them into conformity with a single, fundamental principle. On reading the Scriptures and what has been written about them thus, not once or twice, but many times, I have come to the conviction that all Christian tradition is to be found in the four Gospels. I have read them in Greek, and translated as the sense and the dictionary indicated, only departing from the translations existing in modern languages where the Church has interpreted and defined the meaning of tradition in an eccentric way. In addition to the translation, I was irresistibly led to the indispensable fusion of the four Gospels into one, since they all set forth, although in different ways, the same events and the same doctrine."

After an exposition of the word gospel, as the announcement of true welfare or bliss to men, with reference to the Greek, Count Tolstoi begins his Combined Version by a consideration of the meaning of the word *logos* in the first verse of the first chapter of John. Out of eleven definitions he selects *reason* or *understanding*, and renders "In the beginning was the Word" thus: "The understanding of life was the beginning of all things." This he prefers as clearer and more exact, though he does not absolutely reject any other translation, admits the substitution of *reason* or *wisdom*, or even of *Word*, if this last be employed in a wider sense which is not natural to it. The second phrase presents further difficulties, but, after a consideration of the various possible interpretations of some of the Greek words, the author decides that "And the Word was with God" means "And understanding stood for God," *i. e.*, took the place of God. His final summing up of the first two verses which, in connection with his conclusion that Christ was not the Son of God in any exclusive sense, gives the keynote to his interpretation of the Gospels, runs as follows: "According to the announcement of bliss made by Jesus Christ, the understanding of life was the foundation and the beginning of all things. The understanding of life took the place of God, the understanding of life was God. According to the announcement of Jesus Christ, it became the foundation and beginning of everything instead of God."

Thus the author proceeds to examine the verses which follow, quoting the interpretation of the Church at length when necessary, furnishing his version in a column parallel with the accepted text when he differs from it, citing Reuss generally in partial support only of his views, discussing Greek words in their nicest shades of difference, and summing up episodes by a series of "general remarks." With this method, some repetition is inevitable. In pursuance of his plan of fusing the four Gospels into one, Count Tolstoi does not take his texts successively from the same chapter or even from the same Gospel, but considers them in the order which he attributes to them in the narrative of Christ's life, or as they bear upon or illustrate his topic; for his new Gospel is, to some extent, topical.

After this summary of his general plan, I may proceed to give detached specimens to illustrate the author's ideas on various interesting points, without seeking to connect them by the complete train of the argument. For instance: "Understanding is God; consequently, to become the son of God means to become the son of understanding. What is meant by *son?* In the third verse it is stated that all that was made (was born) was made by (or born of) understanding. What is born is a son, hence all of us are sons of understanding, and, therefore, what does it mean to become the son of understanding? Verse 4 furnishes the answer to this. It says that life lies in the power of the understanding. And therefore the sonship of the understanding has a double signification: one natural—that all are sons of understanding—and another depending upon the will of men, upon their acknowledgment of the dependence of their life upon understanding." Verse 18, which says, "No man hath seen God at any time," he uses as a final argument against Christ's divinity. "We cannot speak of a God who does not understand; there can be no other God than the one which is revealed by the Son of God—the understanding of life, if it consists in understanding. . . . The Son means life—the living man—as stated in the third verse, 'All that was born was born of understanding,' and in verse 4, which says, 'In him was life.' *The only begotten Son* means *the same as the Father; which is in the bosom of the Father* means that life, the living man, which is in the bosom (*i. e.*, which does not depart from understanding, blending with it), only points out the way to him, but does not reveal him." The general deduction is, that, "All that we know about God we know because we have understanding. And hence, the true beginning of everything is understanding." "The source of life—understanding—was in all the world, and in every living man. But living men, who were alive only because reason was in them, did not comprehend that they came forth from understanding."

Such being the foundation of the structure, it is natural that the author should speak of Christ's birth and baptism in terms which could never be approved by any church or state. The verses describing the descent of the Holy Ghost at the baptism speak, he says, "of a miracle, a supernatural and incomprehensible occurrence. These verses add nothing to the doctrine, but, on the contrary, they obscure it." His attitude on the subject of the miracles may be gathered from his remarks on that performed at the marriage in Cana of Galilee: "This occurrence, thus minutely described, is one of the most instructive passages in the Gospels—instructive as an example of the harm done by accepting literally the so-called canonical Gospels, as something sacred. The occurrence in Cana of Galilee offers nothing either interesting, or instructive, or noteworthy in any way. If it is a miracle, it has no sense; if it is a juggler's trick, it is insulting; if it is a picture of manners and customs, it is unnecessary." In some cases, he directs that the accounts of miracles be printed in small type, as an appendix, if at all.

All these heresies sink into insignificance, however, in the presence of the change which he makes in verses 38-39 of the eleventh chapter of Luke: "And when the Pharisee saw it, he marvelled that he had not first washed before dinner. And the Lord said unto him, Now do ye Pharisees make clean the outside of the cup and the platter, but your inward part is full of ravening and wickedness." For *Pharisee*, Count Tolstoi substitutes *pravoslávny*, which is the word for a Greek Orthodox Christian. He makes the same change in the parable of the "two men who went up to the temple to pray, the one a Greek Orthodox Christian, the other a sinner; and the member of the Greek Church thanked God that he was not as other men are," and so forth. Personally, I do not agree with Count Tolstoi on this point. The average of hypocrites is much the same in Russia as in other countries, I should say; and the truly devout, who are by no means rare, while believing firmly in a church in general and in their own church in particular, are remarkably liberal towards other faiths, and not given to thanking God that they are not as others. I think that if *church-member* had been substituted for *Pharisee* and *publican*, it would have expressed the author's meaning more fully, since he does not believe in the necessity for any churches whatever, and quotes the Gospels as his authority. Even in that less personal form, however, it could hardly be expected to meet with approbation from the authorities, although in expounding the texts he restores the original words. In illustration of the manner in which he differs from the Church on almost every point, I may cite his opinion that Christ's words to Nicodemus about being born again are to be understood in directly the contrary way. "There is no sense," he says, "in understanding that a man must strive to be born from above and of the spirit; but that every man, because he is a man, is already and inevitably born of the spirit. . . . It must be borne in mind that all these appellations—(1) God, (2) Spirit, (3) Son of God, (4) Son of Man, (5) light, (6) understanding—have one and the same meaning, and are employed according to the relations in which they stand to the subjects under discussion. As the beginning of all things, it is God; as opposed to the flesh, it is Spirit; as related to its sources, it is the Son of God; in its revelation, it is the Son of Man; in conformity with the reason, it is light and understanding."

I will now turn to the Sermon on the Mount, which, as the readers of Count Tolstoi's later works are already aware, is, in his opinion, a summary of all Christian Law. To the rendering "Blessed are the poor in spirit" he emphatically objects. Had Christ referred to meekness, he would have said so clearly, he declares, and he argues from the Greek that the word used really signifies a beggar, a homeless vagabond, but without the scornful meaning which is attached to that expression; hence, in the first place, it is impossible to say "vagabonds in spirit"; and, in the second place, it is impossible because the whole Gospel teaches that we must elevate the spirit, live by the spirit; and, in the third place, Matthew says *blessed*, in general, are the pure in spirit, and then there are added the blessings flowing from this state of bliss. Among them, thirsting after righteousness is in no wise compatible with the conception of meekness. Even if the idea of thirst for righteousness does not contradict the idea of meekness, still it by no means springs from it. In the fourth place, all the blessings which follow must evidently be explained as arising from the first, because to the first blessing only are added the words, "for theirs is the kingdom of heaven." But the conceptions, *those that hunger after righteousness, the merciful, the pure in heart*, do not spring from the idea of meekness. In the fifth place, the rewards promised to the qualities enumerated are incompatible with the con-

ception of meekness. *They shall see God, they shall inherit the earth, they shall be called the sons of God.* "From this it is plain that the translation *meekness* is entirely incorrect and impossible; that these two words in their connection have no meaning. . . . According to Luke, Jesus says: Blessed be *ye poor*, for yours is the Kingdom of God." (This is the English rendering. In the Slavic, which Count Tolstoi habitually quotes, it stands *poor in spirit.* But the word which he employs here—without reference to his authority—is *wanderer, vagabond.*) "John was a beggar, a vagabond. Jesus was a wanderer all his life. And Jesus teaches that riches cannot enter the Kingdom of God, that we must renounce everything, and so forth; and the whole of the Sermon on the Mount treats of hardly anything else." Tolstoi also calls "Blessed are the merciful, the pure in heart, the peacemakers," obscure in meaning, and he notes that the Sermon begins with "Blessed are the *wanderers*," and ends in an injunction not to amass wealth, but to live as live the birds and the flowers of the field. "The words 'Blessed are ye poor wanderers, for yours is the Kingdom of God,' are no flowers of sentimental eloquence, like the words 'blessed are the pure in spirit,' and so on, according to Matthew, but a terrible idea for people who recognize that fine state of society which they have arranged for themselves, and the truth, full of joy, for all the unfortunate." In short, "ye are already in the Kingdom of God, because ye are poor wanderers. The Kingdom of God is open, accessible to the poor man, and closed against the rich man."

Such are the fundamental ideas of Count Tolstoi's interpretation of the Gospels. I am not sufficiently versed in the niceties of theology to be able to decide to which of the numerous sects these ideas most nearly approach. They are not unknown to the world as ideas, or as the special ideas of this gifted Russian author. It is not worth while to take up his whole combined version of the Gospels in detail. The denial of divinity to Christ involves certain views as to other portions of the narrative which the reader can easily foresee, while the various forms assumed by the cult of poverty at various epochs of the Christian era are familiar to all students of history. It is not in the novelty of his ideas that the objection lies, but in the fact that, in a land where Church and State are so closely united, he preaches the abolition of the Church (for that is what his interpretation of the Lord's Prayer is equivalent to). The meaning of this prayer, he says, is: "When ye pray, forgive, if ye have aught against any man, that your Father in heaven may also forgive your trespasses. But if ye forgive not, your Father which is in heaven will not forgive your trespasses. This," he continues, "is what should take the place of prayer. These words have no other meaning, but, as it has happened in many and many a case with the teachings of Jesus, the very words which he uses to reject all negative prayer have been taken, with slight and obscure additions, as a form of supplicatory prayer. How is it possible to say more clearly that it is not necessary to pray? The temple of sacrifice had been destroyed; it had been said: Not sacrifice is required, but love among yourselves; it had been said: God is a spirit, and we must work for him in deed and in spirit. Moreover, as though foreseeing how obstinately men would cling to prayer, he says plainly: 'Pray not in words. All prayer must consist in a desire for the Kingdom of God and the fulfilment of his rules, and all rules in not regarding any one as guilty, but in loving and forgiving all men.' And what comes of it? These very words in which he rejects prayer are taken for a prayer."

In short, while rejecting Christ's divinity, prayer, and nearly everything else which goes to make up Christianity in the general acceptation of the term, one can hardly refuse to Count Tolstoi the title of a Christian, since he holds by the two doctrines which Christ undoubtedly did teach more than all others, namely, poverty and love to one's neighbor. His preaching, therefore, is identical with the teachings of every church and sect, with the conclusions which any one may reach by reading the Gospels intelligently in their ordinary form. If, as is well known, the author is prevented by force of circumstances from putting one portion of his brief creed into as perfect practice as he would like, it is not for wealthy and warring churches to condemn him absolutely; although a due regard to circumstances, and to the danger of rebellious spirits accepting permission for him to publish his unconventional views as a license to them to reject even his valuable doctrines, must, necessarily, require that his utterances shall be kept from those whom they might harm and incite to other institutions closely allied to the Church. It is not likely that all readers would be moved almost to tears at the very name of Christ, as the author is.

ISABEL F. HAPGOOD.

Correspondence.

THE CAMPAIGN.

TO THE EDITOR OF THE NATION:

SIR: It is not an easy matter to retain one's sanity in the midst of an exciting political campaign, and to judge of its ultimate importance as moderately as if we occupied the position of our grandchildren with respect to it; but after divesting myself as thoroughly as possible of everything that would tend to increase unreasonably my sense of the importance of the present contest, I am compelled to admit that it contains two elements that promise to make it memorable for many years to come.

Experience will prove, I think, that we may date from this year the general acceptance of the tariff problem as an issue of overwhelming importance in American politics. The contest of 1884 was fought on a totally distinct line, and in previous contests the attitudes of the two parties were but imperfectly distinguished. I say this without regard to the outcome of the present election. If the worse comes to pass, and Mr. Harrison is elected, the lines are still fixed on which the canvass four years hence must be made. It is quite possible that, despite the fact that there has been a constant spread of sound ideas on this question, the popular mind may not be yet ready for decisive action. But the value of a campaign of the present kind in bringing home to the consciousness of the people the reality of great public questions, in awakening them to see that their dearest interests are affected by a policy which has been perpetuated for an altogether different reason from that which led to its adoption, and that the plea for the continuance of the protective system has been slowly changing for twenty years, until a temporary burden has become a perpetual and sacred charge—the value of such a campaign is, I say, incalculable. The fact is plain that the intricacy of our tariff laws, the difficulty surrounding the subject both in its practical and its theoretical aspects, the remoteness in which its workings have been studiously obscured, and the distrust that men naturally feel of figures which are made to serve both sides indifferently, have all contributed to lengthen the life of the protective system. But the moment that we realize that protection is a policy for which we are paying a recklessly extravagant price, that it is not a thing of distant, but of the most immediate concern to the humblest among us, its life is doomed. Popular realization of this fact, to the degree of making itself actively felt in a political campaign, we may, I think, date from the President's message of December last.

The change which has, as one of its effects, crystallized public sentiment upon the tariff question, involves a still larger and more important result. Thoughtful men for the last fifteen years have remarked that our politics have become steadily further removed from the real intellectual life of the nation. The energy of the entire nation has been more and more diverted from all objects of thought and reflection; our newspapers, more closely connected with politics than with the deeper and truer currents of national life, have encouraged the same mercenary spirit. I dare say our people have never seen the time when there was in public life less of patriotic spirit, less of commanding intelligence, than during this period. But while the manufacturer, the railroader, and the adventurer were holding high carnival in high places, the spirit was silently gathering before which the noxious growth was bound to disappear. The Administration of President Cleveland, with a strong and intelligent sentiment at his back, is the first decisive witness of the presence of this new power in the field, the first indication that the money idea has been, for once, humbled. Our politics, in a word, are beginning once more to feel the effect of ideas; the college, the university, science, and speculation are beginning once more to connect themselves closely with the general life of the nation. The change is slow and painful; it is not a march of uninterrupted victory—the forces of conservatism, of prejudice, of ignorance, dispute its advance stubbornly. But where victory will rest in the long run, no one who has observed the history of the human spirit can long doubt.

The opportuneness of President Cleveland, the completeness with which he meets the peculiar circumstances of the time, is remarkable. Had his appearance been premature, his bold stand for ideas would have evoked no response; had he come too late, he would have found no place. But he came at a time when the new spirit was just entering public life, when passions had cooled and thought grown sober—a man whom the new spirit had found a ready and capable servant, and who both served and fostered it. The tact with which he embraced the opportunity to unite and enthuse the Democratic party, and by which, at a single stroke, he elevated the tone of practical politics, might almost be called genius.

A change of this kind will soon affect the character of our statesmen, and in that event the vocation of a man like Mr. Blaine is gone. I do not say that he will lose his hold because people believe him corrupt in the sense that he is open to bribes, or has been so at any time of his career; but I do say that in a public life demanding sound ideas, liberal equipment, statesmanlike bearing, a man like Mr. Blaine—I use him as a type—who has instead of ideas, prejudices, instead of statesmanship, "politics," instead of sincerity, plausibility, instead of reason, bugaboos, can have no place. That he feels without comprehending the nature of the change, his pitiful floundering since his return from Europe abundantly proves; and I am inclined to believe that he has already lost something of his hold on his party managers, who

see clearly his inability to meet the situation without perceiving that the reason is that a man of quite different stamp is required. The entire condition of the Republican party—without purpose, without ideas, hopelessly divided within itself, its sole safety in the efficacy of a "scare"—illustrates again how utterly inadequate tradition and machinery must always be to maintain a party as a living and moving organism; how essential it is to our safety as a nation that thought, knowledge, ideas, have free and easy play among us.

The tariff question is not, indeed, a question such as corresponds to and animates a nation at its most fertile epoch. But it happens at the present time to derive additional importance from its peculiar connection with many new difficulties, the proper solution of which bears closely on the most subtle principles of our political organization. In large terms, therefore, the issue is not between free trade and protection, or a revenue tariff and protection. The question is, Are we as a nation to cut loose from the intellectual life of mankind, and still longer to subsist on the memories of the war? Are we willing to fasten on our central Government a species of paternal authority? The re-election of President Cleveland may not settle for ever these fantastic notions; it may not, it cannot, permanently transform the atmosphere of public life. But it will propel us one step further towards that generous ideal, and give the vantage ground at least to the right. F.

Louisville, Ky., September 14, 1888.

SPECIALIZATION FOR LIBRARIES.

To the Editor of The Nation:

Sir: The desirability of specialization and coöperation in library administration seems to be not sufficiently recognized by donors and trustees. Our libraries act for the most part independently, and enlarge their collections without systematic reference to each other. It thus happens that a specialist finds his material only after painful search, scattered unsystematically in libraries all over the country. No library in this age can be complete at all points; it must specialize in some single department. Indeed, the full literature of a single department is quite beyond the reach of any one library; and by complete in any one line we must understand a good working library, satisfactory to the special student and original investigator, as embracing all works which are really additions to the department. Such a complete library for zoölogy alone would cost, as estimated for me by competent authorities, from $100,000 to $150,000. A complete library for all branches is thus only possible for any large section of country through the systematic coöperative specialization in a large number of the most important libraries in that section. We may look for the founding of certain complete libraries, as, for instance, an art library in connection with an art institute, or a medical library in connection with a medical college; but still for literature, learning, and science in general we must look to this coöperative specialization by our general libraries, public and collegiate, to give the complete and accessible collections so urgently demanded.

The ideal library, and one quite possible to realize, is one in which the student, by consulting the bibliography of his subject, would understand by a system of checks what portion of the literature is immediately available, and also what is accessible in other libraries. Further, by a system of interchange, corresponding libraries might, within certain limits, draw books from each other for certain classes of patrons, specially for original investigators and literary men. Hiram M. Stanley,

Librarian Lake Forest University.

Notes.

Professor James Bryce's long-expected work, 'The American Commonwealth,' is on the list of the fall announcements of Macmillan & Co. Other significant issues are an edition of Wordsworth's Complete Poetical Works, with an introductory essay by John Morley, and an unpublished poem of considerable length; 'Letters of Keats,' edited by Sidney Colvin; 'Letters of Thomas Carlyle, 1826–1836,' edited by Prof. C. E. Norton; 'William George Ward, and the Oxford Movement,' by Wilfrid Ward; 'Thomas Poole and his Friends,' by Mrs. Sandford; 'The Works of Edward Fitzgerald,' with a memoir, edited by W. Aldis Wright; a second series of 'Essays in Criticism,' by Matthew Arnold; a new volume of Essays by Prof. Huxley: 'A History of English Literature in the Eighteenth Century,' by Edmund Gosse; 'Night and Day Poems,' by Arthur Symons; 'Walpole,' by John Morley: 'A Tour in Holland and Germany,' by the Rev. J. P. Mahaffy; 'Roman Mosaics; or, Studies in Rome and its Neighborhood,' by the Rev. Hugh Macmillan; 'Coaching Days and Coaching Ways,' by W. Outram Tristram; 'Wild Beasts and their Ways in Asia, Africa, America, 1845–1888,' by Sir Samuel Baker; 'An Investigation of the Principles of Athenian Architecture,' by Francis C. Penrose and W. W. Lloyd; 'A History of the Later Roman Empire, 395–800,' by John B. Bury; 'Montelius's Swedish Civilization in Heathen Times,' by the Rev. F. H. Woods; 'The Pre-Raphaelite Brotherhood,' by W. Holman Hunt; 'Two Chapters of Irish History,' by T. Dunbar Ingram; 'Tables of Income and Expenditure,' by Wm. Lloyd Birkbeck; 'The Lives of the Fathers' and 'The Bible: What It Is and What It Is Not,' by Archdeacon Farrar, and the following novels: 'The Aspern Papers, etc.' by Henry James; 'The Countess Eve,' by J. H. Shorthouse; 'Beechcroft at Rockstone,' by Charlotte M. Yonge; 'The Weaker Vessel,' by D. Christie Murray; 'Kophetua the Thirteenth,' by Julian Corbett.

Harper & Bros. will shortly publish 'Shoshone, and Other Western Wonders,' by Edwards Roberts.

'The Dramatic Year, 1887–1888,' a work by several writers, is in the press of Ticknor & Co., Boston.

'Wit and Humor; Their Use and Abuse,' by Prof. William Mathews, is announced for immediate publication by S. C. Griggs & Co., Chicago.

Ginn & Co. announce a 'Hand-book of Arithmetic,' by G. C. Schultz. They are to be the American publishers of the London *Classical Review*, in the editorship of which American scholars will be hereafter associated.

An edition of Freytag's 'Die Journalisten,' edited by Walter D. Toy, Professor of Modern Languages in the University of North Carolina, is to be issued soon by D. C. Heath & Co., Boston, together with Goethe's 'Torquato Tasso,' edited by Calvin Thomas, Professor of Germanic Languages at the University of Michigan.

A new and largely revised and rewritten edition of the 'United States Dispensatory' is nearly ready to be issued by J. B. Lippincott Co. The 'National Formulary' has been incorporated with it.

Mr. W. J. Ashley's 'Introduction to English Economic History and Theory,' which we lately had occasion to praise in these columns, has just been reissued in this country with the imprint of G. P. Putnam's Sons. From the same publishers we have 'Readings from Washington Irving,' quarried from the 'Sketch-Book' and the 'Alhambra'; a so-called "Katrina Edition" of the 'Sketch-Book,' with a dainty exterior; 'The Rose and the Ring,' in the "Nuggets Series," with Thackeray's illustrations, and a holiday edition of Misses Brackett & Eliot's 'Poetry for Home and School,' having 'The Silver Treasury' for its new trade title. This last work has been given broader margins, particolored borders, a handsome binding, and somewhat heterogeneous illustrations. The collection is an excellent one—to be criticised, if at all, in the most juvenile portion of it, which the compilers themselves felt to be of necessity the least satisfactory.

Harry M. Kieffer's 'Recollections of a Drummer-Boy' (Ticknor & Co.) has hit the popular taste to the extent of a sixth edition, now published in improved style and with a slight enlargement.

Judgments will differ as to how far Mrs. Burnett's amusing story of 'Editha's Burglar' can properly be styled "for children." It has, however, been offered them once more, in book form (Boston: Jordan, Marsh & Co.), and it is made more "real" by illustrations, and among these the portrait of a little girl who acts the part of Editha—"the original Editha," she is called.

One is surprised to learn, or to be reminded, that the late Edward Lear began his "nonsense" as far back as 1846. Now we have all four of his 'Nonsense Books' brought together in one volume, with all the illustrations, and with a capital portrait of the author, by Roberts Bros., Boston. It is fit to be a permanent memorial of a type of humorist, with pen and pencil, as delightful as he was original. The obituary notice copied from the *Saturday Review* gives welcome biographical details, revealing Mr. Lear in his own eccentric personality, as a landscape artist, and an ardent traveller to whom Tennyson, in his lines "To E. L. on his Travels in Greece," has accorded an immortality of musical verse like that which Browning confers on "Waring." This volume should be marked on every parental list for the holidays.

The new 'Worcester's Academic Dictionary,' published by J. B. Lippincott Co., has taken advantage of the most recent authorities on etymologies, in particular of Skeat and the 'New English Dictionary.' In the rather sparing illustrations, natural history has received more than its share of attention. Such familiar things, too, as a crown, a mallet, a screen, etc., might well have been omitted. New words have been pretty well looked after. We miss *boycott*, and the verb *to wire* (=to telegraph), though we have *to cable*. The typography is not as handsome as that of 'Webster's Condensed Dictionary,' but it is at least tolerable to the eyes.

A welcome tool is the 'Index to Appleton's Annual Cyclopædia' for the twelve volumes, 1876–1887. The compiler has been needlessly brief in making the entry—"Obituaries, in every volume." It should have been mentioned that the subjects of these obituaries are to be found in the main alphabet of this Index. We think it would be well to indicate this by an obelisk.

No. 8 of the papers of the New York Shakespeare Society, upon 'The Construction and Types of Shakespeare's Verse as seen in the Othello,' by Thomas R. Price, is an excellent examination of the metrical character of

Shakspere's dramatic verse, not only in the "Othello," which is used merely as an example, but in all the plays. The unit is made the stave, as it has been defined by Dr. Guest in English metres and by Dr. Schmidt in classical metres; and by using this as the basis of analysis, Shakspere's most difficult verses are found to be regular. The insufficiency of the foot as a unit of structure in English poetry is notorious, and the substitution of the stave in its place is really a great gain as a means of reducing the harmonies of verse, as they exist in our greatest poets, to law. Dr. Price is brief and orderly in his treatment, and his study may be regarded as a valuable monograph in a field usually abandoned to incompetency.

Thos. Y. Crowell & Co. have added three new works by Victor Hugo to the translations from his writings now in course of publication by them: 'Notre Dame de Paris,' 'The Toilers of the Sea,' and 'Ninety-three,' each in two volumes. Last year they issued 'Les Misérables,' in five volumes, in the same series. 'Ninety-three' is translated by Mrs. Helen B. Dole, but all the others are the work of Miss Isabel Hapgood, whose conscientious faithfulness in rendering into English Victor Hugo's extravagantly heroic conceptions and language in 'Les Misérables,' has not deserted her in the two translations more recently published. The difficulties are so great in translating any work of Victor Hugo's into another language that both Miss Hapgood and Mrs. Dole are deserving of praise for making such vigorous and faithful versions in such an acceptable English form.

Geo. Routledge & Sons have published an English translation of M. Alphonse Daudet's 'Robert Helmont,' in an octavo volume, upon which they have lavished all the luxury of large print and thick paper, broad margins and profuse illustations. The translation is good, though, as might have been expected, the sparkling effervescence of Daudet's inimitable style is not attempted in the translator's easy and flowing narrative. This is sufficiently satisfactory, however, as this 'Diary of a Recluse'—Robert Helmont is a young artist detained by an accident in a deserted village not far from Paris, and concealed there during the siege—is written in Daudet's most subdued manner. The translation is by Laura Ensor, and the illustrations, those of the last French edition, by Montégut and Picard.

Mr. H. N. Fowler of Harvard University has contributed to the "College Series of Greek Authors" an edition of the fifth book of Thucydides (Boston: Ginn & Co.). Like the editions of the other books, so far as they have appeared, it is based upon Classen. But the entire freedom which the present editor, as well as his predecessors, has allowed himself in the revision of Classen's notes, and the extent to which he has drawn upon other editions and the researches of other and in some cases more recent scholars, renders him responsible and entitles him to credit for the whole. We have so recently reviewed in detail the editions of the fifth and seventh books that it is only necessary to add that the same general plan is carried out in this, and gives renewed assurance that the completion of the whole series will put us in possession of one of the most useful and scholarly editions of Thucydides that have appeared in this country or Europe.

We commend to teachers another text-book in a class abounding in poor ones, the 'Eclectic Physical Geography,' prepared by Russell Hinman, and published in Cincinnati by Van Antwerp, Bragg & Co. The scheme of this work is very rational, and the presentation attractive, and there is a marked absence of rubbish. The publishers have, as usual, done their part admirably: type, paper, and illustrations are excellent.

Chas. Scribner's Sons have issued a folio 'Citizen's Atlas of American Politics, 1789–1888,' the timely embodiment of electoral, tariff, and population statistics in colored maps and graphic charts, by Fletcher W. Hewes, author of 'Scribner's Statistical Atlas of the United States,' from which a certain number of plates have been borrowed. This work offers endless study to the curious, at the same time that it presents compactly and strikingly the salient features of our political and economic progress. The maps of the successive Presidential elections since 1824 will arouse a particular interest at this time. Two, on the largest scale, show the popular vote by counties (numbered for reference and comparison) for 1880 and 1884. Others exhibit the leading foreign nationalities. The charts deal with receipts and expenditures, balance of trade, customs revenue, importations, prices, wages, cost of living, etc. The explanations are creditably clear and ample, and authorities are scrupulously named.

Miss Kate Sanborn is, we believe, first in the field with a calendar—"The Rainbow" (Ticknor & Co.). Its daily leaves are freighted with extracts from all sorts of authors and styles. But where in her "Milton" did Miss Sanborn (under January 7) find the stanza—

"Let fate do her worst, there are relics of joy,"

etc.?

The Richmond and Twickenham *Times* of August 4 contains a full account of the recent two hundredth-anniversary celebration of the birth of Pope, which was most remarkable because of the fine loan-collection of articles relating to the poet. This consisted of rare editions, portraits, caricatures, autograph letters, early manuscript-notes, furniture, ware, etc., and is fully described in the catalogue, which can easily be procured by post. Prof. Morley delivered a long and eulogistic address, in which he took the most favorable view of Pope's infirmities. There was a water-fête on the river, which was unfortunately interfered with by the bad weather of the season. The celebration lasted through an entire week, and its promoters seem to deserve congratulations for their energy and success. At the same time the British Museum exhibited a smaller collection of similar curiosities. This issue of the local newspaper is filled with excellent articles upon Pope's relations with his publishers and with women, on the costumes of the time, and other matters of similar interest, and is adorned with wood-cuts of Pope, his mother, Martha Blount, Swift, and others—among them Austin Dobson and the principal promoters of the enterprise—as well as with pictures of the grotto and the villa. It is in itself an interesting relic of the occasion.

Mr. S. S. Rider, in his *Book-Notes* for September 15 (Providence), explodes once more what he calls "the perennial pig story"—the war of 1812 having long been popularly assigned (with more or less seriousness) to a dispute between two Providence citizens over a trespassing pig. This story last appeared in *St. Nicholas* for July.

The most noteworthy paper in the September Proceedings of the Royal Geographical Society is an account of the Little Andaman by Maurice Portman. This island, the southernmost of the group of this name in the Bay of Bengal, is interesting from the fact that it has remained from time immemorial (till very recently absolutely) shut off from intercourse with the rest of the world, the natives invariably killing every stranger who fell into their hands. Mr. Portman, having succeeded in winning their confidence, was at length, in 1886, permitted to spend a few months among them. He describes them as "probably the most intensely black race in the world," though "they have none of the thick lips, high cheek-bones, and flat noses of the negro type." He was not able to discover that they had any religion whatever, nor could he learn of any traditions or superstitions. "Among themselves they are most gentle and good-natured, holding most things as common property; theft is almost unknown, and towards each other they seldom lie. With a strict monogamic system of marriage, infidelity and all attendant crimes were very rare." They are, according to Prof. Flower, "probably the purest examples still remaining of one of the large branches of the human race which, according to the modern view, was at one time widely spread over the southern portion of India, the Malay Peninsula, the Indian Archipelago, and New Guinea," and by some regarded as the original population.

The last Bulletin of the Société de Géographie is devoted to the French navigator, La Pérouse, the centenary of whose death was celebrated by the Society in April. It contains the papers read on this occasion, an account of his private life by his grand-nephew, of his voyages by M. de Courcel, and a description of the manner in which the relics of the expedition were found at Vanikoro, an island some distance north of New Caledonia, by Vice-Admiral Paris. There are also various documents relating to his last expedition and its personnel. Among these are extracts from a journal kept by La Pérouse while in command of the *Amazone*, then forming a part of the fleet of D'Estaing, in which he describes his capture of the British frigate *Ariel* off Charleston, September 10, 1779. There are also given some "Notes," found in the papers of M. Barthélemy de Lesseps, father of the great engineer, who was sent by La Pérouse from Kamtchatka across Siberia with despatches, and so escaped the fate of his commander. A bibliography of works and papers relating to the navigator or his expedition which have appeared down to the present time, prepared by M. G. Marcel, contains 386 numbers.

—The October *Harper's* special article is a survey of the Western and Southwestern press, with many portraits of editors, by Z. L. White. It gives a brief account of the history of particular papers, and naturally makes prominent the most startling successes of Western journalism and the careers of the most enterprising editors. It is observable that the ideal of the newspaper, as a history of the world for one day, which puts news in the first place and hardly takes account of editorial opinion, dominates the development of journalism; that the press, generally speaking, has tended towards independence of political parties; and that something like a copartnership between great papers of different cities points to still greater simplifying of the business of news-gathering, and to more uniformity in the matter given in different areas of circulation. The physiognomy of the faces shows a marked predominance of the Yankee type, and exhibits in nearly all a nervous strength, determination, and a certain concentration, the marks of work done. They are interesting for comparison with the series of authors lately given, or those of the generals with which the *Century* has provided us in such numbers. They approach the type of "business men," and from the literary standpoint this is a noticeable fact. Another prominent article is a very full account of the arts of Limoges, especially that

of the Haviland porcelain, which, as an American enterprise established on foreign soil, has a curious interest. In this case it was the employer who exported himself, instead of importing labor and material. A better illustration of the vast advantages, in competition with European labor, enjoyed by American talents and methods, could hardly be desired. The mechanical processes in making the ware are amply illustrated. The more ancient art of enamelling also receives attention in the paper. Dr. Coan's advice upon how to use the various native and foreign mineral waters at home is a valuable medical article, and covers a wide field with clear and explicit directions. The remainder of the number is filled with travel and fiction of the ordinary kind, and is noticeable only for the batch of old English songs with Abbey's illustrations, which break the solid body of the magazine and give a lighter appearance to the pages.

—If readers turn at once to the paper of ex-Secretary McCulloch in the *Scribner's*, neglecting the other attractions of an unusually good issue, they will find a very noteworthy essay upon the state of the country. The three vital problems before us as a business community are said to be the decay of shipbuilding, the tariff, and the extension of our foreign markets. The history of our trade and revenue with respect to these points is broadly told, and the present conditions affecting them succinctly stated, so that the reader is put in possession at once of the facts and of their bearing. The conclusions drawn are explicit and very trenchantly worded. Mr. McCulloch insists that our policy with respect to ships is barbarous, and will necessarily debar us from being a commercial nation if persisted in; and he argues that no nation ever has been or ever will be great which was not first commercial. As to the tariff, his views are well known, but they have never been so forcibly put forth, and seldom do we have a broad discussion which keeps so close to the plain facts of the situation. He deals also with two other main questions, that of the taxation of land according to Henry George's theories, and that of naturalization and manhood-suffrage for cities. The first of these is approached in a temperate manner, but with steady, destructive criticism. He will not admit that the land which the Western pioneers overcame was the gift of God in the sense of being a free gift, nor does he rate its value in the mass as higher than that of the labor expended upon it; and from this initial position he argues to the conclusion that land should be most lightly taxed, with passing remarks upon socialistic hopes and human nature which may be recommended as a sobering draught to those who feel the great attractions of the millennium. Finally, he regrets the granting of the suffrage to the foreign-born, and advises property qualification for municipal voting. These latter positions, however, are not argued, and can rank only as expressions of opinion. The article should have a wide currency, because it deals with real questions ably and in an entirely frank spirit. Readers will find for themselves the charm of Lester Wallack's reminiscences, which are admirably recorded, and promise yet better things to come. Of Prof. Hadley's fine article upon the relation of railroads to business, and of the other lesser papers, all excellent, we have left no room to speak. The number is one with which the editors may well be proud to close the second year of the magazine.

—The fourth volume of Stedman and Hutchinson's 'Library of American Literature' (Chas. L. Webster & Co.) confirms our previously expressed opinion of this work, viz., that it is a selection marked by essentially sound judgment and a praiseworthy plan. The politico-historical value of it when completed will be very considerable, as will also its educational influence if the edition reaches the figures to which we are accustomed in the case of successful subscription books. In order to be both generally and individually representative, some matter has been admitted which is of little worth from a literary point of view. The verse of such masters of prose as J. Q. Adams and Daniel Webster might be cited for examples. And speaking of Adams, we could wish that the editors had extracted some of that "natural and spontaneous eloquence" the lack of which in himself the "old man eloquent" so unjustly deplored. So we should have liked to see some of Alexander Hamilton's letters drawn upon. This statesman has his character delineated by Fisher Ames, Harrison Gray Otis, and Eliphalet Nott. Fisher Ames and John Marshall pronounce upon Washington, and William Sullivan describes our first President's receptions in a manner which forcibly reminds us of time's changes towards democratic simplicity. The veracious Weems's anecdotes of the Father of his Country have a new lease of life not undeserved by this clergyman's happy knack of telling a story. Of other biographical touches by contemporaries, we may mention Joel Barlow and Elkanah Watson on Thomas Paine, William Wirt on Patrick Henry, and Webster's portraits of Theophilus Parsons and Thomas Jefferson. Webster, Lyman Beecher, and Hannah Adams speak of and for themselves. The Expounder of the Constitution is well represented except at his basest.

—A timely interest pertains to the extract from Josiah Quincy's speech on the struggle for patronage (1811), and to that from Mathew Carey describing the dreadful demoralization caused by the outbreak of yellow fever in Philadelphia in 1793. A large portion of William Austin's 'Peter Rugg,' the New England Wandering Jew, is reproduced, and shows no marks of fading. William Tudor's character of the Bostonians is also fitly revived, and can be commended for instruction, especially in what relates to their coldly critical attitude towards oratory. We are much mistaken if this does not, in connection with the general enlightenment of the community, account in large measure for the incomparable line of orators which the Massachusetts capital can boast. Most curious of all the entertaining contents we have found Royall Tyler's diatribe in 1809 against certain cant English expressions. Almost every one that he specifies has held its own to this day—not in *frequency* of use, to be sure, but still in use and in intelligibility, *e. g.*, "all the rage," "quiz," "quizzical," "bore," and "horrid bore," "I owe you one," "That's a good one," and "clever" and "clever fellow." "Clever," says Tudor, was "not used by any English prose writer of eminence until the reign of George the Third, nor ever introduced into a serious poem until adopted by Cowper." Its American sense, of 'good-natured,' "which signification is sanctioned by Bailey's and the elder English dictionaries," is preferred by Tudor to the English sense of 'skilful, adroit.' But eighty years have ended a very general prevalence here, at least in cultivated circles, of the foreign usage of this "pert adjunct." Tyler's portrait, by the way, together with Brockden Brown's, Barlow's, and many others, adorns the volume.

—Mr. Richard A. Proctor's untimely death is lamentable on every consideration. Born in 1837, with a constitution of insufficient vigor to support an exceptionally active mind, he had still reason for looking forward to a quarter century of literary work, continually improving in quality with the ripening of his scholarship and literary judgment. Nothing shows this better than his 'Old and New Astronomy,' of which nearly the half is already issued. It is by far the best of Mr. Proctor's works; and all his previous labors—books, lectures, essays—were, he says, merely preparatory for it. It is gratifying to learn that his death is not likely to interfere with the completion of this book, as he leaves the MS. far advanced, if not entirely in hand. It is hardly possible to mark the limit of the scientific good such a man has done, and would have continued to do. That he wrote much trash, no one will deny; but he wrote a vast deal that was not, and any one caring for a just estimate of his life must form a critical judgment of this also. Few scientific authors have had so large an audience, and few have, we imagine, all told, contributed more than he to the correct information of the multitude in matters scientific. He had little respect for mere authority, and would as unhesitatingly attack the statements of the greatest astronomer as he would expose the error of an unpretending amateur. As a consequence, he made frequent exhibition of the blunders of others. Not that he never made mistakes himself—only drones are exempt from such misfortunes; but his mistakes are few in proportion to his activity.

—By an unfortunate idiosyncrasy of temperament, Mr. Proctor seems never to have lost an opportunity for controversy; but his grounds were in the main well taken, and still better held, and his assailants were usually worsted. To know something of the extent and variety of his contributions to astronomical literature, one has simply to consult Houzeau's 'Bibliographie Générale de l'Astronomie,' and verify a score or two of the more important references to Proctor's articles. They cover a period of seventeen years, from 1865 on, and number nearly two hundred. This activity has hardly a parallel among astronomers, his papers averaging nearly one to each month, while his writings range through every branch of astronomical investigation, and show a marked fertility of invention and facility of research. One recalls the remark of an eminent German astronomer, that Proctor should "be pinned down to routine work in some large observatory," with the feeling, nevertheless, that his life-work has perhaps been more effective than it would have been in such capacity. His researches into the structure of the stellar and nebular universe have given him a lasting name, and would be no discredit to any astronomer. Much the same might be said of his treatises on 'The Moon' and 'Saturn,' and the large 'Star-Atlas.' Latterly he abandoned original work almost entirely, but appears to have continued his writing under conditions of self-imposed activity. It was often impossible to take needed rest, so active was his mind on every matter which came to his notice. His life was worth a higher value than his brother scientists often set upon it, and we may liken him more to our own Mitchell, who, nearly half a century ago, gave American astronomy an impulse still plainly recognizable if one will, but of which even this subsequent generation is slow to accord him the credit.

—With the publication of volume twenty of the 'Lovsamling for Island' (covering the years 1868 to 1870, inclusive), all the important laws relating to Iceland from the year 1096 to the present time are made easily accessible,

For as regards the period subsequent to 1870, the annual volumes of the *Lovtidende for Kongeriget Danmark*, from and including 1871, when that publication commenced, have embraced, in a supplement, the yearly laws relating to Iceland, the Faroe Islands, and the Danish West Indies. Another volume of the Collection is yet to be published, however, the intention being to bring the series down to 1874, so as to cover the first one thousand years from the discovery of the wonderful island which lies so far away up under the arctic circle, but whose influence upon the political institutions of a large part of the world has been so remarkable. This terminal date is appropriately chosen, also, because in 1874 Iceland entered upon a new political era under the liberal constitution which went into effect on the first day of August of that year—the gift of King Christian IX. of Denmark to the people of Iceland upon their Millennium. The project of a collection of the important laws concerning Iceland originated with the two Icelandic scholars, Oddgeir Stephensen and Jón Sigurdsson, who presented, as far back as January 18, 1845, a memorial asking support from the Danish Government in the preparation and publication of such a work. This aid was granted them some years later, and they jointly edited the first fifteen volumes containing the laws, ordinances, etc., to 1854 inclusive. The two succeeding volumes, for the years 1855 to 1859, were prepared by Sigurdsson alone, and published in 1871 and 1877 respectively. But on December 7, 1879, death cut short the labors of this remarkable man, whose unusual scholarship had made his name familiar to the whole learned world, while his unswerving love for his native country had led him to dedicate his learning and talent solely to the advancement of the honor and welfare of Iceland. This consecration won for him the undying affection of his countrymen, who inscribed upon his coffin in letters of silver: "Iceland's dearest son: her glory, her sword, her shield." Mr. Stephensen again took up the work, and published, in 1884 and 1885, volumes eighteen and nineteen, covering the period from 1860 to 1867; but in 1885 he also was called upon to lay down his pen, after having rendered his country a long and faithful service as chief of the Icelandic Department at Copenhagen. The completion of the work was intrusted by the Danish Government to Mr. Stephensen's official successor, John Hilmar Stephensen, who is assisted by an official in his Bureau, Ólafur Halldórsson, and under their supervision volume twenty appeared last year in Copenhagen. This valuable work is not only of the first importance to the Icelandic jurist of to-day, but is indispensable for the student of the history of Iceland and the Scandinavian North.

TRAILL'S WILLIAM THE THIRD.

William the Third. By H. D. Traill. [Twelve English Statesmen.] Macmillan & Co. 1888.

Mr. Traill's book has not attained its object; it does not provide us with a picture of the Prince of Orange. Mr. Traill is as able a writer as Mr. Frederic Harrison or Mrs. J. R. Green, but he has failed where each of them has succeeded. Mr. Harrison has given, if not a perfect, yet certainly a striking portrait of the Protector. Mrs. Green has made Henry the Second for the first time to ordinary readers a vivid individual human character. Mr. Traill has written much about William which is worth reading, but he leaves us almost as ignorant of William's personality when we have ended the book as when we began it.

This failure of a skilful man of letters to produce a portrait of his hero is noteworthy. The failure does not arise from any lack of power on the part of our author. There seems to be something in William the Third's nature or position which makes it impossible to present Englishmen with an impressive portraiture of a statesman who conferred the greatest benefits on England. In this matter Macaulay has been no more successful than Mr. Traill. No historian knew better how to use strong colors and how to produce the strong effects which catch the public eye. In general he has impressed upon the popular imagination a distinct view of every man whose likeness he traced. Chatham, Pitt, Fox, Hastings, Burke, Hallifax, Johnson, Addison, and a score of others are to English readers known only from Macaulay's vivid descriptions. It is likely enough that as long as English literature endures, Johnson will, for ninety-nine men out of a hundred, remain the Johnson of Macaulay. Critics may show that Macaulay's likenesses were not true to life, but readers who know nothing of (for example) Chatham but what they learn from Macaulay, will always see the great Commoner as he is painted by the great Whig historian. As regards William it is otherwise. The King who expelled James the Second, secured the religious and civil liberty of England, and opened the reign of the Whigs, excited in Macaulay's mind all the enthusiasm and veneration of which the historian was capable. No one can doubt that William is the true hero of that fragment from the 'History of England' which was all that fate allowed its author to complete. One might have expected, therefore, that William the Third would have been drawn by his worshipper in lines as distinct, as marked, and unforgetable as those in which he has sketched Pitt or Johnson. This expectation has been utterly disappointed. From Macaulay we learn William's virtues and William's heroism; we do not learn to know William himself. The Deliverer remains a shadowy figure.

It is possible for Englishmen to know a good deal about William's work, it has not as yet been made possible for them to understand William's heart. If we ask, as any intelligent critic must ask, how it happens that William's personality becomes lost in his achievements, it is by no means easy to provide a satisfactory answer to a natural question. Here, as elsewhere, in attempting to solve historical problems, we must look not for a cause, but for causes. The reasons why William's personality is so much harder to seize than the individual character of any other among the twelve English statesmen whose lives will make up Macmillan's interesting series, are, it may be suggested, at least three-fold.

William, in the first place, though an English statesman, was not an Englishman. This means a good deal more than one thinks at first sight; it means that everything about him which was individual—all the petty traits which made Henry the Eighth, Elizabeth, Anne, or George the Third intelligible to the English people—were, in William's case, either not noticed or misunderstood by his English subjects.

In the second place, he was not only a foreigner, but a foreign diplomatist, whose aims, though beneficial to the world, and in the long run beneficial to England, were not English. To Cromwell, England was everything. He held theoretically that English interests ought to be postponed to the interests of religion or of European Protestantism; but he would have found it impossible to believe that any act conduced to the service of God which clearly was hostile to the greatness of England. With William it was otherwise. As a patriot he was not an Englishman, but a Dutchman; as a statesman, he was not nearly so much an English King as the leader of a great European alliance. He opposed France not from the wish to aggrandize England, but from the desire to preserve Holland from subjection, and to save the independence of European States. The term "English statesman," indeed, is a misnomer; he was a European statesman, and he occupies a place rather among leaders who have influenced the destiny of Europe than among the men who have moulded the policy and the Constitution of England.

In the third place, William's position in England was one which both the men of his own day and subsequent generations have found it hard to seize. This is the point on which Mr. Traill's book is most full of instruction. He points out that the attempt to make out of William a sort of ideal Whig monarch who in his policy anticipated the Whig constitutionalism of the eighteenth century, falsifies our whole view of his position and of the English Constitution as it existed immediately after the Revolution. Nothing is more certain than that the generation who welcomed "the glorious Revolution" did not intend to change the foundations of the English polity or to lessen the legitimate authority of the English Crown. Their notion was that William and Mary should possess all the prerogatives which could be legally claimed by Charles II. or James II. The King was to remain a power in the State, but to exercise his authority in conformity with the general will of the nation; William, in short, was to rule as Charles and James ought to have ruled. William, on his part, had no intention of being a *roi fainéant*—a king who reigned and did not govern. He intended, as his subjects intended, that he should be the true head of the Executive, and he intended, and his subjects allowed, that he should be his own Foreign Minister.

The singular feature in the history of the English Revolution is, that, partly from the inherent nature of things, partly from accidental circumstances, the conception of the royal position held both by the King and by the English people could not be permanently maintained. If William had had children, if any of Anne's children had lived, the Crown might have continued to be for a century longer a most influential if not a predominant power under the English Constitution. A national dynasty might have represented the nation. Anne, feeble as was her personal character, was not, as Queen, a nonentity: on her changing caprice did at times depend the policy of the State. But from the first the Revolution introduced changes more fundamental than were contemplated by its authors; it made the existence of Parliament permanent; it laid the foundations on which within a generation was erected the fully developed system of party government. This, however, was not the scheme of administration contemplated by William. He intended to choose his own ministers from all parties in the State. He had no wish to be the king of a party, and this for two reasons—a monarch who consents to be the head of a faction cannot hope to be supported by the loyalty of the nation; a king who becomes a party leader, in the long run subordinates the authority of the Crown to the will of a party.

The plain truth is, that, as in the time of Cromwell, so, though less clearly and distinctively in the time of William, two theories of parliamentary government presented themselves to the English people. The one plan was that the real monarch exercising royal prero-

gatives for the benefit of the nation should be the true head of an independent Executive, which, though not appointed by Parliament, should loyally obey laws passed by the houses of Parliament and by the Crown, and should pay respect to the settled will of the nation, as expressed through the mouth of the House of Commons. The other plan was that the Executive should be more or less directly appointed by the party predominant in Parliament, and that party government should derive force and cohesion from the combined action of great aristocratic connections. Either scheme, be it remarked, involved the existence of parliamentary government. The one placed the appointment of the Executive in the hands of a king who should conform to and represent the national will; the other placed it in effect, though not in name, in the hands of the houses of Parliament, or, in effect, in the hands of the great Whig connection which at that period could control Parliament. From the one scheme it followed that the King should take a real part in legislation; from the other it followed that what is now inaccurately called the royal "veto" should become little else than an obsolete form.

William, and with him the mass of the nation, wished to give effect to what may be called the royal system of parliamentary government. Nothing can show this more clearly on the King's part than his refusal to approve bills which had passed through the two houses. His conduct in this respect is very noteworthy. He revived, in substance, the Cromwellian idea, and anticipated the Presidential practice of a suspensive veto. The Whig aristocracy, on the other hand, preferred the scheme of party government, which in those days and for a century later (as any one may see who studies Burke) was intimately connected with the permanent influence of the great Whig houses. The policy of the Whigs triumphed. This result was due, as already pointed out, to favoring circumstances: neither of the first two Hanoverian monarchs could play the part of a Patriot King. But it was due, also, to much deeper causes. The predominance of the Whigs was justified by the only plea which ultimately justifies political authority—exclusive capacity to rule a nation with a true view to national wishes and interests.

What, however, the student of William's life should bear in mind is, that the constitutional problems raised by the Revolution needed to be solved. Two solutions were theoretically possible. The one favored by William was not the solution favored by the Whigs and ultimately accepted by the country. The hero who saved English liberties did not sympathize with the policy by which alone, in the judgment of the Whigs, these liberties could be permanently preserved: the Whig monarch was not a Whig. Nothing has led to greater confusion than the attempt to represent a vigorous ruler, determined to exercise, for the benefit of England and the world, all the legal prerogatives of the English crown, as favoring a policy which ultimately put the crown, for fifty years at least, so to speak, into commission.

GREEK CERAMICS.

Les Céramiques de la Grèce propre. Par Albert Dumont et Jules Chaplain. Paris: Firmin-Didot. 1888.

It certainly does credit to French scholarship that the two most recent treatises on Greek ceramics, the only two, indeed, which embody the recent results of archæological research, together with the plentiful harvest yielded by excavations during the last ten or fifteen years, should have been published almost simultaneously in Paris, bearing the names of two former pupils of the French School of Archæology in Athens, MM. A. Dumont and O. Rayet. By a sad coincidence, these two works have appeared after the death of their authors, thanks to the devoted care of two younger scholars, MM. E. Pottier and M. Collignon. Dumont's 'Céramiques de la Grèce propre' and Rayet's 'Histoire de la Céramique grecque' do not cover exactly the same field, as the titles they bear might induce the reader to suppose. The former is a severe and scientific study of Greek ceramics down to the fifth century B. C.; the latter, while dwelling with sufficient detail on the same period, is more particularly interested in the description of Greek ceramic art during the brilliant phase of its career, from the time of the Persian wars to the death of Alexander the Great. Rayet's work is more specially intended for dilettanti at large, while Dumont wrote for professional archæologists. His intention had been to trace a complete history of Greek painted vases, without neglecting the period of splendor, nor the long and rather confused struggle against decay. This explains why the plates annexed to the volume just published, or, to speak more exactly, just completed, contain many subjects which are not dealt with in the text; but they will be gladly accepted as a supplementary gift, M. Pottier having added in an appendix a short though admirably precise description of these fine specimens, engraved from the drawings made at Athens by M. Chaplain.

However charming the aspect of these plates may be, we cannot refrain from thinking that, if M. Chaplain's drawings had been reproduced by some mechanical process, instead of being handed over to an engraver, the result would have been, from a purely scientific point of view, superior to what it actually is. The engraver has a certain tendency to soften the asperities of the design, to attenuate the original coarseness of certain figures; and whoever is closely acquainted with Greek vases will certainly regret not to find, on some of the plates, the *tenor antiquus* which he is accustomed to. But we must hasten to add that, in the large number of forty plates, there are a great many which are highly satisfactory, and give as complete an idea of the originals as any plate published in the 'Monumenti dell' Instituto,' or the 'Auserlesene Vasenbilder' of Eduard Gerhard. This is especially the case with the beautiful engravings of Attic funeral *lecythi*, those unequalled masterpieces of pure Hellenic elegance and simplicity.

The study of Greek ceramics is no longer what it was in the days of Gerhard and Panofka. Not only have the materials immensely increased; not only have quite new series, such as those of Hissarlik and Thera, been added to the stock of primitive Grecian ware, but the method itself of ceramical study has undergone a very complete change. Formerly—that is, until about 1865—attention was particularly directed to the mythological scenes figured on the painted vases. Great efforts were made to explain these scenes by the aid, more or less forced, of the well-known or the most obscure legends of Greek mythology. When these were insufficient to explain the data, bold interpreters did not refrain from coining new legends, or from calling in the help of the very little we chance to know about ancient mysteries and secret worship. The new school of archæology does not disdain the exegetical task which its predecessors submitted to with an immense display of learning and tremendous labor, but the belief has gradually gained ground that mythological interpretation is not the chief point to be aimed at by the ceramograph. The huge quantity of vases which fill our museums must be classified in accordance with their shapes, the various motives of decoration displayed upon them, the inscriptions or *graffiti* which they bear; care must be taken to distinguish the different schools of art they belong to and the local workshops from which they originated. In a word, the vases have ceased to be, at least exclusively, mythological or artistic documents; they have been drawn into the wide sphere of historical research, and made to serve as tests not only for the history of ancient art, but for the history of civilization, commerce, and industry. M. Dumont's volume is a very fit demonstration of the important results which may be realized by this new method.

M. Dumont was a prudent, perhaps even an over-prudent, archæologist; he discarded many theories, by proving that they were at variance with the facts, but he did not indulge in the easy and rather vain sport of erecting new scaffoldings by the side of those he had just pulled down. He never goes beyond his facts, though he knows how to obtain from them all the information they can yield to a systematic and not over-ingenious inquiry. His method is more analytical than synthetical, and his style is in accordance with the scientific severity of his method. After having described with much accuracy the vases of Hissarlik, Thera, Mykenæ, Spata, and Ialysos, he comes to the conclusion that the vases of Thera are older than the sixteenth century B. C., that those of Hissarlik are more ancient still, and that the Mykenian ware is somewhat later than the Ialysian. He then proceeds to show how the Greek and the Oriental traditions concerning the early history of the Ægean may receive new light from the results of ceramography; but he is content with a few hints on the matter, and does not even venture a guess at that much-disputed problem, the ethnographical connections of the Pelasgi. If archæologists could take example of Dumont, much waste of paper and time might be avoided; but it is not probable that the generality of them will consent to do so.

Next to the vases of the very primitive classes just alluded to, we meet with the ceramics of geometrical design, which have been divided into two series: the vases of the Ægean (*type des îles*) and the well-known Dipylon vases found at Athens. In opposition to the views of Prof. Conze, lately adopted by O. Rayet, Dumont does not believe the geometrical style to be a mode of decoration peculiar to the Aryan races; many specimens of the same ornamental system occur in early Chaldean art, and it seems natural enough to think that the adoption of such simple patterns cannot be considered as the characteristic feature of Aryan taste and industry. The influence of Oriental (in particular of Assyrian) art begins to make its appearance on Greek pottery immediately after the full development of the geometrical Dipylon style. Hence those numberless vases which are commonly called Corinthian (although they were not painted in Corinth alone), and in which the floral ornaments, the processions of Asiatic animals, and the taste for symmetrical arrangements, clearly betray the imitation of Oriental models, perhaps of Oriental tapestry.

Little by little, the human figures, which are very rare in the earliest specimens, become more numerous and take up a larger place in the Greco-Oriental vases. The result of this evolution is the Rhodian type, presenting a

mixture of the Corinthian and of the geometrical style. Dumont studied the vases of these several series with remarkable critical acuteness and a profound knowledge both of Oriental and of Hellenic art. In the following chapters, which he had left imperfect, the foot-notes are all due to M. Pottier, who has enriched them with an astonishing fulness of bibliographical and technical information. The series dealt with in that part of the work are the black Etruscan and Grecian ware, ancestors of the Roman ware which is so improperly styled Samian, the enamelled pottery which is generally called Rhodian, and the elegant vases affecting the shape of human heads.

A long and very good chapter is devoted to the Cypriote vases, the classification and chronological arrangement of which have been so greatly improved by recent excavations. This forms the conclusion of the Second Part, after which begins the study of the Melian vases, similar in style to the chest of Kypselos described by Pausanias, and of the Second Corinthian series, where the mythological subjects and the representations of human beings become decidedly predominant at the expense of the Oriental motives. Corinthian ware of the Second style was also fabricated in Italy, especially in the old town of Cære, where so many specimens of it have been brought to light during the present century. Kirchhoff has demonstrated, by the study of the inscriptions, that a number of similar vases, formerly confounded with the ware of Corinth and of Cære, must be attributed to Chalcis, or to the Chalcidian colonies on Italian soil. This is one of the most important discoveries of recent ceramographical research, and has been very well illustrated by MM. Dumont and Pottier.

A rather queer series of vases, the most celebrated of which is the cup of Arcesilas in the National Library in Paris, has been successively attributed to Cyrene, to Crete, and to the Peloponnesus. M. Pottier has given good reasons for transferring its origin to Naucratis, the most important settlement of the Greeks in Egypt. The question cannot be solved with certainty until new excavations have been made in Cyrenaica; unfortunately, the political state of that region renders it almost inaccessible to scientific research, however tempting its prospects may be.

The last chapters of our volume concern the black-figured vases of Athenian manufacture. Athens has become the intellectual and artistic metropolis of the Hellenic world, and its supremacy in that respect will remain unshaken for several centuries. The recent discoveries on the Acropolis have given proof that the red-figured ware is not, as was generally believed, later than the Persian wars, but that it was already flourishing in the time of the Peisistratidæ. As the black-figured ware is unquestionably more ancient, we are led to remove its origin far beyond the beginning of the sixth century B. C.; the Dipylon vases must be at least two centuries older, and this brings us to a period which is not far distant from that of the Homeric poems.

M. Pottier has added to this valuable work a very complete index, and, last but not least, several pages of addenda, brimful of bibliographical references, including a brief mention of all the books, magazine articles, and discoveries relating to archaic Greek pottery up to the middle of the current year. All future writings on that intricate subject will have to take Dumont's work as a starting-point; we cannot conclude this review with higher praise.

GOSSE'S LIFE OF CONGREVE.

Life of William Congreve. By Edmund Gosse. London: Walter Scott; New York: T. Whittaker. 1888.

Mr. Gosse has the distinction of being the first biographer of Congreve. The trustworthy notices of his life are scanty, and especially wanting in the element of personal interest. Thackeray, it is true, built up a fine figure for us to have in our fancy when Congreve's name is on the lips, but he plainly outdid nature, and drew with the pen of the world's satirist, not of the literary investigator. Mr. Gosse holds this latter office. The range of his knowledge of the infinitely little is equalled only by the patience with which it has been acquired. He has a positive genius for the resurrection of dry bones, and, thanks to this, we have now a singularly excellent life of the wittiest English dramatist. It does not tell us much about Congreve personally, because there is little to tell; but it corrects some misconceptions, fills up some blanks, reduces some dates to accuracy, and gives us a just general conception of what Congreve was to his contemporaries; and, besides this, it sketches very completely the history of the stage during the poet's connection with it.

The most important modification made is that which destroys the notion that Congreve lived as a golden youth in a golden shower of sinecure offices. He had some patrimony, and the income from his literary work, which was no doubt considerable, but his offices came slowly, after some tedious waiting; he complains that he has not enough "to have the few people that I love as near me as I want," speaks of the many "fair promises" that come to nothing, and invokes his philosophy to bear him out. A passage from Swift's poems points to anything but superfluous riches as his lot, and Swift thought it necessary to recommend him to the Lord Treasurer, when the change of parties came, and Congreve was made anxious for fear he should be deprived of what little he had. Altogether, Mr. Gosse's view that Congreve is not to be considered rich until after he was forty, is so well supported that, in the absence of any positive facts to the contrary, it must be accepted.

But if he was not the favorite of fortune he has been depicted, he had his full share of favor. Whether his position, his friends, or his talents be regarded, he was at all points enviable. Dryden acknowledged him, with public praise as well as private kindness, as the heir-apparent to the literary throne; his youthful fame was immediate and great, and was grounded on such abilities as needed not to fear lest it should not be supported by mature genius; the town liked him, the literary circles were proud of him, and he had health, mind, and art in his own right. But he ended at thirty in the gout. Twenty-seven years more he lived, the victim of a broken constitution, in virtual retirement, with pain and partial blindness to afflict him, and intellectual tastes, friendships worth having, and at least £1,200 annually in sinecures to lighten his lot; but it was, after all, a failure. The best thing we know of him is that he kept his friends. There are many contemporary notices of his amiability, his good manners, his delightfulness socially; but without them we should know that the man in whose chambers Steele and Swift might have met, and Dennis and Pope might hope to be reconciled, was a liberal-minded gentleman, with tact and discretion enough to serve in any social emergency. The quarrels of the rest never disturbed the serene atmosphere of the rooms where they all liked to be. It is significant that he is called "unreproachful." He had kindness for all. When one remembers, moreover, that he was by common consent the wittiest man of his time in private talk, the wonder grows that he was so free from offence; for wit is as near akin to malice as pity is to love.

To complete the slight characterization, he was a good scholar and a man of pleasure. His genius was eminently intellectual. This comes out in his criticism, which shows studious cultivation and clear, keen thought. His remarks on the Pindaric ode belong to the best order of criticism, and were, moreover, serviceable: they mark the interregnum between Congreve and Gray, and prophesy the latter's verse-form. A surer sign of the intellectual base of his nature is that the one overmastering quality of his comedies is their style. Putting aside the wit and the life and the humanity (such as it is) that they contain, there remains still the exquisite charm of the words which fall upon the literary sense like honey from the honeycomb; nor would we hesitate to say that Congreve's style in the comedies has a quality as unique as Shakspere's prose—a perfection of form seldom equalled and nowhere surpassed even by the great prose masters of his own age; not by Bolingbroke, nor by Swift, though their writings were on the grander scale. This is Congreve's distinction in our literature, that he has the most intellectual refinement of any of our comic dramatists and easily leads them; in fact, the purely intellectual element, both in the form and the interest, tends rather to the injury of his plays, which the theatre found deficient in action. He was observer and satirist enough to be a dramatist, and he was, besides, a great writer so far as the mere art is concerned; he was, besides, something of a poet, and it is interesting to remark that he was really a student of verse-structure (as is proved by his criticism of the Pindarics), and derived from Milton, as Mr. Gosse thinks, some of his cadences in blank verse. This was while Milton's fame was in its nonage. It is more certain that his influence upon the blank verse which began with Thomson and expired in Wordsworth was considerable, and that Collins learned from him how to write odes, not scrupling even to imitate him with unmistakable directness. Nor is it without justification that a parallel has been made of Keats's famous lines—

> "Still, still to hear thy tender-taken breath,
> And so live ever, or else swoon to death"—

with Congreve's conclusion to the "Ode on Mrs. Arabella Hunt Singing":

> "Wishing forever in that state to lie,
> Forever to be dying so, yet never die."

Congreve's literary influence, although it must be acknowledged that the next age in poetry remembered him only to improve upon him, was far from insignificant, and he little deserved the contempt he has sometimes received. Nevertheless, the impression one has of him is of a genius which made only an imperfect expression of itself; of a man with more mind than his few comedies could hold, with tastes, culture, curiosity, a naturally fertile nature richly developed, but leaving no memorial of itself equal to its value. Ill health, in connection with the laborious care with which he composed, is perhaps the secret of the matter; perhaps, too, there was the indolence that goes with such superb social gifts as Congreve delighted his companions with. Or it may be that early fame had brought early ennui, especially when the dramatist found his work was too well done, too refined in quality to tickle the lungs of the vulgar. He became sterile, and the activity of genius gave way to the pleasures of taste. He was one of the first to collect pictures in England.

In connection with the latter days of Congreve, one should note the new turn which Mr. Gosse ingeniously gives to the best known anecdote of the poet—that in which Voltaire figures, and replies to Congreve's hint that he desired to be visited as a plain gentleman by saying, "Had he been so unfortunate as to be a mere gentleman, I should never have come to see him." Mr. Gosse reminds us that Congreve had long been silent, his literary ambition dead, and in its place, perhaps, an old man's chagrin. If Congreve had really been a snob of this sort, Mr. Gosse goes on, if he had "entertained a mean idea of the literary profession, we should have heard of it from Swift or Pope." That is certainly very probable. Voltaire, in a word, mistook a modest disclaimer of the compliments he had brought with him for an insult to the literary profession. It is an interesting view of the conversation, and inasmuch as there is no other evidence that Congreve preferred being "a plain gentleman" to the fame which had flattered him when Dryden handed down the laurel, one cannot but rejoice to have so easy a defence. But no defence can serve for our poet's abandonment of Mrs. Bracegirdle with the paltry legacy, and nothing can extenuate the mortal comedy of his end as a *bon viveur* when the Duchess of Marlborough, whom he had made his heir, placed his waxen effigy at her table, so contrived as to nod when she spoke to it, wrapped its feet in cloths, and had a physician to attend upon it and render a daily diagnosis. With the seven thousand pounds remaining from the legacy, after this pleasant whim was satisfied, the young Duchess bought a diamond necklace. Mrs. Bracegirdle, the favorite of his early years, the woman for whom he had written the best of his characters and who shares his theatrical fame, was poor, but she shielded Congreve's memory by her silence, while the Duchess blazoned his infatuation by her diamonds. This was a death scene for a comic dramatist to observe.

Of Mr. Gosse's fidelity in research and of his extraordinary success in recovering the meaning and bearing of anonymous passages and obscure allusions in the waste-basket of literature, one cannot speak too highly. The theatrical annals in particular are well attended to. Nowhere else shall we find so full and orderly an account of the controversy over the morals of the stage which Jeremy Collier set in motion; and at frequent intervals one comes upon minute facts about the minor literature and writers of the times which are valuable to the close literary student.

A DILAPIDATED EMPIRE.

Through the Yang-Tse Gorges; or, Trade and Travel in Western China. By Archibald John Little, F.R.G.S. 2d ed. London: Sampson Low. 1888.

In this volume Mr. Archibald Little describes his voyage up a considerable portion of the Yang-Tse-Kiang, the great river which bisects the Chinese Empire. The scenery along this route is of the sublimest character, and Mr. Little expatiates upon it with an amplitude that is excessive. The main interest, however, of his volume arises from the light that it casts indirectly upon the internal state of China, the character of its singular people, and the efficiency or otherwise of its singular administrative system. On these subjects Mr. Little has much to tell us that is interesting and suggestive.

The position of China, in its relations to the western world is, at the present time, of a truly extraordinary character. Half-a-century ago, the isolation in which the Chinese elected to live was regarded by the western world as constituting a standing outrage upon humanity at large, which justified any action that tended to break down the barriers in which they had intrenched themselves. And, as a matter of fact, these barriers were broken down at an inconceivable cost to the Chinese. In the wars carried on against the Chinese Empire, either by the British alone, or in alliance with the French, the loss of life and the destruction of property incurred by the Chinese, although enormous, constituted the least part of the evil. The worst part was the loss of authority by the Imperial Government and its agents throughout the country, the hordes of brigands and pirates which were let loose upon the devoted population, and, finally, those terrible insurrections—the Taiping and Panthay revolts—which depopulated and laid waste great provinces and hundreds of flourishing cities, rivalling in the horrors which attended them the irruption of the Mongols under Genghis Khan. The barriers were, however, thrown down, and the Chinese, issuing from their seclusion, began to migrate in all directions into the lesser peopled portions of the globe. This new process had gone on for a few years only, when, from all the regions thus visited, arose the cry that the Chinese, whom it had cost so much to set free, must again, no matter at what cost, be dammed up in their own country, and denied all exit thence on any pretext whatsoever. All that the western world really wants with China is the liberty to trade with her people with an exclusive eye to its own pecuniary advantage, and it is not, therefore, surprising that we learn from Mr. Archibald Little that all that China wants from the western world is its implements of war and destruction, the more effectually to protect itself against the encroachments of the European trader.

Mr. Little presents in his own person a really admirable example of the type of mind which regards China simply and solely as a country to trade with. His particular aversion is the Christian missionary. He considers that his presence in China interferes grievously with the activity of trade. He would like to see all protection on the part of the western Powers withdrawn from this noxious individual, and the missionary handed over, naked and defenceless, to the tender mercies of the Chinese authorities. The magnanimous and self-sacrificing trader is, on the other hand, the real moral regenerator that Providence has provided for this people. Mr. Little's bitter aversion to the missionaries is all the more curious because, as he points out again and again, they make no converts and are held in supreme contempt by the Chinese of all classes, high and low. It cannot, therefore, be from fear of the missionaries that the Chinese Government is so anxious to obtain a supply of ironclads, breech-loading cannon, and magazine rifles. We must look elsewhere for an explanation of this, nor will it be difficult to find. Mr. Little reserves all his censure for the missionaries; he has not one word to say in condemnation of the opium traffic, or the infamous kidnapping of coolies which for so many years constituted the principal industry of the European merchants located at the Treaty Ports. These, however, are the aspects of western civilization with which the Chinese are most terribly familiar. These it is which have convinced them that unless they have force at their backs, nothing is to be expected from the justice or the humanity of the western world. If European trade is to breathe a new life into the people of China, it must appear before them in a very different guise and inspired by a very different spirit from that which has been the case hitherto.

The truth is, that it is the merest cant to talk of trade as animated by a single particle of the missionary spirit. There is nothing in the world more absolutely selfish than the spirit of money-getting, and to talk as if the Shanghai merchant were likely to succeed where the Christian missionary has failed, is to talk nonsense. At the same time, it cannot be denied that the Chinese Empire is in a bad way. The picture drawn of it by Mr. Little from personal observation has a curious resemblance to the pictures drawn by other travellers of the Asiatic portion of the Ottoman Empire. Like Asiatic Turkey, China is in a state of pitiful dilapidation. In the way of roads, quays, harbors, causeways, temples, and palaces, nothing that has once been erected appears to be ever subjected to repairs. The whole Empire is, so to speak, crumbling silently into ruin. The governing classes are not content with doing nothing in the way of repairs; they seem to have brief spasmodic fits of activity which are directed against improvements effected by others. Mr. Little has the following significant story to tell:

"The destruction of the little railroad that ran from Shanghai to Woosung in 1874 is an instance of the dogged resistance the officials make to any innovation too forcibly pressed upon them. The Chinese people themselves were delighted with this experimental railway of ten miles length, which united Shanghai to its port of Woosung, and the trains were crowded as long as they were allowed to run. The local authorities had, of course, given their consent, but the central Government had never been consulted. Sir Thomas Wade, unwisely in my opinion, allowed the Pekin officials to purchase the line, thinking they would then work it themselves. He did not understand the Chinese. No sooner bought than the line was pulled up and thrown into the sea, and Shanghai, the commercial capital of China—built up as it has been by foreign enterprise—is still dependent upon houseboats and a few steam launches for communication with its port of Woosung, distant by water fourteen miles. The road on which the rails were laid, and which for a time was used for a driving road, has been allowed to decay, and communication by land has again reverted to the old foot-paths."

An empire governed after this fashion is clearly in a hopeless condition. As with all Asiatics, the force of custom rules with irresistible power over the Chinese. Mental initiative has perished. A Chinaman never thinks of inquiring for the reason of a custom; the existence of the custom is the reason why it should be conformed to. The horrible tortures—the life-long deformity—to which women are subjected in order to force their feet into a revolting and abnormal shape, is a cardinal illustration of this stupid and perverse habit of mind. It is in strict keeping with this irrational imbecility that, while the sanitation of their towns is wholly disregarded, and the filth of the streets is something appalling, there should exist a special department for the purpose of collecting and burning all scraps of waste paper, the written character of the Chinese language being looked upon as too sacred to be trodden under foot of men. Similarly, the fortunes of a family, a village, or a town are absolutely determined by the site on which the family residence, the village, or the town has been erected. As Mr. Little points out, the origin of this superstition is, probably, traceable to the simple belief that the health of people was largely dependent upon the nature of the locality in which they passed their days. This, however, is now wholly forgotten, and the superstitious terror attaching to this question of site is a chief obstacle in the development of the vast mineral wealth of

China. It is widely believed among the Chinese that such irreverent treatment of the earth as is involved in excavations for the purpose of discovering its hidden wealth, would react upon the sites of their villages and cities in a manner most disastrous.

The Chinese are less plentifully endowed with imagination than are other Asiatics; but this deficiency is not made up to them by a larger amount of the scientific reason. It is in their total privation of the scientific reason—the logical and investigating faculty—that the Chinese, like other Asiatics, are most strikingly distinguished from the western world. Life among them, social, moral, and intellectual, seems to be absolutely at a stand-still, or, as this is, perhaps, impossible, to be steadily corrupting. The irruption of the West has shattered the authority of the Government. The glare of western civilization has revealed, so to speak, the dry-rot that is eating away the fabric of Chinese civilization; but how to arrest the progress of decay has yet to be discovered.

The Social Influence of Christianity. (The Newton Lectures for 1887.) By David J. Hill, LL.D 12mo, pp. 231. Boston: Silver, Burdett & Co. 1888.

THIS is to some extent a work of apologetics—much more so than its title would suggest. To some extent, also, its aim is much the same as Mr. Brace's 'Gesta Christi,' reviewed some years ago in these columns, with this difference, that it is very largely occupied with present social problems. The second chapter, however, is evidently drawn from 'Gesta Christi' and similar works. There are eight chapters or lectures. The first two treat of general subjects dealing with historical influences and theories. They discuss human society, and the effect of Christianity upon it. The remaining six are upon the social problems of the day: labor, wealth, marriage, education, legislation, and repression or punishment—all aiming to present the influence of Christianity upon these several forces and institutions. The apologetic spirit in which the work proceeds comes from the assumption that Christianity must vindicate itself in this sphere, or suffer a diminution of its fairly won fame, and from the manner in which the author endeavors to state his case in favor of views accepted as Christian.

To trace the social influence of Christianity is a large task, and the author who comes to it should be qualified by a wide experience in the fields of history and philosophy. Dr. Hill's lectures betray no evidence that he has any such qualifications. They are merely a system of outlines such as might suggest the writing of a whole library upon the subject, but convey no adequate conception of it to those for whom they were meant. Brevity may be the soul of wit, but it will not expound and defend a philosophy or a religion. Just one example of Dr. Hill's inadequate treatment of large questions will suffice. The theories of Montesquieu, Condorcet, Kant, Quetelet, and Buckle are stated and disposed of in three small pages! In undertaking so large a subject, an author who has any respect for real scholarship, or who expects to impart any permanent and well-defined knowledge to his readers, would do well to omit much that is relevant, and even important, in the wider comprehension of his subject.

The most indispensable thing to an apologetic work of this kind is a clear and definite conception of Christianity. No attempt whatever is made to supply this want, unless we except one short sentence in a footnote (p. 162), where the author says: "I use 'Christianity' as a synonym with 'the influence of Jesus,' not as equivalent to the historical Church." But does he mean to say or to imply that the historical church is not due to the influence of Jesus? If so, one wonders to whom he will attribute the representation and embodiment of that influence. Outside of the historical Church it must be the free-thinkers. But this is a strange place for the theologian to locate Christianity. The fact is, that Dr. Hill knows very well that much which has been called Christianity has to be given up, and he chooses his conception of it with a view to making that concession. But if he persists in separating the Church and the influence of Jesus, he is shut up to the position that Christianity is *only* an ethical and social scheme—the very last admission which the author would make. We can readily admit the historical Church, with all its shortcomings, to be the representative of Christianity, and to be entitled to the merits of those great achievements which had their historical origin and moral impulse in the character of Christ. Only we should be careful to separate the chaff from the wheat. The social influence of Christianity has unquestionably been the best leaven of the last eighteen centuries. But, in order to vindicate it, it is not necessary to cling to that old mental attitude which drew an invidious line between Christianity and other influences really tending in the same direction, nor to suppose that everything which has received its protection must be free from fault.

Sketches of War History, 1861–1865. Papers read before the Ohio Commandery of the Military Order of the Loyal Legion of the United States. Vols I., II., 8vo. Cincinnati: Robert Clarke & Co.

THESE handsome volumes are made up of original contributions to the history of the civil war by officers who served in the campaigns of which they speak, and who are narrating facts of which they were eye-witnesses. Almost without exception the papers are temperate and serious efforts to throw new light upon the campaigns in which the writers served, and they speak well for the usefulness of the Loyal Legion as an historical society of no mean importance. The temptation at army reunions would naturally be to make comradeship and social enjoyment rule the hour, and it is a pleasure to note the fact that lapse of time since the war closed has evidently made this association of former officers of the army and navy feel that it is time to put into durable form the personal knowledge of the war which would otherwise die with them.

A mere glance at the titles will show how wide a range of experience is covered by the service of the men who meet in a single "commandery" of this association. Here we have the surrender of the United States troops in Texas under Twiggs at the outbreak of the rebellion, the battle of Winchester or Opequan, the Wilderness and Spottsylvania, Cumberland Gap, the Eleventh Corps at Chancellorsville, Early's advance upon Washington, West Virginia fighting in '62, the Red River expedition, Schofield's campaign from Pulaski to Nashville, the campaigns about Charleston, Canby's campaign in New Mexico, the campaign of Vicksburg, Marching through the Carolinas, the Cavalry campaign of Selma, the surrender of Johnston's army, etc. With these are interspersed recollections of prison life, of the medical service, of the organization of the military telegraph and service in it, and the like.

When it is remembered that these are records of actual experience, and not compilations from the records, it will be seen that, as material for systematic history in the future, they are invaluable, while they are also attractive and even fascinating reading in themselves.

BOOKS OF THE WEEK.

A Peep at our Cousins. By a Maid of Honor. 2d ed. The Minerva Publishing Co.
Aristocracy: A Novel. D. Appleton & Co.
Ashley, W. J. Introduction to English Economic History and Theory. G. P. Putnam's Sons.

PROTECTIONISM.

The ism which teaches that waste makes wealth. By Prof. Wm. G. Sumner. 16mo, cloth, $1. Postpaid.

HENRY HOLT & Co., 29 W. 23d St., N. Y.

Entertaining, but not Ephemeral

FOR YOUNG AND OLD.

DANIEL WEBSTER

IN HIS

New Hampshire Home.

The eagle-eyed old statesman as a farmer and sportsman, as schoolboy, master, friend, and neighbor. Full of anecdote and adventure. Written from old family letters and talks with Webster's old neighbors and the children of his steward, John Taylor.

TWENTY PICTURES, among them FOUR PORTRAITS WHICH THE PUBLIC HAVE NEVER SEEN, one of Webster as a young man of twenty-two—"That's the way I used to look when I went courting," Webster himself said of it; one of his first love, the beautiful Grace Fletcher; one of his steward, John Taylor, and Ames's full length oil sketch of Webster as a farmer.

Only to be had in October WIDE AWAKE. 20 cents. At the news stands.

A Midsommer Nights Dreame.

By William Shakespeare. *Variant Edition.* Facsimile reprint of the text of the First Folio, 1623, with Footnotes, giving every variant in Spelling and Punctuation occurring in the two Quartos of 1600, according to the perfect copies of the original text in the Barton Collection, Boston Public Library. With Introduction and Notes by Prof. Henry Johnson of Bowdoin College. In one volume, 8vo, $1.00.

The special value of such a work as this consists in its perfect accuracy; and it is believed that Prof. Johnson has secured this, and has thus conferred a positive favor on students of Shakespeare.

**** For sale by all Booksellers. Sent by mail, post-paid, on receipt of price by the publishers.*

HOUGHTON, MIFFLIN & CO.,

11 East Seventeenth Street, New York.

Johns Hopkins University,

BALTIMORE.

Announcements for the next academic year are now ready and will be sent on application.

TO CAPITALISTS.—FOR SALE.—Southern Mineral and Timber Lands. Gold, Tin, Copper, and other mines. Paying from 25 per cent. to 50 per cent. net profit.

Send for Descriptive Circulars.

E. L. DIDIER,
11 E. Lexington St., Baltimore.

ELLIOTT'S THE UNITED STATES and the Northeastern Fisheries. The most complete and accurate history of the question. Endorsed by Messrs. Bancroft, Lowell, Lodge; Senators Hoar, Morgan, Davis, and other eminent authorities. Sent, postpaid, on receipt of 50 cents. Department of History, University of Minnesota, Minneapolis, Minn.

AN EXTRA FINE BOUND SET OF the Nation, 45 vols., for sale by A. S. CLARK, 34 Park Row, New York city.

The Forum . . . continues to hold its place as the foremost of our magazines for the variety, the value, and the weight of its contributions.—N. Y. TIMES.

THE FORUM

CONTENTS FOR OCTOBER.

COUNT LEO TOLSTOI. Archdeacon F. W. Farrar.—A review of Tolstoi's career and of his writings, with a study especially of his religious opinions. Has he made the true interpretation of Christ's teachings?

THE PROGRESS OF THE NATION. Edward Atkinson.—A grouping of facts which show how the standard of living has been raised since the war; what the war cost; the bearing of these facts on the subject of currency; the importance of the quality rather than the quantity of money.

RACE ANTAGONISM IN THE SOUTH. Senator James B. Eustis.—A strong Southern study of the Negro; mistaken treatment by the Federal Government and Northern philanthropists; the Negro's characteristics and social position.

THE GREAT RAILWAY DEBT. Adelbert Hamilton.—Its amount; the dangerous conditions under which it was contracted; the possible industrial peril.

HOW THE TARIFF AFFECTS WAGES. Prof. F. W. Taussig of Harvard.—A review from a purely economic point of view; both partisan positions criticized.

HAS AMERICA PRODUCED A POET? Edmund Gosse.—A British review of American poetical production: our four poets—Longfellow, Bryant, Emerson, and Poe.

THE BORDER LAND OF MORALS. Dr. C. A. Bartol.—Is suicide justifiable? Moral and immoral methods of war; delicate questions regarding the relations of the sexes.

WHY THE CHINESE MUST BE EXCLUDED. W. B. Farwell, of San Francisco.—A temperate review of forty years of Chinese immigration to California; far-reaching industrial effects; reasons for exclusion.

WHAT SHALL THE PUBLIC SCHOOLS TEACH? Rev. A. S. Isaacs.—The concluding essay of this series; a study from an Hebraic point of view; the question of religion in the public schools.

THE DREAD OF DEATH. Junius Henri Browne.—The exaggerated popular idea of the pain of dying.

XENOPHON. Selections from Book 4 of 'The Anabasis.' Edited, with Notes and Vocabulary, and Exercises for the use of schools, by the Rev. E. D. Stone, M.A.

CLASSICAL SERIES.

XENOPHON. Hiero. Edited, with Introduction, Summaries, Critical and Explanatory Notes, and Indices, and Critical Appendix, by the Rev. H. A. Holden, M.A., LL.D. Third edition, revised. 16mo. 90 cents.

Of an earlier edition the *Journal of Education* said: "Any edition by Dr. Holden of a classical author is sure to be scholarly, and any work which he undertakes is sure to be thoroughly and conscientiously done. . . . It would be difficult to speak too highly of much of the comment and criticism contained in the notes."

HALL and STEVENS. A Text-Book of Euclid's Elements. For the use of Schools. Part 2, Books 3–6. By H. S. Hall, M.A., and F. H. Stevens, M.A. 16mo, 75 cents. Parts 1 and 2, containing Books 1–6, in one volume. 16mo. $1.10.

HALL and KNIGHT. Arithmetical Exercises and Examination Papers. With an Appendix containing Questions in Logarithms and Mensuration. By H. S. Hall, M.A., and S. R. Knight, B.A. 16mo. 60 cents.

DODGSON. Curiosa Mathematica, Part 1. A New Theory of Parallels. By Charles L. Dodgson, M.A., author of 'Euclid and His Modern Rivals,' etc., etc. 12mo. 75 cents.

SHAKESPEARE. The Tragedy of King Richard the Third. With an Introduction and Notes by C. H. Tawney, M.A. 16mo. 60 cents.

SIDGWICK. Outlines of the History of Athens, for English Readers. By Henry Sidgwick, Knightbridge Professor of Moral Philosophy in the University of Cambridge. Second Edition, Revised. 12mo. $1.25.

OXFORD CLARENDON PRESS SERIES.

CÆSAR. The Gallic War. Books 1 and 2. With Notes and Maps by C. E. Moberly, M.A. 16mo. 50 cents.

CICERO. Speeches against Catilina. With Introduction and Notes, by E. A. Apcott, M.A. 16mo. 60 cents.

DEMOSTHENES. The First Philippic and Olynthiacs, 1-3. Edited, with Introduction and Notes, by Evelyn Abbott, M.A., and P. E. Matheson, M.A. 16mo. 75 cents.

LIVY. Book 22. With Introduction and Notes, by M. T. Tatham, M.A. 16mo. 60 cents.

XENOPHON. Anabasis. Book 3. With Introduction, Notes, and Index, by J. Marshall, M.A. 16mo. 60 cents.

BUCHHEIM'S GERMAN CLASSICS.

New Volume.

BECKER'S FRIEDRICH DER GROSSE. Edited with Notes and Historical Introduction, by C. A. Buchheim, Ph.D. 16mo. 90 cents.

"The editor has done his part exceptionally well, . . . and grammatical difficulties are met with a discrimination which reveals the careful and experienced teacher."—*Educational Times.*

ELEMENTARY POLITICAL ECONOMY. By Edwin Cannan, M.A., Balliol College, Oxford. 16mo, 25 cents.

MACMILLAN & CO., New York,

112 Fourth Avenue.

The Nation

VOL. XLVII.—NO. 1214. THURSDAY, OCTOBER 4, 1888. PRICE 10 CENTS.

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

The Advance-Guard of Western Civilization.

By JAMES R. GILMORE ("Edmund Kirke"), author of 'The Rear-Guard of the Revolution,' 'John Sevier as a Commonwealth-Builder,' etc. With Map, and Portrait of James Robertson. 12mo. Cloth, $1.50.

This work is a narrative of an episode which is perhaps the most unique and remarkable in American history—that of the settlement of Middle Tennessee. It is in a measure a continuation of the thrilling story told by the author in his two preceding volumes, 'The Rear-Guard of the Revolution' and 'John Sevier as a Commonwealth-Builder.' The three volumes together cover, says the author in his preface, "a neglected period of American history, and they disclose facts well worthy the attention of historians—namely, that these Western men turned the tide of the American Revolution, and subsequently saved the newly-formed Union from disruption, and thereby made possible our present great republic."

II.

A History of Charles the Great (Charlemagne).

By J. I. MOMBERT, D.D., author of 'Hand-Book of the English Versions,' 'Great Lives,' etc. 8vo, cloth. 600 pages. Price, $5.00.

This work, which consists largely of matter now presented for the first time in English, rests almost wholly on the *contemporary* authority of Annals and Chronicles, Biographies, Letters, Laws, Poems, Inscriptions, etc.

III.

Researches on Diamagnetism and Magne-Crystallic Action,

Including the Question of Diamagnetic Polarity. By Prof. JOHN TYNDALL. With Ten Plates. 12mo, cloth. Price, $1.50.

IV.

Westminster and other Sermons.

By RICHARD CHENEVIX TRENCH, D.D., Archbishop. 12mo, cloth. Price, $1.50.

This posthumous volume by Archbishop Trench contains sermons preached in Westminster Abbey and sermons preached in Ireland.

V.

A Text-Book of Human Physiology.

By AUSTIN FLINT, M.D., LL.D. A new edition (the fourth) entirely rewritten. With 316 Figures and two Plates. 8vo, cloth, price, $6.00; sheep, $7.00.

For sale by all booksellers; or any volume sent by the publishers by mail, postpaid, on receipt of the price.

1, 3, & 5 Bond Street, New York.

IMPORTANT NEW BOOKS

PUBLISHED BY

T. Y. CROWELL & CO.,

No. 13 Astor Place, New York.

GOLDEN WORDS FOR DAILY COUNSEL. Selected and arranged by Anna H. Smith with Introduction by Huntington Smith. Cloth, 16mo, $1.00; gilt edge, $1.25.

The hope of both compiler and editor is that it may serve in some manner to enlarge the idea of personal duty, to lessen the little offences that are so apt to make the life in common unbearable, to incite to words and deeds of mutual kindness, to broaden and deepen the sense of charity, which is the sense of love.

THE SEARCH FOR THE STAR. A Tale of Life in the Wild Woods. By Edward Willett. 12mo, illustrated, $1.25.

Full of adventure and hairbreadth escapes. Just the book for live, wide-awake boys, who will make safe acquaintance with the bears and moose and wild men, of northern Maine.

THE CAPTAIN'S DOG. By Louis Enault. Translated from the French by Huntington Smith. 18 illustrations, 12mo, $1.00.

A charming book, in which the adventures of "Zero," the Captain's dog, are set forth in that inimitable style which only French writers possess. Nothing in the way of canine literature since 'Rab and His Friends' has been published to compare with this exquisite tale.

WRECKED ON LABRADOR. A Story of Shipwreck and Adventure for Boys. By W. A. Stearns. 12mo, $1.50.

Labrador is generally regarded as a desert coast. This book pictures it under entirely different conditions, and the story is healthily ballasted with accurate information which will be appreciated by every boy who loves to hunt and fish and collect "specimens."

SEVASTOPOL. By Count Lyof N. Tolstoï. Authorized translation from the Russian, by Miss Isabel F. Hapgood. 12mo, $1.00.

These marvellously vivid sketches of the Crimean War, in which Count Tolstoï took an important part, show the real aspect of military glory. They are photographic and brilliant, rich in detail, and yet stern in their simplicity.

THE COSSACKS: A Tale of the Caucasus. By Count Lyof N. Tolstoï. Authorized translation from the Russian by Nathan Haskell Dole. 12mo, $1.00.

This, "the most perfect work of Russian fiction," as Turgenief said, gives interesting glimpses of life in an unknown land, and also illustrates the dawn of Count Tolstoï's altruistic tendencies.

FAMILY HAPPINESS. By Count Lyof N. Tolstoï. Authorized translation from the Russian by Nathan Haskell Dole. 12mo, 75c.

"Family Happiness" is like a finished study for Anna Karenina. In view of the current discussion of the question whether "marriage is a success," this book is an answer and a warning.

BOOKS.

WORTHINGTON CO., 747 B'way, N. Y.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

HAVE NOW READY:

THE RELATION OF THE TARIFF TO WAGES. By DAVID A. WELLS. Being No. 54 in the Series of Questions of the Day. 12mo, paper, 20 cents.

A thorough analysis by an acknowledged authority on economic science of what is probably the most important question to be considered in connection with the proposed reductions in the tariff.

TARIFF CHATS. By HENRY J. PHILPOTT. Reprinted, with Revision, from the 51st 1,000, being No. 52 of "Questions of the Day." 12mo, paper, 25 cents.

"The best thing in our tariff literature for the popular effect aimed at."—*Prof. W. G. Sumner.*

GREAT THOUGHTS FOR LITTLE THINKERS. By LUCIA T. AMES, Boston. With twenty-one illustrations. 12mo, cloth. $1.75.

...rofound appreciation of the difficul... attempt has been made to present ... guage and as definite form as possible a... those fundamental truths in science, ... religion, and morals which shall be a basis ... all later thought, with the hope that, however inadequate, it may at least serve as a stepping-stone to something better than was taught most of the children of the previous generation."—*Extract from Author's Preface.*

WOULD YOU HAVE LEFT HER? A Novel. By WILLIAM F. KIP. 12mo, cloth extra, $1.25.

LAMB'S ESSAYS OF ELIA, forming the thirteenth issue in the series of KNICKERBOCKER NUGGETS, two volumes, 32mo, cloth extra, gilt top, $2.00.

"Little gems of bookmaking."—*Cincinnati Commercial Gazette.*

List of fall publications, including titles of the "Questions of the Day" series, and other important recent issues in Economic and Political Science, and of the "Knickerbocker Nuggets," forwarded on application.

Messrs. Putnam have the pleasure of announcing that they have arranged for the agency in the United States of the PUBLICATIONS of Messrs. WILLIAMS & NORGATE of London. These include the issues of the THEOLOGICAL TRANSLATION FUND LIBRARY, the HIBBERT LECTURES, and works by BAUR, COBBE, EWALD, KEIM, KUENEN, STRAUSS, ZELLER, and other scientific and theological writers.

BOOKS OF THE WEEK 281

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

When mailed in paper tubes, without creases, 50 cents per year extra.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.

Publication Office, 208 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

Scale of Agate lines.

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents. — 15

A column (140 lines), $20 each insertion; with choice of page, $27. — 5

A page (3 columns), $60 each insertion; with choice of position, $80. — 10

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top. — 15

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography (subject to approval). Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

THE HARVARD UNIVERSITY EXAMINATIONS FOR WOMEN will be held in New York on June 27, 28, and 29, 1889. Two scholarships of $300 and $200 each are offered in connection with these examinations. For information apply to the Secretary, No. 32 East 33d St.

COLUMBIA COLLEGE.

SCHOOL OF POLITICAL SCIENCE.

The prime aim of this school is the development of all branches of the political sciences. It offers eight courses in political and constitutional history, nine in political economy, five in constitutional and administrative law, four in diplomacy and international law, three in Roman law and comparative jurisprudence, two in political philosophy, and one in bibliography—in all, forty-four hours per week through the academic year. The full course of study covers three years. For admission as candidate for a degree, the applicant must have satisfactorily completed the regular course of study in this college, or in some other maintaining an equivalent curriculum, to the end of the junior year. Special students admitted to any course without examination upon payment of proportional fee. For circular of information apply to Registrar, 49th St. and Madison Ave., N. Y. city.

For information apply to HENRY DRISLER, LL.D., Acting President.

F. A. P. BARNARD, LL.D., D.C.L.,
President of Columbia College.

Complete Text-Book of the New Shorthand.

"EXACT PHONOGRAPHY"; THE NEW SYSTEM, with CONNECTIBLE STROKE VOWEL SIGNS; by Geo. R. Bishop, Stenographer of N. Y. Stock Exch'ge; member (and in 1882-3 President) N. Y. State Stenogr'rs' Ass'n, &c. This system discards the indefinite (vowel) part of the common phonography; *unmistakebly distinguishes* vowel and consonant strokes AND TREATS THEM SIMILARLY—the MOST HARMONIOUS AND SYSTEMATIC PRESENTATION OF PHONOGRAPHY, securing SCIENTIFIC EXACTNESS with BREVITY. As ONE SIGN in ONE POSITION stands for ONLY ONE sound or group of sounds, a LEGIBILITY not before attained in the briefest shorthand, is secured. Concludes with numerous clearly-engraved Reading Exercises—11,000 words. A MODERN BOOK, for MODERN USES, 260 pp.,—222 engraved,—fully illustrating all principles. Price, bound in flexible leather, TWO DOLLARS. Descriptive circulars, with OPINIONS of EXPERT SHORTHAND WRITERS, sent. Address GEO. R. BISHOP, N. Y. STOCK EXCHANGE, N. Y.

BAKER'S Breakfast Cocoa.

Warranted *absolutely pure Cocoa,* from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

OFFICE OF THE

Atlantic Mutual INSURANCE COMPANY,

NEW YORK, January 24, 1888.

The Trustees, in conformity to the Charter of the Company, submit the following Statement of its affairs on the 31st of December, 1887:

Premiums on Marine Risks from 1st January, 1887, to 31st December, 1887.....		$3,642,969 09
Premiums on Policies not marked off 1st January, 1887.....		1,417,600 13
Total Marine Premiums.....		$5,060,569 22
Premiums marked off from 1st January, 1887, to 31st December, 1887.....		$3,672,331 21
Losses paid during the same period	$1,599,468 25	
Returns of Premiums and Expenses.....	$788,846 38	

The Company has the following Assets, viz.:

United States and State of New York Stock, City, Bank, and other Stocks....	$8,622,565 00
Loans, secured by Stocks and otherwise..	1,559,100 00
Real Estate and Claims due the Company, estimated at.....	474,439 83
Premium Notes and Bills Receivable....	1,362,986 07
Cash in Bank.....	218,192 40
Amount.....	$12,237,283 35

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof, or their legal representatives, on and after Tuesday, the seventh day of February next.

The outstanding certificates of the issue of 1883 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the seventh of February next, from which date all interest thereon will cease. The certificates to be produced at the time of payment and cancelled.

A dividend of FORTY PER CENT. is declared on the net earned premiums of the Company for the year ending 31st December, 1887, for which certificates will be issued on and after Tuesday, the first of May next.

By order of the Board,
J. H. CHAPMAN, Secretary.

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

"A WONDERFUL BOOK."

CITIZENS' ATLAS OF AMERICAN POLITICS.

1789-'1888,

With a series of over 150 Colored Maps and Charts. By Fletcher W. Hewes, author of 'Scribner's Statistical Atlas of the United States.'

Large Folio, $2.00.

"It is a series of 150 or more colored charts, giving a survey of American political history as wonderful for its completeness as for its simplicity and convenience for common use. Without the labor of study or research, every point of national progress for 100 years is presented to the eye and at once understood. By the adoption of graphic methods of illustration, the great tariff problem of to-day finds in this work its simplest explanation and material for a ready understanding."—*The Washington Post.*

HISTORY OF THE POLITICAL PARTIES.

"The entire history of the political parties from 1776-1888 is portrayed, and a more interesting study of the same matter has never been presented."—*Brooklyn Times.*

POLITICAL AND NATIONAL PROGRESS.

"It offers endless study to the curious, at the same time that it presents compactly and strikingly the salient features of our political and national progress."—*The Nation.*

RESUME OF AMERICAN POLITICS.

"No work we can now recall is more complete as a resumé of American politics."—*Wheeling Register.*

FOR THE TARIFF STUDENT.

"The most comprehensive charts come to the assistance of the student of the problem of tariff, revenue, and wages, and he has at his command and before him material which would fill volumes if reduced to writing."—*Pittsburgh Post.*

ECONOMIC STATISTICS.

"Tariff and wages, wages and cost of living, imports and exports, the progress of the various economic industries, increase and decrease of revenue and percentage of duty, distribution of manufactures, strength of foreign population, the area comparatively of the prevailing vote of the country in the whole vote—a thousand things which cannot be enumerated here are to be found packed away in this 'nutshell,' and so lucidly that one readily learns the method of use. It is a wonderfully ingenious and compact piece of work that every man who ever reads at all should have and use."—*Chicago Times.*

FOR EVERY VOTER.

"But the barest outline of the immense mass of useful knowledge, political and economical, imparted in the most striking and convincing manner in the pages of this handsome Atlas can be given. If every voter in the United States should buy and diligently study it, the result of the November election—whatever it may be—would not be due to the efforts of stump speakers and party papers, but to the sincere convictions of the people, founded upon reasons truly worthy of respect."—*N. Y. Journal of Commerce.*

The Nation.

NEW YORK, THURSDAY, OCTOBER 4, 1888.

The Week.

MR. BLAINE'S speech at the Polo Grounds on Saturday evening, as published in the *Tribune*, was about three times as long as the one actually delivered by him and printed in the other papers. In substance, however, the long speech was the same as the short one. It was really an attempt to explain away a portion of his History, so as to show that high tariffs have always caused national prosperity, while low tariffs have always brought on commercial crises and disaster. The hardest thing to "get over" was the following passage from his History, describing the consequences of the low tariff of 1846:

"The Whig victory of 1848 was not sufficiently decisive to warrant any attempt, even had there been desire, to change the tariff (of 1846). Gen. Taylor had been elected without subscribing to a platform or pledging himself to a specific measure, and he was, therefore, in a position to resist and reject appeals of the ordinary partisan character; moreover, the tariff of 1846 was yielding abundant revenue, *and the business of the country was in a flourishing condition at the time his Administration was organized.* Money became very abundant after the year 1849, large enterprises were undertaken, speculation was prevalent, and for a considerable period *the prosperity of the country was general and apparently genuine.* After 1852 the Democrats had almost undisputed control of the Government, and had gradually become a free-trade party. The principles embodied in the tariff of 1846 seemed for the time to be so entirely vindicated and approved that resistance to it ceased, not only among the people, but among the protection economists, *and even among the manufacturers to a large extent.* So general was this acquiescence that in 1856 a protective tariff was not suggested or even hinted by any one of the three parties which presented Presidential candidates."

In order to harmonize this with his newly-found theory that low tariffs always lead to a commercial crisis, he stated that the crisis which came eleven years later, in 1857, was staved off by a number of accidental circumstances, such as the Mexican war, the discovery of gold in California, and the Crimean war. After all these had exhausted their beneficial and counteracting influences, the real effects of the low tariff of 1846 began to show themselves, and the tardy crisis of 1857 declared itself. But why did not Mr. Blaine tell us these things in that chapter of his history which he wrote expressly on the subject of American tariffs? All the things he now tells us were as well known to him then. Why did he suppress them then? Supposing that Mr. Blaine had died after finishing his history and before he made this speech. What would have been the situation of the world and of posterity in respect of knowledge of the true causes of the crisis of 1857? Absolute dearth and famine, groping in darkness and stumbling in ignorance; and all because Mr. Blaine did not then reveal what he knew of the hidden causes of commercial crises, but, in fact, led his readers into false paths by telling them in substance that the tariff of 1846 was not a bad thing after all.

We would call the attention of the Rev. Dr. Storrs and other respectable Republicans of the old school, the religious, the intelligent, and the conscientious men who were the bone and sinew of the party between 1856 and 1866, who gave it the noble enthusiasm which carried it through the war, and created for it those great traditions under which so many rascals have since found shelter, to the fact that the foremost man of the party, Mr. James G. Blaine, was accompanied to the Polo Grounds in the carriage, on Saturday evening, by "Pat" Ford, the dynamiter and deserter. There was a small party in the carriage, necessarily either political or social intimates of the orator, and Ford was one of them. We ask Dr. Storrs, and all who think with him about politics, to consider for one moment what Ford represents, what he has publicly aided and abetted, and gloried in—namely, murder and arson in a peaceable and thickly populated city—and to remember that on the one occasion in his life when he filled a brave man's place in front of a great duty, he broke his troth, and fled like a frightened cow before the public enemy. Having got this base career firmly before their mind's eye, we ask all Republicans, great and small, men and women, to consider the conspicuous light which this man's close companionship with the acknowledged leader of their party, on a great occasion, throws on the spirit, aims, methods, and standards of the party management. It is not a thing they can shirk or evade, swallow in silence, or "dismiss with a smile." It is a thing to be faced, examined, and explained. If they think well of it, they ought to come out and say so. If they think ill of it, they ought to show it openly, in the only way in which a good citizen can effectually show his horror of crime, and disorder, and corruption.

Gen. Harrison's last plan for the reduction of the surplus is the distribution among the States of the $20,000,000 of Government deposits now lying in the banks. This, he says, "might be very righteously used so as to greatly lighten the real burdens of taxation now resting on the people—burdens that the people know to be taxes without any argument from our statesmen." But are there any such burdens? Who is complaining of taxation except the revenue reformers, and who minds what *they* say? In what State do the people complain they are taxed more than they ought to be by the State? If it hurts a man's pride to wear a cheap coat, would it not hurt it still more to have his local taxes paid for him out of the national Treasury? And then, if the national Government should distribute a large sum of money among the States this year, why not every year? People are not suffering more from State taxation this year than they will suffer next year and the year after. Why not, in fact, abolish State taxation altogether, and raise the needed local expenses solely by Federal tariff? We hope Gen. Harrison will clear up these points in the next of his little speeches. We cannot help thinking that when he considers the matter more fully, he will be so much impressed by the dangers of the distribution plan that he will eventually fall back on the free-whiskey plan of reduction as the neatest and easiest of execution.

A new document issued by the Republican Congressional Committee is entitled "The Foreign Market a Will-o'-the-Wisp." It consists of a short extract from a speech of Mr. Goff of West Virginia, and another short extract from a speech of Mr. Reed of Maine, and a long table of "Foreign Customs Duties." Mr. Goff tells us that foreign trade is a will-o'-the-wisp, because "most all the countries of the world the markets of which we are told we should seek, have protective laws, England not excepted." And he asks whether we are to "destroy our protection and then contend with the protection that the nations of the world have surrounded themselves with." In regard to the table of foreign customs duties, we think that those of Great Britain may be viewed with suspicion, for we find that the tariff on gold is set down at $4.14 per ounce. Travellers from this country to Great Britain have never, we believe, had their baggage or their pockets searched for gold by the customs officers, or even for gold watches, which this document says are taxed at the same specific rate of $4.14 per ounce. But as the British Islands do not produce the metal gold, this could not be called a protective duty, even if it were levied at the exorbitant rate named in the document. We think that Mr. Goff is misinformed when he states that England has protective laws. We think also that he ought to be very careful about saying that England has protective laws, even if she has them, because he may thereby convince a good many Republicans that we ought *not* to have them, so large a part of the campaign is based upon the brilliant idea of doing the opposite of what England does.

The Home Market Club of Boston are now circulating a handbill entitled "Wages in Paterson, N. J., and Lisburn, Ireland," containing a statement of the Barbour Brothers, who carry on business at both places, saying that they employ 1,500 hands in Paterson and 2,800 in Lisburn, and that in two weeks' time they paid as much money within $500 to the 1,500 here as to the 2,800 there; also, that "none of our employees in Ireland ever had wages enough to be able to have their money at interest, to say nothing of owning a home. The Paterson employees all came from Ireland originally, so you can see how much better off they are here than they were there." The Barbour

Brothers are certainly in a fortunate position to plunder the American consumers of linen goods, as they can transport labor from one place to the other as it may suit their own interests. There ought to be somebody to look after them. As to the savings of the operatives in the two countries, however, we find a remarkable contradiction between the statement given above and the testimony of one member of the firm, Mr. Thomas Barbour, before the Tariff Commission in 1882, viz. (vol. i, page 290):

"*We have imported a great many workers into this country*, but we find that, as a rule, they spend more money in America for rents and for food, they dress far better, and become more extravagant in this country, and *do not lay up any more wages than they do in Ireland.*"

So it appears that the Barbours are importers of contract labor, and that they tell different stories at different times about the savings of their employees. This Mr. Barbour wanted to have the duties on the kind of linen he produces in Ireland reduced, and the duties on the kind he makes here raised from 35 per cent. to 50 per cent. ad valorem. The Tariff Commission listened to him with imperturbable gravity, but declined to follow his suggestions in either direction.

We have been making search for that American newspaper, the *Iron Era*, which the Republican Committees and the Republican press substituted in place of the *English Iron Era* as the authority for the following campaign lie, namely:

"The Cobden Club is trying to raise a large sum of money to be spent in furthering the free-trade propaganda in the United States. Lord Brassey has given £1,000, and others less, and the hat is going round."

No such paper as the *Iron Era* could be found in New York, Philadelphia, or Pittsburgh. None of the large firms in the iron trade in New York knew of it. An inquiry addressed to the office of the *Iron Age* led to the disclosure that there was a weekly paper of this name published at Dover, N. J., but that it was not a trade journal. Pursuing the subject to Dover, N. J., we now learn that the *Iron Era* of that place, when it published the Cobden Club item, credited it to the *English Iron Era*, and said that it (the Dover *Iron Era*) had found it, not in the *English Iron Era*, but in another American paper credited to the aforesaid English paper. This is the paragraph of which the Philadelphia *Press*, the other day, when explaining the wrong credit, said that nobody disputed the accuracy of the item: the only wrong thing about it was that the American and not the English paper of that name was responsible for it. Now it appears that neither of them was responsible for it. The thing was "in the air"; it was caught, like yellow fever.

We have been favored with a copy of Mr. H. K. Thurber's *amended* circular "To the Wage-Earners of the United States." It will be remembered that Mr. Thurber retracted a portion of the original circular and promised not to send out any more of them. The words retracted were these:

"When the London *Times* thinks the best use they can make of Irishmen is to help them emigrate to this country, and join the Democratic party, and thus help break down our protective tariff, that makes me think that our tariff is a great benefit to this country, and of course I range myself on the side of a protective tariff."

In making his retraction and apology for sending out this false statement, Mr. Thurber said that he had seen the London *Times's* quotation in a speech in Congress, that he had taken it to be genuine, and that he had considered it "public property." So far so good. What does he do next? He amends the circular, and sends out a fresh edition with these words:

"When *a London paper* thinks the best use they can make of Irishmen is to help them to emigrate to this country and join the Democratic party, and thus help break down our protective tariff, that makes me think that our tariff is a great benefit to *this* country, and of course, I range myself on the side of a protective tariff."

This, we submit, is a worse offence than the first one. "A London paper," forsooth! What London paper? Not the London *Times*; Mr. Thurber has acknowledged so much. He cannot pretend that he has found the new saying in a speech in Congress, or going around, or that it is public property. On the contrary, this is Mr. Thurber's private property. He alone has any ownership in it.

To Mr. Thurber, the Home Market Club, the Hartford *Courant*, and all the other worshippers of British opinion, we present another genuine quotation. It is from the well-known technical journal *Engineering*, of the date of September 21. That paper contains an article on "Japan as a Market for British Manufactures," which disposes of us with the following brief reference: "From American competition in Japan we have not much to fear, always supposing our manufacturers do not fail to advertise their wares and supply them of good quality. America, it is well known, owing to her protective tariff, cannot compete with us in iron and steel manufactures out of her own country, and she is further handicapped in Japan, as regards all heavy goods, by higher freights, since such goods coming from the Eastern manufacturing States require to go via the Suez Canal, owing to the heavy charges for railway carriage across the American continent."

One of the good signs of the times is the appearance in the field of Col. Wentworth Higginson to run against Gen. N. P. Banks for Congress in the Fifth Massachusetts District. Banks has been United States Marshal for a good many years, and was allowed by the present Administration to serve out his term. Before his removal he expressed the highest opinion of President Cleveland; since his removal he has been denouncing the Administration in unmeasured terms, and is now the Republican candidate for Congress. What his real politics are we presume nobody knows, not even himself. But he is one of the old Republican war-horses, who has to be provided for, no matter how useless he may be, and sending him to Congress is the easiest thing to do. Col. Higginson's candidacy represents those who think that the national Legislature should contain nobody but competent legislators, and should not be used as an asylum for decayed politicians. He may not be elected, but in running he helps to raise the standard of political capacity, and to organize those who mean that it shall be kept high.

The *Sun* says, speaking of the Democratic opposition to Hill:

"In the whole history of American politics there has never before been a plot so remarkable. In its inception and execution it is simply a violent attack on the Democracy."

Come, now, was not your own "plot" in 1884 just as "remarkable"? Did you not begin the canvass that year by declaring that

"Should the Convention determine to nominate one of them [Cleveland or Flower], we say emphatically that the candidate will stand a fair chance of carrying the State of New York, and that the best efforts of the *Sun* will be devoted to securing his entire success. . . .

"Sooner than join in making James G. Blaine President of the United States, we would quit work, burn up our pen, and leave to other and, perhaps, rasher heads the noble controversies of politics and the defence of popular self-government"?

Did you not soon after repudiate the Democratic candidate and begin to abuse him savagely, for reasons satisfactory to yourself, and to run a candidate of your own, concerning whose strength in this city you made the very remarkable error of 129,659 in a total of 136,656? Was not the end of it all, as far as you were concerned, the loss of half your circulation, and the substitution therefor of mortgages to the amount of $235,000 or thereabouts, and the rise into power and wealth of your detested rival "Judas," and the immense amusement of the public over your sorry plight? Is not your ingratitude to us, who saved you last spring from committing the same follies again, also very remarkable, considering that by collaring you in time, when you were marching straight to destruction, and were prophesying publicly against Cleveland in the most fatuous manner, we prevented you from engaging in another open bolt? It is true you are now trying to knife the ticket, and are privately predicting the defeat of the Democratic candidate; but this, bad as it is, will not hurt you as much as coming out publicly against him would do. It is your interest only, you will observe, that we consider in this matter. Your support of Hill through good and evil report is, we confess, not remarkable at all; for when has there appeared in politics a rascal who did not call forth all the tenderness of your nature, and for whom you were not ready to move Acheron?

Boston has become greatly stirred up over the question of Roman Catholic influence in the conduct of the public schools, the provoking cause being the exclusion by the School Committee of a text-book which members of the Catholic Church considered objectionable because of a reference to that church, and which was admitted to be so by the Rev. Dr. Duryea, one of the most prominent Protestant clergymen of the city. The

result is, for the first time since women were given the right to vote in school elections in Massachusetts, a general disposition on the part of women to avail themselves of the right of suffrage. The movement appears to have begun with Protestant women, and the first development of significance is the revelation that the Committee of One Hundred of Protestant Women claim to have information which proves conclusively that there have been a large number of cases of perjury among the Catholic women, many of whom are charged with having appeared before the assessors, and taken oath to signatures which were written by other persons. Not less noteworthy is the statement in a Boston despatch that "the two factions show much more spite and bitterness than do the men."

Towards the latter part of September, Mr. B. P. Hutchinson, a member of the Chicago Board of Trade, made a calculation that he could buy all the wheat in the Chicago elevators, and hold it a few days. He then made another calculation that no large amount of wheat could be brought to Chicago from the elevators of Milwaukee, Toledo, St. Louis, and other storage points, and be inspected and hoisted into store, and weighed and certificated, before the close of business on Saturday, September 30. Having made these calculations, he began to bet with his fellow-members that they could neither get wheat to Chicago from other points, nor get hold of any of the wheat that was actually in Chicago, during the remainder of the month of September. Naturally, he won all his bets. Great efforts were made to run express trains loaded with wheat from St. Louis and other points to Chicago within the time mentioned in the bets, but they were generally failures. This is the true explanation of the corner in September wheat at Chicago.

The *Rundschau*, which published the extracts from the diary of the Emperor Frederick, has got itself into a bad fix, for Bismarck is after it with all the terrors at his command. As an enemy, too, he does nothing by halves. Everybody who has stood in his way, except the late Emperor, he has managed to ruin utterly. He is not content with driving a man from office: he tries to drive him out of society and out of his trade or calling. One passage in the report to the Emperor, in which Bismarck asks permission to prosecute, contains a savage dig at the ex-Empress. He says:

> "The Crown Prince in 1870 did not share in political discussions. I did not have the King's permission to discuss with the Crown Prince the more intimate questions of our policy, because the King feared it might lead to indiscretions at the English Court and harm our relations with the German Federal allies."

This simply means that the Crown Prince was supposed to be under the influence of his wife, through whom state secrets would be revealed to the English Court. He further adds: "It seems as if the daily notes, or at any rate their later elaboration, were the work of some person in the Crown Prince's entourage"—which may or may not be also an insinuation that the ex-Empress is at the bottom of the whole matter.

It is now said that Prof. Geffcken, who has been arrested and is to be tried for publishing the Emperor Frederick's diary, will plead the Emperor Frederick's permission. If he has this in writing, he is very lucky, but if he has it not, the danger is that he will be tried for defaming Frederick's memory, in alleging that any such permission was ever given. Bismarck's resources in dealing with his enemies are endless, and he has a capital young Emperor to back him up. The suggestion of the "jurisconsult" in London that Bismarck himself might be tried for revealing state secrets, in saying that the Emperor William forbade him to consult the Crown Prince lest their communications should be revealed to the English court and consequently to the French, seems to have much plausibility, but it is very barren, for any one who wanted to prosecute Bismarck would have to get Bismarck's leave to do it. The continued uncertainty about the present Emperor's character and intentions, and the influence of this uncertainty on German politics, is, or ought to be, rather humiliating for as highly civilized a people as the Germans. That an unknown youth of twenty-eight should have so much to say about the affairs of a nation of 60,000,000, and that his opinions, likes, and dislikes should weigh so much in peace and war, seems now an immense anachronism.

The granting of charters to three "Sovereign Companies" by the British Crown within the last two months carries one back to the old days of the Elizabethan and Jacobite monopolies, and revives the brilliant memories of the East India Company, which built up an empire and filled the world with its fame. A charter has been granted to one company which is to rule the valley of the Niger in Africa; to another to rule North Borneo; and to another which is to take possession of and govern 50,000 square miles of East Africa, carved out of the territories of the Sultan of Zanzibar. They will all, if successful, necessarily play the same part as the East India Company—begin by trading, then dispute, then raise troops and fight, then annex territory, then get quarrels on their hands to which their resources are not equal, and then call on the Crown to back them up, and then, in some remoter future, disappear, leaving England, in her character of the "weary Titan," with two or three more huge dependencies on her hands.

The message of President Diaz to the Fourteenth Mexican Congress, at the opening of its first session, September 16, is of a decidedly optimistic cast. He congratulates the country upon the continuance of domestic peace and upon the signs of increasing industrial and commercial prosperity, recounts the rapid extension of the different railroad systems, speaks of the enlarged post-office facilities and the increasing postal revenues, and narrates the progress of the common schools. Even of the financial condition, his nightmare for the past four years, he can now speak in a tone of moderate hope. The Berlin bankers have taken another third of the loan proposed last March, and he hopes that they will yet take the remainder. The quotation of these bonds in London at 92½ marks the highest point the credit of Mexico has reached since her independence. Gen. Diaz gives, however, but few figures to substantiate his statement that the Treasury is really out of the crisis. The exports have fallen off slightly. What the imports were he does not say, though the slight gain in the national income would seem to imply that they were larger than last year's. Even so, the revenues are about $4,000,000 short of the estimated expenditures. Clearly, the Treasurer's detailed report will have to be waited for to state the situation exactly. In foreign relations, Mexico is on an excellent footing with her neighbors and all the world. Treaties with Guatemala are pending—one to define the boundary line and another of commercial reciprocity. The President announces that a convention has been signed at Washington designed to meet the difficulties occasioned by drovers passing with their cattle over the frontiers, and also recommends that the Extradition Treaty be amended so as more promptly to punish crimes committed on the border.

The British Consul in Rio Grande do Sul reports great dissatisfaction with the Imperial Government on the part of the inhabitants of that Brazilian province. The main trouble is the wretched inefficiency of the customs service, which leaves the way open for floods of contraband goods to come in via Uruguay and the Argentine Republic, to the ruin of the honest importers. This has been a long-standing grievance. The frontiers are too extensive to be easily guarded, and the central Government has left things pretty much to shift for themselves. In 1879, it is true, the expedient was tried of a special tariff for Rio Grande do Sul, with rates put at a figure low enough, it was hoped, to lessen the motives for smuggling. Little advantage came of this, however. Now it is proposed by the Secretary of the Treasury to enter into negotiations with the authorities at Montevideo and Buenos Ayres for a common agreement in regard to the protection and collection of customs revenues. Meanwhile railroad after railroad is being pushed up to the border from the south and west, and it seems almost inevitable that the province will become commercially dependent upon the republics to the south. It is doubtless partly due to this physical contact that a pronounced republican spirit exists across the Brazilian line. Many are found to advocate cutting loose from the Empire, following the example of the Banda Oriental, in 1829. Others see more hope in stirring up the imperial rulers to action, in self-defence, if for no other reason, and in the very probable republicanizing of Brazil itself, one of these days. At any rate, the situation and agitation have a significance.

THE ORDNANCE BLUNDER.

THE circular from Gen. Benet, Chief of the Ordnance, which has just come to light, making arrangements to divide the offices in the Government armories and arsenals between the two parties, would, we should think, furnish Secretary Endicott with a striking illustration of the danger of letting military men issue circulars on political matters, without seeing them. We have no doubt whatever that Gen. Benet thought, as he himself now explains, that when he issued this order he was doing something for civil-service reform. But the reason of this was, doubtless, that, like the great majority of military men, as well as politicians, he did not know what was meant by the phrase civil-service reform, or what the legislation on that subject had been. There is nothing very surprising about this. Any one who had not had actual experience of it, would be amazed by the ignorance of most men in political life about the demands of civil-service reformers, and about the provisions made to satisfy them by the Civil-Service Law and the regulations framed thereunder. An illustration of this may be found in the fact that when Gen. Sickles was appointed to the Civil-Service Commission in this State last year, he made known in an interview that he thought examinations for places under the State law related entirely to literary subjects, and one of the first things he was going to do was to make them "practical."

The plan of dividing the offices equally between the parties is about as much civil-service reform as a great many men in public life can grasp. Some of the more gifted ones have laid hold of the idea of pass examinations to see if the man whom they want to put in the place is really fit for it; but very few indeed really and truly comprehend, and conceive as a contemporaneous possibility, the awarding of places in the public service by open competition without regard to politics. They hear talk about this from professors and literary men, as they hear talk about Kant's categorical imperative, but that any honest effort is being made to carry it out in the United States, A. D. 1888, is something they are as yet mentally incapable of believing. We have little doubt that Gen. Benet belongs to this class, and that he really thought that he was making an immense stride in advance when he prepared to divide the force in the different grades in the arsenals gradually between Democrats and Republicans; and we believe it all the more because of the application of his rule to "women and children." Nobody but a conscientious, well-meaning, even if rather stupid, body would have thought of selecting women and children for employment in arsenals according to their political opinions. Gen. Benet, we have no doubt, is a first-rate artillerist, but he is a dreadful man for circulars.

The circular is apparently giving great comfort to the Republicans, and it is undoubtedly for them a far more valuable thing than a forged extract from the London *Times* or the *Iron Era*. But the friends of good government in both parties, and in all parts of the country, will note with unmixed pleasure the fuss they are making over it. When a party which for twenty-five years rigidly confined all the offices of the Government to its own members, professes to be shocked by a clumsy attempt of its opponents to divide the offices equally between both parties in one department of the Government, it shows that, in spite of all obstacles, the good time, in which political strife will rage wholly over better things than small places, is rapidly approaching. Every reproach hurled at the President for his shortcomings in the use of patronage, every "scandal" made by bad appointments or wrongful dismissals, or foolish circulars or orders, shows that the seed has not fallen on stony ground, and that a return to the old state of things is impossible. Let those who are disposed to be disheartened by the smallness of progress recollect for one moment that a circular like General Benet's, if issued in 1868 or 1872, would actually have been considered a ridiculous concession to the Opposition, and that the Secretary of War would have been called on to reprimand him, not for proposing to divide the arsenals between the two parties, but for letting a single Democrat, man, woman, or child, inside the gates.

At that time Gen. Benet would have been called a traitor to his party: he is now denounced as an inhuman monster and hypocrite. We do not know which he would find it harder to bear; but those who accuse him of "making war on women and children" confess by implication that the times have changed for the better, and that the battle of reform is really won.

HOW COMMON THINGS BECOME SACRED.

ANY student who wants to understand how institutions such as monarchy or aristocracy acquired in earlier times a sacred character, and became hedged with a sort of divinity, so that it was considered impious to examine their origin, or question their claims on human reverence, has only to read carefully the history of the Republican party and of the tariff. In 1884 we were brought for the first time face to face with the curious fact that a very large body of Americans were possessed by the idea that the Republican party was entitled by moral right to remain in possession of the Government for an unlimited period. We remember hearing one man of prominence lay it down that President Arthur ought not to hand over the Administration to a Democratic successor unless he was entirely satisfied that it was safe and expedient to do so. Clergymen were hunted out of their parishes, workingmen lost their employment, and storekeepers their custom, and lecturers had their engagements cancelled, on this same assumption that the Republican party had, without reference to the quality of its managers, a sacrosanct character, which made voting against it the sign of moral obliquity. Attempts to show that a party was but a means to an end, that it was sure in the long run to outlive its usefulness, that human societies had to change their institutions as their needs changed, and that all human contrivances, such as governments, needed periodical questioning and overhauling, were resented as sophistries directed against American peace and order. The Democrats were painted as political devils, who would revel in the ruin of the public credit, the plunder of the Treasury, and the destruction of the national industries.

One has only to read the defences of the tariff now frequently put forth to see how successful it also has been in twenty five years in becoming sacred. From 1860 to 1865 it was treated as a purely human contrivance for raising a very large revenue. After that it began rapidly to take on the sacrosanct character—that is, to become something like the flag, "by angel hands to valor given," or like one's aged mother—which it was unpatriotic, *i. e.*, irreverent, to discuss, or even investigate. At first a man who did it only laid himself open to the charge of impropriety or profanity, that is, of something objectionable because it shocked the rest of the company. Professors at college who taught free trade began to be looked on with suspicion, as Unitarians used to be in the beginning of the century. Fathers whose sons talked free trade began to have an uneasy feeling that the boys were keeping bad company and getting into evil ways. The Cobden Club, which prominent politicians like Gen. Garfield joined without hesitation between 1865 and 1870, as an economical society named in honor of a great philanthropist, between 1870 and 1880 took on the air of a society of evil disposed persons, raising immense sums of money for disreputable purposes, such as the ruin of American manufacturing families, the corruption of young men at colleges, and the hiring of adventurers to propagate falsehoods in peaceful communities. The process of sanctification was so rapid, in fact, that by 1880 men shrank from the charge of belonging to the Cobden Club as they would shrink from the charge of frequenting a faro-bank or dealing in lottery policies.

The reaction against such superstition, which, like the reaction against the witchcraft delusion, is sure to come in all civilized communities, has set in since 1884 undoubtedly. That year saw it at its height. The removal of the dread of the Democratic party—which pursued so many people's lives—stripped the sacerdotal robes off the Republican managers, and prepared the way for the purely secular treatment of the tariff as a device for raising money. People have begun to examine it, just as they examine their own income and expenditure, in a thoroughly rationalistic way. But one still comes across numerous proofs of the religious reverence with which it is regarded in some circles, especially by those who profit by it. We have before us the refusal of a country editor to print even as an advertisement any criticisms of it in his paper. The worthy man shrinks from such things as he would shrink from the

publication of an immoral tale or one of "Bob" Ingersoll's controversial lectures. He does not know the mischief he may do by breaking down the popular reverence for the tariff. He asks himself, What would become of the Church and what of the home if the tariff were lowered? Where would the domestic affections be under a 42.78 per cent. duty? What is the state of religion and morality in countries where wool is free? Is it not true that in free-trade countries profane swearing is disgracefully prevalent and chastity little more than a name? The Turks have little or no tariff, and what is the result? Look into the harems, and see the degradation of their women. He thinks too much attention is given to the relation of the tariff to wages and profits, too little to its relation to the fundamental human virtues. He cannot understand the state of mind of a man who thinks that there is nothing essentially corrupting in easy intercourse with foreign dealers, or that you can have steel rails cheap and yet love your neighbor or your country. The good man will get over this by and by, but we must be patient with him.

THE COST OF THE PRESENT TARIFF.

A CORRESPONDENT, referring to the cost of protection to the taxpayers of the United States, wants to know what the present tariff costs, both in the amount of revenue collected and in the enhanced price of protected goods produced at home. The question is not an easy one to answer. The amount of revenue collected from duties on imports it is, of course, easy to ascertain. For the last fiscal year it was about $228,000,000. As to the other sum—the amount paid to the producers of protected goods—there have been gross exaggerations on both sides, and any estimate must be largely a matter of conjecture. Some persons have gone so far as to assume that all manufacturers are protected, and that the prices of the protected articles are raised to the full extent of the duties. It is worth while to notice, therefore, that the two leading manufacturing industries of the country are absolutely unprotected. The census of 1880 placed the product of the flouring and grist mills at $505,000,000, and that of the slaughtering and meat-packing (not including retail butchering) establishments at $303,000,000. The iron and steel industry ranked third, with a total product of $296,000,000. In the two former industries the protective system does cause a slight advance in prices, since it makes dearer the plant used, and often prevents small establishments from purchasing needed machinery. Yet the advance in price thus caused is inconsiderable; and in making estimates, these exporting industries, whose development is hampered by protection, belong rather among the taxpayers than among the tax-gatherers.

If we descend to the minor industries, and take in alphabetical order all those having over 1,000 establishments, we find the following list:

Industry.	Product.
Agricultural implements	$68,000,000
Blacksmithing	43,000,000
Boots and shoes, including custom-work and repairing	196,000,000
Bread and other bakery products	65,000,000
Brick and tile	32,000,000
Carpentering	94,000,000
Carriages and wagons, etc	64,000,000

All of these industries are restricted and hampered more or less by protection. Prices are somewhat advanced, but only in so far as the public is charged with interest on the advances which these industries make to others and to the Government when they buy their raw materials and machinery. This burden must not be counted twice.

If this survey be continued through the entire list of manufactures, it becomes apparent that only about two-fifths of them should be classed among the recipients, rather than among the payers, of protective taxes. The aggregate product of these two-fifths is in the neighborhood of $2,000,000,000. In spite of combinations, and in spite of the use of antiquated machinery and the extravagant methods which Government-aided monopoly fosters, the prices of the protected goods are not much more than half as high on the average as the tariff duties make possible. It would, perhaps, be a moderate estimate to say that the consumers pay an average advance of 25 per cent., or $500,000,000.

But here another point must be considered. The consumers of these protected goods are often the manufacturers themselves. The finished product of one factory is the raw material of another. These protected industries pay over $1,200,000,000 for such interchanged raw materials, and the price of nearly two-thirds of these is enhanced by protection. Whether paid to the Government or to other manufacturers, it is not an extra burden upon the consuming public, although in a broad way it is a clog upon the prosperity of the country. From the $500,000,000 previously found, nearly $200,000,000 must therefore be subtracted.

To the result thus found very little need be added because of the tariffs on imported raw materials. The tax paid to the declining sugar industry of Louisiana amounts to but $6,000,000 a year, and the duties levied to protect "stumpage" and to promote the destruction of our forests and encourage Ohio farmers to use as sheep pastures land which is worth sixty dollars an acre for corn-raising—these have already been reckoned in the increased cost of the product of the woollen and lumber mills. Nothing is to be gained by exaggeration. The total money cost of the protective system annually, over and above the amount paid to the Government, ought not to be reckoned at much more than $300,000,000. This sum, however, is equivalent to the total State and municipal taxation of the country, and, were it a direct tax, would not be tolerated another year by the tax-burdened sections and classes.

The "consequential damages" are probably much more than the direct. An illustration of this is to be found in the tariff on copper ore, which ruined a flourishing industry, having its seat in Boston and Baltimore, viz., that of smelting copper ores from Chili mixed with American ores. How many such industries have been broken down, and how many prevented from coming up, by duties on raw materials and on tools and machinery can only be left to conjecture. The tariff debates of Congress are full of illustrations of the clogging effect of the tariff, which is simply a device for robbing Peter to pay Paul. In the case mentioned, Congress confiscated the property of the Eastern copper-smelters and handed it over to the Lake Superior mine-owners, and called the process protection to American industry.

THE BALANCE OF TRADE.

WE have been looking anxiously for an old-fashioned argument for high tariffs on the balance-of-trade theory. Such arguments are now scarce, but we have found one in the speech of the Hon. Jehu Baker of Illinois, which, although delivered in the House on the 19th of July, was not printed in the *Congressional Record* until the 27th of September. Formerly the balance of trade cut a great figure in discussions of the tariff, but latterly it has fallen into "innocuous desuetude." Its decadence is probably due to the fading away of the "gold scare." The balance-of-trade theory generally requires us to believe that if there is an excess of imports over exports, there will presently be a "drain of gold," and a suspension of specie payments, and an irredeemable currency, and all that.

Two circumstances have conspired to deaden this popular apprehension. One of these is the fact that for nearly twenty years we had an irredeemable currency. The "blood-stained greenback" became very much a popular idol. On the other hand, gold was loaded with the reproach of having "deserted us in our hour of trial." The tendency towards personification of the medium of exchange—a relic, probably, of early superstitions when all things beneficial to man were classed as gods and all things hurtful as demons—has had the effect to degrade gold, in consequence of its unpatriotic behavior during the war; for although gold deserted the Confederates sooner and more completely than it deserted us, that fact was never brought home to us by sharp experience. We only remember that when we were battling for the Union, and when we needed every effective agency of warfare, gold turned tail and scuttled away to Europe. Then the friendly greenback came to our rescue and remained with us to the end. It came out of the conflict, as Senator Oglesby of Illinois eloquently affirmed, "battle-scarred and blood-stained." Our standard of value, like our regimental standards, became something sacred. The very dirt and tatters of the greenback gave it a camp-like and democratic aspect. Gold, on the other hand, acquired a foreign and aristocratic air, which it still wears to the eyes of a great many people.

The other circumstance that has helped to deliver us from the nightmare of gold drains is the silver craze that started up about the time that gold began to repent of its dastardly conduct and come back to us. We all

remember how Wall Street, and the gold bugs, and the bondholders, and the national banks have been berated and scoffed at as a privileged class, as an oligarchy, as bloodsuckers, vampires, etc., etc. This kind of talk is still issuing from the mouth of Senator Stewart of Nevada, and occasionally, but not so much as formerly, from that of Senator Beck of Kentucky. The accusation has been perpetually brought against the gold bugs that they were intentionally doing some injury to silver. Striking down silver and disinheriting silver have been the crimes laid to their charge from year to year, with the intention, of course, of unduly exalting gold and conferring upon that metal the birthright belonging to its twin brother or sister. Naturally, sympathies are aroused for the ill-used metal, the disinherited member of the family.

Both of these circumstances have been adventitious and both misleading, but they have laid the ghost of the balance of trade pretty effectually. Nobody fears gold exportation now; and since nobody fears it, nobody talks about it. We presume that this is the reason why Mr. Baker has dropped gold out of the list of available spooks, and has substituted in place of it "our stored-up wealth." "What is a balance of trade?" asks Mr. Baker. "It is the difference between what a nation sells and what she buys. If she sells more than she buys, the balance is in her favor, and it adds to her stored-up wealth. If she buys more than she sells, the balance is against her and has to be paid for out of her stored-up wealth." No definition of stored-up wealth is given by Mr. Baker. There are very few forms of wealth that will bear storing up for any considerable time. Grain, cotton, provisions, and the bulk of the commodities which are accepted in exchange for other commodities very soon deteriorate on storage. The stored-up wealth of the country consists almost wholly of the instruments of reproduction and transportation, including buildings and other improvements on land. Of course, gold is included in the list of stored-up wealth, but we judge that Mr. Baker did not have this in his mind when he used the phrase. What he meant to say, apparently, was that if a nation buys more than it sells, the balance has to be paid out of her instruments of reproduction and transportation—not out of the products thereof, but by handing over the instruments themselves to foreigners.

Looking at the subject in this light, we are amazed at the financial crisis impending over the British Empire. Usually the balance-of-trade philosopher in this country shuns the trade statistics of Great Britain because they show an enormous balance of trade against that country every year, and this fact does not tally with the common belief that England is a creditor nation towards the world in general, while the balance-of-trade theory requires us to believe that, since her imports exceed her exports, she ought to be a debtor nation. But Mr. Baker does not dodge the English statistics at all. On the contrary, he welcomes them as the aptest illustration available to sustain his position. He shows in tabular form that British imports have exceeded British exports regularly every year from 1854 to the present time, and that the balance of trade against England now reaches the enormous sum of $11,892,633,118. This, he says, "teaches a highly significant lesson." What does it teach? Why, that England owes to other countries a sum equal perhaps to her entire stored-up wealth in the form of machinery, buildings, railroads, and canals, for Mr. Baker says that the trade statistics fall far short of showing the real balance of trade against her, since $250,000,000 per year of her exports are those of foreign and colonial produce, which should be added to the balance against her. So here we have a few billions more or less of British indebtedness to other countries to be added to the large total already mentioned. That Mr. Baker is not thinking about a "drain of gold" is evident from the fact that Great Britain's debt, according to his estimate, is more than double the entire amount of gold in the world, as estimated by good judges, including that used for purposes of ornament.

Weighed down with such a load of debt, Mr. Baker does not wonder that Great Britain would like to get this country into the same predicament as herself. "What," he asks, "could be more natural than that England should desire to unload a part of her crushing adverse balance of trade upon the shoulders of the United States? And this," he continues, "is precisely what the scheme of the Chairman of our American Ways and Means Committee would accomplish." What will become of Great Britain when the other nations call on her for payment, or what will become of them if she fails to pay promptly, Mr. Baker does not tell us. Considering that the other nations have no collateral security, we should say that their position was rather the worse of the two. Is it not probable that England maintains her navy in order to resist the collection of this debt?

Our explanation of the balance of trade is, that a nation is enriched by the goods that she receives rather than by what she parts with. This theory harmonizes with the prevailing conception, that Great Britain is a creditor instead of a debtor nation. It also enables us to cherish the opinion that the eleven or twelve billions of dollars of adverse balance of trade that have been piled against her in the trade returns of the past thirty-five years, represent a gain to her rather than a loss.

"THE WAGES RACKET."

We are in receipt of a large number of inquiries on the subject of wages, most of which it is impossible to answer, as for example: What is the present rate of wages in Belgium? What was the rate of wages in Germany under the free-trade policy? What was the rate of wages in the United States before the war? What is the comparative rate of wages in this country and in Australia? We desire to do everything in our power to satisfy seekers after truth. We look upon the inquiries themselves as very hopeful signs of the awakening of the people to the momentous problem that will, for some years to come, constitute the chief issue in our national politics. But in order to give any satisfactory answer to any question, we must first know what is the basis of the inquiry and what the answer signifies.

"The rate of wages." What wages? Wages are of every kind and degree, from those of the street scavenger to those of the skilled weaver who can produce the Lord's Prayer on a silk handkerchief; from the stone-breaker on the public highway to the electrical engineer; from the boy who carries sheaves in the wheat field to the gold-beater who produces leaves of metal the 367,000th of an inch in thickness. Evidently "the rate of wages" is as impalpable as the Milky Way.

But, it may be replied, we mean the average rate of wages. There is no average rate of wages. Professor Richmond Smith, without any party bias, and with only a scientific intent, has proved, in a series of articles in the *Political Science Quarterly*, that the current tables, compiled and published by the grandmothers of statistics in this country as average rates of wages, are quite delusive. What is the average rate of wages of three boys, four girls, twenty-five women and seventy-five men, one foreman and two assistant foremen, all working at different trades? The usual way to determine the average rate is to add up the total weekly wages of all and divide the sum by the number of persons. But what does this tell us? Merely that if the whole sum were thus divided, each person would get a wage quite different from what he does get. But when we have reached this useless result, we need to know how many hours the wage-earners work, and how steady their employment is, and whether the unsteadiness of employment is due to their own choice or to the slackness of trade.

In order to reach any useful result, we need to know especially what is the efficiency of labor, that is, what any given unit of labor produces. In India, for example, grass is cut with a pocket-knife by men squatting on their haunches, and carrying a jute bag on their shoulders in which they put the hay crop by handfuls. In America, it is cut by a hay harvester drawn by horses, the driver sitting on a comfortable seat. In Italy, ploughing is done by relays of men and women using wooden mattocks. In England, it is done by gang-ploughs run by steam or electricity. An American workman turns out 33 per cent. more shoes with a given machine than an English workman using the same machine. What can the rate of wages do for us in such cases towards the solution of any economical problem? Yet such cases are as multifarious as the inhabitants of the earth.

Again, the rate of wages is different in different parts of the same country. This variation happens in the same trades. The variation will sometimes run as high as 100 per cent. Mr. John Jarrett testified before a committee of Congress, in 1883, that the wages in Western rolling mills was from 50 per cent. to 200 per cent. higher than in the

Bethlehem Iron Works of Pennsylvania. We will quote his exact words:

"Now I want to say further that the wages paid in that concern were in some instances 50 per cent. less than those paid in the Western mills. I will go further: I will say, for instance, that in 1882 there was at least over double the amount paid in Western mills for rolling hands that was paid in that mill, *perhaps nearly three times as much.*"

Mr. Jarrett is a well-known high-tariff spouter. Mr. Blaine is another, and he told us, in his famous cotton-goods report, that the wages of cotton-spinners in Massachusetts were higher than in the other New England States and their hours of work shorter.

Now, we ask again, what can the "rate of wages" tell us, even if we could resolve that Milky Way and bring it into our arithmetical tables? Nothing at all. Take the comparative rates of wages that are now flooding the country from Washington under the frank of "Bill" Chandler. Here is a specimen:

	England.	U. S.
Cotton-mill hands....	$4.60	$6.72

Both figures are wrong, as Mr. Blaine proved to us in the report already referred to. But suppose they were right. Would they tell us how much cloth $4.60 in wages produces in England and how much in the United States? Would the nine cents per day paid to the East Indian grass-cutter convince us that the American horse-mower, getting $1.50, could never compete with him in the hay market? A few years ago an American citizen went to Brazil to restore a ruined sugar plantation. The first thing he did was to double the rations of the hands. They had been half starved, and were in a condition of bodily weakness and mental mutiny. The result of doubling the pay was to more than double the crop. The plantation was restored and became profitable to its owner.

There are signs that "the wages racket" has nearly run its course, and that workingmen are beginning to see its hollowness and inconsequential character. We doubt whether it will hold out thirty days longer.

THE GREAT AWAKENING.

The greatest drawback to tariff reform in years gone by has been the inability to interest the masses in the subject. The law of inertia, or indisposition to change, is as great and significant in the mental or intellectual world as it is in the material. Something has got to take place in both cases, or the tendency of things will be to remain as they are; and in the case of the tariff iniquity, this something did not occur in sufficient force until the bold and clear appeal which President Cleveland made to the American people in December last, commanded, in virtue of his office, universal attention. Simultaneously popular interest was excited. Every day has since seen it widen and deepen, and now one of its most striking features is the number of elaborate investigations which individuals in different portions of the country are making in respect to the claims of the protectionists for a longer continuance of high duties, and the almost uniformly adverse judgment which such investigations are inducing in almost every mind capable of clear and unprejudiced reasoning.

Thus, for example, in response to an offer some time since of a prize of $250 by the Reform Club of this city for the best essay on the injurious influences of the existing tariff on the local industries of any district, it is understood that over 250 essays have been sent in, and that many of these are of a high order of excellence, and embody revelations of great value in future discussions. In addition to this, many individuals, in all parts of the country, who, since the President's message, have made for the first time a special study of the tariff, have become so convinced of its national impolicy, and so interested in their conclusions, that they are printing them in an attractive way and circulating them among their friends and the public, so that hardly a day now passes which does not bring one or more of such publications to our notice.

One of the most recent and interesting of these which we have seen, replete with homely, common-sense propositions and deductions, not lacking in wit, and having withal a strong, old-school, Puritanic flavor, is entitled 'Tariff Chestnuts, or, Prepared Food for an Over-fed but still Hungry Public,' by George Brickett, and having the imprint of "Boston." As a specimen of its contents we quote the following from its exposition of "What constitutes Protection to American Industries?"

"Protection to American industries is not a tax paid by foreigners, but one paid by Americans. If you think it wise to protect an industry that you are not directly interested in, I make this proposition to you. Tax yourselves only one cent a year, and give the proceeds to me, and I will open a new American industry, agreeing to employ 1,200 native American laborers at wages of $500 a year, or I will give them $450 a year and allow them 365 holidays. You are following me as an arithmetician. In round numbers there are 60,000,000 people to be taxed.

One cent from each amounts to.....	$600,000 00
1,200 laborers at $450 each would take of this amount.....	540,000 00
Leaving for me.....	$60,000 00

In the new industry twelve hundred laborers are employed at good wages and very light work. Sixty thousand dollars is a fair remuneration for my severe mental strain. Twelve hundred and one of our population, pure, native Americans, are engaged in a business profitable to them, and the other 59,998,799 are losers of only one cent each. This business I will continue, and I will further agree not to reduce the wages of my help, to employ only natives, and not to import laborers from Hungary, Poland, or Italy to compete with them. There shall be no 'shut-down,' no strikes, and in ten years I agree to have a free library, gymnasium, and hospital for my help. I further agree to find politicians who will point to this new industry as one that has grown up entirely under the beneficent workings of protection. I will refer to this industry, myself, as depending absolutely upon the glorious American idea of protection. But can you afford this? Haven't you a nobler use for the $600,000? Cannot you, for this amount, employ the 1,200 in some manner that shall be profitable to you as well as to them? Protection to American industries is a profit to the few and a loss to the many."

Possibly some in reading the above may regard this illustration of Mr. Brickett, although a happy one, as nevertheless somewhat extravagant; but, if so, they would be mistaken, for within a few days one Charles Duffy, in a letter to the Chicago *Inter-Ocean*, has put the case much more forcibly and practically. He states that he knows all about manufacturing tin-plate, and is prepared to commence the business in this country and supply all its demands for this article, if Congress will only advance the present duty from 1 cent per pound to 2½ cents; or, in other words, pay the good and patriotic Duffy $14,250,000 for establishing a new American industry of substantially the same kind as Mr. Brickett proposes in his 'Tariff Chestnuts' to do on a smaller scale, and on the basis of an annual contribution of the people of the country of only $600,000. But whether Mr. Brickett has borrowed his idea of protecting American industry from Mr. Duffy, or Mr. Duffy has unwittingly anticipated Mr. Brickett, one thing is certain, and that is, that the influence which Mr. Brickett and other like people are now exerting, is likely soon to satisfy Mr. Duffy and all his kind of folk that if they expect to get $14,250,000 per annum out of the country by taxation on tin-plate, they need to hurry up, for the day for such transactions, whether Mr. Cleveland is re-elected or not, is rapidly nearing its end.

IMPERIAL FEDERATION.

London, September 10, 1888.

It is often remarked that new ideas take root and grow very slowly in England. British instincts are conservative; they cling strongly to the past and its lines of thought and action. The insular mind does not venture very far ahead; all movements which look to grappling with the problems of the future are extremely cautious and tentative, not to say almost suspicious and distrustful. Perhaps this springs partly from the weight of the present difficulties; the Empire always has on its hands, either at home or abroad, quite enough to absorb the attention of its statesmen and thinkers. Still, the world is in a marvellous state of flux in this nineteenth century: problems of the most fundamental and far-reaching character develop rapidly, thrust themselves forward into notice, compel attention, clamor for solution. Even British inertia has to respond to the quickening impulses of steam and electricity. For a long time the people of these islands seemed comparatively unconscious of the great national results which must flow from the fact that year by year vast swarms of people were leaving their shores to find new homes in new lands still under British sway. Of late they are certainly awaking to the importance of the new factors which this migration is introducing into the national life, and are doing so with unwonted alertness.

The whole attitude of the public mind on this question has quite changed within a comparatively short time. Fourteen years ago, when, as a Canadian, I first discussed the problems of British unity, or the so-called Imperial Federation idea, at the Union (the great debating school of Oxford), the question was looked upon as a new one. Not only was this true of undergraduate Oxford, but of many men in public life with whom I then talked upon the subject: only here and there was one found who had thought about it at all. All this has been changed in the last few years. J. R. Seeley, the well-known Cambridge Professor of History, has devoted a brilliant series of university lectures to the subject, and these, published under the title of the 'Expansion of England,' have found an immense and sympathetic audience throughout the English-speaking

world. Goldwin Smith, the no less brilliant, but somewhat pessimistic, Oxford Professor of History, who has chosen Canada as his home, finds his pen pretty constantly employed in trying to throw cold water upon a movement which threatens to blaze up into a national enthusiasm, but which is opposed to certain pet political dogmas of his own invention.

For some time the reproach most commonly made by Mr. Smith and others against the advocates of a more complete national unity was, that they were mere theorists, that practical public men held the idea at arm's length. This reproach no longer exists. Probably one of the most practical, shrewd, and business-like men that the House of Commons has known for some years was the late W. E. Forster. To the problem of Imperial Federation he devoted much of his later thought, and he had publicly announced that his chief object in life was to do all he could to forward the idea. Lord Rosebery, whose past career and present prestige clearly mark him out as a possible Premier of England, a man of tried caution and approved judgment, has deliberately accepted for himself the leadership of the movement since Mr. Forster's death; and though he leads the way too slowly to satisfy some, yet he loses no opportunity of pressing the idea upon his countrymen as one of the first importance both for those at home and those abroad. As President of the Federation League, he lately, by a special circular, directed the attention of the bishops present at the Lambeth Conference from every part of the British world to the national importance of the subject, particularly in its bearing upon the great missionary enterprises of British Christians. With a like address he endeavored to enlist the sympathy of the members of the Pan-Presbyterian Council in session at London. In both cases the appeal met, I believe, with satisfactory response. Lord Rosebery points out that the object of the League is to secure "the closest possible union of the interests ruled by the British Crown, consistent with that national free development which is the birthright of British subjects all over the world—the closest union in sympathy, in external action, and in defence." He goes on to say that, "so far as the human intellect can discern, there is nothing in the affairs of this world which is so likely to realize that 'peace and good-will towards men' which it is the object of the Church to establish, as the voluntary entrance of the people of this great Empire into a federation for the defence of common interests, the maintenance of common rights, and the fulfilment of those responsibilities which have ever been held by the British race to be attached to the possession of power."

In expressions such as these, I believe that Lord Rosebery is only reflecting sentiments which are fast becoming a fixed idea in the British mind, or, at least, in the mind of that section of the British people which thinks. The idea is not monopolized by any party or any set of politicians, and its warmest advocates are drawn in about equal numbers from Liberals and Conservatives alike. Many thinkers believe that no finality can ever be looked for on such a question as Irish Home Rule until it is dealt with on a broad national basis, when all the English-speaking parts of the Empire shall be placed on a similar footing, and when a definite line of separation shall be fixed between matters of local and matters of imperial interest. Two utterances upon this aspect of the question have attracted a good deal of attention within the past few weeks. In Canada Archbishop O'Brien of Halifax, speaking at a meeting of the Imperial Federation League, took the ground that the objects of the League did not clash with the aspirations of the Home Rule party, but that Home Rule would have its best opportunity in a wisely federated Empire. "We hope to see," he said, "each colony and state of this Empire brought together and knitted into one grand whole, in which individuality will not be swallowed up in union, but unity secured and perfected by the guaranteed autonomy of each unit." The late correspondence between Mr. Rhodes and Mr. Parnell touched upon the same point. Mr. Rhodes, an influential British subject from South Africa, pointed out to Mr. Parnell that he and many others, while sympathizing with the idea of Home Rule, could not, as ardent supporters of Imperial Federation, also support a measure which, like Mr. Gladstone's Home Rule Bill, did away with Irish representation at Westminster. This provision, he claimed, looked to disintegration rather than federation. Mr. Parnell at once replied that he had regarded the clause referred to as a great defect in Mr. Gladstone's bill, and affirmed that Home Rule, as he understood it, was not at variance with the aims of the Federation League. A subscription of ten thousand pounds to the Irish fund by Mr. Rhodes was the outcome of this declaration of Mr. Parnell.

These facts may serve as illustrations of the drift of the national thought. That Government has begun to feel the strength of the movement is shown by the significant circumstance that last year, at the suggestion of the Federation League, Lord Salisbury was induced to summon a conference of officially appointed delegates from all the great colonies to consult and advise upon questions of common interest. Ten or fifteen years ago such a step would have been looked upon by an English statesman as absurd: now it seems but a natural recognition of the widening of the national horizon. The fact that such a conference could, without special difficulty, be called in London, was itself a striking proof that space is not now a serious hindrance to effective national unity.

Population goes on increasing in Britain with surprising rapidity. The addition each year is estimated at about 400,000. The accumulating social pressure which this implies gives a strong impulse to political thought. Only a few weeks ago an influential deputation waited upon the Premier, and urged the advisability of giving direct financial support to a large scheme of State-aided emigration to the colonies, supporting their views by the argument that such a step would serve the double purpose of relieving pressure at home and strengthening the Empire in its outlying parts. While public aid is thus invoked, private philanthropy is working on parallel lines, and various religious and benevolent bodies are engaged in the work of selecting good emigrants, and assisting them to find better homes in Canada, Australia, or South Africa. The conditions under which colonization of this kind is carried on, tends to strengthen greatly the sense of national unity.

The points to which I have referred are only a few of the many indications that are visible here in England of the rapidly gathering strength of the Federation movement. It would never have gone so far, however, unless there had been a responsive or, indeed, a preliminary movement in the colonies. I think that the most critical or hostile observer would be forced to admit that at present, throughout the Empire, the tendency is decisively towards closer union of the various parts, rather than disintegration. It is probably the largest question now coming up within the domain of peaceful political development.

GEORGE R. PARKIN.

IN THE FOOTSTEPS OF DANTE.

RAVENNA, July 31, 1888.

HERE, in face of Dante's tomb, it is perhaps allowable to regret that Ampère's charming 'Voyage Dantesque' is after all so imperfect, and that no one has had the courage to supply what is lacking in that, and still less to write another book on the same theme from a somewhat different point of view. Italy is better known to outsiders than it was when Ampère wrote; but there are many places where Dante stayed which are seldom visited by the traveller, and about the aspect of which at the time when Dante lived the reader of the 'Commedia' knows next to nothing. Yet Dante seldom mentioned a place, and never spoke of one in the way of description or comparison, unless he had himself seen it and it had left a strong impression on his mind. Among the multitude of commentators few have illustrated the great poem, either as regards persons or places, by a careful study of local history. Blanc, in his well-known dictionary, and even Don Giacomo Poletto, in his more ambitious 'Dizionario Dantesco,' of which the seventh and concluding volume has recently been published, often give no further information about a person or a place than is found in Dante's own words, turned by them into prose. Many of the allusions of the poet cannot be properly appreciated until the family history of each of the men praised or abused by Dante is thoroughly understood, and the relations of these men to each other and to Dante have been carefully studied. Owing to the migrations of families, the Guelphs and Ghibellines of the different Italian cities seem connected with one another in such unexpected ways that it requires a considerable knowledge of old chronicles and of more modern compilations to disentangle the knot.

A study of this kind has been undertaken by Isidoro del Lungo of Florence, who has long occupied himself with that epoch, in a book just published called 'Dante ne' tempi di Dante.' But, in order to be thorough, the author has been obliged to restrict himself to very few subjects, and treats only of the new people in Florence in Dante's times—William of Durfort and Campaldino; a family of Pisan Guelphs in Dante's time; the relations of Dante to the house of Este; and his dispute with Forese Donati.

A month's stay on the slopes of the Apennines, on the edge of the Romagna, interested me in several of the old castles and towns mentioned by Dante; and drives through the country, and occasional visits to the libraries of Forli, Faenza and Ravenna, convinced me that much might still be done to elucidate the poet's invective against the Romagna, in the fourteenth canto of the 'Purgatorio,' as well as to throw light on other passages.

According to Balbo, Dante probably went from Arezzo to Forli in the autumn of 1302. He must either have gone up the valley of the Arno and then crossed the mountains with great difficulty, or he must have gone back towards Florence as far as Pontassieve and taken the well-known road through the pass which is now traversed by the diligence. The road to Faenza, almost parallel to this, is not known to have existed until a century later. At all events, he stopped, apparently for more than a day, in the monastery of San Benedetto, situated on a high hill, a little below the high pass where several small valleys come together, and the streams which flow through them combine and form what is now called the River Montone, and was apparently then known as the Acquacheta. What is now the largest and

evidently the main stream is now called the Montone above this junction, even to its source. At San Benedetto it receives from the right the Troncalossa; then a few steps further on the left, the Acquacheta; and half a mile further down on the right, the Caprile. Increased by other brooks, it is a stream of considerable size at Castrocaro, especially in the spring or autumn, and in summer immediately after rain. Just before reaching Forli it is joined by the Ronco, a stream of nearly equal size, flowing down the parallel valley on the right, which, in distinction from the Acquacheta, was known in the Middle Ages as the Acquaviva. Formerly the river again divided, and embraced Forli between its two arms, both of which fall into the sea, and often caused great danger by the severity and frequency of its freshets. The name Montone—the ram—is variously explained: by some, on account of the two horns or branches of the river; by others, from the savage frequency with which it butted against the walls of Forli. The ancients knew one of the two arms running into the sea—and possibly even both—as the Vitis, Vitius, or Utens. The rage of the river has since been appeased, partly by devastation among the trees in the mountains, and partly by a new, well-regulated channel, through which—in spite of frequent outlets for irrigation—it peaceably reaches the sea at Ravenna. It did not require a great stretch of geographical imagination, or rather of vision, for Dante, standing in front of the cascade of San Benedetto, to perceive that this was the first river, except the Po, which rose in the Apennines and emptied into the Adriatic. The idea probably occurred to him only when, on the shore of the Adriatic, he noticed how near its mouth was to that of the Po, and found on reflection that every Apennine stream, from Monte Viso on the extreme western frontier of Italy, whose great peak is sometimes seen from the coast of Mentone, as far as Ravenna, is absorbed by the Po itself.

That Dante should have visited the cascade shows that he must have passed some little time at San Benedetto, for it is distant an hour and a half on horseback, and more on foot by a steep and scrambling path. It shows, too, that Dante was not destitute of love for mountains and landscapes, as Mr. Ruskin and some others would have us suppose, if, when on a long and fatiguing journey—in exile, too—he went so far out of his way simply to see a mountain-gorge and a waterfall. Unfortunately, our little party lacked Dante's pluck, and, although we had driven up the valley four hours for the express purpose of visiting the cascade, when we found the length of time required, which would prevent our returning home that night, and the difficulties of the way, we put it off till another time, especially as the Acquacheta was then so low that the inhabitants told us it would be hard to see even a trickling of water. Olindo Guerrini, with whom I have talked since, says that the cascade is now very small and insignificant, and by no means authorizes Dante's use of the word *rimbomba*. But we agreed that, in all probability, the aspect of the place, from the cutting down of trees and the wearing away of rocks and earth, is very different now from what it was in Dante's time. I walked up the ravine far enough, however, to see that the hillsides were ploughed at short distances with the tracks where, in spring or rainy weather, torrents ran, leaped, or slid down to reach the stream below; and I could not help wondering whether the word thousands (*mille*) could not refer to these torrents rather than to the expected inhabitants of either town or abbey. Both are in a very picturesque situation: the ruins of the abbey—for there is little now except a small church—on the top of the hill; the village, which is called San Benedetto in Alpibus, partly grouped about the Badia, and partly in the valley below. The chief street leading up to the church is named Via Dante.

As we descend the valley, the road running sometimes close to the water, at others making sharp turns at the edge of precipices hundreds of feet above, we see on the other side, between Portico and Rocca San Casciano, the ruins of the old castle of Calboli, the home of that house once so powerful, at Forli, of whom one member is praised by Dante in the 'Purgatorio,' while the remainder are castigated because they were of opposite parties to Dante and his friends, and one of them, Fulcieri da Calboli, was in power at Florence. This castle was beseiged in the autumn of 1277 by Count Guido Novello, then Podestà in Faenza for the Forlivesi—

"in order to wrest this post from the exiles, and free the neighboring peasants and subjects of Forli from their inroads. There were in the castle Rinieri and Guido Calboli, brothers and lords of the place, and with them other nobles and 800 defenders; the Senate of Bologna having given Rinieri 12,000 lire, so that he could provide for his defence for at least ten months, with the promise of aid. Nevertheless, assistance being prevented by the difficulties of the mountains and the passes, and the castle being bombarded by seven enormous machines, which threw huge stones and laid low the houses and killed the men, the lords of Calboli, together with Count Regolo, lord of Particeto, and other exiles, surrendered; safety being promised to their persons and to as many of their goods as they could carry away."

The castle was burned and destroyed, but was rebuilt in the time of Pope Martin IV. The family continued important and powerful until it subsequently became merged in the Paulucci family—the source of many eminent men—and exists to the present day at Forli, the head having the title of Marchese Paulucci di Calboli. One branch has even settled in Russia.

Rocca San Casciano is a very dilapidated and almost shapeless ruin, towering about the flourishing pretty town of the same name at the bottom of the valley. So remote is this little place from the busy world that one finds, almost without surprise, a well-printed thick octavo volume both written and published there this very year—a Latin georgic poem with an Italian verse translation by Giuseppe Mangozzi, called 'La Cerere della Romagna Toscana,' which is not without poetical merits, and is curious as a study of local agriculture and country customs. A little way further, and we see the high fortress of Castrocaro in the distance, but, before reaching it, come upon the picturesque castle of Dovadola. After passing Castrocaro and Terra del Sole, spoken of in detail in a previous letter, we see far to the right on a parallel range of hills the tall square tower of the Caminate, which dominates all this landscape; and then the buttresses of Bertinoro, called by Dante Brettinoro, once a stronghold, and now the favorite summer resort of the inhabitants of Forli, whose vineyards and cheerful villas cover all the slopes. This was the home of Guido del Duca, into whose mouth is placed the invective against the Romagna, but whose identity seems lost in the crowd of other Guidos. In the hills above Bertinoro stood the castle of Polenta, whose eagle protected Dante in exile at Ravenna, and which was the ancestral home of poor Francesca da Rimini. There remains nothing of it now but a formless mound, for after the castle was destroyed its stones were taken to build a little chapel. This has furnished Olindo Guerrini (Stecchetti) with the subject for a short poem presenting some of his peculiar views, which must be given in an unrhymed version:

"THE CASTLE OF POLENTA.

"O passer-by, who hastenest thy step
Along the lonely road,
Lift up thy gaze toward this ruined mound,
Regard this heap of stones.

"For once a castle grim did darkly frown
Upon this very hill,
Whose lord viewed all his vassals round about
As so much food for war.

"The blood he shed for vengeance cried aloud,
Which God did give at last:
The castle fell, and on its site arose
A humble little church.

"But cursed is the place! The jealous fates
All peace have torn away:
Rapine among the cottagers still reigns
As once it reigned before.

"The cruel lord no longer stains with blood
The valleys and the hills:
A bestial parish priest instead takes tithes
Of all the peasant girls."

From Bertinoro there is a wide view over the great Romagna plain, that land which

"sits by the seas,
Upon that shore to which the Po descends,
With all his followers, in search of peace."

One can see nearly all the towns mentioned by Dante in this region from above Faenza to the north, as far as Rimini in the dim southern distance. Each one has been so characterized by the poet that, when they have once been visited, his description cannot be forgotten. It is enough to mention Cesena, because Ampère apparently saw the town only in passing, and considers that in the description of Dante the political has got the better of the topographical feeling. Any one who has approached the town from the north, and has seen it apparently on the middle of the hillside, and who then, after passing the brimstone refineries, crossing the bridge, and toiling up the steep street, has come to the open market-place, above which is the towering Rocca with its castle, and has then gone further on, winding up a still steeper hill to the picturesque sanctuary of La Madonna del Monte, with its splendid view—will at once admit the poet's terse and truthful description:

"And that of which the Savio bathes the flank,
Even as it lies between the plain and mountain,
Lives between tyranny and a free state."

(It is unpleasant to quote from such a bald and unpoetical translation as that of Longfellow, which is often so literal that it cannot be understood without the aid of the original; but it is the only one at hand, and is probably the one most easily accessible to the reader.)

Dante, when he was at Forli, probably heard enough about Guido Buonatti, the astrologer, to justify himself in placing him low down in hell as a type, by the side of Michael Scott, in spite of his being regarded as one of the worthies of his native place. Poor Tibaldello Zambrasi is put in the lowest circle of hell, because he opened the gates of Faenza to the enemy (whom Longfellow wrongly calls the French, in addition to giving Tibaldello a wrong family name). It is only from the old chronicles that we learn the reasons for his act, and can then see the motives of the poet's enmity. In 1269 Faenza had been once more conquered from Bologna by the men of Forli, who sent there as Podestà Count Glicerio of Castrocaro; and when, a few years later, the Guelphs of Bologna, headed by the powerful family of the Geremei, had exiled their rivals, the Lambertazzi, and a great number of Ghibellines, these latter were received with open arms by Forli, and some of them established themselves in Faenza, where both they and the men of Forli easily succeeded in making themselves very obnoxious. By 1281 Tibaldello, although he had always been a strong Ghibelline, had got so indignant with the conquerors, and especially with the Lambertazzi, who had recently insulted him by killing his favorite little pig, that he swore ven-

geance. He began to feign himself insane, to lament immoderately for his lost pig, and to do all sorts of nonsense. He professed to divert his affections to a lean, half-starved old mare, nothing but skin and bone, which at last he carefully shaved, and, with plentiful use of sticks and stones, used to chase through the town. The rabble followed with shouts, and when the uproar caused the Lambertazzi to be on the alert, they found nothing but crazy Tibaldello and his old mare. Then he began to raise commotions at night, with cries of "To arms! to arms!" until he had entirely succeeded in lulling the vigilance of the usurpers, and was given full immunity for his absurd acts. Then, with a confidant, he one morning issued from the town, dressed as a sportsman, with a falcon on his wrist and a brace of setters, amid the laughter of his compatriots. Once outside, they changed their clothes for friars' gowns, and rode straight for Bologna, where, in secret council, they revealed their plot, and offered to deliver up Faenza. After some little negotiation the plan was arranged, and at dawn of St. Bartholomew's Day the gates were opened to the Bolognese, and the ruling faction was awaked by loud cries of "Long live the Church! Death to the Lambertazzi and the Forlivesi!" After a sharp fight, in which many were killed, the Lambertazzi and their supporters had to flee, and for some years Faenza was restored to the dominion of the Church. Tibaldello and all his family emigrated to Bologna, where they received all the privileges of the native nobility, and there was established the festival of La Porchetta, or the little pig, which was for centuries celebrated on St. Bartholomew's Day. Pope Martin IV., encouraged by this, wished to get possession of the other towns of the Romagna, and sent out a considerable army, in which were many Neapolitans and French, under the command of a French general Giovanni (also called Guido) d'Appia. In a battle on September 16, which brought Forli to great straits, the papal troops were victorious, but, among others, Tibaldello was killed.

In the fourteenth canto of the 'Purgatorio,' Dante says:

> "O Ugolin de' Fantoli, secure
> Thy name is, since no longer is awaited
> One who, degenerating, can obscure it."

And the commentators pretty unanimously tell us that Ugolino was a worthy and honorable gentleman of Faenza "who died without heirs, and thus his name was saved," taking the words in their literal sense. Apparently, however, the poet speaks sarcastically. Ugolino di Albertino Fantolino di Zerfognano, Count of Brisighella, lived at the Castle of Calamello in the valley of the Lamone in the mountains above Faenza, and was a noted Guelph. He died in 1278, but not without heirs; and his son, Ottaviano, two years afterwards, married the daughter of the Tibaldello just spoken of. So that Dante probably means that Ugolino's name had sunk so low that no degenerate descendant could obscure it more.

Nearly every line of this fourteenth canto contains a scrap of municipal history sadly needing elucidation and explanation. My stay in Castrocaro interested me in the lines:

> "Bagnacaval does well in not begetting,
> And ill does Castrocaro, and Conio worse,
> In taking trouble to beget such counts,"

especially as the commentators have offered no reasonable explanation of them. Bagnacavallo is now a small town on the railway between Bologna and Ravenna, about fifteen miles from the latter city, and is perhaps better known to us as the place where Byron's daughter Allegra died in a conventual school. In the latter half of the eleventh century we find Bagnacavallo governed by independent counts of the Malvicino or Malabocca family of Ravenna, who, in spite of some disasters, maintained themselves for over a hundred years. Count Ruggiero, who succeeded in 1250, had even a strong party in Ravenna itself, opposed to the Traversari family, of whom also Dante makes mention. Bagnacavallo was not large enough to satisfy the ambition of the princes of that time, and when Malvicino III. succeeded in 1281, he was living and intriguing at Forli. In 1296 he was elected Podestà of Cesena, in spite of the fact that he had been excommunicated and outlawed by the Pope. Nevertheless, he was not an adherent of the Ghibellines, and two years afterwards he ravaged and sacked the territory of Cunio. He was, of course, included in the general peace of Romagna towns in 1300, the jubilee year, but was still an object of dislike to Dante's friends when the poet first visited that region. He died about 1305, leaving an only daughter, Catherine, though a certain Ludovico, the very last of the family, appears on the scene fifty years later. In 1308 Bagnacavallo was captured by the Counts of Cunio, one of whom, Count Bernardino, was elected Podestà and maintained himself for twenty years, when he was exiled, and the town was annexed to the papal dominions, of which it formed a part until the present century.

Cunio, which Dante calls Conio, and the site of which seems utterly unknown to the commentators, was at one time a strong castle situated on the level country on the left bank of the Senio, between the town of Cotignola and the parish church of Felisio. It had indeed been destroyed before Dante wrote—for the last time, and then thoroughly, in 1296, by the Ghibellines, and especially the people of Faenza, lest it should be sold to Ravenna. But the Counts still existed—a large family of them too, who had sway over a large and fertile territory—and, when they could not rebuild Cunio, took refuge in one of their other castles, Barbiano, whence, on account of family disputes, some withdrew to Lugo and Imola, and ultimately founded several families. At that time, being independent and warlike, they caused considerable trouble to the Ghibellines, and we can easily understand Dante's wish that they should have no posterity. It was better, for the fame of the family at least, that this prayer was not granted, for Alberico was a very distinguished *condottiere* at the end of the fourteenth and the beginning of the fifteenth century. He defended Romagna against the Duke of Anjou; as Captain-General of the papal troops he was victorious at Naples, and triumphed at Rome; in 1402 he took Bologna from the Visconti, and was then made Grand Constable of Naples under King Ladislas; the next year he took Bologna again for the Pope, and only two years afterwards was excommunicated because he had gone back to the Neapolitan service without permission, and had been accused of irregularly seizing papal castles.

It seems almost needless to say that the better we understand the motives of the poet and the allusions which he makes, the better we appreciate the poem. Even these hasty and brief studies—mere amusements of a summer journey—convince me that it would probably be possible, although it would be a difficult and long task, to explain every historical allusion in the 'Commedia'; at all events, there is room and need for a careful dictionary of every place and person mentioned by Dante. E. S.

Correspondence.

THE TRUE INWARDNESS OF THE VERMONT ELECTION.

To the Editor of The Nation:

Sir: Some weeks since, a Vermont correspondent of the *Nation*—presumably a Congregationalist clergyman recently settled in the State—complained somewhat bitterly of the Democratic management of the post-office business in that State, with reference to the duty of the Independents in the approaching national election. This complaint, in connection with the recent State election, and some uses made of it by partisan Republican journals and platform speakers, suggests this note from one who has some knowledge of the State "from Pownal to Derby Line."

It is lamentably true that the postal service in Vermont has suffered very material depreciation during the present Administration, and no one who knows the nature, capacity, and purpose of the Vermont Democratic ring will be at all surprised, or greatly disposed to criticise President Cleveland. The Vermont Democracy is the most unique organization in the history of modern political development. It is not a party, in the sense of an organization with political ideas or policy of administration to enforce and illustrate for the public weal, measures to carry, and reforms to be adopted. The Vermont Democracy is not a party; it knows nothing about ideas, principles, and measures: it is a clique, a ring, small and select, of party bosses, with several thousand voters who go to the polls and register the will of the leaders. There are Democrats good and true in the State by the thousand, but they are not organized so as to resist effectively the unscrupulous ring. These Democrats are as intelligent and patriotic and public-spirited as any men in the State, and they constitute the majority of the 17,331 votes given by the State in 1884 for Cleveland; but they are practically outside the ring, and have no effective influence on the conduct of the party or the "base uses" to which it is put by its masters.

In fact, the Democratic party does not exist in Vermont for State purposes, though it goes through the form of nominating State officers biennially, and voting for them, so as to preserve the party from disintegration. For years before the war the venerable Paul Dillingham used to stand as the party candidate for gubernatorial honors; and after the election was over and his overwhelming defeat was "officially assured," John G. Saxe, then of the Burlington *Sentinel*, would indite him a poem of political condolence over his misfortune. Later "Governor" (as everybody calls him) W. H. H. Bingham of Stowe, did the honors for his party; a few years ago they persuaded the Hon. E. J. Phelps, who, in addition to his other achievements, wrote the best poem on "Essex Junction" extant in the English or any other language, to run for governor. Recently, they have picked up such men as they could get. This year's candidate no one but a politician would think of as governor, while Mr. Dillingham, the son of Paul, one of the great war governors of the State, is confessedly the brightest, most capable and promising young man in Vermont to-day.

The Vermont Democracy exists and is ruled by two bosses, well known to every Vermonter at home and abroad, for the sole and supreme purpose of the national patronage in the State during a Democratic administration. This is its sole and only reason for living. It seeks no State victory; in fact, I do not believe they would

know what to do with the State on their hands, if by some accident they should carry an election. It is the spoils of the national Administration they want. After twenty-five years of waiting, the day of these bosses came, and, as there is but one custom office in the State, and one boss wanted that—and but one Government building to be erected, and the other wanted the superintendency of that—there was only the postal service for the henchmen. Hence, old, experienced, and valuable route-agents were dismissed by Col. Vilas, at the behest of these party leaders, first-class postmasters turned out, and, in not a few instances, wholly incompetent men put in their places. And so it has gone all over the State, and this kind of business was just as congenial to Col. Vilas as to the Vermont leaders.

The same is true to a large extent throughout New England, and hence Col. Vilas's administration of the Post-Office Department not only failed to make friends for the President, but has actually alienated some of his best supporters. The postal service comes home to the great masses of the people in New England, and the one thing clergymen, teachers, and business men there will not tolerate with any patience is bad mail service. Thousands of them care not for the sex or political affiliation of postmasters, route agents, etc., but they insist on good service; and that is where Col. Vilas was the evil genius of the Administration in New England, and his work injured his party in Vermont; and in the recent State election the people associated this vitiated mail service with these well-known party bosses, and took this opportunity to "hit" them. But for these things Vermont would have shown marked Democratic gains. Hence, any apparent Republican gains are not attributable to Edmunds's "loyalty" this year, nor yet to fresh party enthusiasm, nor to any free-trade scare, albeit high tariff on wool is political orthodoxy in that State, though more Vermonters are engaged in dairying than in wool-growing, and even this is in the hands of the small but wealthy and influential Merino sheep ring. The apparent Republican gains grow out of this revolt against obnoxious bosses and a degraded public service, which is felt in nearly every home in the State.

As an original Mugwump, an unyielding Independent, and a friend and supporter of President Cleveland, I write this to show the true inwardness of the Vermont election. I have keenly regretted that this degradation of the postal service in Vermont by local machine politicians, as above described, aided by Cabinet officers, should be used by the President's political opponents as a proof of his declining strength. The same is true too largely in other portions of New England, and this mail service is the only feature of public life which would not have been worse under Blaine.

VERMONTER.

CHICAGO, September 25, 1888.

A PSYCHICAL COINCIDENCE.

TO THE EDITOR OF THE NATION:

SIR: For the benefit of investigators into the subject of coincidence, I send you the following statement, premising that the parties (man and wife) to whom the dream came are educated people, past forty years old, and not given to superstition, and the facts are stated as they actually occurred, without any paring down or dovetailing:

The two persons were asleep in the same room about 7:00 A. M., servants being up and moving about in the house, and making noises which could easily be heard in the bedroom.

The man awoke, conscious of having dreamed that he was at the office where he ordinarily went to his business, and saw, standing in the door some twenty feet from him, a young man whom he was in the habit of meeting frequently at that place. He addressed a question to the young man, who looked straight at him, and, with evident intention to be offensive, remained silent. Upon this the first speaker administered a severe rebuke to the young man, apologizing, as he did so, to the bystanders for his heat.

A moment afterwards, the wife wakened and begun detailing the following dream, before having heard anything of her husband's dream: She had been at home, engaged in some housekeeping matter which occupied for a moment her full attention, when her husband opened the door and called to her. Being busily engaged for the moment, she neither turned round nor answered him, whereupon he scolded her sharply, when she awoke before she was able to make the full explanation she had begun to give while she was asleep.

At the instant of waking, the wife spoke of her dream, and the husband detailed to her what he had dreamed a few moments before.

The question seems to be whether both parties heard, while asleep, sounds which produced parallel, though not exactly similar, impressions upon their minds, or the man dreaming talked in his sleep so as to be heard by his wife in her sleep, and only partially understood.

These two people have for a number of years noticed that exactly the same thought frequently occurs to them at the same moment, when they are together alone, and believe that their minds are impressed by outside circumstances, which, while they set in motion cerebration, do not fully awaken consciousness, if that be the proper expression of the idea.

Neither one of them when awake has ever known the other to talk coherently while asleep.

ONE OF THE DREAMERS.

CUMBERLAND, MARYLAND, September 25, 1888.

"PREVENTATIVE."

TO THE EDITOR OF THE NATION:

SIR: Dr. Worcester, citing Pilkington for *preventative*, rules that the word is "incorrectly used for *preventive*." This was in 1846. Similarly, in one of the older editions of the dictionary known as "Webster's," *preventative* is called "a gross blunder"; and the latest editions of the same work teach that it is "incorrectly used instead of *preventive*." Dr. R. G. Latham, as editor of Johnson's Dictionary, gives *preventitive* from the Rev. Dr. George Gregory's *Economy of Nature* (1796), and finds no fault with it. Such a development of *praevenire* as *præventire*, which is demanded by *preventitive*, has, however, no parallel in Latin.

With respect to *preventative*, coupled with another vocable, Mr. R. G. White, in the chapter of his *Words and their Uses* entitled "Words that are not Words," pronounces: "They ought to be, but I fear that they are not, evidences of an utter want of education and of a low grade of intelligence." Mr. Edward S. Gould, in his *Good English*, bracketing *preventative* with two other terms which he disapproves of, tells his readers that they "are already in constant oral use among ignorant people, and they are gradually working their way up among people of some education." As estimated by Dr. William Mathews, in his *Words, their Use and Abuse*, *preventative* ranks with "base coinages, barbarisms which should be excommunicated by 'bell, book, and candle.'"

Many critics besides those quoted above have condemned *preventative*, and equally in silence as to the etymological grounds on which it may be supposed to be inadmissible. But at last we meet with one who is sufficiently explicit on that point. "*Preventative* is an impossible form, presupposing a *præventare* (sup. *præventat-um*) that has no existence." So writes the author of *Errors in the Use of English*, Dr. William B. Hodgson, who can quote for the word only a bookseller's circular issued in 1869.

Dr. Hodgson forbears, and prudently, to object against *preventative* (in aspect a frequentative, or an intensive) that it ought to be either frequentative or intensive in signification. No doubt it occurred to him that our accepted vocabulary swarms with derivates which, with reference to Latin and Greek, are not justified by their current senses. But a little reflection should have suggested to him that a word is not to be cashiered as "impossible" just because it implies a factitious predecessor. *Annexare* is no proper Latin; and yet we have adopted, in *annexation*, the mediæval substantive evolved from it. Of the same class as *annexare* is *fixare*, which has given us *fixation* and *fixative; affixation*, also, not being unknown. Analogous to *annexare* is *intensare*, likewise, whence the verb *intensate*, Mr. Carlyle's *intensation*, and the adjective and substantive *intensative*, so written by Mr. G. J. Cayley (1853), but corrupted into *intensitive* by the Rev. G. S. Faber (1817), Mr. W. R. Hamilton (1822), Mr. Ruskin (1867), and Mr. Leslie Stephen (1879), while Sir Walter Scott has the adverb *intensitively*. Add Samuel Holland's *fluxation* (1656), and *perfectation*, which Mr. W. R. Greg has repeatedly. On Dr. Hodgson's principles, rigidly applied, we ought, indeed, to shun, as "impossible," not solely *annexation, fixation*, and *intensative*, but, additionally, *acceptation, adhesive*, and congeners of theirs which might be named by pagefuls.

The patrons of *preventative* have been, it seems, not a few. My numerous philological memoranda are only in small part arranged; but a little search among them has revealed the following quotations for the expression under discussion:

"A *preventative* care has been allowed of as a just one." "All *preventative* thoughts of hostility were silenced." Roger Boyle, Earl of Orrery, *Parthenissa* (1654), pp. 355, 581, (ed. 1676).

"When men have the *preventative* power of it." *Id.* (1662), *State Letters* (1743), vol. ii, p. 411.

"I hope it may serve, also, as a *preventative* to deter others from the like hazard." "She then recommended a little to me, as the best *preventative* of wind in the stomach." *The Trifler* (1788), Nos. viii and xxiii.

"The obvious *preventative* is a second chamber." Mary Wollstonecraft, *An Historical and Moral View*, etc. (1794), vol. i, p. 352.

"A most excellent *preventative* against the various mistakes and blunders men are constantly making." *The Man in the Moon* (1803), No. xi.

"That it might furnish us with a *preventative* for canine madness seems not impossible." Robert Southey, *Omniana* (1812), vol. ii, p. 265.

"And the *preventative* was effectual." *Id.*, in the *Quarterly Review*, vol. xxxvi (1827), p. 320.

"We hope that a complaint of the same kind, which laid us all up in the early part of last year, may serve as a *preventative* now." *Id.* (1831), *Selection from the Letters*, etc. (1856), vol. iv, p. 234.

"Even the *preventative* which George Tubervile recommends, in his monitory rhymes, is not infallible." *Id.*, *The Doctor*, vol. iv (1837), p. 53.

"The *preventatives* of superstition." William Taylor of Norwich, in the *Monthly Review*, vol. lxxii. (1813), p. 280.

"They have several kinds [of fish] which are effectual remedies for sins. I do not know whether they have any that are *preventative;* nor does that seem a consideration in their

religion." W. S. Landor, *Works* (ed. 1846), vol. ii, p. 226.

"Do you know the late Dr. Baillie's *preventative* of the flatulency which tea produces?" Cardinal Newman, *Loss and Gain* (1848), p. 163. And the Cardinal has *preventative* in his *Essay on the Development of Christian Doctrine* (1845), pp. 101, 423.

"His intolerance of perfunctory remissness led him to adopt a complicated disciplinatory system, remedial and *preventative*." Isaac Taylor, *Wesley and Methodism* (1851), p. 280.

The word in question is also found in Bp. Heber's *Sermons;* in the *Life of William Wilberforce*, by his sons, Archdeacon R. I. Wilberforce and Bp. S. Wilberforce; and in the *Asiatic Researches*. My references to these works I cannot, however, at present verify.

By possibility, without consideration that it intercalates *preventive* worse than needlessly, *preventative* was modelled on some long adjective of similar termination. At any rate, once conspicuously before the world, it was adopted through heedless sequacity; and reiteration of it has gradually operated to the effect, that, rated by the standard of good usage, it has attained to considerable respectability. *Pensative*, for *pensive*, exemplifying an equally idle outlay of letters or demand of breath, was bazarded, in 1582, by Nicholas Lichefield, and was used as late as 1654 by Edmund Gayton. Viewed etymologically, it is better capable of defence, as is also Sir Thomas More's *assertation*, than *distributative*, instead of *distributive*, the property of the Rev. John Carpenter, writing in 1607. But such cumbrous devices, even where a classical ancestry, real or analogical, can be challenged for them, have, as was to be expected, found scant favor in a language whose tendency is shown in, for instance, its refusal to naturalize *idololatry;* in its preference, from the first, for *coercion* rather than, as in French, *coercition;* and in the imminent disappearance from it of *dilatation* before the handier *dilation*.

Your obedient servant, F. H.

MARLESFORD, ENGLAND, August 23, 1888.

THE INDICES TO HALKETT AND LAING.

TO THE EDITOR OF THE NATION:

SIR: May I, as editor of Halkett and Laing's 'Dictionary of the Anonymous and Pseudonymous Literature of Great Britain,' ask you to give publicity to the fact that I am not the compiler of the indices which form the concluding portion of the fourth volume of that work recently issued? As I have already stated, in the London *Athenæum* of August 18, the preface which bears my name, as written by me for the press, contained the following sentence: "I have to add that my labors closed in 1885 with letter Z; the indices, etc., being the work of another hand."

These words were omitted, without my knowledge or consent. As the Dictionary is, I believe, well known in America, I shall esteem it a great favor if you will allow me to disclaim all responsibility with regard to the indices.—Your obedient servant,

CATHERINE LAING.

EDINBURGH, September 18, 1888.

Notes.

AMONG the forthcoming books, one likely to have more political than literary interest is 'The Private Correspondence of Daniel O'Connell, the Liberator,' which Mr. W. J. Fitzpatrick has edited, adding a memoir and abundant notes. It will be published by Longmans, Green & Co. The same firm announce a 'Life of Lord Stratford de Redcliffe,' by Stanley Lane-Poole, which, seeing that this English diplomat was British Minister to Washington in 1820–1823, possesses an American interest.

Macmillan & Co. further announce 'Natural Inheritance,' by Francis Galton; 'Popular Lectures and Addresses on Various Subjects in Physical Science,' by Sir William Thomson; 'Scientific Papers,' by the late Prof. Andrews; a translation of Amédée Guillemin's popular treatise on 'Electricity and Magnetism'; 'A Practical Text-book of Pathology,' by D. J. Hamilton; a seventh series of 'Cameos from English History,' by Charlotte M. Yonge, embracing the Rebellion and the Restoration, 1642–1678; an 'Alphabet of Economic Science,' by Philip H. Wicksteed; a translation of Plato's 'Phædo, Lysis, and Protagoras,' by Josiah Wright, in the Golden Treasury Series; 'The Classical Element in the New Testament,' by the Rev. C. H. Poole; 'Some Contributions to the Religious Thought of Our Time,' sermons and addresses by the Rev. James M. Wilson; and 'University Sermons, New and Old,' by the Rev. Charles J. Vaughan. Macmillan & Co. have determined to enlarge their *English Illustrated Magazine* to seventy pages, without increase of price, the added space being especially desirable for the department of fiction.

Chas. Scribner's Sons have in preparation the 'Diary and Letters of Gouverneur Morris,' in two volumes; 'Cyclopædia of Music and Musicians,' by John D. Champlin, jr., and Wm. F. Apthorp, in three volumes; 'History of French Painting, from its Earliest to its Latest Practice,' by Mrs. Clara H. Stranahan; and 'First Harvests,' by F. J. Stimson.

Thomas Whittaker has in press 'Musgrove Ranch,' a tale of Southern California, by J. M. Browne; 'Our New Mistress,' by Charlotte M. Yonge; and in the Camelot Series, 'Irish Fairy Tales and Folk Lore,' selected and edited by W. B. Yeats; in the "Canterbury Poets," 'Chaucer,' edited by F. Noel Paton; in the "Great Writers," 'Crabbe,' by T. E. Kebbel—English issues by Walter Scott, London.

In the last catalogue of Hachette & Cie. we find an announcement of the first French edition of Prof. Guyot's 'Géographie Physique Comparée,' now first published in the original French, with a preface by M. Vivien de Saint-Martin.

Wilhelm Hertz, Berlin, will publish this fall the second volume of the Memoirs of the Duke of Coburg, which promises to be fully as entertaining and instructive as the first volume, already noticed in these columns.

We doubt if any volume of the 'Battles and Leaders of the Civil War' will be found to surpass in interest the third, just issued by the Century Co. It deals in the first place with Bragg's invasion of Kentucky in 1862, a campaign of which General Buell, who narrates the Federal part in it, says that it extended over a wider territory, and involved greater hazard to the Union cause, than any other. Incidentally, General Buell reveals his idea of generalship when vindicating his course on this occasion, both his own and his adversary's prudence having drawn popular censure from their respective "countries." He has also a pregnant paragraph on the rule of Confederate inferiority in numbers and superiority in effective fighting, which is philosophically explained much, we fancy, as posterity will explain it. Burnside at Fredericksburg, Chancellorsville, Gettysburg, Vicksburg, Port Hudson, Chickamauga, and Chattanooga, are the other grand topics of the volume, discussed by both sides. The leading chapter on Chattanooga is one of General Grant's, and is criticised by General "Baldy" Smith. This interesting and weighty writer shows how, contrary to a certain dictum, the Chattanooga engagement was fought exactly as it was *not* planned. His brief demonstration of this would make a good footnote to Tolstoi's thesis, that such deviations from the plan are the rule in war. The volume before us is, we need hardly say, like its predecessors, a marvel of typographical beauty and wealth of valuable illustrations.

If any one is disposed to vote politics "slow" this year, it is Mr. Edward McPherson, who delayed bringing out his invaluable 'Handbook of Politics for 1888' till it was clear that he would lose the campaign market if he held back longer for the Presidential letters of acceptance. The volume accordingly appears without them (Washington: James J. Chapman), but contains everything else of importance. The editor notices the two prime achievements of the past two years—the passage of the Electoral Count Act (pending since 1872) and the Inter-State Commerce Act (pending since 1884). Among the statistical tables is a comparison of rates in the Mills Bill and in the Tariff Act of 1883. Sections 18 and 19 exhibit the Constitutional amendments proposed or carried in the several States and in the United States respectively. No fewer than forty-two amendments to the Federal Constitution are recorded as proposed in Congress from December 16, 1886, to January 23, 1888. Mr. Blair and Mr. Crain had the honor of presenting four each.

Roberts Bros. have issued, in a style similar to their edition of the 'Imaginary Conversations,' Landor's 'Pentameron,' linking with it the "Citation and Examination of William Shakspeare," various minor pieces of prose, and the critical papers upon Petrarch, Catullus, and Theocritus, all in one volume. It is a very convenient collection, and we may congratulate ourselves that this really great writer is so easily accessible to the American public. An author whose works are more distinctly literature, has not been known in the present century.

Ginn & Co., Boston, have issued a new and revised edition of 'A Text-Book of Geometry,' by Prof. G. A. Wentworth of Phillips Exeter Academy. Although the whole book has been rewritten and considerably increased in size, it is essentially the same as when it first appeared in 1879. The alterations consist principally in the simplification of some of the demonstrations, and the increase in size is mostly due to the greater number of exercises. The great popularity of the book is sufficient evidence that the characteristics which distinguish it from others of its class meet with the approval of teachers generally, and we see no reason to dissent from the verdict. That concurrence, however, does not imply a complete agreement with the current methods of treating and teaching geometry—a subject which we have no room to discuss.

An 'Academic Algebra' and a 'College Algebra,' by Prof. Bowser of Rutgers College, published by D. Van Nostrand, are both excellent works. The only essential difference between them is that the latter is the more extensive, treating many subjects omitted in the former. But the 'College Algebra' does not assume any previous acquaintance with the science, and is equally adapted to the beginner and the undergraduate. The 'Academic Algebra' contains all that is necessary for entrance to any of our colleges.

While speaking of text-books, we may mention, as aids in the teaching of English worth examining, the 'Milton,' from Johnson's 'Lives

of the Poets,' and Goldsmith's 'Traveller,' both edited with abundant notes (Clarendon Press, and Macmillan). An edition of "Richard III.," prepared by Prof. C. H. Tawney of Calcutta for the students of Indian universities (Macmillan), surpasses ordinary Western needs in the matter of notes, but may be all the more useful in some quarters among us.

Moore's 'Irish Melodies and Songs,' with Kenny Meadows's illustrations (reduced), has taken its place in the pretty Nuggets Series of the Messrs. Putnam. The ornamental borders of the pages have the green tint of Erin.

We can do no more at this time than report the welcome appearance of Prof. Edward Allen Fay's 'Concordance of the Divina Commedia' (Boston: Little, Brown & Co.). It makes a handsome volume of 819 pages, and would alone be worth the formation of the Dante Society of Cambridge, Mass., under whose auspices it sees the light.

Dr. F. Ratzel's ethnographical volumes, in the series called 'Allgemeine Naturkunde' (New York: Westermann), are concluded with the 117th instalment of the entire work. The final issues (108–117) deal with the African populations of the equator belt stretching from Bornu to Abyssinia; the Asiatic from Persia to China and India; the European from the Caucasus westward; and the semi-civilized people of our western American coast. As usual, there are numerous excellent colored plates of costume, implements, weapons, vessels, etc., and still more wood-cuts of a trustworthy kind. There now remains to complete this great enterprise only one volume in the botanical division, which has been delayed by the editor's illness, but is expected to be ready in a few months.

The most significant article in the *Magazine of American History* for October is "The Story of a Prince," by Lee C. Harby. "A Romantic Chapter in Texas History" is its subtitle, and is fully borne out by this account of the founding of a German colony in Texas before it was wrested from Mexico. The narrative is not controlled by documentary evidence, as it should and might yet be (for it is only begun), but it was worth writing. Numerous portraits and other illustrations accompany the paper.

The September number of *Les Lettres et les Arts* (Paris: Boussod, Valadon et Cie.; New York: Chas. Scribner's Sons) contains six articles, of which the two most attractive are the first part of "Les Canons anciens et modernes," by General Thoumas, with its reproductions of curious old wood-engravings, and the second part of "L'Opéra sous l'ancien régime," by M. Adolphe Jullien, which is also illustrated by reproductions of old pictures and engravings. Among them is a little miniature of Sophie Arnould and a portrait of the irresistible tenor Jéliotte as Apollo, in full court dress and wig, holding a singular lyre. But the most expressive of these illustrations is from an old engraving of the time of Louis XIV., signed by the engraver, Trouvain, and representing the ambassadors of Morocco at the Opéra during a representation of the "Carnaval de Venise." "Orchardson et son œuvre," by Frederick Wedmore, is especially interesting on account of the five illustrations from the artist's work which accompany it.

If our memory serves us, the extravaganza with which *Le Livre* for September opens is the first incursion of fiction into this journal. And more is apparently to come, for "L'Héritage Sigismond: Luttes homériques d'un vrai bibliofol," by MM. Octave Uzanne and Adolphe Robida, is preceded by the general title, "Contes pour les Bibliophiles." It cannot be said that this department was needed to enliven the general contents, in which light and humorous articles are by no means rare. Nor is this first essay irresistibly mirth-provoking—perhaps because the deliberate destruction of a precious library is, in the eyes of a genuine book-lover, too tragic a theme for jesting. For international comparison, one might wish to see what Mark Twain would have made of the same conceit. This number of *Le Livre* is adorned with an excellent etched portrait of the Duc d'Aumale.

—The October *Atlantic* is an unusually pale number, remarkable chiefly, as much of our current work is, for evenness. The most agreeable paper is in the classical series, which takes up this month the correspondence of Marcus Aurelius with his old tutor, Fronto, one of the luckiest finds of this century in the old Italian libraries. Fronto himself, and not the Emperor, is the subject, and the nature of the friendship of the two is sufficiently illustrated from their very intimate letters. The article suffers, however, if one recalls the passages in Mr. Pater's 'Marius,' in which he translates, in a much nobler and not less faithful English, one or two of the same extracts, and builds up the character and personal impression of the old rhetorician in a more lively and fuller manner, as, indeed, his treatment is the more catholic in sympathy. The present paper will, perhaps, serve as good a purpose in sending the reader back to that picture of the thoughtful life of Rome in Aurelius's day which is the most profitable, both for knowledge and reflection, that modern scholarship, touched by a refined imagination, has produced. The remainder of the number affords us a vivid abstract of Garibaldi's memoirs, written in a sympathetic spirit, but deriving its interest from the romance of the Italian's tempestuous career. The suggestion that our century, which is now usually characterized as materialistic and scientific, will be known rather as the age of romance, is something more than a fancy. It has not lacked other great individual careers besides Garibaldi's, and in what pertains to the records of man in history and in literature the romantic element has certainly been the dominant one. Iceland is the source of the travel article, which is neither better nor worse than usual. There is the customary nature piece, with a refined touch, devoted to "pasture-herb and meadow-swath." Art is cared for by a critical account of the French pictures in the Boston Museum. The excellence of the magazine is well brought out when so undistinguished a number is so good as this.

—In the October *Forum* Mr. Gosse asks whether America has produced a poet, that is, one worthy to be ranked with the dozen great names of poetry in English literature. It is a mercy, in an Englishman, that he refrains even from mentioning Walt Whitman; but this is almost offset by the elaborate refutation that Lanier is an immortal. One observes in the article a singularly wrong apprehension of the best American opinion, which indicates that Mr. Gosse has fallen into the hands of coteries; and in other parts his remarks are trivial. He seems to think that the reason why Poe is not acknowledged in Boston is because he misbehaved before a very small audience in that city over forty years ago, and he gravely urges that Bostonians should really lay aside prejudices which spring from such an incident. This, however, does not invalidate his academic criticism of the only four (not among the living) whom he allows to be competitors for a high place, viz., Longfellow, Bryant, Emerson, and Poe. He denies their claims. Of Longfellow he says that his narrative is "second only to that of Prior and Lafontaine"; that his "real place is in Swedish literature, chronologically between Tegnér and Runeberg," and "that originality and greatness were just the qualities he lacked." Bryant is "a poet of less attractive but somewhat higher class than Longfellow," a hybrid product of "the Wordsworth of Tintern Abbey" and "the Coleridge of Mont Blanc," and he owes his impression to the persistence of this style through his life; "his irreparable fault is to be secondary, to remind us always of his masters first, and only on reflection of himself." Emerson belongs in a higher region than either, and if judged by selected passages, he gives "the impression of high imagination and great poetical splendor." He is "too fragmentary and uncertain" to be set among the stars, and deserves to figure at most as "an asteroid" among the planets. Poe is judged very leniently. Mr. Gosse declares that "the posy of his still fresh and fragrant poems is larger than that of any other deceased American writer"; his power of melody seems to be the charm that has cast this spell. Mr. Gosse does not quite dare to say that Poe is our first poet, but he goes so near it as to make the reader wink. He will hardly convert our people or our men of letters to his opinion. As we have said, his survey is limited to the dead. To the living he pays one tremendous compliment: "There was never a time, in my opinion," he says, "when America possessed among her citizens so various and so accomplished singers, gifted in so many provinces of song, as at present." Perhaps it is as well, in view of what he says of the dead, that he was not obliged to enter into details, and distribute this general judgment among Mr. Stedman's hundred bards of "the twilight."

—The September number of the *Bibliothèque Universelle et Revue Suisse* is one of the best that this excellent and too little known periodical has issued. It opens with an article on the French poet, Leconte de Lisle, by M. Édouard Rod, who, since the extinction of the *Revue Contemporaine*, of which he was the first editor, and his establishment at the University of Geneva as Professor of Comparative Literature, has been a frequent contributor to the pages of the Lausanne review. The present paper is one of a series upon the contemporary poets of France, and M. Rod presents very agreeably what he calls "the singular mixture of admiration and *agacement*" which is produced upon readers in general by this much-admired and little-read poet, whose three small volumes have only recently carried their author into the ranks of the French Academy. It must be said, however, that, in spite of M. Rod's skilful plea, the admiration, if admiration it be, given to the author of the 'Poèmes antiques,' the 'Poèmes barbares,' and the 'Poèmes tragiques' seems always to be given under protest; nor will everyone be able to say with the present critic that the *agacement* of the persistent reader is attenuated. M. Paul Stapfer gives the third and concluding part of his "Rabelais, sa vie et son œuvre," a very straightforward, unpretentious account of the life of Rabelais, and a clear exposition of the nature of his work. A very similar article, though upon a writer entirely unknown to most western readers, is the one entitled "Jean Kollar et la poésie panslaviste au xixe siècle," of which M. Louis Leger, the first among French Slavic scholars, gives the second and last part. Like all that appears in this periodical, even from scholars and specialists like M. Leger, it is as simply and plainly written as it

is new and interesting, for the articles of the *Bibliothèque Universelle* never belong to what is very expressively called in Paris the literature of mandarins. Two excellent articles, "L'Histoire réligieuse de la Révolution française," by M. Edmond de Pressensé, and "Le Pessimisme philosophique et l'Optimisme chrétien," by M. Léo Quesnel, are very characteristic of the *Revue*, which, without being religious in its tone, is addressed to a community in which Protestant Christianity is respected. Among the lighter articles is one by M. G. van Muyden, "Les grandes Régates anglo-américaines." The various *chroniques*, Parisian, German, English, Swiss, are, as usual, very readable.

—The tenth volume of 'Meyer's Konversations-Lexikon' (New York: B. Westermann & Co.) has been completed, and the eleventh far advanced, ending with the article on Minting. The profusion of engraved and colored plates, among which latter we remark one of insect mimicry, and of maps, is well maintained. The articles on the colonial strivings of Germany; on Corinth and its canal, to be finished in 1891; on Krakatoa, etc., show the editing to be abreast of the times. So do the biographies of Prince Krapotkin and of Robert Koch, with his comma bacillus; but the notice of Dr. Morell Mackenzie makes no mention of his attendance upon the Emperor Frederick, and the subsequent unpleasantness. The article on running (*Laufen*) is illustrated by Muybridge's plate of the galloping horse. In general, American achievements are apt to be slighted, as for example in the sketch of the development of the pianoforte. The Knights of Labor are postponed to a later stage of the alphabet. Since cyclopædias are the great disseminators of error, it is worth while to point out two typographical slips in the article on Gen. McClellan: Brenton stands for Brinton, and Grange for Orange. Kossuth is severely judged; and in reply to a subscriber the editors say in their correspondence sheet that the *day* of Kossuth's birth was, and may still be, unknown to himself. Through the same channel they affirm against Vapereau that ex-President Grévy was born in 1807, not in 1813; and they add that his baptismal name was Judith François, which he took the liberty of exchanging for Jules.

—The Convention of the American Library Association, just held in the Catskills, was, as usual, a success. The weather was, as at every other convention, most accommodating. Though there was a violent storm on the coast, no walk or drive among the beauties of the Catskills was hindered by wind or rain. We have always said that there were too many papers at these meetings, leaving no time for discussion. This year there were only two papers, sent by members who could not come. Topics were suggested by the President, or introduced by short talks from some one who desired information, and were then discussed in a very informal manner. The result was eminently satisfactory. Some very unexpected facts came out, and in one case the discovery led to the most important action taken. It was found that a list of portraits other than those separately published, that is, of portraits contained in collections, in biographies, in art periodicals, and the like places where they might be overlooked, had made considerable progress in a certain large library, and that others had done more or less work in the same direction. It was agreed that such isolated work, leading necessarily to considerable duplication, was unwise, and that such a list ought to be prepared in coöperation, as was Poole's 'Index to Periodical Literature,' and with a view to publication when finished. A committee was appointed to report at the next convention (to be held at St. Louis next spring) what works of this sort are going on. The preparation of such a general list of portraits was suggested some years ago by Mr. R. R. Bowker of the *Publishers' Weekly* to the English Index Society, and the Index was put upon their list; but that Society has frittered away its energy on the production of little indexes of extremely limited value, and nothing has ever been done, so far as we know, to organize that coöperation without which a scheme of this magnitude could not be carried out. It is to be hoped that the coming report will not confine itself to enumerating all the bibliographical work that can be discovered to be going on in this country, though that of itself would be of great value, but will outline a method by which the iconographical index can take its place as the third of those useful labor-savers of which Poole's 'Index' is the first, and Fletcher's 'Essay Index' is to be the second.

—One session was devoted to architecture. The plans of the new rooms destined for the State Library in the Sta e House at Albany, prepared by a librarian, were approved; the plans of the Howard Library just finishing at New Orleans, one of Richardson's latest drawings, were riddled with objections. All of Richardson's designs for libraries are, from the library point of view, failures. We do not know whether that famous architect ever gave any thought to the object for which his buildings of this sort were intended: there is little indication that he did in any of them. He appears to have been satisfied if he drew a beautiful design, and to have left it to some draughtsman to fit in the books and the service. When shall we find an artist who will plan for use first and beauty next; who will see where his book-shelves and his reading-halls and his work-rooms ought to go for the highest efficiency, and then will mould his library building around them? Looking at such plans as this of the Howard Library (where, for instance, an attendant must go 320 feet to get a book within 10 feet of the delivery desk), and scores of others like it, not excepting even the magnificent structure just begun for the Boston Public Library, one may say, as did the President of the Association, "The architect is the natural enemy of the librarian."

—The late report of the Astronomer Royal, Mr. Christie, to the Board of Visitors of the Greenwich Observatory, exhibits a gratifying state of activity in that institution. The structure itself has been undergoing extensive repair, and is now modernized quite as much as is desirable, the chief addition being a new dome made by Sir Howard Grubb. The comparatively recent introduction of spectroscopic and photographic branches of the work necessitated temporary arrangements which are replaced in the completed building, and the whole of the astronomical establishment is now brought together. As in Paris, the neighboring traffic has rendered the astronomers solicitous as to the foundations of their instruments, and the subject of approaching railways thus engages their serious attention. Railway interference with observatory piers varies much with the character of the geological formation, but the nature and amount of the disturbance near Greenwich were settled once for all by noting the effect of passing trains upon a reflecting mercurial surface which the astronomer has frequent occasion to make use of: the tremors were found to produce exceedingly deleterious results while trains were passing at a distance of some six hundred yards; and up to distances of one mile, the effects were distinctly marked. As a consequence of this work, the recommendation of the Astronomer Royal to the Admiralty led to the abandonment of the construction of a new railway across Blackheath.

—As everywhere else, very bad weather during nearly half of the year is found to have disastrously affected the number of observations; but the calculations of results are in a most forward state. No progress has been made for a year in the construction of the great refracting telescope, of 28-inch aperture, as the glass-makers have not as yet succeeded in producing the crown-glass disk for the objective. The measurement of the motions of stars from or towards the earth by means of the spectroscope is continued with very interesting results; while, in the photographic department, it is noteworthy that, by combining Greenwich solar pictures with those from India and Mauritius, records are at hand for 361 days out of 365. During 1887 the spotted area has rarely amounted to 1-2,000th of the sun's visible hemisphere, and the average is less than one-sixth that recorded in 1883, near the time of maximum spots. Preparations are making for a redetermination of the difference of longitude between Greenwich and Paris. A photographic refracting telescope is needed to enable the Observatory to bear its share in the international work of mapping anew all the stars of the sky; some thirteen observatories, in both hemispheres, have already ordered their instruments of like dimension for coöperation in this great undertaking. This need has just been met by a Treasury-grant. A year ago, the Astronomer Royal referred to the increased demands upon the Observatory by the scientific and the general public, and he now calls attention to the fact that in 1835 there were six assistants, having no computers to superintend, no extraneous work worth mentioning, no magnetic and meteorological observations, no altazimuth observations, nor any spectroscopic and photographic work. At present there are but eight assistants, excluding the chief assistant, having fifteen computers to superintend; and of the assistants' staff, five are absorbed by the newly developed branches of work, leaving thus practically only three assistants to do the astronomical work which in 1835 required five, and in addition to perform varied extraneous duties imposed by the public interest. Mr. Christie therefore very properly pleads for adequate provision for the primary objects of the Observatory, in default of which the voluntary work—the supply of hourly time-signals, for example—may have to be dropped.

RECENT NOVELS.

The Reverberator. By Henry James. Macmillan & Co.

A Virginia Inheritance. By Edmund Pendleton. D. Appleton & Co.

From Lands of Exile. By Pierre Loti. Translated from the French by Clara Bell. W. S. Gottsberger.

The Black Arrow. By Robert Louis Stevenson. Charles Scribner's Sons.

The Residuary Legatee. By F. J. Stimson (J. S. of Dale). Charles Scribner's Sons.

The King of Folly Island, and Other People. By Sarah Orne Jewett. Boston: Houghton, Mifflin & Co.

A Little Maid of Acadie. By Marion Reeves. D. Appleton & Co.

Roger Berkeley's Probation. By Helen Campbell. Boston: Roberts Bros.

A Hard-Won Victory. By Grace Denio Litchfield. G. P. Putnam's Sons.

Virginia of Virginia. By Amélie Rives. Harper & Bros.

Hillingdon Hall, or The Cockney Squire. By R. S. Surtees. London: John C. Nimmo; New York: Scribner & Welford.

It has long been taken for granted that the elements of Mr. James's novels shall be few and simple, the characters and phases of life typical. Nobody expects anything to happen, or anticipates emotional excitement. Perhaps his strongest book, 'The Princess Casamassima,' missed general appreciation because its strange incidents and deep feeling offend preconceived opinions, and exhibit an art less circumscribed than public wisdom permits to the author. If that wisdom was disturbed ever so slightly by the exceptional novel, 'The Reverberator' will reëstablish it triumphantly. The manuscript of the plot could be packed neatly in a nutshell, or a summary thereof engraved by an ingenious person on a dime. The subject, too, is that which the making his has made the author's fame, viz., the hopeless difference in social point of view between a certain class of Americans and another class, not so certain, but not American. The difference on which the argument rests will doubtless appear to individuals of that certain American class, if by any chance they read Mr. James, to be a flimsy and ridiculous pretext for a story. They will pronounce this judgment, not because they count themselves in that class, but because they know that the author is a finical, snobbish fellow, whose soul is dead to the glories of his own, his native land, and who is always nosing about for a chance to have a fling at it. The question is simply whether you like to have your private affairs set forth in a "society journal"—set forth, either with flattery or disparagement, always mendaciously—or whether you don't. On one side of the question stand the Dossons of America, newly arrived in Paris, and Mr. Flack, George M. Flack, correspondent of the *Reverberator;* on the other are arrayed the Proberts, originally of South Carolina, now in the second generation of denationalization. The Dossons are new-rich, yet not on that account offensively aggressive; on the contrary, of the lowest degree of humility consistent with self-respect and free-born Americanism. The treatment of the Dossons is most admirable. They have so little marked individuality that they are almost characterless, yet the author manages to characterize them perfectly. One cannot decide which is the more wonderful, his power of divination or of apparently effortless expression.

No people were ever more helplessly what nature made them than the Dossons; therefore, no people could be for themselves a fuller explanation and more cordially acceptable apology. They deserve all the sympathy that people so ingenuous as never to have thought of being pretentious can get. They thought an editor, by virtue of his office, was a great man, and George M. Flack, commanding as he did the ear and time of princes and potentates, the greatest of his guild. His explanation that he was "only a correspondent" served only to exalt him; for how much greater an editor free to roam abroad than an editor doomed to stay at home! There was only one position in life which he was not fitted to adorn, and that the position of husband to Miss Francie Dosson. Then it was really Miss Dosson who created this limitation, and she was moved thereto not so much by a doubt of Mr. Flack's greatness as by the knowledge gathered from *Reverberators* at home, that the grandest matches were made by American girls "over there," which knowledge had fired her with vaulting ambition for her beautiful sister, Francie. Thinking Mr. Flack great, they thought, in natural sequence, that it was a splendid thing to have a column in the *Reverberator* all about Francie and her portrait, with the skeletons in the closets of her Franco-American *fiancé's* family, exposed in cold type to a gaping world. It was distinction! It was fame! They were obliged to see that the three demoiselles Probert, by marriage ennobled, took a different view of it. Miss Dosson was "mad" with Flack because he had apparently broken off the grand match, but, to save their collective lives, they couldn't see why the Proberts should go on so, and to the end of time they never would. Francie herself never knew that these family secrets had been confided to her chiefly with kind intention to make her feel herself one of them. She got no nearer to the heart of the disturbance than to perceive a fulfilment of her prediction when she had become engaged to Gaston Probert—that "she knew she would do something," and "now she had." As for the assassin, Flack, what could he have but contempt for antediluvian frumps, who made a row because their doors had been forced, their shrines desecrated, for the increase of the *Reverberator's* circulation, and incidentally for the enlightenment of mankind?

Mr. Flack is a monster, and more monstrous still is the fact that he had excellent grounds for the assumption on which he plied his disgraceful trade. He said, in all sincerity, that he knew "what the people want," and he did. By hook or by crook he proposed to supply that want. Mr. James, holding himself aloof from the controversy, neither preaching nor scolding, simply narrates the effect of Flack's most brilliant stroke on a family whom Flack would not have counted among the people. The Proberts are shocked and furious, and each manifests rage in characteristic fashion. Francie, brought to the family bar, is bewildered. It doesn't occur to her to deny innocent complicity with Flack nor to feign sympathy; and it doesn't occur to the Proberts to admire her honesty. To the Gallic mind, that was shameless avowal of shame. One word of exaggeration here would convert a serious scene into a farce, but that word is not written. Francie, whose fascination for Gaston Probert is a matter of fine lines and color, is endeared to the Anglo-Saxon reader by this splendid exhibition, not of courage, but of natural-born incapacity for lying. It makes her worth Probert's reluctant sacrifice, and worth, too, the incomparable ease, grace, and brilliancy with which her fortunes are narrated.

The interest of 'A Virginia Inheritance' centres in the conflicting claims of the Northern inheritor of Chatterton Manor and the Southerner in possession. As in 'The Reverberator,' it is a question of point of view. The case is an amusing one, and the argument on both sides is clever, impartial, and clear. There is left no room for doubt that an irreconcilable difference of opinion exists between North and South, not about the war (we are spared that), but about whether, in the words of Mr. Leigh, the erratic champion of the Virginia Chesters, "the right of eminent domain, founded on association, is at least equal to hereditary title." The chapters describing the adventures in Virginia of Perry, legal representative of the New York claimant, are delightful. The gravity with which the Virginian propositions for compromise and friendly adjustment are set forth heightens their intrinsic absurdity, and there is a warm sympathy between the author and his characters and scenes which communicates itself to the reader. For the time, the legal right of the pompous, meanspirited Chatterton is of no consequence, except to magnify his hatefulness, and the more cordially to identify us with the sentiments and prejudices of the "hospitable, out-at-elbow, irrelevant, sympathetic South." In these chapters there is a naturalness and ease lacking in the rest of the story. When the action is transferred to New York, the author becomes more intent on generalization than on creating men and women. The eagerness of his people to say good things about themselves and each other detracts from their naturalness. It conveys the impression that fashionable society speaks spontaneously in epigrams, or else that its scant leisure is given to thinking them up. The suspicion arises that the Mesdames Denvers and Underdunk of New York, the Chattertons and Perrys, may even pass around contemplated conversations in manuscript for suggestion or approval, as Shakspere's sugared sonnets were handed about to his favored friends, or La Rochefoucauld's maxims submitted to the De Sablé coterie. If this precise and elaborate manner of expression and the habit of liberal quotation from the Bible are indeed common, then fashionable society is not in such a bad way as the unfashionable are prone to believe it. The making of epigrams is not a wholly frivolous folly, and study of the Bible, even for the purpose of embellishing conversation, cannot be barren of otherwise good results.

It is a pity that Mr. Pendleton did not limit himself to his question of point of view, and to the perpetration of epigrams which, irrespective of the mouths that utter them, embody wise thought and a perception of human follies and frailties, modified by kind charity for them. He has, however, made the mistake of throwing in some incidents, apparently for excitement, and of introducing an intrigue wholly sensational in character, and not excused by adequate connection with his main theme. He does not deliberately "play to the gallery," yet he does not preserve that equable indifference to its cravings which, for instance, distinguishes Mr. James. The discovery by Perry, in Virginia, of the picture of his old love, Barbara, is good for nothing except to startle. It makes no trouble between him and his new love, and Barbara dead was just as useful as Barbara raving in a lunatic asylum, besides being a pleasanter object for contemplation. For the figure of a daring social adventuress, Mrs. Dare would have stood very well dowered with one defunct husband, at most two. But when she is known to have got rid of three, and is seen trembling on the brink of more, she is no longer altogether human, actual: she belongs among the prodigies, like the "Bearded Lady," or the "Lady with feet twenty-six inches long." The complications between Mrs. Dare and the Chesters make a discordance jarring through most of the story, culminating in the destruction of Atherton Leigh in a tenement blaze. This catastrophe is lurid, and, being the catastrophe, goes far to stamp the book with a commonplace sensationalism out of keeping with its predominating tone.

Once in a while, a weary while, there comes along a book of travel which is a revelation of the capacity of language for pure description, and of pure description for captivating senses and imagination. Such a rare book is the collection of notes from the far-away Yellow Land,

from Malabar and Africa, entitled, 'From Lands of Exile.' The author, an officer in the French navy, has the quick, all-embracing eyesight of a tried sailor, the ready apprehension of a Parisian, and the dreamy, sensuous temperament of a poet. He sees all there is to see, and so there are plenty of facts which are undeniably very important aids to realization of things unknown and exceedingly odd and strange. Far more than that, he feels in one way or another all that he sees, and it is his full and rich expression of a most sensitive impressionability that vivifies his fact and plunges his readers into the atmosphere of his scene. He takes us first in a ship's boat across a bay of Anam and up a river that leads to the town of Touran. On the way we notice some queer things—a temple with "concave roof bristling with hideous and diabolical emblems, horns, claws, and in the midst the huge lotus flower;" then, a sentinel, "squatting in his little lair by a huge tom-tom, looking like a nasty old woman with a gown on and her hair in a knot." Presently we come to Touran, where we are entertained in a bamboo hut, drink tea out of tiny blue cups amidst the waving of fans and umbrellas, in a litter of bronzes and lacquer and paper rubbish which would be the despair of a Western collector. From the mandarin's, on to the market, where hosts of "senile, childish creatures" are trotting about in fluttering, gaudy rags and absurd hats. Their chatter is maddening, their filth and squalor are disgusting, and the air is laden with their smell, that heavy, musky smell with which the Chinese curio shops at home have already acquainted us. Passing from the streets to the pagodas, Chinese art does not appear so eccentric, unaccountable, and anomalous as when regarded piecemeal, isolated in the incongruous West. It seems natural that such travesties on humanity should express themselves in writhing, nightmare monsters, and in pudgy little demons with bulging eyes and malign grin. Our impressions of China are not pleasurable but they are intense, and they do most forcibly suggest to us thoughts of the "wide gulf which parts us from the men and things of this land; the different darkness in which we had our birth; the disturbing dissimilarity of our primeval origin." On the whole, we do not regret China, and at Singapore are irritated that it is not yet quite behind us. Here the Chinese mingle with every nationality and predominate. It is all "yellow, bustling, greedy, simian, obscene." Once at Mahé, on the Malabar coast, a kingdom of calm and beauty is ours.

"At about five in the afternoon," says the author, "I disembarked there on a sandy shore, at the mouth of a little river which makes a cutting, a winding bay through the dense wood. I had come from afar, from farthest Asia, and had almost forgotten the charm and splendor of Hindostan. At such a time it is enchantment to see it again, unique as it is and matchless. The sun was already low, and shed a glory of color on the river up which I had come; the palms, where it touched them were gold—wonderful gold—and the air seemed full of gold dust. On the slope of each bank, at the foot of the palms, which form vast green hangings, sat groups of Indians watching my boat pulling in. They took grand attitudes, like gods, wrapped in white, red, or orange-colored draperies; and they and their trees and their land and their sky were all bathed in the radiance of an apotheosis."

From India to Obock there is no stop, and here, beneath a fierce sun, on the shimmering, sandy edge of the only continent that still preserves any mystery, for us the journey ends. The sketches of "The Death of Admiral Courbet" and "An Old Salt," included in the volume, are profoundly pathetic. The spirit of melancholy that lurks in all the pages dominates these; yet it is a gentle and tearful melancholy, not that loathed thing,

"Of Cerberus and blackest midnight born."

Boys with an appetite for tales of violent adventure—that is, all healthy boys—will doubtless get considerable comfort out of 'The Black Arrow.' The scene is in England during the Wars of the Roses, and the personal exploits of the hero, Dick Shelton, have the national struggle for background. Dick fights, and loves, and also runs away, in manly fashion. He is the eternal boy, with nothing mediæval about him, except his doublet and hose. There is a certain monotony of hacking and killing in his career which, in the mature mind, begets a listlessness as to its catastrophe. Few are the men and women who retain that youthful joy in deeds of physical daring which the author appears to carry with him from the shooting of the first Black Arrow to the last. The narration is all alive. Dick is always up and doing, always too busy for dull thinking, or for making critical observations on the radiance of the sun by day or the shine of the stars by night. His physical bravery is no greater than his moral courage, which he proves gallantly when his royal namesake, Richard of Gloucester, qualifies a favor granted, with—"By the glory of Heaven, there your favor dies." "Mine be the loss," says Dick, and turns his back upon the glittering future so recently opening before him. In his treatment of Gloucester the author takes no heed of the report of ancient men of the fifteenth century, who had seen the Duke and who affirmed that he was of "bodily shape comely enough, only of low stature." His Richard is entirely the Shaksperean, the popular Richard, and is memorably drawn in the scene outside the church of Holywood, when, behind the files of his army winding along the road, "girt by steel-clad knights, the bold, black-hearted, and ambitious hunchback moved on towards his brief kingdom and his lasting infamy."

The little comedy of 'The Residuary Legatee' is very well managed, and, by way of compensation for the flatness of John Austin's posthumous joke, has the happy, true comedy ending. The tale is based on an extravagance, yet there is no good reason why the hero should not have been endowed with a slight measure of common sense, not to say something like brains. He is represented as an actual, an every-day young man, and a Bostonian besides. He is fastidious about what he drinks, and wears garments, or a garment, which the author is pleased to describe as "Poole-built trousers." He has an obsequious valet named Schmidt, whose name would never disclose the fact that he is "a sinuous Oriental." Yet, with all these advantages, the abused donkey has a splendid intelligence compared with that of Mr. Austin May, and, beside him, a monkey is a figure of virility.

'The King of Folly Island' includes half a dozen sketches of New England life, all so like previous sketches by Miss Jewett that we might as well be reading the last volume, or the volume before that. The fishermen, the countrymen, the old maids by hill and shore, are familiar friends, and there is no obvious reason for presenting them under new names, except to keep before us the author's skill in the delineation of them. The last sketch (there is not a story in the volume), "Mère Pochette," is of French Canadian life, somewhere between the settlements, the Eastern States, and the St. Lawrence country. The location is indefinite, but it serves. The sketch does not indicate any more definite acquaintance with the people than with the topography. Mère Pochette, the several curés, and the rest are conventional peasants, not *Canadiens*. The sweeping characterization of the habitants as "hardening into stolid farmers," growing "stupid and heavy," "drinking gin and bad beer," is an unjustifiably severe criticism of the French in the Province of Quebec. It betrays almost as superficial a knowledge of their actual condition as the reference to "merry, vine-growing ancestors" does of their history. It is not recorded that their ancestors were gloomy, but it is set down with exactness that the vine-growing provinces furnished but few colonists for New France. There were forests and snows and savages to be encountered in the new land—not a prospect seductive to vine-growers, merry or sad. The best that can be said for Miss Jewett's tentative excursion into foreign territory is that she has not the blighting tendency to misrepresent for romantic effect, and that thus far the Canadians are fortunate in her hands.

Miss Reeves is possessed by this tendency, and the Acadians in 'A Little Maid of Acadie' are the sufferers. Such a family as her De Landremonts nev er took root in Acadie. Fine folk roamed in Acadian wilds in their day, but few of them founded families there, and none have continued fine for two centuries and a half, as her De Landremonts presumably have done. The Acadians to be found near the scene of her story, Madawaska, about the head-waters of the River St. John, are descendants of those who fled towards Canada, escaping in the untrodden wilderness the deportation of 1755, the year still known to the people as that of the *grand dérangement*. The seigneurial system never prevailed in their settlements, and though they are as a rule well-to-do, wealth, power, fashion, are practically unknown words to them. Great allowance should be made for a novelist's assumption, but the allowance is the more easily made when the assumption is not too evident. Nevertheless, Miss Reeves's misrepresentations are harmless, and, for an essentially artificial romance, the incongruity between fact and fiction matters not at all.

"Harmless" is the word that describes most comprehensively 'Roger Berkeley's Probation' and 'A Hard-Won Victory.' The authors of these stories are alike animated by a desire to enforce the necessity of self-sacrifice in order that the whole world may be benefited. In the first instance, a young man is the self-castigator, in the second, a young woman. Mrs. Campbell's Roger uses the scourge with more reason than Miss Litchfield's Jean, for he performs a family duty, whereas Jean only permits herself the luxury of unnecessarily assuming an extremely disagreeable position. The conduct of these admirable young persons in trial is all that could be desired, and there is enough interest in their experiences to hold the attention and stir the sympathy of amiable and patient novel readers.

'Virginia of Virginia' is the old tale of a lowly maid who loved without requital above her station, suffering through that love excruciating torment, and for the loved one's sake a most dreadful death. The loved one, as usual, has no qualities that excuse a mad passion. He is a particularly stolid and insensible Englishman, whose chief attraction for Virginia seems to have been that he took so many baths, that his "ole blue shirt" smelled "good, kinder briery and soapy." The incidents of this story, expanded into a thick book by kindly aid of type and margin, are cheaply sensational, Virginia's character is hysterical and an offence against taste and common sense, while the descriptive language is superlatively extravagant. A modification of the coarse and fleshly quali-

ties marks the only improvement on 'A Brother to Dragons.'

It is scarcely probable that the individual exists to-day who could read through 'Hillingdon Hall, or The Cockney Squire.' Any interest in this reprint of a novel written forty-four years ago is of the kind attached to literary curiosities. It is a truism to say that posterity is the infallible judge of literary greatness, but if any one should desire personally to test the truth of that truism, let him compare 'Pickwick' and 'Hillingdon Hall,' Weller and Jorrocks. If that doubting person should also wish to satisfy himself that the general readableness of our second-rate novels is some compensation for our paucity of first-rate, let him select 'Hillingdon Hall' first among a bundle of the second-rates of the first half of our century. It appears from the illustrations of the novel that humor, expressed by pictorial art not of the highest excellence, retains the power to amuse longer than that of inferior literary art. The Flathers and Jorrocks, the Marquis of Bray and the Duchess of Donkeyton, are to us caricature of an insufferably dull kind; but it is just as easy to laugh at Wildrake's pictures of "The Guests Departing from Donkeyton Castle" and "The Surprise," as it was the day they were drawn.

GERMAN HISTORY, BY A FRENCHMAN.

L'Empéreur Guillaume et son règne. Par Édouard Simon. 8vo. Paris: Ollendorff. 1886.

The Emperor William and his Reign. From the French of Édouard Simon. 2 vols. 8vo. London: Remington & Co.; New York: Scribner & Welford. 1886.

Histoire du Prince de Bismarck. Par Édouard Simon. 8vo. Paris: Ollendorff. 1887.

L'Empéreur Frédéric. Par Édouard Simon. 12mo. Paris: Hinrichsen. 1888.

THE biography of the Emperor Frederick furnishes a natural pendant to M. Simon's previous books, and affords a welcome occasion briefly to notice the same author's 'Emperor William' and 'Prince Bismarck,' which together constitute an excellent history of the making of the new Germany. M. Simon possesses some of the best qualities of an historian: patience in research, accuracy in presentation, and fairness of judgment. The latter quality could not be put to a severer test than in these biographies; for the writer, himself a Frenchman, describes the men who worsted France in diplomacy and in war, deposed her from the first place among Continental Powers, and despoiled her of two of her best provinces—and all this in his own day. We scarcely expect a Frenchman to write dispassionately about Pitt or Metternich, Wellington or Blücher; but M. Simon has drawn three of the most typical figures of the war of 1870, not merely without bitterness, but without a sign of prejudice. An American may well find, in Bismarck's diplomacy, some sharp practice and a touch of brutality: M. Simon may think the same, but he avoids saying it. Bismarck is obviously, to him, an unsympathetic personage; but he describes him, fairly and truly, as the faithful servant of his King and country; the man who saw clearly, from the outset, the real character of the German question and the means of solving it, and who pursued the solution with inflexible determination and the highest courage.

For the Emperor William the author has evidently a warmer feeling—a feeling of reverence and almost affection. In M. Simon's pages the Emperor William appears as an honest and kindly nature and a strong character; a true gentleman and a great king. In his zeal to vindicate for the master a higher degree of political sagacity than is commonly accredited to him, M. Simon, in one case at least, does injustice to the servant. He asserts ('Emperor William,' transl., vol. i, p. 106) that "the conception of the diplomatic and military contest with Austria belongs to the King, and its execution to Bismarck, Moltke, and Von Roon." This statement is in accordance neither with the facts nor with the data elsewhere furnished by M. Simon himself. The diplomatic contest against Austria was begun by Bismarck at Frankfort, when Frederick William IV. was King; and the military contest was distinctly foreshadowed in Bismarck's Frankfort despatches. Prince William assumed the Regency (1858) with friendly feelings towards Austria, and a belief that the Prussian and Austrian crowns must make common cause against democracy. Bismarck's attitude at Frankfort compromised the friendship of the two courts, and Bismarck was accordingly transferred to St. Petersburg. In order to substantiate his theory (that Prince William had already determined to fight Austria), M. Simon treats this transfer as a "promotion," indicating the Regent's approval of Bismarck's demonstrative antagonism to Austria. But Bismarck himself, in one of his characteristic and picturesque phrases, declared that he was "put on ice" (*kaltgestellt*) at St. Petersburg—clearly implying that at Frankfort he had been too hot to suit the Government. From St. Petersburg he watched the vacillating policy of Prussia during the Italian war of 1859 with sharp and outspoken disapproval. He saw in Austria's difficulties Prussia's opportunity; and when Prussia seemed on the point of interfering to aid her rival, Bismarck's chagrin culminated in a nervous fever.

When, in 1862, the King called Bismarck to the premiership, he summoned him, not as an enemy of Austria, but as a champion of the royal prerogative. He needed such a man to defend the reorganization of the army against the opposition of the Diet and the country. The war of 1866 was Bismarck's war; the King was drawn into the struggle against his will. This M. Simon expressly recognizes (transl., vol. i, p. 177); but he explains the reluctance of the King to carry out his own policy—a policy, according to M. Simon, matured seven years before—by the assumption of sudden "scruples"!

But while M. Simon goes too far in reclaiming for the King the authorship of the policy of the years 1864-66, it is quite true that William was no puppet in the hands of Bismarck. The Prussian historiographer Von Treitschke, in his recent eloquent tribute to the "Two Emperors" in the *Preussische Jahrbücher*, puts the matter rightly in saying that King William never had a single confidant and adviser for all matters. He selected the best man he could find for each department: Von Roon to organize the army, Moltke to lead it, and Bismarck to manage the Prussian Diet and direct the Prussian diplomacy. To the men thus selected he gave great freedom of action; but nothing of consequence was done without his assent, and this assent was not always easily obtained.

After the war of 1866 it was stipulated in the Peace of Prague that the Prussian reorganization of Germany should extend only to the Main. The States south of this river (Bavaria, Würtemberg, Baden, Hesse-Darmstadt) were to remain independent, and, if they chose, form a separate confederacy. But before this treaty was signed, Bismarck had negotiated secret military alliances with these South-German States. Politically, therefore, as far as the line of the Main was concerned, the Peace of Prague was nullified before it was signed. M. Simon goes too far, however, in saying that the Peace of Prague was "broken" before it was signed. It was expressly provided, in that instrument, that the States of South Germany should be free to adjust by treaty their relations to the North-German Confederation, and the secret alliances were nothing more than such an adjustment.

M. Simon's account of the secret negotiations which filled the four years between the Austrian and the French war is interesting and clear. France was arming with nervous haste to repair her diplomatic defeat; and both France and Prussia sought the alliance of Austria in the coming struggle. The Prussian approaches were made indirectly, through the Bavarian Premier, and came to nothing. The French negotiations were direct and partially successful. No treaty was signed, because Austria insisted on the aid or neutrality of Italy, and Italy demanded a price which Napoleon could not pay—the surrender of Rome. But an understanding seems to have been reached; and Austria would probably have joined her forces with those of France in 1870 but for the menacing attitude of Russia. Russia had been completely won over to the Prussian cause, a result largely due to Bismarck's diplomacy. As Ambassador to St. Petersburg (1859-61), he had strengthened the old dynastic friendship between the Hohenzollerns and the Romanoffs; as Minister-President he had supported Russia (during the Polish insurrection) against the western Powers and against the sentiment of Germany; and down to 1870 he sagaciously held a future benefit in reserve—the nullification of the Treaty of 1856 and the freedom of the Black Sea. We know no other books in which this complicated cross-play of diplomatic intrigue is so fully and so well described.

The immediate prelude to the war of 1870, the absurd quarrel over the Spanish candidacy, is impartially narrated. In brief, according to M. Simon, France forced the war; King William made a decent effort to avoid it; Bismarck perhaps helped it on, certainly accepted it with alacrity. The details of the war are not set forth in any of M. Simon's books; he does not undertake to write military history. In his 'Emperor Frederick,' however, the author devotes several pages (138-144) to a description of the Crown Prince's life in Versailles. It was the happy fortune of this Prince, whose life closed so sadly, to make friends everywhere. His simplicity and kindliness, his care for the comfort of the French soldiers in the Versailles hospitals, and his efficient protection of the art treasures in the Versailles palaces, aroused the gratitude and won the affection of the French themselves.

The history of the German Empire since 1870 is admirably sketched in 'Emperor William' and 'Prince Bismarck.' There is no better account in any language of the movement of German politics and German diplomacy from 1871 to 1886. It is only in the description of the *Kulturkampf* that the author's customary impartiality deserts him. Such phrases as "persecution," "flagrant acts of injustice," "desecration of churches" (by the intrusion of Old Catholics) show a strong ultramontane bias. ('Emperor William,' transl., vol. ii, pp. 229, *et seq.*)

In comparing the three books, we find, naturally enough, that 'Prince Bismarck' and 'Emperor William' contain more historical material, while 'Emperor Frederick' is almost purely biographical. The old Emperor and his

Chancellor made history; their lives are inseparable portions of a great era. A biography of Bismarck is necessarily a description of European politics since 1859; and in his 'Emperor William' M. Simon has set himself to describe the career of the King, not the development of the man. In this extraordinary life the development of the man was in fact ended, and the ordinary limit of useful activity almost passed, before the career of the King began. Prince William was sixty-one years old when the illness of his brother made him Regent, sixty-three when he became King, and nearly seventy-four when he was proclaimed German Emperor at Versailles. In the natural course of events the internal development of the new empire during the next seventeen years would have devolved upon his son. But the prolonged life and vigor of the father, and the strict Prussian tradition, held the Crown Prince remote from the affairs of state. Once only, in the summer of 1878, when the Emperor was prostrated by wounds inflicted by a Socialist assassin, the Crown Prince was summoned to act as Regent; and the firmness and tact with which he discharged the duties of the office gave earnest of a wise reign. But in the autumn of the same year Emperor William resumed the exercise of the royal power, and the Crown Prince returned to private life. As inspector of the South-German armies, he held an honorable and important, but not onerous, position. He relieved the aged Emperor of much of the drudgery of royalty, receiving and making visits of ceremony; and on several occasions he was charged with important diplomatic missions. But he was best known and most often seen as the patron of letters and art, presiding over reunions and congresses, opening expositions, and distributing medals. When, at last, the Emperor William passed away, full of years and honors, Frederick ascended the throne a dying man. The great events in which he participated are associated in first instance with other names, and his biography is necessarily a record of personal experiences and a study of character. M. Simon therefore tells us much of Frederick's youth, of his marriage, of his domestic life and his foreign travels. The book is more anecdotical than the 'William' or the 'Bismarck'; but the anecdotes are well chosen, and serve to illustrate the frank and genial character, the ready tact and kindly humor of the Prince whom all Germany called "our Fritz." M. Simon's book was published immediately after the Emperor Frederick's return from San Remo to Berlin. It lacks the last sad chapter: we do not see the Emperor dying by inches; and we are spared the spectacle of the strife and intrigue of political parties, court cliques, and differing doctors about the imperial death-bed.

M. Simon's 'Emperor William' has been translated into English. If the 'Bismarck' or the 'Frederick' is to be translated, it is to be hoped that the task will be assigned to other hands. The standard of English translation is not high, but work so bad as this is fortunately rare. When an English translator is unaware that there is such an English word as "customs," and speaks sometimes of a *Zollverein* and sometimes of a union of *douanes;* when he ignores the distinction between "States" and "Estates"; when he uses such phrases as "declaring war *to* Austria," "founding himself" on a treaty (meaning basing his action thereon), "coalesced governments" (meaning allied or confederate), and "complicated in a political trial" (meaning involved); when he speaks of the republic as "prevalent" in France, as if it were analogous to smallpox, talks of "an equivalent equal to" certain provinces, and coins such an adjective as "conquerous"—the reader wonders how long and where this foreigner studied English before attempting to write it. The book is also defaced by numerous misprints, often destructive of the sense, *e. g.:* Federal for feudal (i., 101); Saxony for Prussia (i., 212); minority for majority (i., 280); Prussian for Russian (ii., 44); protest for pretext (ii., 47); agreement for argument (ii., 153); imports for imposts (ii, 250). Paper and type are good.

GRANT AND THE POTOMAC ARMY.

The Personal Memoirs and Military History of U. S. Grant, versus the Record of the Army of the Potomac. By Carswell McClellan, Brevet Lt.-Colonel U. S. Vols., on staff of Gen. A. A. Humphreys, 1862–1864. Boston: Houghton, Mifflin & Co. 12mo.

THE relations of General Grant to the Army of the Potomac are, and will no doubt long continue to be, a moot question in history. Had only his 'Personal Memoirs' been written, the controversy would have been softened, though it still would have existed. The modesty of tone and the simple directness of the 'Memoirs' go far to impress the reader with the sincerity of the writer's convictions and the honesty of his expression of them. But it is impossible to forget that Badeau's 'Military History' was avowedly Grant's own story, and that he had declared himself substantially responsible for its statements of fact and of opinion, except its personal praise of himself. Badeau's systematic depreciation of the prominent officers of the Potomac army, in order to heighten Grant's greatness, has therefore (and quite naturally) been taken as the true disclosure of Grant's personal attitude towards them; and the more considerate tone of the 'Personal Memoirs' has been interpreted as meaning only that his habitual modesty of personal expression avoided the sweeping judgments of his military secretary, which he had endorsed, if he had not dictated them. Such, at least, may be said to be the opinion of a considerable party among the officers of that army, and this is the sentiment which is represented in Colonel McClellan's book.

The controversy generally takes even a wider range than this. The military soundness of Grant's plan of campaign and of his methods is drawn in question, and it is often assumed that it is necessary to argue that he is a greatly overrated man, if the subordinate officers are to be relieved from the damaging effect of his unfavorable opinion. The two subjects of controversy do not necessarily go together. Grant may have been quite as great a soldier as his most devoted admirers claim, and may yet have been prejudiced and partial in his treatment of particular men, or even in his judgment of the Army of the Potomac as a body. His colossal reputation is an historical fact, and it would seem to be in the last degree impolitic to make the vindication of Warren or the proper estimate of Meade or of Hancock require the conclusion that Grant was not the fit man to command the army. A time will come when the critical estimate of the man and his faults may be made as coldly and judicially as we make that of Marlborough, but it will hardly be in this generation. Public gratitude and political prejudices combine to put both friends and foes in a frame of mind which is anything but judicial.

There is not the same obstacle to fair public judgment when the question is carefully narrowed to one of mistake in particular facts or of unjust judgment of a particular man. Even in such a debate, however, he is a blind disputant who does not see that the reputation of General Grant will outweigh almost any individual opinion, and put any one who disputes his judgment at an enormous disadvantage. He will be extremely unwise if he lugs in any subject of discussion but the one in hand, or uses any method but the most serious and thorough appeal to clearly stated and well defined evidence.

After Badeau's 'Military History' was published, but before Grant wrote his 'Personal Memoirs,' Gen. A. A. Humphreys wrote his 'Virginia Campaign of 1864 and 1865.' Few men were so well fitted for the task by experience or by education. He was an eminent army engineer, who had also an established reputation as a brave and able commander of troops in the field. He had been chief-of-staff to General Meade during the greater part of the campaign of which he wrote, and had an intimate personal knowledge of the facts he was dealing with, so far as one man could know what took place in so great an army. His character was of the highest, and his temperament of the calmest. He differed from Badeau's version of the campaign in a number of particulars. Some of them were of more importance than others, but, taken together, they would lead to another conclusion than Badeau's on some of the controverted points to which allusion has been made—notably to that touching General Warren's performance of duty and the justice of retiring him from the command of the Fifth Corps at Five Forks.

General Humphreys's method was that of a self-respecting historian. He did not hesitate to say when he could not accept Badeau's statements as accurate, and to give the grounds of difference, either from personal memory or from his examination of official documents. He carefully avoided criticism of General Grant, and sought to make his narrative of events so explicit and clear that intelligent readers could draw their own conclusions. In short, his book comes within the lines which have been above noted, as wise discussion of points in which the author knew the reputation of Grant was in fact behind the statements of Badeau which he criticised. It was therefore a very positive and weighty contribution towards the settlement of the history of an eventful period. General Humphreys would have been the last man to claim that the personal authority of his own narrative would override that of General Grant in a matter concerning which both had personal knowledge, or in which their opinions clashed. He might, however, rightly feel that his deliberate and temperately expressed conclusions would challenge the impartial investigation of students, and suspend judgment, even in face of an opinion or statement of Grant himself.

Colonel McClellan's book purports to compare the statements of both Grant and Badeau with "The Record of the Army of the Potomac"; but at the outset of his task he declares his purpose "to use, with very little other reference, the work of General Humphreys, as embodying substantially the established record, as far as it shall be necessary to examine it." Indeed, throughout the book, when the "Record" is referred to, it will be found that a textual quotation from Humphreys is made, whether the usual marks of quotation are inserted or not. What is in fact given, is therefore a series of quotations from Grant and Badeau, compared with others from Humphreys, connected by a running comment, in which the proof of error in the first two books is supposed to be complete when their disagreement with the last is exhibited.

Justice to Colonel McClellan requires us to

note that he defends his method by reasoning which seems to him conclusive, though few will agree with him who are not disqualified as jurors by having previously "formed or expressed an opinion" on the subject-matter. He says of General Humphreys's book:

"It is believed that not one material fact as recorded by him has been questioned or controverted. To this General Grant bears silent but positive testimony. Although General Humphreys has noted and corrected some of the deviations from the record into which General Badeau had wandered, and which General Grant has persistently followed, the entire ignoring in the 'Memoirs' of the name of General Humphreys, as far as the matters treated of will in any way permit, is the only discoverable evidence that General Grant or his assistants have been aware of the existence of 'The Virginia Campaign of 1864 and 1865.' The supposition that they were in actual ignorance of this authority cannot be entertained; nor can it be believed that they would have failed to produce antagonistic authorities, had such been obtainable" (pp. 5, 6).

It will be seen that, as to Badeau, the argument is that he who has published a book must publish a refutation of any later book which controverts his own, under pain of being held to be self-convicted of inability to do so; as to Grant, it is that, though he has explicitly reiterated Badeau's original errors, he must be held to confess that they *are* errors because he has failed to add "antagonistic authorities" to his own implied contradiction of Humphreys. To any one who knew much of Grant's peculiar mental traits, it would be quite easily believed that when Grant had asserted either matter of fact or of opinion, he quite naïvely assumed that the burden of proof was on him who questioned it. Besides, it is a violent presumption that Grant had read General Humphreys's book. Even in health, it may be doubted whether he would read a book reputed to be in any way antagonistic to his own ideas of his military campaigns. He was not a great reader, and there was plenty of pleasanter reading. His quiet but undoubting confidence in himself was one of the conditions of his great successes. To "say his say," and to ignore those who disputed it, was quite in the line of his mental constitution and habit. But when he wrote the 'Memoirs' he was a sick man. His relations to Badeau's History had been such that he could properly use it as the material which he was to recast into his own language, with such variations as had occurred to him since it was published, and such additional personal matter as he judged appropriate. His reference to authorities might well be limited to official documents which those about him could consult for the purpose of verifying or correcting his memory.

Apart from all such considerations, however, Colonel McClellan's assumed principle of criticism is wholly untenable, and shows clearly that it was foredoomed that his comparison of Grant and Badeau with what he so strangely calls the "Record" could have little or no historical value. It may be a convenience to some to have the quotations from the several books brought into juxtaposition, so that the extent of the divergence may be seen without the trouble of reference to the volumes themselves; but we are not otherwise assisted in reaching satisfactory conclusions as to the controversy. A sidelight is thrown upon the feelings of young officers of that army, like Colonel McClellan and those who were in a similar attitude towards the Lieutenant-General, and one may suspect that they reflected in some degree the sentiment of the older and superior officers to whose persons they were attached. For whatever this is worth, its tendency would be to show a misjudgment of Grant's qualities and a disposition to harsh conclusions respecting him. To this extent, also, the influence of General Humphreys's book will be weakened rather than strengthened by the tone of one who was so close to him that he may be assumed to betray the deeper feelings which the more prudent general did not express.

There is a general tendency among impartial students of the history of our Civil War to believe that Grant's 'Memoirs' (and much more Badeau's 'Military History') need correction along lines which are indicated by General Humphreys. This only makes it the more desirable that nothing shall be brought forward as fact or as argument which is not solid. Lack of judgment or of the judicial temper in the disputants will only delay that settling of public opinion upon a just award which every patriotic man wishes for.

An example or two may be necessary to show the point of this criticism. Colonel McClellan devotes some pages to an effort to show that Grant had put Meade into a painfully false position by assuming personal control of the movements of the Potomac Army. He quotes with a certain fairness Grant's own views of the intolerable position of a "second in command" in the Corinth campaign under Halleck, and argues that this should have prevented Grant from establishing such relations with Meade. This is legitimate argument, though it does not meet the important question, What were the real reasons and motives that made Grant adopt that which he, at all times, recent as well as earlier, admitted to be full of embarrassment? The historical critic's task is only begun when he has shown that Grant had spoken strongly against the very thing which he did. Most people will conclude that he must have thought there were very strong reasons for doing that which was personally unpleasant to both himself and Meade, and which he perfectly well knew diminished the vigor and promptness of response to his commands. Colonel McClellan sees no good reason for it, and contents himself with showing that Grant was doing that which he had before criticised, and that both Badeau and he speak of Meade's intermediate position being the occasion of mistakes and cross-purposes at times. It is only just to remember that Grant at least insisted that Meade should be publicly recognized as having performed great services, and demanded that his promotion to be Major-General in the regular army should be simultaneous with Sherman's, which had been won by independent command in the field.

But in what he says on this subject, Colonel McClellan is within the line of fair argument. His fault is, that he concludes with criticism by insinuation or mere assertion far more sweeping than his direct attack. He says of the suggestion that Grant could have succeeded better had there been no "second in command," that it "is now, at best, no less problematic than the conviction held by many competent to judge, that the tragedy which commenced in the Wilderness on May 4 and ended at Cold Harbor on June 3, 1864, would have been unnecessary had General Meade been unhampered by the constant overruling presence of General Grant." (p. 31.) Again, on page 37, speaking of Grant's repeated flanking movements to "get south" of the enemy, he says: "Again and again the favorite movement was attempted, and again and again it was met and foiled, till the James River was reached and crossed, and the army took breath to count the strategic value of 'mere attrition.'" Once more, on page 39, he says: "The campaign and the whole responsibility were General Grant's, as his historian affirms. However much his (Grant's) views may be regretted, no one doubts the sincerity of his statement," etc. Still again, on page 40, he speaks of it as "a campaign confessedly fruitful, almost solely, of carnage." As the author makes no pretence of a strategic and tactical examination of the campaign and its results, such sweeping judgments can mean nothing but that the writer enrolls himself among the few who still hold that Grant was "no general;" and by linking them to his more extended discussion of the personal questions affecting Meade, Warren, and others, he prejudices his case in the way which we have suggested above.

THE LATEST YEAR BOOKS.

Year Books of the Reign of King Edward the Third. Year XIV. Edited and translated by Luke Owen Pike. [Rolls Series.] London. 1888.

THE filling of the gaps in the old black-letter volumes of English law reports, known as the Year Books, proceeds but slowly. This is not the editor's fault, but is traceable probably to an ill-advised economy on the part of the British Government. We have here the reports of Easter and Trinity Terms, in the year 1340, the fourteenth year of Edward III.; and the editor informs us that others are ready to be printed. The regular appearance of these excellent books is a steady provocation to the much needed work of reëditing, translating, and reprinting the black-letter volumes in a manner to match the present series. Does that project slumber in England? It should be taken in hand forthwith, by the Inns of Court or some other natural or corporate person competent to carry it through. There is no doubt that active help and pecuniary support can be secured on this side. It is of the greatest importance to anything like a mastery of our law that there should be access to the Year Books. The legal scholarship of the present day, if it would not be utterly put to shame by what goes on in other departments of learning, must thoroughly explore its own annals. The admirable fruits of this sort of research, when made by competent men, like Judge Hare, Mr. Justice Holmes, or Professor Ames, is more and more coming to the notice of the legal profession. But those who do this work do it at a fearful cost of time and labor in searching these blind, ill-printed, and incomplete records, which they should be spared. The Year Books are full of material of great value to all students of law, young and old, but they are, practically, closed to all but a very few.

Moreover, something is to be said as to the interests of philology and general scholarship, as well as of legal science. The thorough examination of all existing manuscripts of the earlier Year Books is essential to the preparation of that Glossary of the Norman-French, or, rather, Anglo-French, which is so great a desideratum.

"A glossary," says Mr. Pike, "of the French language, written and spoken in England, as made known to us by the reports in French, is an essential feature of the present undertaking. . . . The only direct sources of information with regard to the French spoken in England down to the time of the disuse of pleading in French [say twenty years later than the time of the present volume] are the Year Books, and a great portion of the Year Books is, for all philological purposes, still in manuscript. The old black-letter editions [*i. e.*, the only editions there are, excepting the few volumes of the present series] cannot for a moment be trusted in relation to delicate variations in the forms of words. . . . When, however, the MSS. are carefully compared, the language actually spoken day by day is clearly brought out. . . . There has probably never been a language which, after so long a lapse of

time, has left such a perfect memorial of itself as the French spoken in English courts of justice, and written in various instruments of the same period. There are other ancient languages which we know as they were written in history, poetry, or philosophy, and which have left such indications of ordinary speech as are to be found in the drama, or in artificial displays of oratory. But the colloquial phrases and idioms used by men of cultivation in their ordinary avocations more than five hundred years ago, have been handed down in the Year Books, which are, in this respect, absolutely unique."

This very important and interesting undertaking would seem to be included in the plans of the Selden Society. There ought to be a co-operation between this society and Mr. Pike in accomplishing this purpose, but we observe no reference in the announcements of either to the plans of the other.

In this volume Mr. Pike has followed the same excellent method as before. Four manuscripts have been collated, and occasionally more than one report is printed. A comparison of these reports with the original records is constantly bringing out important matter supplementing, correcting, or illustrating the reports. "In this way a double task is being accomplished, as the Year Books are made to serve as a guide for the selection of all that is most important in the rolls, in relation not only to legal but also to social history. . . . The reported cases are almost invariably found to be the most important for all purposes, even though the report be meagre and not easily intelligible." The editor of these volumes refers to all the cases in the Book of Assizes and in Fitzherbert which are also found in the present series.

Mr. Pike continues the good custom of pointing out in the introduction such cases as seem to him worthy of particular remark, and adds much valuable original matter of his own. Thus the subject of redressing errors in the Court of Exchequer, before the establishing of the Court of Exchequer Chamber, is illustrated by the printing of an important record of the year 1337, which shows the successful claim of the Barons of the Exchequer to correct their own errors at home, by calling into the Exchequer "other the King's lieges, among whom were included the Justices of the two Benches." In discussing the case No. 45 in Trinity Term, the editor refers to the four men from four neighboring townships, who are summoned in to inform the Court of King's Bench more fully as to the facts relating to the obligation to repair a certain bridge—as having a function nearly akin to that of modern witnesses. This seems hardly so, for their information appears to have been given to the court during the process of pleading; an issue was subsequently reached and a jury of trial summoned. These seem to be our old friends who figured, *e. g.*, in the previous century at the Gloucester Iter of 1221 (Maitland, 'Pleas of the Crown,' xlii–xliv), and their function in this case seems more like that of the *secta* than of modern witnesses. But the subject is dark.

A highly interesting case is an assize of Novel Disseizin (No. 11 Easter Term) in which the jury gave a special verdict, and were questioned by the judges as to how they knew certain things which were matters of record. They stated how they knew it, not saying that they had ever seen the record, but, according to one report, that they knew it by hearsay, and, according to the record itself, that "they had no certain knowledge that there was such a plea or judgment, and they would not absolutely say that there was any; but by the summoning and resummoning of Walter and Margery and by the view of the land and because it was generally said in the country, . . . they understood that there was such a plea and judgment." The court refused to give judgment on this verdict till they saw the record, and when it was brought in they declared that, although there was such a record, yet it related to a different piece of land from what the jury assumed; and so they disregarded this part of the verdict. It is noticeable, however, that in point of substantial justice this jury were right and the court was wrong; the land really was the same. This case will be found to illustrate the great benefit that these volumes are conferring upon legal scholars by that comparison and publication of different reports and of the original record to which we have already referred.

In another case the editor notes that a deed executed on Sunday appears to have been recognized as good, and he rightly remarks that Coke's quotation of ante-Norman laws to show that Sunday had always been *dies non juridicus* is misleading. The first "Sunday law" since the Conquest appears to have been the stat. 27 Henry VI., c. 5 (1448-49). "After the Reformation, statutes relating to the observance of Sunday or the Lord's Day increased and multiplied, but there seems every reason to believe that, from the reign of Richard I. to the reign of Henry VI., the distinction between Sunday and other days was but little recognized even by the Church, and, of course, not more by laymen than by the clergy." About a quarter of a century later than the Sunday law of Henry VI. we find it stated as the law of the period, in an argument by Serjeant Pigot, in 1472 (Year Book, 12 Edw., IV., 8, 22), that "a market cannot be held every day in the week, for on the Lord's Day no market can be held as matter of common right, since it is against the law of God. If a return day falls on Sunday, no court will be held until the following day. . . . And if a man counts on a contract that on the Lord's Day he became bound to do so and so, it is void, for the contract is unlawful. And moreover there is a statute 27 Henry VI., c. 5, that merchandise shall not be shown on the Lord's Day," etc. This was in part denied by counsel on the other side, and there was no decision, for the matter was not in issue in the case. But as regards the practice of holding court on Sunday it may probably be taken as correct.

Mr. Pike has interesting comments upon a practice, which some of the cases disclose, of lending money to another to use in merchandise for the profit of the lender: "The liability was limited and could not possibly extend beyond the amount originally risked. In this respect our forefathers enjoyed all the advantages of the 'Companies Acts, 1862,'" etc.

The only criticism of this excellent volume that occurs to us relates to a mere mechanical device of reference. It would help the reader if the numbers of such cases as are carried through several pages were placed at the top of each page.

The Capitals of Spanish America. By William Eleroy Curtis, late Commissioner from the United States to the Governments of Central and South America. Illustrated. Harper & Bros. 1888.

THE South American Commission of 1884 was, diplomatically, so complete a failure as to be laughable. But the mission on which Stevens went in 1839 was politically barren, while its literary results were highly important. There, we are sorry to say, the parallel does not hold. Mr. Curtis has got together much interesting information. Several of his chapters, judged as fugitive magazine articles (and in that form many of them first saw the light), make a favorable impression. For a half-hour's skipping reading, the book, with the help of the numerous illustrations, would be fitted to almost all tastes. But beyond that it does not seem to us to go.

Its name is not happily chosen. Of course, an author should be given great liberty in the selection of his own title ordinarily, but he ought not to choose a misleading one. This is far from being a handbook to the capitals of Spanish America. Of Mexico, for example, fifty fuller and more accurate descriptions have been published. In general, but the vaguest impressions are left by Mr. Curtis's handling of the subject proper of his book. Bogotá and Quito he did not see, yet his accounts of those cities are only a little more indefinite and devoid of local color than in most of the other cases. The title of the book, in fact, seems to have been a despairing recognition of the impossibility of giving a unifying name to the miscellaneous collection of statistics and history, anecdote and narrative, odds and ends about climate, customs, architecture, government, trade, and politics, drawn from the author's note-books and reading. It is but fair to the reader to advise him that if he expects to get either a good description of the cities, or a satisfactory account of the history of the countries and the habits of the peoples, he will be disappointed.

If we were to speak of the minor inaccuracies we have noted in the book, there would be no end. A few of the graver faults should be mentioned. Mr. Curtis appears to have carried the habits of a Washington newspaper correspondent into his writing of history. Misunderstandings of authorities, frightful mistranslations—above all, a readiness to take an idle tale as demonstrated fact and to print all sorts of rumors as veritable occurrences—are frequent. A good instance of the competence of the author as an historian, and, at the same time, a sample of his ideas about Spanish, is found in the account he gives of the origin of the name Nicaragua: "Here he found on the borders of the lake a vast population of Indians under a cacique named Nicaro, and called the country in his reports *Nicaro's Agua*, or waters; hence the name" (p. 154). Mr. Curtis makes unwarrantable charges against public men, in the true style of an anonymous and irresponsible newspaper despatch. Such, at least, in the absence of a shred of proof, we must account his grave accusations of President Cárdenas (p. 106). The fact that he states wrongly the date and many of the incidents of the revolution in Costa Rica, of 1870, affords a fair presumption that his whole account of the motives leading up to that occurrence has no historical basis. Not once in the whole book, we believe, is an authority cited.

It may also be to Mr. Curtis's newspaper work that some of his errors in taste and faults of style are traceable. Among the former are to be noted the truly Jenkins-like descriptions of the persons and possessions of certain prominent Hispano-Americans, who must, we should think, take great offence at the liberty with which their names are used, if they should see this book; among the latter, the too frequent witticisms, which are usually cheap, often salacious, and occasionally indecent.

In point of paper, print, and binding, the book is very attractive. The illustrations, too, are abundant, and most of them successful. They suggest, however, a word as to the proper limits to be observed in the use of old plates. The publishers have drawn pretty freely on their stores. In particular they have laid

under contribution the late Prof. Orton's 'The Andes and the Amazon,' Holton's 'New Granada,' Page's 'La Plata,' and Bishop's 'Old Mexico and her Lost Provinces.' This is legitimate enough (except that the cuts from the old plates are too often inferior in execution), were it not that sometimes acquaintances of other days are made to masquerade under new names. Thus, the picture on page 316, called "A Passenger Train," is taken from Holton, where it is called "Riding on the *Sillon*," and is meant exactly to illustrate the Peruvian side-saddle in use. In Curtis, it neither explains nor is explained by a word of the text. Holton's appropriate "A Priest on his Travels" becomes Curtis's vague "Across the Continent" (p. 437). Bishop was pretty thoroughly pillaged to set out Griffin's 'Mexico of To-day,' but had then to undergo no such surprising and painful transformations as are now wrought with some of his pictures. On page 106 of Bishop is a picture of "A Mercería at Puebla." In Curtis (p. 9) this is transported bodily to the City of Mexico. A still more worthy rival of the Loretto miracle is the carrying of some of Bishop's buildings from Orizaba to Guatemala, and of an entire street from the City of Mexico to the capital of Honduras. We refer to the pictures to be found on pages 99 and 132 of Curtis and 196 and 49 of Bishop.

The Heart of the Creeds: Historical Religion in the Light of Modern Thought. By Arthur Wentworth Eaton. G. P. Putnam's Sons. 1888.

MR. EATON'S volume is a sign of the times, and there are many like unto it. That it is not unique, is clearly shown by the succession of anthologies which precede the several chapters. They greatly enhance the value of the book; they indicate the sources of the writer's inspiration, and, while they include many sentences and passages from Unitarian writers, so many others are from contemporary writers in at least nominal fellowship with evangelical churches, that Mr. Eaton is clearly seen to be one of many—the exponent of theological tendencies which are very deep and wide, and which derive their volume and momentum in part from tributary streams as far apart as Schleiermacher and Matthew Arnold. The problem is how to keep up "the *form* of sound doctrine" and observance when all they once contained has vanished into thin air. Schleiermacher, a master of the Hegelian metaphysic, had great success in doing this. It was really doubtful whether any of the points of the doctrine were believed by him, but his last act was to call for cup and platter to administer the Eucharist, and he had never any difficulty in using theological terms which had for him no particle of their traditional meaning.

Dr. John Caird's 'Philosophy of Religion' and Dr. Elisha Mulford's 'Republic of God' are the books—one in Great Britain and the other here—that represent the Hegelian Neo-Christianity in its most engaging forms. Mr. Eaton places them first upon the list of books that have done much to shape—or rather to unshape—his thought. If he had not named them, we should have known that he had been with them. Matthew Arnold's scheme for resolving the Church of England into "a society for the promotion of goodness," retaining creeds and articles and liturgy, while abandoning belief in miracle and immortality and the personal God, however intellectually remote from the Hegelian school, had much in common with its moral tendency. But his was a clear-eyed perception and clear-voiced insistence that "the former things had passed away." This is perhaps the reason why he does not shine with Mr. Eaton's other lights.

The first of Mr. Eaton's nine chapters is upon God. It reproduces the thought in Prof. Alexander Allen's 'Continuity of Christian Thought,' which Mr. John Fiske found reason to approve in his 'Idea of God,' to the effect that the theology of Eastern Christendom was much less anthropomorphic and much more a "cosmic theism" than the theology of the West. This proposition, which is fundamental to Prof. Allen's book, is returned upon again and again, and Augustine and the Western theologians generally are treated so contemptuously by Mr. Eaton that one's sympathies with them are quickened. Certainly, if the tree can be known by its fruits, the Christianity of the East was no better than the Christianity of the West. If the West was lacking in philosophic insight, it had something of moral earnestness to which the East did not attain. A very doubtful statement in this chapter is that "the so-called Apostles' Creed" was made under the influence of the larger and freer and more rational theology of a time nearer to Christ and the Apostles than the fourth and fifth centuries, when Augustine lived and wrote. There is no evidence of its existence before the end of the fourth century, and none of its acceptance by the Church before the eighth.

Mr. Eaton's second chapter brings out more strongly than any other the anti-Calvinism that pervades his book. In view of certain phrases of the New Testament Epistles, he is much too severe upon Augustine and Calvin, as if they had got their doctrine of human depravity entirely from their own inner consciousness. It is interesting here, as elsewhere, to find Emerson quoted as a good authority—sometimes the very phrases that were anathema to his Unitarian brethren in his Divinity School address of fifty years ago. What is not clear in the chapter upon Christ is why, if all men have something in them of the divine, he should receive a homage so peculiar and unique. How far the adumbration of the traditional dogma has proceeded with Mr. Eaton may be inferred from his statement that Christ's atonement was his "revelation of the light and freedom of the obedient soul," and that his divinity is "*truly believed* by every one, however defective his philosophy may be, who, loving reason and goodness and faith, seeks the liberation of his own soul from sin."

A chapter on the Creeds brings out even more sharply than the preceding chapters the easy-going way in which the traditional dogmas are entertained by Mr. Eaton's ideal Episcopalians. The Thirty nine Articles are not a doctrinal standard, we are told. Mr. Eaton does not see "why the broadest thinker should not feel able to subscribe them as a whole"; but, in point of fact, they stand on the back of the Prayer-Book as an historical document. The only doctrinal standards of American Episcopalians are the Apostles' and Nicene Creeds. The substance of the latter is the Trinitarian symbol, and, as Mr. Eaton explains it, we are all Trinitarians, but the Unitarians much better ones than the Calvinists. Mr. Eaton is generally very gracious with the Unitarians, evidently considering them much nearer the Church, as he apprehends it, than the evangelical sects. Certainly, any one could conscientiously accept the Apostles' Creed if he could conscientiously accept Mr. Eaton's understanding of its force; but there are many who could not do this. For it is thus: "When we say of Jesus, 'Conceived of the Holy Ghost, born of the Virgin Mary, suffered under Pontius Pilate, was crucified, dead, and buried, and *went into the place of departed spirits*,' we simply mean to declare our belief in the *facts* of his history, whatever they are." Moreover, there are many, Unitarians and others, who will consider Mr. Eaton's explanation of the Trinitarian symbol as wholly without warrant. That the Father stands for "the majesty and mystery of God" is a misreading of the Christian consciousness, and so is it that the Son stands for "the tenderness, patience, and pity of God" more than the Father.

The instances already given will convey a sufficient idea of the method and spirit of the book. They are further illustrated by chapters on the Bible, the Church, the Sacraments, the Liturgy, and the Future Life. The spirit is as catholic as one can ask. The opinions are as liberal as any can desire. Theodore Parker's opinion of the Bible is quoted, and the account of it is such as he would have approved. For the sacraments nothing is claimed but a symbolic assertion of the sacredness of the meal and bath. "Heaven and hell are states of the soul, not places of reward and punishment." Our author is hard upon the Calvinistic doctrine of eternal punishment—we should say too hard, considering the testimony of Jesus, which men have seldom felt at liberty to dissipate into mere rhetoric or to call "accommodation" to the superstition of his time. In the argument for immortality there is no mention of the resurrection of Jesus, but Emerson's is quoted as an authoritative word. And yet we can conceive that, for all the catholicity of spirit and the liberality of opinion, this book will be as little to the taste of the average liberal as to that of the average conservative.

Das nachgelassene Werk Immanuel Kant's: Vom Uebergange von den metaphysischen Anfangsgründen der Naturwissenschaft zur Physik. Von Albrecht Krause. B. Westermann & Co. 8vo, pp. 425.

THIS posthumous work, which created so much interest among philosophers in 1882 and 1884, during its serial publication in the *Alt-Preussische Monatsschrift*, now appears in book form, accompanied by a popular exposition and commentary of equal length with the original, and extending into the whole philosophy of Kant. It is very conveniently printed for the reader: the original text occupies the left- and the commentary the right-hand page. The chief importance of the work will be for specialists in the Kantian philosophy, and even for them it will not modify but confirm their conclusions from the older and greater work, the 'Critique of Pure Reason.' Hence we may notice but one or two of those characteristic features in which Kant's general reputation is concerned.

His paradoxical conceptions of space, and the consequent transcendentalism which they involved, have given the cue to most of the criticisms which have been directed against his whole philosophy by physicists and the school of "common sense." A great many features of his style made it impossible to penetrate his meaning except at the expense of greater time and study than the uninitiated have to devote to it. The result has been, by the consent of ordinary minds, to relegate his system to that limbo of philosophic cloud-land where the shades of Plato have been content so long to dwell. But a hasty judgment of this kind entirely mistakes the problem before Kant's mind, and is usually determined by an assumption that will not bear examination. It is too generally supposed that Kant was ignorant of physics, and "projected his system from his own consciousness" in the interests of a purely

introspective philosophy. Nothing could be more unfounded. He lectured on the physical sciences for forty years before beginning his philosophy, and was a rival of La Place for the honors of the nebular hypothesis. This fact ought to disarm criticism based upon the presumptions of physics. Kant was perfectly aware of the offence to "common sense" which his position offered, and hence this effort to point out the connection between metaphysics and physics. Besides, he is entitled to the benefit of a second and equally significant fact, which ought to have much *ad hominem* force with the physicist. Kant's theory of space was but an extension of Locke's and Descartes's view regarding the "secondary qualities" of matter—light, sound, etc. They idealized these, and Kant had only to put the question, Why not the "primary qualities" also, space and time? The physicist everywhere accepts the Lockian and Cartesian doctrine, while Kant's view has the merit of completeness and consistency, whatever may be said of its correctness.

To scholars the evidence that Kant constructed his idealism with a view to recognizing the most extravagant claims of physical science will be very strong in the contents of this work, for it is largely occupied with questions for which the physicist will look in vain in the 'Critique,' and which indicate the very problems to be solved by all subjective systems of philosophy. It is here, too, more than elsewhere, that the scholar will discover the affinities between Kant and Leibnitz; and this fact is interesting because the compatibility of Leibnitz's philosophy with the physical sciences has never been questioned. Although Kant says nothing about "monads," "preëstablished harmony," and other Leibnitzian conceptions of the kind, the influence of Leibnitz is unmistakably present in the discussions of force and matter. The commentary helps very much to make this apparent.

Highways and Horses. By Athol Maudslay. London: Chapman & Hall; Philadelphia: J. B. Lippincott Co.

THE title of this book is likely to raise expectations that will be disappointed by its contents. There is hardly anything in the whole five hundred pages concerning the breeding, selection, or care of horses, and very little about the construction of highways. What there is under the latter head relates principally to the old Roman roads, a subject upon which more satisfactory information can be obtained elsewhere. In fact, the author seems to have had no clear purpose in writing, and to have jotted down whatever occurred to him without regard to continuity. He does not hesitate to quote page after page of Dickens, upon the ground that everybody enjoys reading whatever Dickens wrote; he makes long extracts from the adventures of Dick Turpin; he inserts "The One-Hoss Shay" entire; and in general he fills up the gaps between his own observations with miscellaneous clippings from the newspapers.

The proper title for this book, or for so much of it as should remain after a severe pruning, would be 'Coaches and Coaching.' Upon these subjects the author has really something to say, and, in spite of his lack of system, he often says it pleasantly. Some of his stories of bygone days upon the road are worth preserving, but they are generally too long for quotation. There is nothing better, however, in this line than the remark, made some forty years ago by Will Bowers, the Oxford coachman, to Sir Henry Peyton, a famous whip and member of the Four-in-Hand Club, upon the superiority of coaching to railroading: "Why, you see, Sir Henry, if an accident happens to a coach, why, there you are; but if an accident happens to a train, where are you?"

The time made by coaches immediately before the introduction of railways was very good, averaging eight and a half miles an hour. The Exeter day-coach made 165 miles in seventeen hours, and the Manchester day-coach ran 186 miles during the day. A coach called the "Beaufort Hunt" maintained the extraordinary speed of eleven miles an hour between London and Bath, except where it encountered steep hills. The "Quicksilver" once went down to Brighton on the opening day of Parliament, with a copy of the King's speech, in three hours and forty minutes—fifteen miles an hour. The regular time of this coach was four hours and a half. With the revival of coaching in recent years, this line has been reëstablished by an amateur, but the time is now six hours, with a half-hour's rest.

As to the details of coach-building and furnishing, Mr. Maudslay supplies a good deal of information that may be of interest to amateurs in this country. The proper kinds of timber for the various parts of the coach, their seasoning and painting and varnishing, the axles and wheels and tires and springs, are all described, and directions are furnished for the guidance of purchasers in obtaining what is most approved in the shape of harness, lamps, coach-horns, etc. But, except to those who are specially interested in coaching, the book is not likely to be of much service, and it can hardly be recommended to the general reader.

The Story of Ohio. By Alexander Black. Boston: D. Lothrop Co. 1888.

THIS is the second volume published in the "Story of the States" series, the first having been the 'Story of New York.' The book, like Hinsdale's 'Old Northwest,' lately reviewed in these pages, is a centennial monument to the settlement of Marietta by the passengers of the second *Mayflower*, in April, 1888, and covers to a great extent the same ground as President Hinsdale's book. The thirty-six very pretty illustrations, and the omission of everything that is dry or unpleasant, betoken a semi-juvenile work, and it can hardly be criticised from any other standpoint. The body of the "story" comprises 300 pages in large print, followed by ten pages of a chronological epitome, an abstract of the Ordinance of 1787 and of the present Constitution of Ohio. Then follows a short list of books bearing on the subject, and a copious index. How difficult it is for the "story" writer to arouse an interest in the doings of an established American commonwealth may be judged from our author's compressing into 146 pages the history of Ohio from its admission down to our own day, while giving up 154 pages to the *origines*. Among these may be found Washington's first campaign to the forks of the Ohio; the expedition which wound up in "Braddock's defeat"; the defeat of St. Clair, and the victory of Mad Anthony Wayne—all of which, though of great importance to the settlement of Ohio, took place beyond its borders. But the expedition of George Rogers Clark, by which the revolting Americans took possession of the Northwest, is wholly ignored. The establishment of the Moravian missions among the Delaware Indians at Gnadenhütten, by Heckewelder and Zeisberger, is not related in the narrative; we only read how the settlement was destroyed and the "praying Indians" were massacred in the "last winter of the Revolution" by a party under Col. Williamson. Gov. Arthur St. Clair is to our author not a hero, but a meddlesome, overbearing blunderer, who made the powers of the Executive, and above all the veto power, for ever odious to the people of Ohio. But his daughter Louise comes in for so much the more admiration, not only by reason of her beauty and grace, but also of her courage, her horsemanship, and her skill with the rifle. One of the illustrations shows her sitting on horseback, while young Brant, son of the mighty Mohawk chief, passes by and throws sheep's-eye glances at her. The old story, that by refusing to marry him she brought an Indian war on the first settlers of Ohio, is given for what it is worth.

The story of Ohio, when it entered upon Statehood and since, is told with a strong bias against slavery and slaveholders. Due praise is bestowed on Ephraim Cutler (son of Dr. Manasseh Cutler, the founder), who, in the Convention of 1802, by his word and vote, turned the scale towards the total exclusion of slaveholding. A long chapter is devoted to the "Underground Railroad" and its worthy President, Levi Coffin. Mr. Black gets the origin of Mormonism within his jurisdiction, not only by reason of the short stop which Joseph Smith with his little band of "Latter Day Saints" made at Kirkland, in Lake County, Ohio, but also, and mainly, through the circumstance that a young poet, Solomon Spaulding, living at Conneaut, in the Western Reserve, wrote an unpublished poem, under the title, "The Manuscript Found," which the shrewd "prophet" came across and turned into his Book of Mormon. Blennerhassett's Paradise, and the serpent Burr who entered and ruined it, also find their way into our story, though the island on which the refined Irishman lived was a part of Virginia. The Germans of Ohio, notwithstanding their powerful influence in shaping public sentiment in Cincinnati and other large cities of the State, are disposed of in a few lines of foot-note on page 298. The struggle between temperance and free liquor, which has for nearly forty years held the foremost place among local questions, is not alluded to at all. The faction fights, growing out of the entry of the Standard Oil Company into State politics, are passed over in silence. But the great men whom Ohio has furnished to the nation are mentioned with much pride—Grant, the Shermans, Sheridan, Hayes, Garfield, Chase, Waite, and Wade, and the late George R. Locke (Petroleum V. Nasby).

Peninsular California: Some Account of the Climate, Soil, Productions, and Present Condition chiefly of the Northern Half of Lower California. By Charles Nordhoff. Harper & Bros. 1888.

IN this unpretentious narrative of a hundred pages, Mr. Nordhoff relates the steps he took to satisfy himself of the wisdom of making an investment in land lying along Todos Santos Bay, and gives the results of his inquiries and personal observation as to the situation and prospects of the Mexican Territory. He opens with a brief historical summary, which will do till Bancroft's promised volume on Lower California appears, when, of course, it will be but a cockle-shell to a royal seventy-four; has a chapter on the query which ninety-nine readers out of a hundred would at once put—why the peninsula was reputed a desert; and then proceeds to display his evidence of the Territory's wealth and development, particularly under the operations of the International Company holding vast grants from the Mexican Government, and to make a clear and satisfactory statement of the legal rights and privileges of settlers and purchasers under the Com-

pany's titles. The author frankly writes as an advocate, but, so far as our knowledge goes, with scrupulous fairness. His prophecies are not too glowing, and may very easily all be fulfilled, we should think. But no one ought to imitate the author's example without imitating his caution. No schemes of colonization have been more disastrous than some tried in Lower California. Some of Mr. Nordhoff's Mexican authorities are belated. Following a publication of 1874, he puts the population at 23,000, or under. It was officially declared last year to be 34,668. Señor Pacheco is mistakenly called the Secretary of the Treasury (p. 96).

SELECTIONS ILLUSTRATING ECONOMIC HISTORY SINCE THE SEVEN YEARS' WAR. Compiled by Benjamin Rand, Ph.D. 8vo, cloth $3.00.

This book was originally compiled at the request of Professor Charles F. Dunbar as a text-book of required reading in Economic History at Harvard, and has already been adopted for a similar purpose by several other leading American universities. It is a new departure in political science.

"It is admirably adapted for the end in view."—*From an Authority at Yale.*

"It is worth more than is claimed for it."—*From an Authority at Cornell.*

"This composition is a most important contribution to the literature of political economy. It marks an epoch in the development of the science."—*Boston Advertiser.*

"The production of the book may be said to mark an epoch in the teaching of political economy in this country, and to make possible a new branch of study in the curriculum of the universities of America."—*Halifax Herald.*

TOPICS AND REFERENCES ON THE TARIFF HISTORY OF THE UNITED STATES, by F. W. Taussig, Assistant Professor of Political Economy in Harvard University, author of the 'Tariff History of the United States.' 12mo, paper, 50 cents.

These topics contain bibliographical references, arranged chronologically and by subjects, and designed especially for the use of students and teachers. They are invaluable for all who wish to look up the history of tariff legislation, the argument on the tariff, and the discussion of its effects.

IMPORTANT ENGLISH STATUTES— 3d edition, 1888. A compact collection of British Enactments relating to the subjects of Real Property, Evidence, Procedure, Contracts, Crimes, etc., compiled originally as a handbook for members of the Harvard Law School, but now used to a considerable extent by other students of the Law, particularly those whose methods lead them to consult original authorities. The book is thoroughly indexed, printed on extra heavy paper, and provided with broad margins for notes and references. It contains the text of the Hilary Rules, and a chronological table of the Sovereigns of England. The dates of the Selected Statutes range from the year 1100 to 1877. Bound in cloth, pp. 189, $1.75; half sheep, $2.25.

To be obtained through booksellers, or mailed, postpaid, on receipt of price, by the publishers.

ELLIOTT'S THE UNITED STATES and the Northeastern Fisheries. The most complete and accurate history of the question. Endorsed by Messrs. Bancroft, Lowell, Lodge; Senators Hoar, Morgan, Davis, and other eminent authorities. Sent, postpaid, on receipt of 50 cents. Department of History, University of Minnesota, Minneapolis, Minn.

ROBERTS BROS.'
NEW BOOKS.

Franklin in France.

From Original Documents, most of which are now published for the first time. Part II. The Treaty of Peace and Franklin's Life till his Return. By EDWARD EVERETT HALE and EDWARD E. HALE, JR. With a fine portrait of Franklin in his old age, by Duplessis, never before engraved, and numerous illustrations. 1 vol., 8vo, cloth, gilt top, uniform with the first volume. Price, $3.00.

This volume completes the work. Also, just ready, a second edition of

FRANKLIN IN FRANCE. First Period.

Prince Vance.

The Story of a Prince with a Court in his Box. By ELEANOR PUTNAM and ARLO BATES. With numerous Illustrations by Frank Myrick. Small 4to, cloth. Price, $1.50.

A satirical and humorous fairy extravaganza, happily conceived and felicitously illustrated, which should create a literary sensation.

The Book of Christmas.

Descriptive of the Customs, Ceremonies, Traditions, Superstitions, Fun, Feeling, and Festivities of the Christmas Season. By THOMAS K. HERVEY. With all the original illustrations by R. Seymour. 12mo, cloth. Price, $2.00.

This is a new edition of a clever book by the poet Hervey long out of print, probably the best account ever written of the now universally celebrated Christmas season.

Sparrow, the Tramp.

A Fable for Children. By LILY F. WESSELHOEFT. With Illustrations by Jessie McDermott. Square 16mo, Cloth. Price, $1.25.

"One of the most thoroughly delightful child stories we have had for many a day is 'Sparrow, the Tramp,' by Lily F. Wesselhoeft. It is one of those charming books in which animals talk, and it adds the novel scheme of having them influence the affairs of their human neighbors in a way which will delight the little folk."—*Boston Courier.*

The lamented author of 'Little Women' read the manuscript of this little story with great delight.

Sold by all booksellers. Mailed, post-paid, on receipt of price by the publishers.

ROBERTS BROTHERS, Boston.

Macmillan & Co.'s NEW BOOKS.

New Volume of the Dictionary of National Biography.

This day, price in cloth, $3.75; in half morocco, $6.50. Vol. XVI. (Drant—Edridge) of the

Dictionary of National Biography.

Edited by Leslie Stephen.

"One of the best edited, as it is one of the most useful and important enterprises known to our day and generation. . . . One cannot exaggerate the help thus afforded to the student of every branch of human activity, and particularly of English literature. . . . We have also pointed out the interest which Americans have in this Dictionary, especially in the case of the founders of the several colonies, but also all along the line down to the present time. . . . These and many others touch our history in many memorable ways. . . . All these articles can be read with the greatest profit, and should be accessible in every library in the land, to say nothing of every gentleman's library, whither this Dictionary should find its way, even if merely in recognition of so laudable and costly an enterprise."—*Nation*.

Collected Edition of Robert Browning.

NEW VOLUME.

The Complete Works of Robert Browning.

Vol. VI. "Dramatic Lyrics" and "Luria." Globe 8vo, $1.50. This edition will consist of 16 volumes. Published monthly.

A Popular Handbook to the National Gallery,

Including, by special permission, Notes collected from the Works of Mr. Ruskin, compiled by Edward T. Cook, with Preface by John Ruskin, LL.D., D.C.L. 12mo, cloth, $4.00; half morocco, $4.50. Also, an edition on large paper, limited to 250 copies. 2 vols., 8vo.

"Here we have at last a guide to the Gallery, which is at once adequate and commendable. . . . The book is full of historical and biographical information, and one of its greatest charms is the lavish quotation from the works of Mr. Ruskin, which their author has specially and amiably permitted."—*London Globe*.

New Volume of The English Illustrated Magazine. With 500 Pictures.

The English Illustrated Magazine—1888.

A handsome volume, consisting of 832 closely printed pages, and containing nearly 500 illustrations. Extra cloth, $2.50.

*** A new volume of THE ENGLISH ILLUSTRATED MAGAZINE begins with the October number. Price, 15 cents, annual subscription, $1.75.

Clarendon Press New Books.

JOHNSON'S LIFE OF MILTON. Edited, with Notes, etc., by C. H. Firth, M.A., Balliol College, Oxford. 16mo, paper, 40 cents.

BUCHHEIM'S MODERN GERMAN READER. Part I. A graduated collection of extracts in Prose and Poetry from modern German writers. Edited by C. A. Buchheim, Ph.D., with English Notes, a grammatical appendix, and a complete vocabulary. Fourth edition. 16mo, 60 cents.

ELEMENTARY POLITICAL ECONOMY. By Edwin Cannan, M.A., Balliol College, Oxford. 16mo, 25 cents.

"Mr. Cannan displays a complete mastery of the essential elements of his subject. . . . One of the most suggestive books that have appeared on the subject for some time."—*Pall Mall Gazette*.

MACMILLAN & CO., New York,
112 Fourth Avenue.

Longmans, Green & Co.

HAVE JUST READY:

1.

The Life of the Right Honourable Stratford Canning, Viscount Stratford de Redcliffe, K.G., G C.B., LL.D., etc.

From his Memoirs and private and official papers. By Stanley Lane-Poole. With 3 Portraits. 2 volumes. 8vo, cloth, $12.00.

2.

The Record of a Human Soul.

By Horace G. Hutchinson. 15mo, cloth, $1.00.

3.

Our Kin Across the Sea.

By J. C. Firth. With a preface by J. A. Froude. 12mo, cloth, $2.00.

"Mr. Firth has read much, and has thought and observed more, and what he says deserves and will receive respectful attention. . . . In the work before us he describes a tour through the United States; and hackneyed and threadbare as the subject has become, Mr. Firth brings to it a new mind, and he has studied his American cousins from an original point of view."—*Extract from Preface.*

MACMILLAN & CO.,

New York and London.

$2 per annum. Single numbers, 50 cts.

HOUGHTON, MIFFLIN & CO.'S

SATURDAY BOOKS.

Index to Periodical Literature.

First Supplement, January 1, 1882, to January 1, 1887. By William F. Poole, LL.D., Librarian of the Newberry Library, Chicago, and William I. Fletcher, A.M., Librarian of Amherst College. With the co-operation of the American Library Association. 1 vol. royal 8vo, cloth, $8.00; sheep, $10.00; half morocco, uncut, $2.00.

This work is prepared on the same plan which was found so satisfactory in the previous volume, and is not only a continuation of that, supplying a full index to American and English periodical literature of the five years, 1882–1886, but it contains indexes of twenty-eight sets of periodicals not included in that.

It is especially valuable in libraries, and to all who have any occasion to refer to the almost countless articles of greater or less importance which have appeared in the magazine during these years.

The Rubaiyat of Omar Khayyam.

New Comparative Edition, containing the First Edition and the Fourth of the remarkable translation by Edward Fitzgerald. 1 vol. 16mo, $1.50.

The reprinting of the First Edition of Mr. Fitzgerald's translation of the Rubáiyát in connection with the Fourth (and final) Edition lends especial value and interest to this volume. It enables the reader to see the changes in translation, often very marked, and also reveals the wonderful fertility and sympathetic genius of Mr. Fitzgerald.

A Half Century in Salem.

By Marianne C. D. Silsbee. New (Fourth) Edition, revised and considerably enlarged. 16mo, gilt top, $1.00.

Mrs. Silsbee has made her charming book about one-eighth larger than before. The Salem *Gazette* said of the first edition: "This charming volume of reminiscence, by one who not only knew, but was a part of much that she describes, ... must receive a wide welcome from all dwellers in and lovers of our old town; but perhaps only those who, like the present writer, have been absent from it can appreciate in the fullest sense the delicious aroma of old Salem which breathes through these pages."

The Scarlet Letter.

By Nathaniel Hawthorne. With illustrations by Mary Hallock Foote. New edition, with a fine steel portrait of Hawthorne. 8vo, cloth, full gilt, $3.00; morocco antique, $7.50.

This is a very attractive issue of a beautiful book. Bayard Taylor pronounced the illustrations "masterly," and decla ed that "the volume is one of the most elegant and complete luxuries ever given to American readers."

*** *For sale by all Booksellers. Sent by mail, post-paid, on receipt of price by the publishers.*

HOUGHTON, MIFFLIN & CO.,

BOSTON.

11 East Seventeenth Street, New York.

BANKER WANTED.—FULLERTON, Southern California. We have a bank building, pressed brick, plate glass, vault, etc.: just completed, cost, $10,000, that we desire to let at a nominal figure to a capitalist who will establish a bank with at least $30,000 capital. We guarantee a steady demand for $200,000 at from 10 to 15 per cent., with gilt-edged collateral security. Fullerton is a new town on the Santa Fe short line to San Diego, commenced running East August. It is in the finest agricultural part of Los Angeles County, 23 miles southeast from Los Angeles and 15 from the ocean. Perfectly healthy and delightful climate summer and winter. No frost and no excessive heat. A $40,000 hotel just opened. Photographs sent on application. Reference First National Bank, Los Angeles. FULLERTON LAND & TRUST CO.,
Fullerton, Cal.

TO CAPITALISTS.—FOR SALE.
Southern Mineral and Timber Lands,
Gold, Tin, Copper, and other Mines,
Paying 25 to 50 per cent. net profit.
Send for Descriptive Circulars of these rich properties.
E. L. DIDIER, 11 E. Lexington St., Baltimore.

The Nation.

Recent Press Comments.

"THAT the *Nation* was the forerunner and the first successful example of the independent journalism as it exists to-day may be asserted without fear of successful contradiction; and it must be reckoned to-day as among the most worthy representatives of the new departure in newspaper methods."—*Philadelphia Times.*

"THE *Nation* has fairly fulfilled its promise to be independent of party, and is respected accordingly by thinking people. Its art and literary criticisms have always been of a high order, and have helped to give it a national reputation as a weekly paper of the first class."—*Philadelphia Public Ledger.*

"MANY changes have occurred since the *Nation* first appeared as an independent political and literary journal, not the least important being the improvement effected by its precept and example in political and literary criticism across the Atlantic. We trust that many years of life and usefulness are still in store for our esteemed contemporary."—*London Athenæum.*

"THE New York *Nation* has won a place for itself by its great ability. As a critical authority in matters of art and literature, it is unapproached and unapproachable. No journal exists that is its superior—few, indeed, are they that equal it—in these departments, or in the world-wide correspondence it publishes upon all matters of interest to the best thinkers."—*Hartford Evening Post.*

"IT is not too much to say of the *Nation* that no single agency has done so much to advance and dignify the calling of journalism in America. Including in its scope politics as well as literature and art, it has often aroused bitter political antagonism and suffered from partisan excitement and prejudice; but we believe no one—at least, no one whose judgments are valued by thinking men—has ever soberly questioned its sincerity and disinterestedness, or the remarkable force and candor with which its views have been presented. In literary criticism its methods and achievements have been such that this has almost become a new art under its leadership. In all departments the *Nation* has been singularly able and impartial, and its success is a cause of gratification, in which American scholars generally will share."—*Chicago Dial.*

THE HERETICAL LITERARY TRINITY.

The Boston Saturday Evening Gazette, in a leading editorial under the above caption says, 'Robert Elsmere,' 'John Ward, Preacher,' and the 'Story of an African Farm' constitute this trinity. One book represents "God as truth," another "God as love," and the third "disappointed no-Godism." "Here," it says,

"are the problems of our age; one is to make men morally strong, and keep the Church at the same time intellectually honest; the other is to keep the Church strongly and obediently organized, and yet elastic enough to contain and make use of many minds.

"The three novels we have mentioned have at least done something towards making clear the field of battle, and showing with some accuracy the forces that will meet upon that field; and the thanks of all men who are studying and working with these problems in mind are due to these three women, who have given them light, even though they have not given all that is needed."

The best edition of the 'STORY OF AN AFRICAN FARM' is the Author's Handy Library Edition, red cloth, price 60 cents, published by ROBERTS BROTHERS, Boston.

New Work by Prof. Henry Drummond,
AUTHOR OF
'Natural Law in the Spiritual World.'

Tropical Africa.

By Henry Drummond, F.R.S.I., F.G.S. With six Maps and Illustrations. Cloth, $1.50.

"The only fault which most readers will find with the present volume is its brevity."—*Scotsman.*
"Nothing that we have read is so full of really valuable information concerning Central Africa."—*Philadelphia Bulletin.*

Princetoniana.

Charles and A. A. Hodge, with Class and Table Talk of Hodge the Younger. By a Scottish Princetonian, the Rev. Charles A. Salmond, M.A., Rothesay. With portraits, etc. Crown 8vo, cloth, $1.25.

"One of the most interesting books that have come for a long time is Princetoniana."—*Philadelphia Press.*
"A very interesting work. . . . The agreeable conversational style in which the brief memoirs are written makes this part of the work pleasant to read beyond the common run of similar memorials. The collection of jottings from the lectures and table-talk of Dr A. A. Hodge is valuable for the racy vivacity and point of the various utterances, which have quite as much biographical as theological significance. . . . Will be welcomed as an interesting memorial of two memorable men, and as a vivid sketch of the manner in which theology is taught at Princeton."—*Scotsman.*

The Originator of the Weather Bureau.

Life of Matthew Fontaine Maury,

United States Navy and Confederate States Navy.

Author of 'Physical Geography of the Sea, and Its Meteorology.' Compiled by his daughter, Diana Fontaine Maury Corbin. Portrait. 8vo, cloth, $3.75.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

JUST PUBLISHED:

Ex-Secretary McCulloch's Reminiscences.

Men and Measures of Half a Century:

SKETCHES AND COMMENTS.

By Hugh McCulloch, Secretary of the Treasury in the Administrations of Lincoln, Johnson, and Arthur. 8vo, $4.00.

No book published in this country for many years contains more of interest to the general reader than this work by a distinguished American whose public career extends back for fifty years. The great political measures and famous men associated with them are all treated in a manner as pungent as it is judicial, and the fund of reminiscences and anecdotes with which the book is crowded is accompanied by historical comment and criticism of the highest order, which gives a standard value to the work.

Two Little Confederates.

By Thomas Nelson Page. Square 8vo. Illustrated. $1.50.

This captivating story of two lads left at home on a Virginia plantation during the war will appeal with an unusually strong interest to boys. The two little heroes, and the experiences they had with the blue and gray coats, are certain to make friends among hundreds of young readers.

Letters of Thackeray.

A new edition of this collection (1847–1885), with Portrait of Thackeray, and reproduction in *facsimile* of a characteristic letter. 12mo, gilt top, $1.25.

In this dainty and popular edition these famous letters will again be sought for by thousands to whom the other editions were inaccessible. The letters have already been accepted as one of Thackeray's most characteristic books, without which no set of his works can be regarded complete.

Corea: The Hermit Nation.

By William Elliot Griffis. New edition, with Maps, Illustrations, and additional matter. 8vo, $2.50.

In this new and revised edition the author brings his great work down to date, increasing the value of what is recognized as the most authoritative work on this strange country.

*** For sale by all booksellers, or sent postpaid, upon receipt of price, by*

CHARLES SCRIBNER'S SONS,

The Nation.

NEW YORK, THURSDAY, OCTOBER 11, 1888.

The Week.

THE Senate Tariff Bill marks an era in the great political controversy now going on and which is to continue for some years to come. When the Chicago Convention met in the month of June last, it was under the influence of the House debate on the Mills bill, in which the Republican position had been that of stiff and unbending opposition to any lowering of the rates of duties on any protected articles. It was also under the spell of the Oregon election, which held out the hope that the "cyclone of fear" would sweep the whole country as it did sweep one small State on the Pacific, where there had been no discussion of the tariff, and where two special interests, wool and lumber, were all-powerful. Under these false guides, the Convention committed the stupendous blunder of resolving that there should be no reduction of protective duties on any article, and that rather than reduce any such duties the whole internal-revenue system should be abolished. This public declaration of the party creed was made only four months ago. Nothing could be plainer or more imperative. It forbade any reduction of the duties on sugar, or steel rails, or structural iron, or barytes, or jute, or anything else that is produced in this country. It commanded the Republicans in Congress, when confronted by the necessity of reducing the surplus, to proceed in a certain way, viz., first to reduce the taxes on tobacco and on alcohol used in the arts, then to reduce the duties on articles not produced in this country (except luxuries), and third, to repeal all the taxes on distilled and fermented liquors and oleomargarine.

Now, what has the Senate Finance Committee done? How has it carried out its instructions? It has knocked this precious platform into flinders by reporting a bill to reduce the duties on sugar one-half, and to reduce those on steel rails from $17 to $15.68 per ton, those on structural iron from $28 to $24.60 per ton, while the same bill puts several articles produced in this country and now protected by the tariff on the free list. Henceforth the *principle* has gone out of the Republican creed. The party no longer has any guiding and governing idea. It has "spit upon the platform" as contemptuously as Horace Greeley and the Northern Whigs performed that office for their platform when Gen. Scott was running for the Presidency in 1852. But although the Chicago platform has been thus abused and defied by its own high-priests, the party remains true to its favorite protégés. The duties on wool, the very abomination of the tariff, the main hindrance to the expansion of the woollen industry, and the chief oppression of the poorer classes, are actually increased in this bill, and, what is more wonderful, the duties on carpet wools, which are not produced in this country, are increased also. The reason for the latter increase is that some carpet wools can be used for the coarser kinds of clothing, and thus come into competition in a round-about way with clothing wools. The carpet makers have been hoping for a reduction or repeal of the duties on Donskoi wools on protectionist grounds. They have been asking for bread and they have got a stone.

The Hon. Wm. B. Allison of Iowa was chosen by his colleagues in the Senate to present the Tariff Bill and report of the Finance Committee. Mr. Allison's record on the tariff question is such that anybody familiar with it would naturally be surprised to find him in his present rôle. We can hardly account for the incongruity except upon the theory that all the other members of the Committee, or, at all events, all who are of sufficient prominence to serve as leaders, are "tarred with the same stick." This is certainly true of Mr. Sherman and is partly so of Mr. Morrill, who is, we believe, prevented by illness from attending to his public duties at this time. Mr. Allison's great speech on the tariff was delivered in the House of Representatives, March 24 and 25, 1870. We say "great speech" in no ironical sense. It was the speech of a ready debater who had studied his subject until he was saturated with it. It was calm and dispassionate, bristling with facts, earnest, fearless, and convincing. It was the same kind of a speech as that made by the Hon. Roger Q. Mills when he reported to the House the bill that bears his name. If Mr. Mills had delivered Mr. Allison's speech instead of his own, the difference would not have been noticed, except in matters of detail. The line of argument was the same in both cases, and even as to many of the details. It is a matter of wonder to us that the Democratic National Committee have not printed Mr. Allison's speech as a campaign document on their own side, instead of selecting from it one or two paragraphs on the subject of wool, in which the honorable Senator showed how the high duties on wool had cramped the manufacturer and led to increased importations of woollen goods, and thereby caused an unexampled slaughter of sheep in his own State of Iowa.

Among the remarkable things brought out by Mr. Allison in his speech was his showing of the monstrosities of the iron and steel schedules of the tariff as then existing, and of the rates of duty proposed in the measure then pending, as reported by the Committee of Ways and Means, of which he himself was a member. He concluded with these words, which seem wonderfully applicable to the present time:

"Our policy should be to so cheapen manufactured products that we can revive our export trade, now swept away because we cannot compete with other nations in the markets of the world. If we could restore what we have lost, and in addition greatly enlarge our exportation of manufactures, we would then have an enlarged home market for our agricultural products, which would then be exported in a concentrated form in exchange for other products which we do not and can not produce."

The Boston *Journal* gives great prominence to the annual report of T. Jefferson Coolidge, Treasurer of the Amoskeag Cotton Mills. Mr. Coolidge reports a net profit for the Amoskeag Company of $425,566 for the year, out of which 10 per cent. dividends have been paid, leaving a surplus of $125,566, or nearly 5 per cent. more on the capital stock of $3,000,000, This is certainly gratifying, and Mr. Coolidge would be satisfied but for "the growth of the free-trade feeling in the country." This, he says, gives him some anxiety. We have heard many people say that this growth of free-trade feeling was all moonshine. Indeed, we hear scarcely anything from the Republican speakers and newspapers indicating that there is any such growth. We are surprised, therefore, that Mr. Coolidge should deem it worth noticing in his annual report unless he intended it for the employees rather than the shareholders. In order to show how the growth of free-trade feeling would affect the Amoskeag Mills, Mr. Coolidge makes certain statements about wages, which we print in conjunction with Mr. Blaine's more careful investigations on the same subject:

WHAT MR. COOLIDGE SAYS.	WHAT MR. BLAINE SAID.
According to the most exact figures that I have been able to get, picker hands, carders, mule spinners, and weavers receive in this country from 40 to 80 per cent. more than they do in England, while carpenters, machinists, and masons are paid double. If, therefore, the products of English labor could be imported free, we should have to reduce our labor about 33 per cent. In other words, the English could manufacture for 83 cents what under free trade, at the present price of labor, would cost us 96 cents.	The hours of labor in the Lancashire mills are fifty-six, in the Massachusetts sixty per week. The hours of labor in the mills in the other New England States, where the wages are generally less than in Massachusetts, are usually sixty-six to sixty-nine per week. Undoubtedly the inequalities in the wages of English and American operatives *are more than equalized by the greater efficiency of the latter and their longer hours of labor.*

The difference between Mr. Coolidge's statement and Mr. Blaine's is very striking, but we are bound to give the preference to Mr. Blaine's because he gave his authority for English wages, while Mr. Coolidge gives none. He only says, "the most exact figures I have been able to pick up." We have before us the figures of a man who has been picking them up systematically and very lately, viz., Mr. J. Schoenhof, American Consul at Tunstall, England. Mr. Schoenhof's report having been published by the State Department, and a copy of it having fallen into the hands of the editor of the Liverpool *Daily Post*, that paper is moved to say, in its issue of August 6, that, notwithstanding *the higher*

wages paid in England to cotton operatives than in the United States, English spinners can more than hold their own on account of the finer yarns used by them. "Thus," it says, "125 yards of cloth here will take fourteen pounds of yarn, and in America eighteen pounds—a clear gain of four pounds to the English manufacturer. If this difference was equalized, it is calculated that there would be a balance left in favor of America *sufficient to cover the higher labor cost of this country.*"

The St. Louis *Globe-Democrat* takes pains to explain how a reduction of the duties on sugar is consistent with the national Republican platform. It says that the growth of sugar shows no tendency to increase in this country. The production is no larger now than it was years and years ago. Therefore there is no reason to suppose that further protection would lead to increased production. Well, does your blessed platform say anything about articles that show no tendency to increase in the amount of the product? Not a word. It says:

"If there shall still remain a larger revenue than is requisite for the wants of the Government, *we favor the entire repeal of internal taxes rather than the surrender of any part of our protective system* at the joint behest of the Whiskey Trust and the agents of foreign manufacturers."

Of course we are in favor of knocking this platform into smithereens, but we want you to acknowledge that that is what you are doing. Moreover, we beg to inquire how much the production of carpet-wool has increased in this country, and how much it tends to increase—this article upon which your Finance Committee proposes an increased duty of one cent per pound.

What is this? A whole speech from Mr. Blaine, the first formal effort of his in the Western States, and not a word in it about the tariff? Yet this same Mr. Blaine said, in his first speech after reaching this country from Europe, on August 10, in defining the issue for the present campaign:

"It is not, in the ordinary sense, a contest of partisan against partisan. It is a contest which entirely transcends party motive; it is a contest as to whether the great mass of American citizens, who earn their bread in the sweat of their faces, shall have their wages seriously reduced from day to day. That is the whole pith and moment of this question, and *anything that diverts the attention of the American people from that single point tends, in my judgment, to weaken the campaign.*"

If this was so in August, how can Mr. Blaine devote a whole speech in October to the veto power of the President, without "diverting attention" and "weakening the campaign"? Is the American laborer to be deserted at the very crisis of his wages in order that Mr. Blaine may assail the President's previous record, and thus make the contest one of "partisan against partisan"?

Mr. Blaine's latest campaign lie, embraced in his Third Series since his return from Europe, is the following, uttered at Detroit, concerning the deposit of Government funds in national-bank depositories:

"Now, I have known something about the Government of the United States—have had some little to do with it; but if that had been done any time within the last twenty years by a Republican Secretary of the Treasury, the Democrats in the House would have tried to impeach him. I repeat it. I don't say that I would vote to impeach Mr. Fairchild—that is another question; but if any Secretary since Salmon P. Chase was first appointed by Lincoln had done that with $60,000,000 of the public money, I say that the Democratic House, if in power, would have moved his impeachment."

Let us see how this statement tallies with facts. In a public document entitled 'Specie Resumption and Refunding,' sent to the Forty-sixth Congress by the Hon. John Sherman, Republican Secretary of the Treasury, at pages 984 and 985 is a statement of "Assets of the United States Treasury." Among these assets are the following items for seven successive months.

DEPOSITS HELD BY NATIONAL-BANK DEPOSITORIES.

The intelligent reader will observe that at each of these months the amount held by national bank depositories was larger than the largest amount deposited therein by Secretary Fairchild, and that at three dates, viz., March 1, May 1, and June 1, 1879, the amount was more than four times as large. The matter is of no importance, except as a fresh illustration of Mr. Blaine's recklessness on the stump.

Panels in the cars of the Metropolitan Elevated Railroad are now occupied with Republican electioneering placards, one of which has recently appeared with one forgery and three lies in four sentences. The forgery is the extract from the London *Spectator*, which has been repeatedly exposed in our columns, but is still, with extraordinary effrontery, issued from the Republican headquarters. The use of these panels has been rented by the railroad company to the Manhattan News Company, with, we are informed by Superintendent Hain, no restriction except as to indecency. It would appear, however, that this restriction is not enough. There ought to be a restriction directed against forgery and libellous matter. Also, we will add that we think it is gross abuse of its franchise on the part of the elevated railroad company to permit the appearance in its cars at all of advertisements in any way offensive to any large class of its customers. The great majority of its customers are Democrats, and it is of course annoying to them to have lying or abusive electioneering placards issued by their opponents staring them in the face every time they travel in the elevated trains. The company ought to observe a strict neutrality in political as well as in religious matters. It has no more right to surrender its space to party diatribes than to attacks on a particular religious creed or denomination; and it ought to call on the news company to remove these placards, whether their contents be forged or not.

It is perhaps not so strange as at first thought it seems that the Republicans should cling so stoutly to their forged quotations. The quotations in question could by no possibility be expected to influence any but the most ignorant and prejudiced of voters, but it is evident that only among such voters can the Republicans expect to make any gains this year. Among intelligent and impartial men the drift against them grows stronger every week. Two evidences come simultaneously to our notice. Hugh McCulloch, Secretary of the Treasury under the first Republican President and the last, has declared his purpose to support Mr. Cleveland on account of the latter's policy on the tariff, which he regards as simply carrying out the principles which the Republican party advocated in its prime. Prof. H. M. Whitney of Beloit (Wis.) College, a lifelong Republican, has written a letter giving his reasons for voting with the Democrats this fall, which are briefly these: The prominence of Mr. Blaine in the canvass, and the intention to make him "the commanding influence in the Harrison Administration," "the extraordinary badness of the Republican platform," "the likelihood that Mr. Cleveland, if reëlected, will do more than Mr. Harrison would do to rescue the public service from the spoilsmen," and "the difference between the two parties as to the reduction of taxes and the reform of the tariff," as to which issue he considers the Democrats right and the Republicans wrong.

Prof. Whitney concludes his statement with this interesting passage:

"It seems better to vote with a party that is advancing out of a bad record into a good one, than with a party that is sinking from a good record into a bad one. The Scripture authorizes us to 'forget those things which are behind' in 'reaching forth into those things which are before.' The attitude of the Democratic party, under President Cleveland's lead, seems to me to afford much better hope for the future of the country."

This is a view of the matter which merits the careful consideration of Republicans of the Dr. Storrs school, who admit that the party is all wrong now, but say that it ought to be supported because of its "majestic history." There is something very curious about this advice of a teacher of morality, that one must forever follow the lead of an association of men because this association was once controlled by noble men actuated by lofty purposes. Dr. Storrs would never for a moment think of telling people that they ought to follow a particular man who had taken to drink and was up to all sorts of evil performances, because twenty-five years ago he used to be a most estimable citizen. But he seriously advises people to vote for the association of men called the Republican party, when it means the dominance of such men as Blaine and "Pat" Ford, because twenty-five years ago the association of men then called the Republican party had such a leader as Abraham Lincoln. There certainly is no rule of conduct laid down in the teachings of moralists without claim to

inspiration, that justifies such action, and Prof. Whitney declares himself unable to reconcile it with the teachings of Scripture.

Gov. Hill appears to have prepared a very long and labored defence of his veto of the Ballot-Reform Bill, to have furnished the newspapers with printed slips of it, and then to have "cut it down" in delivery at Monday night's meeting. This was unnecessary. He gave some very long-winded "reasons" for his act at the time he vetoed the bill, and then forgot himself and gave his true reason by sneering, not at the bill, but at the principle of it, by calling it a "mongrel foreign system." He declares now that he is in favor of the principle of electoral reform, and declares that he "would cheerfully approve a well-considered measure" securing such reform. The friends of Ballot-Reform will take that promise for precisely what it is worth—nothing. Gov. Hill made a formal promise in a message to the Legislature to approve a high-license bill that should contain specifications which he enumerated. A bill was drawn on the lines laid down by him, and when it reached him he vetoed it in defiance of his formal pledge.

Mayor Hewitt may well be proud of the popular assemblage which put him in nomination for reëlection at Cooper Union last week. It is entirely safe to say that no body of citizens more fairly representing the intelligence and character of the community was ever gathered in that hall. They came together without the aid of political machinery, and for the single purpose of expressing their approval of a faithful official and of demanding his continuance in office. It would be difficult to devise a plan for nominating a candidate for office which would be more in accordance with the spirit of popular government than this was. That it was a representative body no one can deny, nor that it expressed the will of an overwhelming majority of the "virtue and intelligence" of the city. Speeches were made by both Democrats and Republicans—all citizens of recognized power in the community—and the assemblage itself was composed of people of all political creeds. Here we have precisely the conditions which the most unprejudiced and thoughtful students of the problems of municipal government have declared to be necessary if we are to secure needed reform—that is, complete obliteration of party lines, and the agreement of the friends of honest government in all parties upon the candidate who is best fitted for the place.

The most encouraging piece of news from Indiana for a long while is the announcement that the Republican and Democratic State Committees have reached an agreement regarding the constitution of election boards which is fair and sensible in itself, and which must operate against election frauds. It is in the following terms: "It is hereby requested and directed that in all election precincts where the inspector is a Democrat, he shall appoint a judge and clerk to be selected by the Republicans of such precinct; and where the inspector is a Republican, he shall appoint a judge and clerk to be selected by the Democrats of the precinct." This is an adoption of the non-partisan principle that ought to govern the conduct of elections everywhere, and it is the more significant from the fact that it occurs in a State where each party has been in the habit of seizing exclusive control of the machinery at the polls whenever it could get a chance. The Chairman of the Democratic State Committee has also made a further proposition for united action by all parties to secure a fair election in Indianapolis, where frauds have in the past been notorious. His suggestion was the formation of a committee composed of 100 members, 50 of which should be named by the Democratic Committee and 50 by the Republican Committee, or, better still, 45 by each of the old parties and 10 by the Prohibition State Committee, all to be reputable citizens of Indianapolis, whose business it should be to discover and punish illegal voting and election frauds of every description, and to establish branches under like conditions in every county in the State. The Republican managers have declined the proposition, on the ground that an organization formed a year ago for similar purposes could do the work equally well; but the Democrats complain that they are not fairly represented on this latter committee, while the Republicans can give no sufficient reason for not accepting a suggestion which is obviously fair.

Mr. Theodore Thomas's experience proves that in order to keep an orchestra together in New York, it is necessary to travel with it, not only to neighboring cities, but to those in the far West. It is impossible to secure orchestral players on contract except by guaranteeing them at least four performances a week. New York has never shown itself willing to support even one performance a week during the winter, and the result has been that, in order to play in New York, the orchestra must spend two or three nights a week in railway trains. The tax of travel like this upon men whose work is of so delicate a character can easily be imagined. When, moreover, it has been endured in order to make it possible to play in New York, and it turns out that New York does not care enough for the music to pay the expenses of one concert a week, it becomes difficult to see why the work should be continued. It is an actual fact that for many years Mr. Thomas has striven with all the energy at his command to earn money enough with his orchestra outside this city to defray the losses which he has incurred in a brief season in New York. Is it any wonder that he has grown tired of this? Ought New York music-lovers to exact this heavy tax from him for the privilege of playing to them?

One of the few persons who saw Marshal Bazaine in his latter days describes, in a letter to the *Figaro*, his last end, which was certainly—even if he were guilty of everything charged against him—pathetic enough, in all conscience. He married a young and pretty Mexican before his downfall, and she assisted him with great devotion in making his escape from the fortress in which he was confined, and they settled in Madrid. At that time they apparently had some money, and she for a while dressed well, went into society, and they entertained. But as the years went by, their resources began to fail. They moved from one lodging to another, each time to a cheaper one, and saw fewer and fewer people. Finally his wife left him for good, and returned to Mexico, taking one of their two children with her, and the poor old fellow moved into a mere half-furnished garret, without other attendant than his son, a non-commissioned officer in the Spanish Army, on whose scanty pay he lived. One of the strange sights of Madrid during the past year was the ex-marshal tottering to the market in the morning, and bringing home under his arm the brown-paper parcel containing the meat and vegetables for his dinner. He died, finally, quite alone in his garret, and was carried to the grave in a cheap coffin, followed only by his son and half-a-dozen other persons. The myth of Belisarius and his obolus is hardly so striking an illustration of the vanity of human greatness as this. Bazaine was really no more of a traitor than a score of others, but he had the ill-luck to surrender more men and guns to the enemy.

There has been almost until now a disposition to sympathize with Bazaine's chief, the late Emperor Napoleon, as a man who was deceived by his generals as to the condition of the army, and bore his overthrow with dignity and fortitude. It was in England particularly that this view prevailed, but the Crown Prince's diary has completely exploded it, and in doing so has thrown some light on the causes of Bazaine's strange behavior in surrendering Metz. As is well known, Napoleon made an attempt to secure an alliance with Germany for the partition of Belgium after the Luxembourg affair, and Bismarck had the cruelty to get the French ambassador at Berlin, Benedetti, to put it in writing in his own hand, and when the French denied it, Bismarck published the document. But what was not known was that after the surrender at Sedan, and while Napoleon was a prisoner at Wilhelmshöhe, he renewed this proposal in some shape—"quietly seeking a 'rapprochement' with us," the diary says—"moderation of the peace conditions on promise of a common war against England." This was in March, 1871, six months after Napoleon's capture. There can hardly be a doubt that this idea that some better political use might be found for the army than continuing to fight the Germans, was not confined to the Emperor himself. It ran in the heads of his immediate followers as soon as they discovered what tough customers the Germans were.

THE LATEST PROTECTIONIST SPOOK.

THE protectionist argument, as brought down to date, consists of the following propositions, knit together in the closest logic: With our high rate of wages we cannot compete with the cheaper products of foreign countries, and must lay heavy duties to keep them out; yet this duty is not a tax on the consumer, for all manufactured articles are cheaper in this country than anywhere else in the world; but it would never do to take off the duty thus proved unnecessary, for, once admitted to our markets, the foreign manufacturer would first put down his prices so low as to crush out all our industries, and then, having us at his mercy, would exact our uttermost farthing with his exorbitant monopolistic prices. This combined improvement of Porter on Harrison, and refinement of Wharton over Porter, so far as it is based upon anything but the imagination, is, we suppose, a vague recollection of what took place in 1814–'15. Manufactures which had sprung up in the entire absence of competition, owing to the embargo and the war, no sooner had the consumer by the throat than the importations began again. For twenty years they tried to get their grip on again, making taxation restore the blessings of war and non-intercourse. Even then, however, nothing like what Mr. Joseph Wharton's warm imagination pictures took place, and never will, while either maxims or markets exist.

It may, nevertheless, help to show what total lack of discrimination, and what blissful ignorance of "abroad," mark this beautiful argument, if we call to mind the fact that there is no such thing as a unified foreign competition from which American manufactures have, or will have, to suffer. That is but another bogey. When we turn from the hysterical shrieks over it to inquire what it really is, we find it has no more substance than a Brocken spectre. The fact is that the manufacturing nations of Europe are engaged in the bitterest kind of commercial warfare with each other. So far from plotting together to make a united swoop upon this country, if the Mills bill passes, they are dealing each other just the ugliest blows they can devise, and are too eagerly intent on watching their immediate antagonists to trouble themselves very much about what is going on here. Europe is at this moment one great battle-field of tariffs. Its industries are pitted against each other in the sharpest competition, and are straining every nerve to win an advantage in neutral markets.

Every one who reads the foreign trade journals will know how jealously each country scrutinizes the returns of the commerce of every other. The figures of the Board of Trade, given month by month, are looked for with the eagerness with which important news from a war is expected. They are discussed in Paris and in Berlin as much as in London. Similarly, the French and German returns are made public, and are studied with more interest than the stock reports. Every sign of advance brings exhilaration at home, and carries dismay abroad. A Berlin correspondent of *Le Nord* recently described the anxiety caused to the Germans by their diminishing foreign trade this year, especially as compared with the steady gain of England. The reciprocity treaty between France and Italy came to an end last year, through the initiative of France, and the economists of the latter country are studying the effects of this action, as revealed in the trade of the current year, with an almost feverish interest. Everywhere are signs of sharper rivalry and more stringent retaliatory legislation. Mr. Wharton's portentous combination of foreign manufacturers is all in the clouds.

If they ever had any idea of conspiring, according to his fancy, or if they were in search of convenient fields for the display of their greed, they would have tried it in South America or in Asia and Africa long ago. All the conditions would have been just to their mind, as Mr. Wharton understands the case. They would not even have had to suffer a temporary loss in crushing out native manufacturers, for there were none. All they would have had to do would have been to agree upon the dizziest prices they could think of, and then divide the profits. How far they are from having done this, or even thinking of it, everybody at all acquainted with the facts understands perfectly. The strife of English, French, and German manufacturers is just as keen in all South America as it is in Europe, and that means that it is as keen as can be. With remarkable zeal and patience and skill have the Germans, in particular, worked up a foreign trade in competition with their great rivals. To the results of their superior technical education, they have added the advantage of a vast system of skilled solicitors of trade in foreign countries, have endowed chairs of Oriental languages for the express purpose of raising up trained and competent commercial travellers, and have, in fact, put all their intellect and genius for details at the service of their exporters. As a consequence, the English have undoubtedly lost relatively in some markets where they had held an unquestioned supremacy. They themselves admit this, and are doing their utmost to recover their advantage. One measure adopted with this end in view has been the establishment of a sort of co-operative society for the promotion of foreign trade. Its aim is to gather the fullest and latest trade statistics, to receive information from foreign countries at the hands of special agents, to give publicity to every trade opening that the world furnishes—to do, in short, on a large scale and for a great number, what each of the great exporting houses has had to do for itself.

It is, of course, possible that an international syndicate may control for a time an article of limited production like copper. Even this is a costly and dubious undertaking, as the London *Economist* has recently shown. But that any of the great lines of manufacture can be "cornered" even for a time is so improbable, in the face of existing conditions, that a reasonable man will entirely dismiss it from the account. We may add that we do not expect Mr. Wharton to dismiss it. His fears, however, might be allayed by the reflection that we should have time enough, when we saw the combination forming, to defeat it by promptly putting up the tariff again. On second thoughts, though, we fear that our manufacturers would not consent to that, since, if an international pool were in the wind, they would want to be in it, as Mr. Carnegie is reported to be going into the international steel-rail pool; and then, we will freely admit, the last state of the American consumer would be worse than the first.

PROTECTIONISM RUN MAD.

THE Rev. Edward Everett Hale has made a contribution to the literature of this campaign in the shape of a little book called 'Tom Torrey's Tariff Talk.' It does not call for special comment as regards the economic arguments which are brought forward, or rather insinuated, by Mr. Hale's bucolic but crafty spokesman, for these have been discussed, in one form or another, scores and hundreds of times. But it does seem worth while to call attention to the illustration which this production affords of the sacrifices of dignity and moral tone and national pride which the protectionist superstition demands of its votaries.

It is saying much, but we think not too much, to assert that Mr. Hale goes further than any other writer we have had the privilege of reading, in maintaining that few if any of the things which have made this nation great would have been accomplished had it not been for the blessings of the tariff. He is not content with pointing to high wages and extensive manufactures and flourishing market-gardens, and exclaiming, Behold the fruits of protection! He is not ashamed to put into the same category with these American literature and education. One of his eight chapters is devoted to "Books and Authors," and is intended to convey the idea that had it not been for protection, we should now be teaching our children to read from English primers, and that we should have had no more than a straggling handful of American authors, who would have to send to England to get their books printed. Mr. Hale is unquestionably a patriotic as well as an educated American; and it is not less astonishing than it is humiliating to think that such a man should be willing to ignore all the mighty forces which have made American literature and American learning what they are, in order to swell the list of American achievements which the tariff system impudently claims as its own.

Along with the extravagance of such claims, it is natural to find the prejudice and Jingoism which partisan demagogues so persistently aim to foster, but which one might have hoped to find absent from the work of a philanthropist and minister of the Gospel. The following extract will in some measure illustrate these points:

"I was brought up to consider Charles I. a saint and a martyr, and Oliver Cromwell a fanatic and a murderer, simply because the

people who wrote the books which I read as a child chose to think so, and lived in England. Why, as lately as when Agassiz first came to this country, he went into a Cambridge printing-office, where they were printing a book of natural history. They showed him the sheets with some pride, and Agassiz said, 'Yes, I see. An American school-book, with pictures of three butterflies, and not one of the butterflies was ever in America!' That is the way to bring up children in a colony. . . . And when my friend Cobden comes over here, and wants me to continue that system of education, I do not fancy it."

Mr. Hale is fond of speaking of "the emancipation of 1861," meaning the initiation of our present high-tariff system; it would be interesting to get his private opinion of the work our colleges and authors and publishers were doing during the dreadful "free-trade" period of fifteen years preceding that date.

Mr. Hale expresses himself as sorely tempted to wish there were a sea of fire which would keep foreign novels out of the hands of our young people. Strangely enough, he only remembers to mention three foreign novelists, two of whom are Zola and "The Duchess"; his opinion as to the desirability of excluding Dickens and Thackeray and George Eliot, Tolstoi and Turgeneff, is not set down. Neither does he have anything to say as to whether the best way of keeping out Zola and The Duchess is the permission of literary piracy for the "protection" of our printers, though his definition of "the American System" would seem to indicate that he approves of that interesting feature of our protective institutions. "One part of that system," he says, "is protection; another part is homesteads; another part is free schools; another part is cheap books. It all belongs together. It hangs together." However this may be, it seems to us that this kind of talk "hangs together" remarkably well with such reckless and ignorant libelling of one of the great names in the intellectual history of the Anglo-Saxon race as Mr. Hale indulges in, when he says of Adam Smith that "the French do say that he stole everything he had to say from Turgot."

Mr. Hale says that the Mills Tariff Bill "proposes to transfer to Europe about half a thousand various industries." Is it possible that Mr. Hale believed this when he wrote it? We can only suppose that the state of mind which a man must get himself into when he writes tariff talks of the Tom Torrey variety precludes the exercise of those mental powers by which men are enabled to ascertain the proportions of things in the world about them, and to measure the significance of their own utterances. But we can tell Mr. Hale of one industry which the passage of the Mills bill would be pretty sure to transfer to Europe—or to limbo. That event would put an end to the occupation of the howling dervishes of protection, of the men who uphold tariffs in the bloody-shirt fashion. The triumph of the Mills bill will not mean free trade, but it will mean free thought; it will mean that hereafter, when the wisdom of a 100 per cent. duty on blankets is called into question, its upholder will no longer attempt to shut his opponent's mouth by calling him a British free-trader and an enemy of our public schools, but will have to stand like a man and show rational cause for the maintenance of that particular feature of our tariff laws.

RELIGION IN THE BACK TOWNS.

THE interesting papers published in the *Evening Post* two years ago on the decay of religion in the "back towns" of New England provoked by their appearance some unregulated comment, and even contradiction, but no serious refutation. The facts in the case, indeed, were notorious, and they were stated in the papers under mention with entire sobriety of expression. Those statements find fresh justification in late numbers of the *Andover Review*, published pretty nearly in the centre of the region of "back towns," which has printed recently several articles on "The Problem of the Country Church," the first by the Rev. John Tunis in the September number, and four others in the October number by the Rev. Samuel W. Dike, LL.D., the Rev. Charles M. Sheldon, the Rev. M. J. Allen, and the Rev. Charles L. Merriam.

All of these writers take the "problem" for granted. Dr. Dike says it is of "present vast proportions." How great it is may appear from Mr. Sheldon's remark that "in very many cases, the more odd and impracticable the method seemed [of solving it], the more fruitful it has been of good results." Some things proposed are: Distribution of printed copies of sermons; regulation of church music by the pastor; greater variety in prayer-meetings; short sermons, and "a violin and cornet," with "a talk on the Chinese Bill, and the main incidents in the life of Gen. Sheridan" on Sunday evenings; a blackboard, to contain a summary of the forthcoming sermon; a "Church Wagon" or "Gospel Sleigh," very like the political method of "getting aged and infirm voters to the polls"; libraries and reading-rooms; public entertainments and lectures; a gymnasium and evening school; a musical and literary society; amusement-rooms; drawing-schools; "a wide-awake, able, and thoroughly consecrated man," to be appointed "superintendent" of "three or four very weak churches whose parish boundaries are contiguous," who shall enjoy "a good salary" and a parsonage, and be assisted by young men from the seminaries who "would, no doubt, be willing to assist in this work if their expenses were paid."

These things are all proposed seriously. They show the apparently hopeless nature of the problem. To incite to religion by public entertainments, gymnasiums, amusement-rooms, drawing-schools, and musical and literary societies, is like acquiring the knowledge of scientific taxation by sprint-running and the study of botany. Or, it is even more grotesque than that, since the study of botany will communicate some notion of the benefit which the natural world derives from freedom of exchange. And as for the things urged which do bear directly upon religion, why, a great part of the "problem" is to get them. If you have them, the problem disappears. If you can give "a good salary" and a parsonage to a superintendent, you must have religious interest to begin with, and the trouble is that you have not got it. Yet this device in essence is only a shift of making one minister suffice for three or four churches, which is but "confession and avoidance," and not a triumph over any difficulty.

We are bound to say that more useful ideas than these are advanced. Dr. Dike says:

"Such supplementary study, counsel, and direction must be provided as will make the work of the Church complete—complete in the views of truth she gives, complete in the range of forces and agencies she uses, and complete in the life her work shall reach. Next to lack of divine power and consecration, it is due to her present incompleteness in these various directions that the religious problem of the country church has grown to its present vast proportions. The broadest possible study, with thoroughly scientific methods, looking to readjustments by which the most harmonious and fullest uses of every possible Christian instrumentality shall be secured, is the first great necessity."

Mr. Sheldon (of Waterbury, Vt.) remarks:

"One of the first things that a country pastor should settle for himself and the community is this: the church as a church must be *interesting*. By that is not meant that it must be the centre of amusements or entertainments, but that the church, as an organization with Christ at its head, must be, in all its service of preaching and song and ritual, a genuine source of the best kind of moral excitement. A country parish is of necessity much more in need of the best sensational preaching, for example, than the city parish. The pastor must occupy the position of stimulator far oftener than that of instructor. If he can furnish a community with the interesting phases of moral problems, he is making the church in the country a more powerful factor in its place than the same organization in the city, for he is making it the *one* centre of attraction in spiritual awakening."

And the same writer, whose article shows much power of suggestion, puts stress on the need of pastoral acquaintance with the people. "He obtained the permission of his people to board around with them, one week with a family at a time, lodging and taking breakfast in his own home, and going out to dinner and tea. This plan was continued one entire winter, and nearly twenty families received their pastor into their homes, not as a guest, but as one of the family. One of the best things about this experiment was the opportunity it gave for visiting and getting acquainted with the *men* in the community, as they very seldom failed to be present at meal times!" There is the right note of good inventiveness about this. Mr. Sheldon says also:

"The country pastor may well devote a large amount of time to the careful preparation of preaching material, not fearing to depart from the ways of the fathers; for there is no place where new things may be more successfully and fearlessly tried than in a country church. (This is contrary to general tradition.) In the large majority of cases, novelty in methods, combined with a genuine love of men and consecrated common sense, will be acceptable. There must be a change in pulpit methods before the country church will assume in the community its right place and distinctiveness."

Suggestions of other writers also are useful, such as permanent pastorates (which means resisting the temptations of "larger fields of usefulness"), turning "the noble consecration" of home or foreign missionaries "towards the depopulated and almost discouraged rural town," church recognition of the weaker by the stronger parishes, sympathy between city and country pastors,

etc., etc.; and, finally, local missionary work —the country church to "send the Glad Tidings" to places "three or four miles from the central villages." But the people within three or four miles from the central villages have been born and bred within sound of the glad tidings, yet they do not care for them. The question is, How are they to be made to care? In other words, how is the feeling for religion to be diffused again generally?

Nearly all the methods proposed require the condition desired to begin with. If right religious feeling were common, pastorates would be permanent, sympathy would be perfect between both churches and ministers, the New England people would go to meeting even three or four miles away. Mr. Sheldon says: "The Church of Christ can be made the most interesting organization on earth." Why is it not so, and why—as we think must be allowed to be the case—is it receding further and further from that rank? It is not for us to say that too much "new theology" unsettles men's belief, or that the spirit of the age is intolerant of so much of the old theology as is retained, or in fact anything further than this—that something there is, deeper than any of the *Andover Review* writers have sounded, which must be found before we shall know the reason why, in our day, there is no more power in the force which subdued the Roman world—the force, unique in history, of which a writer in another part of this same *Review* says: "It was the most fiery energy the world had ever seen. It seized upon everything within its reach—the speech, and wealth, and buildings, as well as the manners and hearts of men."

COLUMBIA COLLEGE.

President Barnard's annual report to the Trustees of the College touches on a number of very interesting topics, and on none more interesting than "the graduate department" —that is, the department which contains those who are prosecuting their studies after having completed the ordinary course exacted for the pass degree. He says:

"A resolution is now pending before the Board, inquiring whether it is not advisable that the whole scheme of education in Columbia College should be raised to a higher plane, and which involves the further question whether it is not advisable to discontinue the Department of Arts. So long as this question remains under discussion before the Governing Board, it would not be becoming in the undersigned to pronounce an opinion upon it here. It may be permitted, however, to say in this place, that if the question were merely as to the sufficiency and importance of the work proposed, there could be no doubt that our faculties could find ample and adequate occupation if they were confined to giving instruction exclusively to graduate students. On the other hand, such has been the excessive multiplication of undergraduate colleges in our country in recent years, that the business of these colleges is greatly overdone, and it would certainly be a material benefit to the educational interests of our country if a large proportion of the existing colleges could be suppressed. From statistics gathered by the undersigned in former years with great labor, it was made manifest that while in the last half century the proportion of students in arts in American colleges has been gradually but steadily diminishing, the number of colleges has, on the other hand, more than correspondingly increased. Since about 1837 the population of the country has increased four-fold and the number of colleges three-fold, while the number of students in arts has in the meantime only doubled. In the country generally the number of students under instruction at any given time is in a proportion of about 1 to 2,000 or 2,500. In 1830 the average attendance on the existing colleges was sixty-seven each, and in 1880 about forty each. There is not a State in the Union in which the number of colleges is not greatly in excess of the educational needs of the population. This city itself may be taken as an illustration. New York has about 1,500,000 of inhabitants. It should be capable of furnishing, therefore, at the ratio of 1 to 2,500, 600 undergraduate students in arts. This is not a number greater than could be comfortably provided for in a single college. Nevertheless we have three, not counting the minor colleges under the care of the fathers of the Roman Catholic Church. It would not be, therefore, educationally a misfortune if Columbia College should cease to exist as a school for undergraduate students. The city would still be fully supplied with educational advantages, while there could be no doubt that this institution could be more profitably employed by confining itself to the field of superior education. Whatever be the policy pursued in this matter, nevertheless it is the unavoidable tendency of things to press upon Columbia College more and more constantly from year to year the duty of providing for the wants of the superior class of students—that is to say, the business of proper university instruction. The location of the institution in the greatest city of the continent is peculiarly favorable to such an undertaking; and though the College is not possessed of funds sufficient to enable it to carry out this complete design, it is hardly to be doubted that provision may sooner or later become sufficient to accomplish this object. One advantage which we already possess towards it consists in the library, which, although incomplete in some details, goes far towards supplying the needs of students engaged in literary or scientific research; and this is a possession which in the nature of things must constantly improve in value."

What this means, it may be necessary to explain to those who have not followed the discussion, is that enormous amounts of money and the time of a very large body of learned and able men are now spent, all over the country, in giving a very slender education to the class known as "college boys"—that is, the youths who haze, and have "cane-rushes," and who "bury Legendre," and cut those other childish pranks which make President Barnard rejoice that so many of the undergraduates of Columbia "live at home with papa and mamma," as Mrs. Micawber said. The curse of these youths for collegiate purposes is their youthfulness, not so much in years as in character; and this youthfulness of character is largely a tradition of earlier days when American colleges were really boys' schools, in which it was a question, when even a Senior misbehaved, whether to flog him or expel him. That is to say, we still have "cane-rushes" and "burying Legendre," in a very large degree because past generations of students nearer to the nursery than this one used to enjoy them. Traditions are strong in schools and colleges, and the more childish a custom is, the deeper its roots are apt to be.

Now, a great many thoughtful people have begun to mourn over what seems the waste of talent and money on these youths, so many of whom do not really care for instruction, which goes on throughout the Union, and to ask themselves whether the time has not come to devote more of both the talent and money to providing for the wants of real students—that is, for maturer youths who are undeniably eager to learn, on whom "the higher education" is well bestowed, and who would repay the country for giving it to them some sixty and some an hundred-fold. Of the little colleges, in which the college boys practise their little games, there will evidently never be any lack. Munificent rich men seem never to weary of providing and endowing them. The country, as President Barnard points out, swarms with them already, and their number increases annually. They undoubtedly have their use. Every neighborhood which has one benefits by it in some degree, morally or intellectually. The youths who frequent them are in some degree improved by them. But in so far as they pass for universities, and the education which they give passes for a university education, and the men who establish them fancy that in establishing them they are doing the best that can be done for American intellectual culture, they are a hindrance. They interfere with the creation of real universities, to which only those would go who were eager to learn, and in which every dollar spent would be spent fruitfully, and in which the time of learned professors would not be frittered away in seeing that their disciples behaved like grown-up people in the streets and the campus, and knew their "lessons" in the recitation room.

A good start in the direction of such universities has been made by the Johns Hopkins University in Baltimore, and also by Columbia, Yale, and Harvard, in so far as they have provided post-graduate courses and special professional schools. It is only such colleges as these which really can grow into universities, and get rid of the little men who "rush," and "haze," and "bury Legendre." It is absurd to waste magnificent endowments, and great libraries, and costly apparatus, and learned professors —most of them fit for the work of original research—on boys who could get all they want in any village academy or city high school, and still live at home with papa and mamma. The country needs all the help it can get from the very highest culture in resisting the torrent of materialism which has, ever since the war, been flowing over the land; and for such culture nothing would do so much good as two or three real universities.

THE "PAUPER LABOR" TROUBLE IN FRANCE.

The difficulties into which a protectionist policy plunges a government which is staggering under its burdens, are being gradually illustrated in France in a curious way. Two years ago, in obedience to the demands of the farmers, who were suffering both from a series of bad harvests and from American competition, duties were placed on agricultural produce. The objection to such duties in a great manufacturing country is, of course, that they raise the cost of living to the artisan, and therefore the cost of production to the manufacturer. Accordingly bread became rapidly dearer, and bread plays a more important part in the popular diet in France, probably, than in any other country in the world. It is not uncommon for French workingmen to breakfast off bread and wine alone. Therefore, when it became dear, the city population in Paris became

furious, and applied to the Municipal Council to fix a maximum price, which it did. Thereupon the bakers closed their shops, and then the bread-eaters became riotous and broke some of them open. Some sort of compromise has been reached in Paris, under which the sale of bread has been resumed, but the situation remains a very delicate one. The bakers are not content, and cannot find their business very profitable as long as flour is so dear. But flour must be kept dear to please the farmers, and the vicious circle is thus maintained.

This is only one trouble. Another and more serious one is the influx of poor foreigners, or, as we call it, "pauper labor." These foreigners, mainly Italian, Belgian, and Spanish, flow into France to fill a vacuum caused by the crowding of the native French farm laborers into the towns. This drift has been in recent years something very remarkable, and has greatly increased the difficulties of French farming. It has been partially met by Italian and Belgian immigration. But this immigration of course cannot be confined to the country districts. It makes its way into the cities also, and thus brings a very low class of labor into direct competition with the already discontented, jealous, and comfort-loving native *ouvrier*, and crowds him out of some of the less skilled trades altogether, and he resents it bitterly.

In the skilled trades as well as in the shops and counting-houses and banks, the French are finding formidable rivals in swarms of Germans, who are on the whole more industrious, more painstaking, more manageable, and not less skilful than the natives. The Germans are much sought after by employers, but thoroughly hated and suspected by the people, and the irritation caused by their presence is increased by the stern precautions adopted by Germany against any influx of Frenchmen into Alsace and Lorraine. In one way or another, in fact, there are now about 2,000,000 of foreigners resident in France. A few thousands are travellers, or people who draw incomes from other countries and live on them; but the rest are competitors with the natives in the labor market, and probably the great bulk of them mean to return home with savings. This is undoubtedly true of the Italians, though probably in a less degree of the Belgians.

To meet this state of things—that is, to satisfy the workingmen of the great towns, who are already suffering for the sake of the farmers — President Carnot has drafted a decree placing serious restrictions on all sorts of foreign immigration. Persons intending to become residents have to file a declaration of their intention, with an elaborate account of their birth, parentage, and occupation, and give notice every time they move. In fact, it is a renewal of the passport system in a more odious form; and although persons visiting France for "business or pleasure" are exempt from its operation, of course they may have to show that they came for business or pleasure in order to secure the exemption. It constitutes such a remarkable break in the French tradition of hospitality to foreigners that there are already doubts whether any attempt will be made to carry it out, or rather whether it will not undergo serious modifications before it is put into force.

The problem it tries to solve is one which is vexing all the richer nations of the world. France, England, and America are all annoyed by the influx of "pauper labor," and this influx of pauper labor is one of the natural results of that wonderful cheapening of transportation, both by sea and land, over which we all rejoice so much. It brings the products of every corner of the globe to our doors, at an extremely low rate, which we enjoy, but it also brings a large human "residuum" which we do not enjoy at all, but hardly know how to get rid of. An annual Italian immigration, coming over in the spring and going home for the winter with its savings, and living like savages, in huts, while here, is something which even ten years ago would have seemed an impossibility; but it is to-day a very conspicuous industrial phenomenon along our whole eastern coast. So, also, when forty years ago Christians began to attack the Chinese for being so exclusive and refusing to trade or associate with their betters, we all thought that the only result of compelling them to open their frontier would be the opening of their markets to foreign trade. As time went on, however, they began to turn the tables on us and gave us more intercourse than we could stand. Accordingly, both England and America, after having bullied China into letting her people out, are now bullying her into keeping them at home. It is not surprising if under these circumstances she is a little puzzled to know what the "Foreign Devils" really want. In truth, the new facility of travel promises to impose on all the more highly civilized countries a complete revision of their attitude with regard to the reception of foreigners. They find they cannot afford to share their civilization on a broad scale with newcomers who have lived on a much lower level, or have not the same social standards.

CAMPAIGN LIES FOR IRISHMEN.

One of the lying cards issued by the Republican Committee, and "copyrighted by the Yale Publishing Co., 126 William St., New York," contains, besides the forged extract from the London *Spectator*, this from the London *Star*, the Irish home-rule paper, edited by T. P. O'Connor: "We desire Cleveland's reëlection." This may be also a forgery, but our belief is that it is also an amusing blunder, for the card is addressed solely to Irishmen, and the quotation, real or fraudulent, was undoubtedly ascribed to the *Star* in the belief that it was an English paper. The card is entitled "What Free Trade Has Done for Ireland," and then, with curious fatuity, proceeds to show what protection has done for Ireland. Here is most of the stuff:

"In earlier times the Irish devoted their attention to the raising of cattle for English markets. In the seventeenth century it became a remarkably lucrative business and the source of great Irish wealth. But the members of the English Parliament saw this coming element of power, and passed a law prohibiting the importation from Ireland of all cattle, sheep, and swine—of all beef, pork, bacon, mutton, butter, and cheese. This destroyed Ireland's industry; but she had a few ships and indomitable perseverance—consequently built a few more, and betook herself to commerce with the Colonies, the East and West Indies, and the Continent. Again England interposed, and Parliament passed the infamous 'Navigation Laws,' prohibiting the Irish from trading with the Colonies! Thus was her Colonial trade cut off and for ever destroyed.

"England now kept her in subjection by the aid of troops and superior naval power. But the pluck that never deserts the Irishmen led them to turn their attention towards sheep-raising for the manufacturing of wool products. Irish wool and Irish cloths, says Foude, the historian, were the finest in Europe, and eagerly sought after. . . . Ireland next attempted to develop her fisheries, and when this promised a profit and support, John Bull pounced upon them again with legislation compelling them to fish in English ships manned by English sailors, and to pay tribute to England to such an extent that this industry became unprofitable and worthless. Finally, a few strong leaders came to Ireland's rescue—such as Gratton, Flood, and Charlemont. Demands were made upon England, and once more Ireland was free. One of the first acts of her newly-enfranchised legislature was a protective act of duties upon imports. Soon her prosperity was greater than it had ever been. Her ports were alive with ships from every nation, and happiness and contentment reigned. This was Ireland under Protection! But, alas, the foul Pitt came, and English free trade was forced upon her, and she was joined to England! English manufactures glutted her markets, undersold her, and turned 5,000,000 operatives out of work!"

What is wonderful in all this is, that the composer did not perceive that the exportation of the beef, pork, mutton, butter, and cheese to the English market and the trade with the colonies were the result of unprotected Irish enterprise, and that the English legislation of 1665 and 1680, absolutely prohibiting the importation into England—Ireland's only foreign market—of all cattle, sheep, swine, beef, pork, mutton, and even of butter and cheese, was part and parcel of that infernal policy of protection for home industry which England practised so long. Ireland was rapidly rising, under free trade, from the ruin wrought by the Cromwellian conquest, when these protective acts crushed her only industries at a blow.

The same thing may be said of the Irish colonial trade. Under the English Navigation Act of 1660, Ireland had equal rights of trade with England, and was rapidly creating a shipping business both with England and the Colonies. In 1663 the English Protectionists had Ireland struck out of the Navigation Acts, and thus excluded her ships both from English and colonial ports, and confined the colonial trade exclusively to English ships, manned by English sailors. In 1670 and 1696 other English protective acts were passed forbidding any direct importation from the colonies to Ireland in any ships whatever, so as to give the English protectionists, not only the carrying of the goods, but the "handling" of them in England.

The unfortunate Irish, being thus cut off from the shipping business, and being deprived of all foreign markets for their agricultural produce, turned their attention to the woollen industry, in which they still enjoyed free trade. The native wool was excellent, and under free trade the manufacture grew rapidly. Large num-

bers of Scotch and Englishmen emigrated to Ireland to take part in it. Now listen to the Irish historian Lecky's account of what the English protectionists did next:

"There was an important woollen manufacture in England, and the English manufacturers urgently petitioned for the total destruction of the rising industry in Ireland. Their petitions were speedily attended to. The House of Lords represented to the King that 'the growing manufacture of cloth in Ireland, both by the cheapness of all sorts of necessaries of life and goodness of materials for making all manner of cloth, doth invite your subjects of England with their families and servants to leave their habitations to settle there, to the increase of the woollen manufacture in Ireland, which makes your loyal subjects in this kingdom very apprehensive that the further growth of it may greatly prejudice the said manufacture here.' The House of Commons in very similar terms urged William 'to enjoin all those you employ in Ireland to make it their care, and use their utmost diligence to hinder the exportation of wool from Ireland, except to be imported hither, and for the discouraging the woollen manufactures.' The King promised to do as he was requested." (Lecky, Vol. ii., p. 229.)

A law was accordingly passed in 1699 (10 and 11 Gul., III. cap. 10) by the English Parliament, forbidding the exportation of Irish woollens to any other country whatever; and this industry was accordingly crushed also, and Ireland was finally plunged in a sink of wretchedness which, under the Penal Laws, lasted through the eighteenth century, and from which she has never since emerged. The linen manufacture in Ulster was not touched, because it did not compete with any English industry, and its good social and moral effects on that province are actually used to-day by anti-Irish writers as arguments to illustrate the unfitness of the Irish in other parts of the island for industrial pursuits. But Ulster was not allowed to enjoy entire free trade, for disabling duties were imposed on Irish sail-cloth imported into England, and Irish checked, striped, and dyed linens were absolutely excluded from the colonies, and had a 30 per cent. duty put on them in England.

The Republican card which lies before us asserts (what we must quote again):

"One of the first acts of her newly enfranchised Legislature was a protective act of duties upon imports. Soon her prosperity was greater than it had ever been. Her ports were alive with ships from every nation, and happiness and contentment reigned. This was Ireland under Protection! But, alas, the foul Pitt came, and English free trade was forced upon her, and she was joined to England! English manufactures glutted her markets, undersold her, and turned 5,000,000 operatives out of work!"

The shortest way of disposing of this is to say that it is a campaign lie. The independent Irish Parliament imposed no protective duties whatever. It offered a bounty on the production and exportation of corn, in order to revive cultivation, which had almost ceased under the Penal Laws, owing to the conversion of the large estates into pasturage, which the disturbed state of the times made more manageable and safer than the growing of crops. This did stimulate greatly the production of grain; but whatever other industrial progress was made in Ireland during the brief period of Parliamentary independence was made under free trade. In fact, it would not be possible to find, in the history of modern civilization, an illustration as striking as that which Ireland furnishes of the rapacity and unscrupulousness and selfishness which influence, in a greater or less degree, the creation and maintenance of all tariffs. Scientific protection has been very rare indeed. Most legislative protection has been due to the widespread, ancient, and deeply rooted desire of man to live on the earnings of his fellow-man; and Irishmen, of all men, as the greatest sufferers from it, should loathe the very name of it.

COMPETITION IN FAST TRAIN SERVICE.

THE running speed of the Scotch express, which we discussed two months since, was even better than the New York *Times* cable despatch at first led American readers to suppose. The West Shore performance of three years ago, whatever its merits in certain sections, by no means equalled the English train for the whole run. Yet this first English record has since been much improved, and trains have been run on both routes to Edinburgh at speeds of nearly 53 miles an hour including stops, or 58 miles excluding stops. This experiment has now been discontinued, and it is not likely that it will be soon repeated. The cost of such extremely fast services is so great, directly and indirectly, that the railroad companies obtain no adequate return. It is simply an instance of competition run riot, and belongs in the same category as the attempt on the part of some of our railroads to carry wheat or cattle at ridiculously low rates. Competition in rates in England has pretty nearly ceased, the necessity for a stable rate agreement having been recognized by all parties concerned. The only form in which rivalry can show itself is in the matter of facilities; and these attempts at high speed are an extreme manifestation of such competition.

But while these unusual speeds are not worth what they cost, either to the railroads or to the community, the effect of rivalry in maintaining an efficient standard of train service is in general wholesome. Mr. Ernest Foxwell has taken the trouble to collect a number of facts with regard to train service in England and in Continental Europe; and his investigations, published by the *Pall Mall Gazette*, bring out most clearly the wonderful results which English railroads have accomplished. While the fast Scotch expresses at 58 miles an hour do not pay (any more than the excesses of competition in wheat rates pay in America), it is nevertheless true that English railroads run trains at 45 and 50 miles an hour and make them profitable. On every route where there has been active competition there have been such trains, furnishing a great convenience to the public without loss and often with positive gain to railroads themselves. Their number is too great for us even to attempt to count them. The *Gazette* gives a list of more than twenty towns over fifty miles from London whose inhabitants can journey to and from the metropolis without a stop and in almost all cases at running rates of 50 miles an hour.

It is needless to say that this is a much better showing than we can make in this country; but the contrast becomes far more striking when England is compared with Continental Europe. The railways of the Continent ought to give a better train service than those of the United States, because their population is denser; yet in point of fact they are very far from so doing. The only train which really approaches the English standard is one in Holland, from Rotterdam to Amsterdam, making a speed of 46 miles an hour in spite of five partial stops. Two other Dutch companies also run trains which would be considered good by the American standard if not by the English. Next comes France. The finest French train is on the Orleans Road. This maintains for a distance of 364 miles a speed, including stops, of 42 3-5 and a running average of 44 1-5. On one section of the road its schedule speed rises to nearly 46 miles an hour. This train, it is hardly necessary to say, runs only first-class cars, and charges 50 per cent. above the regular first-class fares. The next best train in France is the London-Paris express via Calais, but its highest running speed is less than 45 miles an hour, and its general speed from Paris to Calais is hardly 42 miles. The Eastern Road does not do so well, its best performance being on an express train from London to Switzerland, running nearly parallel with the frontier, instead of radiating from Paris, as is the case with most French fast trains. The Western, Southern, and Lyons Companies are far from reaching the standard, their best trains not having an effective speed as high as 40 miles an hour, nor a running average of above 42 miles. In Belgium the best results are about 40 miles an hour, including stops, or 41 miles of running speed. The Belgian train service is, however, praiseworthy on account of the number of fast accommodation trains, if we may so term them, which make a comparatively large number of stops, but which have a high speed between stations. In Germany the case is much worse. Almost the only line with even tolerable service in matter of speed is that between Berlin and Dresden, where the average time, including stops, is about 38 miles an hour. The St. Petersburg express makes fairly good time from Berlin to the frontier. The trains from Berlin to Cologne, which carry the most important mails in the country, are not at all what they should be. It is said by the *Pall Mall Gazette* that the speed of the fastest express train from Berlin to Cologne is barely 40 miles an hour, excluding stops, and only 36 1-3 miles an hour actual time. It is a somewhat curious fact that Austria shows better results in this matter than Germany. The fast express from Berlin to Vienna has a running speed varying from 39¾ down to 29 miles an hour until it crosses the Austrian frontier; on the other side the variations are from 31 miles to 41 2-3, and the average speed is very much improved. For more than 100 miles after leaving Prague the train nowhere drops to a running speed of less than 40½ miles an hour.

This completes the list of countries in Con-

tinental Europe which can make good railroad time. In some, like Italy or Russia, the general standard of service is not properly developed. In others, like Switzerland, the character of the country forbids it. Taking those parts of Europe which we have described, we have the means of making a curious and interesting generalization with regard to the effect of competition on speed. Trains are fastest in England, where competition exists, but is only allowed to take this form. They are next fastest in the United States, where competition exists and takes this form among others. To an almost equal extent competition prevails in Holland, not merely on account of the different companies which manage the Dutch lines, but also because of the number of available water routes by which the country is intersected, and which, if they do not compete for passenger traffic, at any rate prevent the railroads from feeling that they have a monopoly of the transportation interests of the community.

After Holland comes France, where the railroads are mainly in private hands, but where competition is much checked. Next among the large countries comes Austria, where the railroads are partly owned by the State; and last of all comes Germany, with its exclusive system of Government ownership. In France itself it is instructive to see which lines give the fast trains. First we have the Orleans Road, which has been and still is subjected to actual competition from independent lines. Next we have the Northern train services, and particularly the one parallel to the north-eastern frontier, which are affected by international competition that no monopoly can control. Again, in Belgium, we see the remains of a train service developed under the most active competition in the period previous to 1873, and still affected by international rivalry which the country is too small to prevent or to control effectively.

The lack of fast-train service in Germany is one of the almost inevitable results of State monopoly. It is a penalty for the ownership of railroads by the Government. A fast train does not seem to pay: the Government therefore offers none. In ceasing its efforts to give first-class train service it loses the power of so doing. Deprived of the stimulus of competition, it is in great danger of failing in the matter of efficient management. Not merely are the German trains slow, but they are ceasing to be punctual. The writer of this article, in travelling through Germany in the summer of 1887, made nine distinct railroad journeys. On only one of these was the train on time. In the majority of cases, in spite of the slow schedule speed, the train made no pretence of being on time and no effort to recover lost ground. On one of these occasions the London-Berlin fast mail was stalled for more than an hour on a straight track and very moderate upgrade, through mere insufficiency of engine power. Moreover, this did not occur without warning. The train came into Hanover under such conditions that any competent official could have foreseen the probability of such a result. Any well-operated railroad in America would have provided against this contingency; but official red tape was too strong, and the train was allowed to leave Hanover without additional locomotive power or other provision against the danger. We mention all this at some length because the claim of military punctuality is so often made for the State railroad administration. In point of fact, the evidence goes to show that the standard of Government service, even in so well administered a country as Prussia, tends to deteriorate. Since the Government of that country has owned the railroads there has been practically no increase in the passenger-train service; there has been perhaps an actual diminution in speed; and in the international comparison the system makes the pitiful showing already given in detail. Whatever may be the bad results of competition, those of State railway monopoly are not such as the American public would for an instant tolerate.

THE WHITECHAPEL MURDERS.

The interest excited by the Whitechapel murders in London is so great that it has almost thrown "Parnellism and Crime" into the background, and continues to furnish the newspapers of that city with their leading topic. Most of what appears in the daily press on the subject has the usual qualities of the composition known in journalism as a "calamity article." It describes the horrible nature of the crime, speculates on the motives of the murderer, and his build, and calling, and the way he made his escape, and usually winds up with some abuse of the police, leaving a very distinct impression that had the writer been in the neighborhood on the night of the murder he would have caught the murderer in the act, and that, as matters stand, the failure to put him in charge of the London detective force is a case of continuing negligence. Nearly all our "calamity" writers on this side of the water who have taken the matter up, strongly suggest that if the English do not like being murdered so often, all they have to do is to substitute the New York police force for their own. This suggestion is due to the well-known fact that no murderer ever escapes in this city, and that whenever a man is going to commit a murder here, Inspector Byrnes, or one of his subordinates, is pretty sure to arrive at the critical moment and take the knife away from him and box his ears.

As to the London police force, nearly all the English commentators agree that it is too small for the adequate protection of the city and suburbs. It numbers only 13,000 men, and they hold that 20,000 would not be too many for the work. They acknowledge, too, that on the detective side it is, and always has been, extremely weak, and this not so much owing to any defect in discipline or training or command, as to a certain want of fitness for detective work in the English character and temperament. Of courage and tenacity the London police has abundance, but the want of finesse and adaptability, and of power of entering into other people's feelings, which makes Englishmen so unsuccessful in assimilating foreign races, odd as it may seem, makes the supply of really ferret-like, rusé men for the police force very short. The Irish, who with the English compose the London force almost exclusively, are better at the work, but are discredited in English eyes for nice jobs by the brogue, which almost always prepares an Englishman's ears for blundering of some sort. There was a good deal of trouble from this source at the time of the Phoenix Park murders, when good detectives were of the last importance in Ireland. Englishmen were admittedly worthless for the special work required, their accent betraying them, and there was a short period when the authorities were afraid to trust almost any Irishman; but they got over this fear very rapidly. Nevertheless there is just the same complaint in Ireland. The Irish constabulary are a splendid force to fight or march, but they do not supply detectives to catch "moonlighters" and murderers.

The philanthropists and social reformers have, of course, appeared at Whitechapel in considerable force, to improve the occasion, as the clergymen say. One of them suggests that the murderer may be a fanatical Socialist, so disgusted with licentiousness and sexual disorder generally that in order to call the attention of society to it in an impressive manner, he endeavors to murder one prostitute every week or thereabouts. The venerable Lord Sydney Godolphin Osborne, now over eighty, who forty years ago, as a country clergyman, did noble work in calling attention to the condition of the agricultural laborer in the southern counties, writes to the London *Times*, pointing out, with some of his old fervor, that these murders are but the natural outcome of the bestial condition of vice and misery in which the population of East London are allowed to live. Mr. Barnett, a minister in that region, confirms this, and adds that overcrowding is at the bottom of the whole matter—that where one whole family, or more, live in one room, morality perishes, and all crimes become possible. Then comes that old suggestion that the landlords, or somebody, should be compelled to furnish decent tenement-houses to the city poor, which, however, as a complete remedy, the *Spectator* ruins by the very sensible remark that if overcrowding were such a very bad thing as the London philanthropists maintain, the race would have perished from vice ages ago, because, as far back as we can trace its history, the rule has been one room for one family—in other words, the great bulk of mankind has always lived in huts or cabins without partitions. Separate chambers for each sex is a luxury born of modern civilization.

But in front of all schemes for improving the physical condition of the city poor, there rises up the old difficulty, which nobody has ever fairly met, that the more attractive you make the city for poor people, the more of them you draw from the country districts, so that you find yourself contending with a constantly rising tide. Whitechapel is now called a "congested district," but the more there is

done to make Whitechapel a pleasant place to live in, the more congested will it be. Some of the poor who drift into great cities can always be saved and elevated by help, but there will always be an immense residuum who, for want of moral and mental constitution, cannot be helped, and who must either be driven out of the city, or taken care of in it.

THE MARGRAVINE OF BAIREUTH.

PARIS, September 17, 1888.

ALL the events of our time tend to add a sort of retrospective interest to the time of the Great Frederick, to his person and his surroundings. The great work of the Duc de Broglie, as well as the publication of many memoirs of persons of Frederick's time, is a proof of this increasing interest. Eighty years ago were published the memoirs of Frederica Sophia Wilhelmina, Margravine of Baireuth, the sister of the Great Frederick. These memoirs extended from 1706 to 1742, and in the manuscript they were entirely in her own handwriting. This first edition was read with much avidity; it was a living picture of the manners and of the situation of Germany in the eighteenth century. The book is now extremely rare, and a new edition has been published in Leipzig, only 300 copies being issued. In it, with the help of authentic letters and documents, the life of the Margravine has been completed till her death in 1758. The new edition has a pretty portrait of her. She sits in a chair, with a book in her hand and a pet dog in her lap; she has a dress lined with fur, and a muff. Curiously enough, she has on her breast a collar of shells, such as were worn by pilgrims, and which were among the attributes of St. James of Compostella. Her hair is in small curls and powdered. Her face is thin and delicate, and has a very intellectual expression. Her forehead is large and uncovered, her nose well chiselled, her mouth very small, her eyes large and fiery. Altogether, it is the portrait of a person of a very uncommon appearance. The publishers end a small preface with these words: "In publishing this new edition, we have been anxious to present to the public a portrait of this Princess, after having removed the stain of infidelity which disfigured it. We wish to show in her true light a woman, thinking and acting as a queen, great in her heroic affection for her brother, true in her friendship. Let us hope that we shall see the opinion disappear which made her considered as a woman without a heart and without a soul."

Frederick William married in 1706 Sophia Dorothea of Hanover. He was then Crown Prince, and had been educated by Gen. Dohna. Frederica Sophia Wilhelmina was born of this union in 1709; and in 1712 was born a prince who was to become the Great Frederick. The dramatis personæ of the first volume of the Memoirs are more or less known to history. The Prince Royal became King in 1713, his principal ministers being Grumkow and the Prince of Anhalt, who were his favorites, and became complete masters of him. The Queen did not live very happily with him. She is thus described by her daughter:

"The Queen has never been handsome. Her features are marked, and none of them is good. She is white, her hair is dark, her waist is of the handsomest. Her noble and majestic demeanor inspires respect in all who see her; a great hatred of the world and a brilliant mind seem to promise more solidity than she possesses. . . . Everybody has defects, and she is not exempt from them. All the pride and haughtiness of the house of Hanover is concentrated in her. Her ambition is excessive, she is extremely jealous, of a distrustful and vindictive humor, and she never forgives those who have offended her."

All the portraits are in this style; the Margravine spares nobody. If she wrote thus about her mother, Sophia Dorothea, you can imagine what she has to say about her father, who was a drunkard, and whose violence seemed at times to be inspired by madness. As for the favorites of the Court, they are described with unsparing severity. Some of these petty personages assume enormous proportions in the Memoirs. The young Princess suffered at their hands, and she takes her revenge. She was first placed under the care of a person whom she calles Letti, the daughter of an Italian monk who had fled to Holland, where he had changed his religion. "She had an Italian heart, that is to say, very supple, very bright, and very dark; she was interested, proud, and bad-tempered. Her coquetry gave her many lovers, and they had not to languish long." There was a state of perpetual warfare between her and Letti, as well as between Letti and her brother. Frederick had a feeble constitution, was taciturn, and often ill. He seems always to have had the greatest attachment for his sister Wilhelmina. He kept nothing secret from her.

It is difficult to imagine a court more full of intrigues than that which the Memoirs describe. The King had his favorites, who were jealous of everybody; the Queen had hers also. Grumkow chose mistresses for the King. "The Queen had among her ladies a Mme. von Wagnitz, who at that time was her favorite. Mme. Wagnitz concealed under an air of devotion the most scandalous conduct; her love of intrigue led her to prostitute herself as well as her daughters to the favorites of the King and to those who mingled in affairs. Thus she learned secrets of state, which she immediately sold to Count Rottembourg, the French Minister." One of the King's favorites, Kreutz, Minister of State and of Finance, "was an assemblage of all the vices. . . . He had secret emissaries round the King. These miserable people tried to disgust him with the Queen. They vaunted to him the beauty of Wagnitz," etc.

The marriage of the Princess Wilhelmina became the subject of great and long intrigues. She tells how, when she was still a child, an officer, famous for knowledge of astrology, looked at her hand, and told her that four Kings would ask for it—the Kings of Sweden, England, Russia, and Poland—but that she would marry none of them. This prophecy was accomplished. Her marriage with Charles XII. of Sweden became the subject of negotiation when she was only eight years old; but the negotiation was broken off for political reasons. This question of marriage filled all the youth of the Princess; she heard of all the candidates, she knew some of them, and did not even know the others. She was of delicate health, and was several times at the point of death. She says things which seem almost incredible about the life she was made to lead with her father, and about her father himself. At Potsdam, she with her brother was obliged to enter her father's room every morning at nine, and neither of them could leave it, as he had the gout, and could not go out himself. "The whole day was spent in invectives against my brother and myself. The King never called me by any other name than 'la canaille anglaise' [it was the time when her marriage with the Prince of Wales was being negotiated], and my brother was always 'le coquin de Fritz.' He forced us to eat and drink things for which we had some aversion, or which were contrary to our systems." The King one day threw a dish at the head of his son Frederick, and another at the head of Wilhelmina. "The King starved us both; he took the office of carver, and helped everybody except my brother and me, and when accidentally something remained in a dish, he spat on it to hinder us from eating. We only lived, both of us, on coffee and milk and dried cherries, which completely spoiled my stomach."

One day Wilhelmina received a letter from her brother announcing to her that his father had beaten him most cruelly with his stick, and that he was resolved to escape. The confidant of Frederick was a page named Katte. The Margravine tried all she could to dissuade her brother. The history of the arrest of Frederick and of Katte, and the condemnation of the latter, is well known. The Margravine tells it with very minute details; she tells, also, how she and her mother succeeded in burning many letters which were written confidentially to her brother by herself and by the Queen. The tragedy of Katte's death would have broken a weaker mind than Frederick's. Many of the faults of this great man must be excused by the horrible treatment to which he was subjected in his youth; and we find also, in the sad events which the Margravine speaks of, the secret of the constant affection of the brother and sister. They had been companions in misery, and remained always united in heart.

The Princess's marriage with the Prince of Wales did not take place, owing to the violence of the King, who treated the English negotiator in the most brutal manner. All the earlier plans which were formed for her were successively abandoned; the King was much incensed at the English refusal, and determined to marry his daughter instantly. He chose for his son-in-law the hereditary Prince of Baireuth. Wilhelmina had hoped to wear a crown: she was reduced to a coronet.

"It must be confessed that my marriage was the most extraordinary thing in the world. The King, my father, made it against his better thoughts, and repented of it afterwards, every day. He could have broken it off, and he accomplished it against his own desires. I need not speak of the sentiments of the Queen [she was very desirous of the English marriage]; I have said enough to show how adverse she was to it. The Margrave of Baireuth was as discontented as the others. He had only given his consent in the hope of great advantages, and he found himself frustrated by the avarice of the King. He found me married against the wish of the three principal persons who could decide my fate, and, nevertheless, with their consent."

The portrait of the Margrave of Baireuth, the father-in-law of the Princess, is not flattered. Her account of her arrival in the territory of Baireuth is most amusing; and no better picture can be found of the life which was led in the eighteenth century in the small courts of Germany. It must be confessed that many of her pictures seem to be caricatures; they are coarse and cynical. She mixes her colors with the greatest liberty; a minute after she has said, for instance, that her father-in-law, the Margrave, drank from morning to night, "which helps to enfeeble his mind," she says, "His popularity has made him beloved by his subjects." "Though he had little genius, he had much penetration, and he knew well the men who composed his ministry and his court." He had no application for public affairs, and had been spoiled by the reading of 'Télémaque.' Such is the rambling style of the Princess, but, with all their defects of composition, her Memoirs are interesting, because here and there are extraordinary facts and traits of character. The story of the intrigues of the Court of Baireuth is told with as much mi-

nuteness as if this court had been the greatest theatre in the world. Fortunately for the reader, the Princess often speaks of her brother, with whom she kept up a constant correspondence, and nothing that concerns the Great Frederick is indifferent.

The Margrave died in 1735, and the Princess became the Margravine of Baireuth, the name under which she is known to history. The Memoirs end in the year 1742; the editorial supplement extends from 1743 to 1758. The collection of the letters which the Great Frederick wrote to his beloved sister fills eleven quarto volumes; the letters of the Margravine to the King of Prussia are even more numerous. The Margravine was also a correspondent of Voltaire. She was acquainted with all the men who formed the philosophical, literary, and scientific court of Frederick. Her married life was not of the happiest; she found her consolation in fraternal love and in intellectual culture. When she died, Voltaire wrote these verses:

"O Bareith! o vertus! o grâces adorées!
Femme sans préjugés, sans vice, et sans erreur,
Quand la mort t'enlève de ces tristes contrées,
De ce séjour de sang, de rapin, et d'horreur,
Les nations acharnées
De leurs haines forcenées
Suspendirent les fureurs;
Les discordes s'arrêtèrent;
Tous les peuples s'accordèrent
A t'honorer de leurs pleurs."

Correspondence.

MR. BLAINE AND HIS HISTORY.

To the Editor of The Nation:

Sir: If the writer of the opening editorial of the issue of the *Nation* dated October 4 had read the entire chapter on the subject of American tariffs in Mr. Blaine's 'Twenty Years of Congress,' a blunder might have been avoided which not every one will be charitable enough to attribute to ignorance.

A failure to mention, in the explanation of a fact, the existence of circumstances which subsequent investigation may have revealed, is no argument against the effect of those circumstances if they actually did exist. However, no such explanation is necessary on behalf of the author of 'Twenty Years of Congress.' All of the causes mentioned in Mr. Blaine's speech at the Polo Grounds on September 29, in explanation of the "apparently genuine prosperity of the country" after the enactment of the tariff of 1846, are set out fully in the chapter devoted to American tariffs, just seven pages after the passage quoted at length in the editorial to which this is an answer. If the writer of the editorial will turn from page 196, volume i., of Mr. Blaine's work, from which the passage quoted was taken, to page 203, he will find due mention made "of accidental circumstances, such as the Mexican war, the discovery of gold in California, and the Crimean war"; and, in addition to these, will find also a reference to the famine in Ireland and the revolutions of 1848.

The italics which abound throughout the quotation in your paper, and for which the public is indebted to the marvellous acumen of the editor, some people may characterize as an attempt to lead the readers of the *Nation* into those "false paths" into which we are informed Mr. Blaine has led *his* readers.

"Mutato nomine, de te fabula narratur."

Your obedient servant,

James M. Willcox, jr.

Philadelphia, October 8, 1888.

[We make our apology to Mr. Blaine and our readers. The latter can be trusted to set down our delinquency to oversight and not to partisan suppression.—Ed. Nation.]

A DISTINCTION.

To the Editor of The Nation:

Sir: You have of late lost no opportunity to expose Republican sophistry and rebuke Republican wickedness, and in your last issue justly call the attention of respectable Republicans to "Pat" Ford's propinquity to Mr. Blaine. Now will you allow a Cleveland Republican of 1884 to ask why you are not equally severe upon Democratic demagoguery and corruption, of which you may find an abundant supply in this State and your own; and particularly what you think of the repeated presence of one Eugene Higgins and one Senator Gorman at the headquarters of the Democratic National Executive Committee?—Truly yours,

S. Lauer.

Baltimore, October 5, 1888.

[Do you not think yourself there is some difference between even corrupt politicians, like Gorman and Higgins, whom we have repeatedly denounced, and a man like Ford, who has collected money for and publicly applauded murder and arson, and has, as a soldier, deserted in the presence of the enemy? If you do not, you may rely upon it your moral training has been grossly neglected.—Ed. Nation.]

THE PRESIDENT AND THE CIVIL SERVICE.

To the Editor of The Nation:

Sir: I have read your paper with considerable care for some weeks past, with the hope of finding some defence to the alleged abuses in the civil service of Cleveland's reign. Are you not one of his partisans? At all events, it would seem to be your *duty* to find some answer to the numerous (at least in this section) attacks made by Republicans upon Cleveland's administration of the civil service. He was elected to reform the civil service. Has he done it, or is he doing it? If he has, these numerous attacks should be answered.—Very truly yours,

L. S. Berry.

Chicago, October 5, 1888.

[If we were partisans of the President, as you intimate, it *would* be our duty to explain away his shortcomings in the matter of the civil service. This, however, we have never done, as a little more extensive reading of the *Nation* on your part will convince you.—Ed. Nation.]

THE CHINESE AND THE HOODLUMS.

To the Editor of The Nation:

Sir: On page 184 of your issue of the 6th inst. is an article entitled 'The Chinese Treaty.' In this article, with reference to the sudden passage by the House of the Scott Bill, occurs these expressions (the italics are mine):

"Here was a rare chance for somebody to 'get ahead' in the scramble to gratify the *hoodlum element* on the Pacific coast. . . . A great game had been played for the *hoodlum* vote. . . . We shall sacrifice both in an unseemly scramble for the votes *of the hoodlums*."

I can scarcely hope to make you understand how such expressions as these hurt the feelings of your readers on this coast, but I am going to try to.

Let me premise, however, by telling you that my husband and myself and my husband's father take a great many papers; indeed, between our two families we have the reading of over twenty publications, monthlies, weeklies, and dailies. Among all these there is none we respect more or read more attentively than the *Nation*. To know your paper, and to read it intelligently from cover to cover habitually, we think to help largely towards a liberal education. We have more than once been the means of getting others to subscribe for it, and these phrases are often heard in our family when we meet people who are narrow-minded or ignorant on some of the great questions of the day: "They don't read the *Nation*," "I'd give a good deal to get them to read the *Nation* for a year or so," etc., etc. Now, this isn't "taffy I'm giving you," but honest sentiment. You are like a respected friend, with whom we have long corresponded, as it were, but never met. Hence, when you say unjust, ill-considered things, we feel it as we should not did we not esteem you as we do.

But as to the *raison d'être* of this letter. It seems to me nothing can be more unfair than for you to take the attitude that all those who object to the Chinese on this coast are "hoodlums," and that it is all the "hoodlum vote" which is cast against them. *I* cannot vote, to be sure, but women are credited with influence. My influence, if I have any, shall be persistently used in favor of excluding the Chinese. This is the mind of all my family. But we are not "hoodlums." Indeed, I never was introduced to a hoodlum, nor talked with one; and yet I have talked with many people—men and women, fathers and mothers and respectable property-owners—on this subject, and I have yet to meet one who differed with me, or us, in their sentiments on the subject. Oh, yes. I might make just *one* exception, that of a very old, retired clergyman, who came to this coast a few years since, and tried for a while to do missionary work among "the heathen" here. It amused him, and didn't do them any harm.

When we came to the coast seven years ago, I was full of the sentimentalism on the Chinese question with which so many of the Eastern papers are rampant to this day (yours among the number, begging your pardon). Time and observation—experience—have cured me of all that. I have long since been ready to say, with others, "Sentimentalism go hang"; and I am satisfied that if you should settle down here for a number of years, as a thrifty citizen, expecting to make this your home for life, you, too would change your views.

It is not that we, as a family, have had any serious trouble with Chinamen. It is not that we have not employed them and made them useful to us in many ways. I buy vegetables and strawberries of them, and my husband has employed them in his raisin vineyards, and otherwise on the ranch. Barring the fact that their small frames make them, as a rule, incapable of doing as heavy work, or the same amount in the working day, that one expects from the same class of laborers East, I should say that they, as help, compare favorably with the Irish, Italian, and negro, and are no more eye-servants than these. The Chinese I have met have impressed me as being more cleanly in their person than the same grade of help East. I have never employed them as house-servants—I never would. But I have had plenty of experience with them as laundrymen—too much.

Why, then, do I object to them? Why am I so opposed to allowing them to overrun our coast? Because I think we should be better without them. Because I think that now, and

more than ever in the future, we should be safer without them. Because I am convinced, through acquaintance and observation, that the *Chinese as a class are inimical to our civilization, our development, our prosperity, and that they can never be anything else.* And lastly, because I do not want my State to become as Honolulu is now.

But, say some, it is unfair to talk so, for the Chinese have helped develop this coast, its railroads and improvements, and you could not be where you are now if it were not for them, and it is real ingratitude to turn against them now. So? Did not they have their pay—a pay, compared to that which they could have got in their own country, that was a bonanza to them, enabling them to carry out ambitious schemes they could otherwise have hardly dared to dream of? We are quits, as far as that is concerned. If they were useful and have served their day, it is nothing but a wishy-washy sentimentalism that would retain them now, if convinced that they are deleterious to the public weal. What is China to us that we should employ her spare millions of hopelessly degraded laborers, if it is not well for us to do so? But as to those Chinamen who worked here during the early days, they have gone back with their "pile," and if we do not need such labor for such work now, why should we be taken to task?

Years ago, during the Turco-Russian war, I read an interesting editorial (in your paper I am quite sure), showing how un-assimilative is the Turk; how for hundreds of years he had been close neighbor to the civilizations of Europe, and was still—a Turk. The problem I have met here in California has shaped itself in my mind much after the same fashion. It is the incompatibility between Occidental and Oriental civilizations. And of all Oriental civilizations, that of China is perhaps the most "set," *i. e.*, the most "pronounced." It is the oldest, is it not? If I thought that the Chinese were to be allowed to overrun this coast, I should be sorry I ever came here to settle; for I believe that they would in time run the American out, and that my posterity would perish in a bitter race-war. For it is true, though you do not seem to know it, that the Chinaman, seems he never so "meek and unresisting," never so "child-like and bland," when in the *minority*, will, as a rule, when he can, be domineering, insolent, and cruel. Did you not read at the time how the Chinamen at the Sacramento fisheries fought to oust the workmen put in their places? Instances could be cited, were it worth while, columns long, showing that they are, *whenever they dare*, anything but "meek." Women and children on the coast, who have chanced to be temporarily unprotected, know this to their cost. That instances of Chinamen abusing them are as rare as they are, is because we here all seem to learn by instinct to seek to guard against danger whenever we meet them. It becomes second nature to us. Our children are taught to be on their guard about them, from infancy—and wisely, too. At the same time, all I know try to train children to treat them with kindness and courtesy. For all decent people are alike in this, that, while here and behaving himself, John Chinaman should be met fairly and honorably.

You close your article by saying: "The Chinese are a meek and unresisting race; hence the contumely and cruelty heaped upon them in California. But every Italian carries a dagger, and nobody harms him with impunity." The logical inference of these sentences clearly shows that you do not know what you are talking about. Besides our ranch, my husband owns one of the two gun-stores in town. He and my oldest son, who clerks there, can testify that there is no class in our valley who go so "well-heeled" (as the phrase is) as the Chinese. Every one knows this, and that they are very quick-tempered, too. They invariably carry bowie-knives, and buy the very best revolvers my husband sells. In short, for personal arms, or concealed weapons, they are the best customers he has.

The longer I live in California, the more afraid I am of the sly, subtle, treacherous, and smiling Chinaman, who lies, steals, and cheats the "Melican man" on principle; whose criterions and standards of morality are for ever and ever as different from ours as black is from white; and whose heart no man can read.

Respectfully, MRS. A. J. TOWNER.

SANTA ANA, September 23, 1888.

[We have never said or implied that the Pacific Coast hostility to the Chinese proceeded solely from the hoodlums; least of all was it in our mind in writing the obnoxious passages cited by our correspondent. The action of Congress which we deprecated, and for which both parties fell equally under our censure, was demagogic, was a bid for the electoral vote of the Coast States. It was performed in a manner utterly discreditable to our civilization—the manner of hoodlums and the mob. Had England, Germany, Spain, or any Continental Power been in question, the passage of the bill while a treaty was pending would never have been dreamt of. Towards a weak, distant, and home-bound power, it was cowardly and brutal, like the treatment of the Chinese by our "hoodlum element" in all parts of the country. Make what division you please between classes of the population agreed in clamoring for the exclusion of the Chinese, it is true of the best that they have given their sanction to the *mode* in which this end has been attained by successive statutes. Denis Kearney on his sand-lots and Mr. Blaine in Congress have joined hands with one another in this business, and thousands of respectable and upright people, like our correspondent and her friends, have coöperated or silently approved. The hoodlums have set the tone.—ED. NATION.]

IF THEY WERE TRUE.

TO THE EDITOR OF THE NATION:

SIR: The forgeries of articles from English papers, intended to show that the English are in favor of free trade in the United States, are very disgraceful in so far as they are forgeries. But suppose now that those articles were genuine: would they furnish any argument against a reduction of our tariff and the proper disposition of our surplus revenue?

Free trade, theoretically, is advocated by economists of all countries, not because it is good for any one particular country, but because it would be good for all. When the question was in England about abolishing the Corn Laws, it is believed that there was not one paper in the United States which did not ardently advocate such abolition, because it would also be very favorable to our country. The landowners in Great Britain opposed abolition most obstinately, predicting that it would utterly ruin the country. But the Tory press did not use the favor which the measure found in the United States, or in Russia, or other wheat-raising countries, as an argument against the abolition of the Corn Laws, nor did they charge the Opposition with being bribed by American dollars or Russian rubles. They had too much sense to believe that they could humbug the English people by such foolish arguments.

Most of the Continental governments have of late years raised their import duties. They have deeply injured our American trade. In all these countries there is now a great struggle going on against these high-tariff measures, and the contest is a bitter one. We have diplomatically and in every other way loudly denounced the action of these governments, our press gives every encouragement to the Opposition. Yet we do not hear from the high-tariff men that their opponents are bribed by our people, that they are fighting under the American flag and in the interest of foreigners. It requires such men as Blaine, who believe the people ignorant enough to be deluded by such base demagogy, to make such charges.

G. K.

BELLEVILLE, ILL., October 2, 1888.

MR. WHARTON AND HIS NICKEL MINE.

TO THE EDITOR OF THE NATION:

SIR: Is Mr. Joseph Wharton's late statement, that nickel mines are numerous in this country, ingenuous? I take it that, for the present purpose, a nickel mine may be defined as a body of mineral matter of such dimensions, and containing such a percentage of nickel, that there is a reasonable prospect that nickel can be extracted from it with profit. Few granite quarries are free from iron: that does not make them iron mines. Though familiar with many deposits falsely hoped to be nickel mines, I believe that Mr. Wharton owns the only, or almost the only, American nickel mine of any economic importance. Will he inform us where these numerous nickel mines are? Or does he quibble, posing as the protector of other mines, while protecting himself only?

H. M. H.

BOSTON, September 28, 1888.

PROF. PAYNE ON GERMAN BOOKS ON PEDAGOGY.

TO THE EDITOR OF THE NATION:

SIR: A number of graduates of the University of Michigan some years ago formed the "Michigan Schoolmasters' Club." As the name suggests, its members are all engaged in teaching, and, it may be added, belong to the most intelligent and earnest workers in the field.

At the May meeting (1888) of this club, Prof. W. H. Payne, formerly Professor of Education in the University of Michigan, and at present principal of a normal school at Nashville, Tenn., read a paper in which occur the following words, which since then have been allowed to appear in print (the italics are mine):

"*To be even approachable, a German work on the philosophy of education needs to be translated twice—first into English and then into English common sense.* This has been done for Rosenkranz by Miss Brackett and Dr. Harris, and we have a book, still not altogether comprehensible, but yet full of wholesome food for thought."

What are we to conclude from such a statement, coming from one of the leading teachers and best-known writers on education in this country? Is it to be supposed that the italicized lines express the judgment at which Prof. Payne has arrived after an extended study of German pedagogical works in the original? The unanimous answer of all students of German pedagogical science, to whatever nation-

ality they may belong, would be an emphatic No! "For two centuries Germany has been the classical land of pedagogy," are the opening lines of a chapter in a work which Prof. Payne himself has thought worth translating from the French. Or, is it possible that Prof. Payne, being unable to read in the original any of the valuable contributions of Germany to the philosophy of education, wishes to cast ridicule upon that which to him is a *terra incognita*? The mere thought that a man in his position and of his reputation would be guilty of such an unscholarly, not to say unprincipled, act is saddening. Are we, then, to come to the conclusion that a stale joke on the abstruseness of German thinkers had such allurements for the lecturer as to lead him to utter the disparaging words above quoted?

By whatever motive he may have been actuated, does it not seem unpardonable in a man who for several years filled the Chair of Pedagogy in one of our greatest universities, by such means to discourage university students and graduates from a thorough pursuit of the science which he professes? Or is it not true that—to borrow the language of a reviewer in the (Syracuse) *Academy*—"no thorough reading of pedagogy without German is possible"?

X.

A CHAUCER CONCORDANCE.

To the Editor of The Nation:

Sir: The Chaucer Society is engaged with the compilation of a glossarial concordance to Chaucer's works, based upon the texts published by the Society. The coöperation of a considerable number of hands will be required, if this important labor is to be seasonably executed. Eleven ladies and gentlemen in England have offered their assistance, but more help is wanted. Americans who may be disposed to give aid are invited to send their names to Wilson Graham, Esq., 64 Mount Pleasant Road, Southampton, England. F. J. Child.

Cambridge, Mass., October 7, 1888.

THE GREENS OF NORTHAMPTONSHIRE.

To the Editor of The Nation:

Sir: I may perhaps be trespassing on your space if I ask you to publish the following "simple tale."

I happen to be rector of the parish of Green's Norton, Northamptonshire, England. In the parish church are several mutilated tombs belonging to the family of "Green," who, for six generations between the fourteenth and fifteenth centuries, were lords of this manor. The first, Sir Henry Green, was Lord Chief Justice of England about the end of the thirteenth century; the last, Sir Thomas Green, was father of Maud Green, who married Sir Thomas Parr of Kendal, Westmoreland, and was the mother of Kate Parr, Queen of England by marriage with Henry VIII.

The only information I can arrive at, by inquiry from the "oldest inhabitant" of this parish, about the descendants of the Green family is, that many years ago a gentleman from *America* (my informant mentions *Boston* doubtfully) came to this church, presumably to inspect the beautiful tombs and brasses belonging to the Green family.

We are about to undertake the rearrangement of the church. I write to you to know if it is within the limits of your rules, as editor, to allow this letter to appear in your columns, as perhaps some member of the family of "Green" would wish to have a voice in the disposal of the effigies which still remain as witnesses of their wealth and position.

I may only add that I am "a constant reader" of your paper, and an occasional contributor thereto.—Yours sincerely,

S. Beal, D.C.L., etc.

The Rectory, Green's Norton, Towcester, England, September 29, 1888.

Notes.

The Moses King Corporation, Boston, have in preparation a 'Handbook of Public Art Galleries in the United States,' edited by Walter Rowlands. It will embrace even the smaller local collections, and those connected with educational institutions. The book will be illustrated.

Charles Scribner's Sons publish directly ex-Secretary McCulloch's 'Men and Measures of Half a Century.'

Clara Bell's translations of Galdós's 'Court of Charles IV.' is ready for publication by W. S. Gottsberger.

D. C. Heath & Co., Boston, begin shortly the issuing of a series of leaflets for the study of English literature of the present century, prepared by Prof. Louise Manning Hodgkins of Wellesley.

Dr. Morell Mackenzie's 'The Case of the Late Emperor of Germany, and the Relation thereto of the German Doctors,' will be published in New York by Brentano, simultaneously with its appearance in England.

The great collection of the Popular Ballads of Denmark, which was brought to a stand by the premature death of Svend Grundtvig, is now to be continued, and, let us hope, completed, by Axel Olrik, who is vouched for as a competent man.

The works of Ibsen, the Scandinavian dramatist, are not as well known here as the novels of Björnsen, and it is with pleasure that we find three of them translated in a single volume. 'The Pillars of Society and Other Plays,' by Henrik Ibsen, edited with an introtion by Havelock Ellis, has just been published in the "Camelot Series" by Walter Scott (New York: Thomas Whittaker). The "Pillars of Society," which had a vogue in the German theatres almost like that of "Pinafore" in ours, has been translated by Mr. William Archer, who has also revised the version of "Ghosts." The third play is "An Enemy of the People," translated by Mrs. Eleanor Marx-Aveling. Of the trio, "Ghosts" is the most powerful, and our readers have had some opportunity of judging whether it might not be pronounced by far the strongest play of the past decade—simple in its movement, direct in its language, trenchant in its characterization, scientific in its handling, and profoundly and pitilessly moral; a play to set men thinking, yet undeniably repulsive for stage presentation.

These plays of Ibsen's are, as we have said, included in the "Camelot Series"; and here occasion serves to note yet another disadvantage of our present defective copyright laws. In any country where there is general education, there is a demand for cheap books. With us now this demand is met by the reprinting of contemporary foreign fiction, most of it worthless. In England this demand is met by several "libraries" or "series" for reprinting really good literature at a low price. The volumes of the "Camelot Series" are comely little books, bound in vellum cloth, with a neat paper label, and are sold at a shilling each. Among the other volumes of the series are books by Emerson, Thoreau, Longfellow, Lowell, and Walt Whitman.

The latest issues of the "Canterbury Poets" (London: Walter Scott) is devoted to Southey, from whose voluminous works passages of 'Thalaba,' 'The Curse of Kehama,' and 'Roderick,' with about a dozen short pieces, have been selected. There is no hope that even this little collection will restore the green to his laurels; yet the editor, Sidney R. Thompson, does well to remind us what Southey's repute once was—how Landor praised him, and how Cardinal Newman, in the critical moment of his career, used to repair to this dull bard for strength such as poetry could give him. His influence, too, upon Shelley, both in verse and in philanthropy, has never been adequately acknowledged—a sign of which is the lack of any mention of it here. Poetry which had three such readers could not have been without some virtues at the time; and Mr. Thompson's critical remarks, starting from this text, are very excellent, both in temper and substance It is too much, we fear, to ask for a Southey revival; but literary students may well take so excellent an opportunity to have a farewell glance at Southey's epics in their wreck, and to remember the other pole of the poetic world. The discouraging thing, the insurmountable difficulty, is that one page is so marvellously like another.

In the "Chandos Classics" Mr. Ewald publishes a selection from the *Tatler*, with notes (New York: Frederick Warne & Co.) uniform with his selection from the *Spectator*. There are four hundred and fifty good-sized pages, which represent all that is worth preservation as literature; but this is very well worth preservation, and the volume should help to bring back these essays, so admirable both for taste and feeling, into the hands of young readers. It will be an excellent addition to every small popular or home library.

The first-fruit of the holiday season is at hand, but is hardly of a savor that promises much for the annual crop. The illustrations of 'The Courtship of Miles Standish' (Boston: Houghton, Mifflin & Co.) are many, but the best of them are not above, and the worst are far below, mediocrity. Those which approach nearest to excellence are by Mr. George H. Boughton, but they will not add to his reputation; the others sink through various stages to pretty positive badness, and some of them have a curious, old-fashioned air, as of survivals from an earlier state of American art—like resurrections from the early numbers of *Harper's Magazine*. The heavy paper is printed upon one side only, and the constant presence of a blank page opposite that which one is reading is annoying to the eye; the letter-press is crowded unpleasantly near the top of the page; the cover is good neither in color nor in design. In short, nothing of the book but its title-page is in really good taste. Ten or even five years ago it might have been accounted a "sumptuous holiday publication," but it signally fails to reach the standard that has been set for such work of late years.

'Embroidery and Lace,' by Ernest Lefebvre and Alan S. Cole (Philadelphia: J. B. Lippincott Co.), is beautifully illustrated and printed, and is bound in a pretty and tasteful cover, and that is almost all that one can say of it. The text is a disappointment. It contains very little real information, and that little is lost from the want of any index or glossary, or even a full table of contents. The translation is slovenly. On the whole, it appears to be a rather ordinary piece of book-making, and, except for its charming drawings, can be of little use.

Fifty years and more have elapsed since the late Thomas Kibble Hervey's 'Book of Christ-

mas' first appeared in England. It is now republished in pretty shape by Roberts Bros., Boston, without hint of its age, yet with incapacity to deceive any judge of literary styles and epochs. The mildly genial, learned, and dignified text wears as plainly the stamp of a bygone generation as do R. Seymour's illustrations—a poor reflection of Cruikshank. Folk-lore has made great progress since 1836, and one would be excused for preferring Mr. Thiselton-Dyer to Mr. Kibble, who is, in truth, a little dull, respect him as we may. It is noticeable that Christmas Day gifts are ignored in this account of the season, and the donations known as Christmas boxes are distinguished "from New Year's gifts in this, that the former, passing from the rich to the poor, and from the master to his dependents, are not reciprocal in their distribution, whereas the latter are those gifts, for the mutual expression of good will and congratulation, which are exchanged between friends and acquaintances." In this country, the Christmas box is unknown, and Christmas gifts have superseded New Year's.

A perennial classic, the 'Essays of Elia,' puts on a new garb in the "Knickerbocker Series" of the Messrs. Putnam, where its fitness will be called in question by none. So the 'Vicar of Wakefield' passes from the older Bohn edition into the olive-green "Select Library" now being quarried from the "Standard" (Scribner & Welford).

The merest glance at Mr. Edward T. Cook's 'Popular Handbook to the National Gallery' (Macmillan) shows it to be a very thorough and scrupulous performance, carried out with great intelligence and equal self-restraint. Its distinguishing feature is that wherever a painter, a school, or a picture has been mentioned by Ruskin in his various works, his words are quoted in the fitting place. Thus the guide-book not only gives all needful details about artist and canvas, but enables the visitor to have Mr. Ruskin at his elbow. It is Mr. Ruskin, to be sure, in his different stages of art feeling, and Mr. Cook makes no attempt to reconcile his discrepancies. The editor's own function is descriptive rather than critical or technical. He furnishes an index list of painters, and another of pictures, arranged by their numbers, each opposite the name of the painter, the room in which it is hung, mode and date of acquisition, and price. Of the 1,250 pictures, 536 have been purchased at a cost of two and a half million dollars. Mr. Cook's 'Handbook' is extremely valuable for reference as well as for use in the Gallery.

Fords, Howard & Hulbert have begun a uniform reissue of Henry Ward Beecher's sermons under the title, 'Plymouth Pulpit.' The four volumes before us cover the period from September, 1873, to September, 1875. These memorials of a great preacher lack the personal delivery which made his discourses so entertaining and impressive, and will never convey to posterity a just idea of his power in the pulpit, nor certainly of his intellectual capacity.

From the Outing Co., 239 Fifth Avenue, we have 'A History of American Amateur Athletics and Aquatics, with the Records,' 1829–1888, by Frederick Wm. Janssen, in collaboration with officers of the various associations throughout the country. It has a table of contents but no index.

President Adams's annual report on the condition of Cornell University during the past year notes the rapid increase in attendance, with a slight gain from New York State; justifies by the results admission on certificate from approved schools; calls for greater accommodations and an increase of the force of teachers; records the success of the first year of the Law School and the beginning of a system of general heating of the college buildings from one station; and in other ways points out the advance and the pressing needs of the institution. The instructor in physical culture provides some curious graphic charts, comparing the physique of the average American student, the Cornell Freshmen, and the Cornell students of all classes, and exhibiting in divers ways the good effect of gymnastic training.

Prof. Albert S. Cook, of the University of California, has just published a monograph on 'Cardinal Guala and the Vercelli Book' (Library Bulletin No. 10), which marshals all the evidence that would account for the passing of the Codex Vercellensis containing the metrical Anglo-Saxon legend of St. Andrew from England to Italy. Prof. Cook will, if addressed at Berkeley, Cal., send a copy of this brochure to any student of the English language, so long as the edition holds out.

In the October number of the *New England Historical and Genealogical Register* will be found a portrait and biographical sketch of the late Israel Ward Andrews, D.D., well known in the educational annals of the West, and author, among other painstaking works, of the admirable manual of the Constitution of the United States; his last historical address, on the Marietta colony of 1788; a list (following those of Harvard and Yale) of the alumni of William and Mary College who have held official position; and the usual instalment of Mr. H. F. Waters's "Genealogical Gleanings in England," here of principal interest to Virginian families.

The supplement to *Harper's Weekly* for October 6 is occupied with colored political maps of the United States, of the doubtful States, and of New York city, very usefully contrived for present information.

The new gold fields in the Transvaal are the subject of the opening paper by Fr. Jeppe in *Petermann's Mitteilungen* for September. These are mostly in the town of Heidelberg, thirty-six miles south of Pretoria, and are known as the Witwaters Rand Mines. Though work was not fairly begun till late in 1886, there are now 118 companies, with a capital of over $15,000,000; and a town, Johannesburg, of 12,000 inhabitants has sprung up. The machinery in use is chiefly of English make, but is now in competition with American. Judging from the amount of gold mined in the first quarter of the present year, there can be little doubt that the total output for 1888 will be five million dollars' worth. An excellent map of the district, showing the position of the various companies, illustrates the paper, which gives an interesting account of the discovery and development of the mines. Dr. W. Weber contributes a chart with descriptive text of the Red Sea, showing its various depths, and J. Menges takes up the cudgels, apparently successfully, in defence of the African elephant, whose usefulness to the explorer was recently assailed by the well-known traveller, G. Rohlfs. H. Semler continues his discussion of the changes wrought in the flora of California by artificial cultivation, dwelling principally upon the larger fruits, as oranges, apples, pears, peaches, etc.

The second issue of *Sun and Shade* (Photogravure Co., 853 Broadway) is dated October, and a regular monthly issue is contemplated. Like the first, the employment of other processes than the photogravure produces an inharmonious impression. By the former there is a fine portrait of Mr. Edward Atkinson, with which is thrown in a "Study in Statistics," by this writer—a diagram denoting the decline in the rate of interest since 1860, the gain in the purchasing power of wages, loss in the purchasing power of income, etc.

Any of our readers having complete volumes of the *Nation*, bound or unbound, which they are ready to bestow for better preservation and a wider use, are requested to send them to the Reform Club of this city, at No. 12 East Thirty-third Street.

—The portrait of Emma Lazarus, with which the October *Century* opens, will recall to lovers of poetry some firm, vigorous verses, often remarkable for imagination, especially when inspired by the fiery intensity of her Jewish nature. The somewhat full sketch of her life in the body of the magazine relates an interesting early career; but the noticeable point in it is the extraordinary change brought about in Miss Lazarus when the persecution of the Jews in Europe recreated for her the race-idea, which, seizing on her imagination and sympathies, immediately absorbed her life. Literature up to that time had been for her an academic exercise, and, notwithstanding her talents, she had not made a real impression. Now it became the instrument of living ideas, and the increase of her faculty was at once plain. She did more, however, than write: she joined in the actual philanthropic work done in this city in aid of the refugees from foreign hatred, and from that time was identified with a real and an ennobling cause. The fine vitality of her last, and by far her best, literary work was the result of this. The present sketch is one which, by making her personality known, does the best justice to her short career. The article which, next to this, will attract literary readers, is Walt Whitman's notes upon the scenes in the hospital service; they are extracted from his letters home, and retain, therefore, the intense feeling of the time. Whatever may be thought of the author's claim to be a poet, he has remarkably acute powers of observation; there could be no more living transcripts from life than these brief memoranda of dying men and boys, their faces and words, and the way they met death. They are inexpressibly painful; but so clear, so naked a laying bare of the horror of war, has its own definite value. Mr. Kennan's description of the Tomsk forwarding prison is also a very painful picture of misery; and, in view of what he draws from his own observation and official reports, his criticism of Mr. Lansdell's light-hearted account of these matters is a crushing rejoinder. The remainder of the number is rich in excellent articles; Mr. Roosevelt's "Frontier Types," the review of McClellan's military operations in the Lincoln biography, and the account of the dynamite gun, being the more noteworthy.

—"John Wise, the Forgotten American," is the title of the opening paper, by the Rev. J. H. Crooker, in the September number of the *Magazine of Western History*. Very few persons have ever heard the name of John Wise: it will be found in Drake's 'Dictionary of American Biography,' but it is not contained in 'Appleton's Cyclopædia,' it is not mentioned by Duyckinck, Griswold, Frothingham, or even by Mr. Ellis in the 'Narrative and Critical History'; but Prof. Tyler tells us that he "was the most powerful and brilliant prose writer produced in this country during the colonial times," and his gravestone at Essex, Mass., calls him "a star of the first magnitude." He has also received worthy tributes from Dr. J. S. Clark and Dr. Dexter, and Mr. Crooker's article aims, in a more popular presentation, to set forth the two particulars in which the work of the Essex pastor was of de-

cisive and critical importance to the American people. In heading the resistance to the tyranny of Andros, for which he was imprisoned and fined, he first proclaimed the doctrine of no taxation without representation; and a few years later, in resisting the centralizing scheme of the Mathers, he triumphantly vindicated the congregational polity of the New England churches. His 'Vindication of the Government of New England Churches,' published in 1717, contains his matured thoughts upon the subject of church polity, and also that "remarkable exposition of the principles of civil government which made it the text-book of liberty for our Revolutionary fathers." In 1772 this book was reprinted, as an agency in the controversies of the times; and the sale of two editions of a thousand copies each "is one of the most remarkable events in the whole history of the American book-trade." Among the subscribers to the second edition were Samuel Eliot, Nathaniel Appleton, John Scollay, William and Thomas Dawes, Artemas Ward, Rev. Edward Emerson of Concord (who took twenty-four copies), and Timothy Pickering. In the same number of this magazine Mr. George W. Julian calls attention to a wilful passage in Mr. Blaine's 'Twenty Years of Congress,' in which the Republican leaders in Congress are severely censured for organizing the Territories of Colorado and Nevada in 1861 without insisting on the Wilmot Proviso. This might pass, for Mr. Julian admits that he cannot himself defend the concession to the peace panic of the hour (the last months of Buchanan's administration). But Mr. Blaine absurdly uses the incident as a pretext for whitewashing Webster's delinquency in the case of New Mexico in 1850, and for this he is rightly scored by his former political associate. Mr. Julian objects to Blaine's commendation of the Missouri Compromise as "wise and patriotic," and says with truth that "there is no conclusive evidence that his [Blaine's] devotion to the colored race rests upon any inwrought principle or real sympathy."

—In his opening address as President of the Library Association of the United Kingdom, Professor Dickson of Glasgow University made some very pertinent remarks concerning the trouble cataloguers experience in finding the full names of authors, which librarians would like to have copied as widely as possible. He said:

"Another grievance is, that, when we have got our author's name, we have too often but half got it. Why should a man hesitate to give his name in full, or at least—what is most important for our purpose—his Christian name, so that he may at once be assigned to his proper place in the catalogue? Why should librarians, in these days of abounding work, have the trouble of searching army lists, or college calendars, clerical or medical directories, the pages of Lorenz or Kayser, to find out what might be so easily given at first hand? Moreover, why should the half-named author not lay claim in full to the merit of his work, and prevent its being credited to another? And why should he bring ever so many innocents, possessing the same initials, into the counter risk of being credited or discredited with its authorship? There seems no reason why the law of copyright should not require an author to give his name in full. At any rate, the toiling librarian may well ask authors, who have possibly never thought of the matter under this aspect, to facilitate by so simple a process the attribution of the *suum cuique*. Even when we have the name in full, there is difficulty enough in assigning to the owners of the same name through successive generations their respective works, as in the case of the well-known Scotch name of Skinner, where the labors of three generations are accumulated on the head of the venerable grandfather, even in the careful catalogue of the Advocates' Library. Why should our difficulties in this matter be indefinitely multiplied?"

—Speaking of cataloguing, we may say, in continuation of our remarks last week, that the matter of coöperative cataloguing came before the American Library Association in a general discussion of "The Future of Cataloguing," introduced by Mr. Fletcher of the Amherst College Library, who has long been laboring to reduce the cost of cataloguing, always a heavy burden on library funds, by preaching the economy, or indeed the necessity, of working together, In this he has followed the tradition of the Association, and not without practical effect, as shown in the foundation of the Publishing Section and the work that has already been done on the 'Essay Index.' But coöperative cataloguing, like individual cataloguing, is slow in producing visible results. Two other questions were discussed at length—freedom of access to the shelves, and the amount of help which it is right to give to those who are looking up the answers to prize questions. On the first the librarians, though fully alive to the two dangers of theft and of misplacement of books, showed a praiseworthy desire to afford to the public the great convenience of access to the books whenever possible, even at the cost of inconvenience to themselves and of occasional loss. Indeed, both discussions showed the strong desire of the librarians to encourage and facilitate reading and research in every way. There was, perhaps, more difference of opinion on the prize-question matter. At any rate, it was clearly brought out that it is not the business of the librarian to find the *answers* to prize questions: the most he may do is set the inquirer on the right road, and teach him, if he can, how to look up questions himself—a teaching which may have considerable educational value, though we fear such seeds often fall on very stony ground.

PRINCE ADAM CZARTORYSKI.

Memoirs of Prince Adam Czartoryski, and his Correspondence with Alexander I.; with Documents, etc., etc. Edited by Adam Gielgud. 2 vols., 8vo, pp. viii, 336; viii, 367. London: Remington & Co.; New York: Scribner & Welford. 1888.

THE actual memoirs of Prince Czartoryski end in 1806, and form but a portion of these volumes, being supplemented by narrative and documents from various sources, mostly unpublished. The editor has done his work acceptably, and has provided it with an index. The publishers furnish good paper and large print, but seem to have no idea of consulting the convenience of readers by using typographical devices for distinguishing the matter of the memoirs from the editor's additions, letters, documents, and the like. With the exception of extracts from an article of Leigh Hunt's, everything is in one uniform type, which, in the absence of marginal references, makes a confusing medley of various kinds of matter.

Prince Adam Czartoryski was born in 1770 and died in 1861. It may be said that the whole of his long life was ardently devoted to his unfortunate country, and that, if he committed any errors, it was his judgment that was at fault and not his patriotism. He belonged to a family of the highest Polish aristocracy, and his father, Adam Casimir, would have been elected King of Poland in 1764 if Catharine II. had not given her preference to his kinsman, Poniatowski. Aside from their high rank, the Czartoryskis were men of great distinction of character, and always wielded their influence for what they honestly believed to be the truest interests of Poland. Even Carlyle, who cannot find words strong enough to express his withering contempt for every "Polack," accords them the negative honor of mentioning their names several times (in his 'Frederick') without once labelling them with a vituperative epithet.

Prince Adam was educated at home, under private tutors. At the age of sixteen he went, with his tutor, on his first journey abroad, and three years later visited Paris and London with his mother, remaining some time in England, where he made a very favorable impression. In 1791 he entered the army, and in the following year took part in a campaign against Russia. After the insurrection of Kosciusko was suppressed, the estates of the Czartoryski family were confiscated. The Emperor Francis of Austria interceded with Catharine II. to cancel the confiscation, but the Empress required, before entering on any negotiations, that Prince Adam and his brother Constantine should go to St. Petersburg and enter the Russian service. After much deliberation, the family accepted the condition, and in May, 1795, the two young men arrived in St. Petersburg. It was a bitter sacrifice for them, for they had been bred to cherish a passionate love of their country, and an equally passionate hatred for her oppressors. Their reception by the brilliant society of the Russian capital was cordial in the extreme, and "by degrees," says Prince Adam,

"we came to the conviction that these Russians, whom we had instinctively learned to hate—whom we indiscriminately classed as malignant and sanguinary beings, with whom we were to avoid every contact, and whom we could not even meet without disgust—that these Russians were much like other people; that there were among them young men who were witty and courteous, and even kind, so far at least as could be judged from their words; that Russian ladies were very amiable; that, in a word, one could live among Russians without repulsion, and even sometimes feel obliged to give them one's friendship and gratitude."

Russian society was but a reflection of the court. Everything that was said or done had reference to the court, and every important impulse came from the court. The Empress Catharine, in spite of her vices and excesses, commanded the veneration, and even the love, of her subjects. Carlyle calls her "a kind of she Louis Quatorze"; and, in like manner, Czartoryski says that "the idolatry of the inhabitants of St. Petersburg for their female Jupiter was in some sort a reproduction of the adoration of Louis XIV." He also finds "an analogy between the court of the Empress Catharine and that of Louis XIV. in so far that his mistresses played exactly the same part at Versailles as her favorites did at St. Petersburg." The most powerful of them at this time was Plato Zuboff, and to him the young princes had to go first in their effort to have the estates of their father restored. Every day at eleven o'clock Zuboff held a literal levee, and an immense crowd of petitioners and courtiers of all ranks assisted at his toilet. "It seemed almost impossible," says the author, "to be humiliated on finding one's self in a crowd composed of the first dignitaries of the Empire, men of the most illustrious names, and generals in command of our provinces, . . . who, after coming in all humility to bow their heads before the favorite, either went away without obtaining a look from him, or stood waiting like messengers while he changed his dress reclining on a sofa." None of them dared to speak or to be seated.

After spending several months in dancing attendance on influential persons, the two brothers were informed that they were to be presented to the Empress at Tsarskoe-Selo, her

summer residence. They went for instructions to General Branicki, who was in high favor. When they asked him whether they were to kiss the Empress's hand, he replied: "Kiss her where she likes, so long as she gives you back your fortune." He also showed them how to bend the knee. Their reception was a gracious one, and not long after they were appointed officers of Catharine's guard, and were presented with the fortune which had been taken from their father, to whom they returned it by giving him full power to dispose of it. A further appointment as Gentlemen of the Chamber brought the Polish princes into close contact with the Grand-Dukes, the grandsons of Catharine, and led to the lifelong intimacy between Czartoryski and Alexander, who was then but eighteen years old, while his wife was sixteen. Alexander's brother Constantine had just been married, at the age of seventeen, to a princess of Saxe-Coburg.

Prince Adam relates his conversations with the future Emperor. He was deeply moved and surprised that a Russian heir to the throne should entertain sentiments so liberal, humane, and just, and should rejoice at the establishment of the French Republic and wish it success. The attachment thus inspired survived the many disappointments and disillusions of thirty years, and led to important results. Catharine's approval of the intimacy tended to cement it by closing the mouths of objectors. The death of Catharine and the accession of Paul, in 1796, did not interrupt these relations, which were rather confirmed by the appointment of Czartoryski to be aide-de-camp to Alexander. The five years that Paul was suffered to remain on the throne were, in one sense, a reign of terror to his officials and to himself. But the fear which he inspired had some salutary effects. The governors of provinces, being in constant fear of sudden dismissal if any of their abuses were reported to the Emperor, paid more attention to their duties, and in Poland there were fewer acts of oppression and injustice than at any other period of foreign rule. The political opinions of Alexander had so far undergone no change, and, as Czartoryski had obtained a three months' leave of absence to visit his parents, Alexander insisted that before his friend departed he should draft a proclamation to be used during his absence, in case the Grand Duke should be called to the throne during that interval. This proclamation breathed a spirit of liberty and justice, and declared an intention to abdicate after the introduction of the necessary reforms.

In 1798 Paul sent Czartoryski as Minister to the Court of Sardinia, which appointment the latter describes as a disgrace in the guise of a favor. The duties of the Russian Minister at the Court of King Emmanuel were not very arduous, and consisted chiefly in inspiring the King with courage, by assuring him of the friendship of the Emperor Paul, and in sending monthly reports to the Cabinet at St. Petersburg. The only other member of the diplomatic body was Mr. Wyndham. He and Czartoryski used to go to the King's residence every Sunday and holiday. The so-called Minister of Foreign Affairs presented them to the King and Queen; the conversation turned on insignificant subjects, and lasted about twenty minutes. After some jocular remarks, the King would dismiss them, sometimes imitating, in a very comic way, the person of whom he had been speaking. The perambulating court was at this time in Florence, but as soon as news was received of the crossing of the Alps by Napoleon, and of the battle of Marengo, a hasty departure was taken for Rome. From Rome Czartoryski was ordered to Naples, but was recalled home in March, 1801, immediately after the assassination of Paul and the accession of Alexander.

The liberal sentiments of the latter suffered no change when he ascended the throne, but were directed to practical matters, such as reforms in the administration of justice and the establishment of liberal institutions. He surrounded himself with a secret council, composed of young men who sympathized with his views, and of whom Czartoryski was perhaps the most important, and all of whom presently rose to high office. Two or three times a week this secret council met the Emperor to discuss various plans of reform, but for a long time without practical results. In 1802 Czartoryski, the only member of the secret council who had not as yet been appointed to office, was prevailed upon to accept the post of Assistant Minister of Foreign Affairs, making the express condition, however, that he should be allowed to resign the appointment whenever its functions became incompatible with his feelings as a Pole. He was also intrusted with the direction of the schools in Russian Poland, and appointed Curator of the University of Wilna. He attended all the conferences with the Foreign Ministers, and drew up all protocols, despatches, and rescripts. He sometimes wrote incessantly for eight or nine hours at a time. In 1804 he was appointed full Minister of Foreign Affairs, his predecessor in office retiring through ill-health, and urging him to accept the place.

He took office with a project to make the Russian Emperor a sort of arbiter of peace for the civilized world and a protector of the weak and oppressed, so that his reign should inaugurate a new era of justice and right in European politics. In order to reduce this idea to a practical form, he drew up a scheme of policy, which he sent to all the Russian representatives at foreign courts. As long as he remained in office he attempted to direct the course of Russian policy in accordance with such principles, which just fell in with the mood in which Alexander then was, but which could not be carried out without leading to a rupture with France. The immediate occasion of the rupture was the execution of the Duc d'Enghien, which, by the way, was the act that Talleyrand pronounced, in his oft-quoted epigram, to be worse than a crime, in that it was a blunder. This event took place March 20, 1804. France and Russia had been at peace since October, 1801. Czartoryski drew up a note, which was sent to the French Ministry through the Russian chargé d'affaires in Paris, protesting against the deed, and demanding an explanation. The reply of France was harsh and insulting. The diplomatic rupture which ensued was a novel one as to its motive. The Cabinet of St. Petersburg had no direct grievance of its own, but was simply moved to resent a violation of international law. Another anomaly was that the state of things produced was not war, but only a suspension of friendly relations. None of the other powers followed the example of Russia, but in the following year the coalition between Russia and England against Napoleon was formed, and was joined by Austria and Sweden.

The secret instructions given to the special Russian envoy sent to England to negotiate a basis of operations against Napoleon, are remarkable for their liberality and breadth of view. It is suggested that the two powers, while restoring the King of Sardinia to the throne, would be justified in urging him to give his people a free and wise constitution; Switzerland should be given a government based on local requirements and the wishes of the people; the same principle should guide with regard to Holland. Everywhere public institutions should be founded on the sacred rights of humanity and on the spirit of wisdom and benevolence. Such phrases as the following are not what one looks for from the Autocrat of all the Russias, and it may be assumed that the sentiments as well as the language belong to Czartoryski rather than to Alexander, although, perhaps, for the moment, shared by the latter:

"It is in tearing off the masks worn by governments which, for their private objects, alternately have recourse to despotism and to anarchy, carefully separating their interests from those of the people over whom they tyrannize, that we may hope for the sincere assistance of the latter, and produce a general enthusiasm for the good cause whose results would be incalculable. . . . The object would be, first, to attach nations to their governments, by making it only possible for the latter to act for the benefit of their subjects. . . . When peace is made, a new treaty should be drawn up; . . . such a treaty might secure the privileges of neutrality, bind the powers who take part in it never to begin a war until after exhausting every means of mediation by a third power, and lay down a sort of new code of international law, which, being sanctioned by the greater part of the European states, would, if violated by any of them, bind the others to turn against the offender and make good the evil he has committed."

In September, 1805, Alexander sent a second special envoy to England, to obtain her consent to the cession of Hanover to Prussia, which the latter power asked as the price of her coöperation against France. This consent was flatly refused, and some interesting conversations between Pitt and the Russian Ambassador in London are here reported. "All the subsidies," said Pitt, "that Prussia asks for herself, for Saxony, for Hesse, and for the Duke of Brunswick, will be given; we shall be delighted to agree to any other indemnity that Prussia may wish to have: but as for the exchange of Hanover, no Minister would be imprudent enough to make such a proposal to the King, and great care will be taken always to conceal it from him." In a later conversation, Pitt said that the proposal to give up Hanover would either kill George III. or drive him mad, "and that, after losing a sovereign so much esteemed and cherished, the country would no longer consent to bear the enormous sacrifices of money it was making for Continental wars. To provoke so fatal a crisis as the death or insanity of the King would therefore be most ruinous to the interests of Europe." Three months later, after the battle of Austerlitz, Hanover was ceded to Prussia by France, as a bribe for having remained neutral.

In June, 1806, Prince Czartoryski resigned his post as Minister of Foreign Affairs. He had previously addressed to the Emperor several very frank remonstrances on the latter's policy. In addition to the reasons for retiring from office which he therein stated, he had one other very potent one, which he could not state with propriety. The hopes of the Poles had been raised by Napoleon, and it was expected that the latter would strive to give them support against Russia by promising to restore their independence; in that case, Prince Adam could not continue to direct the policy of a state with which his countrymen were at war. But although he had ceased to be Minister, the Prince continued for many years an esteemed counsellor of the Emperor, and used his influence constantly in favor of a reconstruction of Poland. He was present at the negotiations for the Peace of Tilsit (in 1807), when the Duchy of Warsaw was created and placed under the

rule of the King of Saxony; and at the Congress of Vienna, in October, 1814, he played so prominent a part that Lord Castlereagh wrote to Lord Liverpool that the Prince, "although not in any official situation, now appears the actual Russian Minister, at least on Polish and Saxon questions." For more than a year prior to this date his private secretary had been in England trying to enlist public opinion in favor of Poland, and had succeeded in warmly interesting Brougham, who wrote a pamphlet on behalf of Poland, and used his influence in the press and otherwise for the cause.

Space fails us to follow the Prince through all the disappointments which his patriotic hopes were doomed to endure. In 1823 he resigned his post of Curator of the Wilna University, in consequence of the atrocious persecution of the students by the Russian authorities. Two years later, Alexander I. died, and was succeeded by Nicholas. In 1830 Poland revolted, and Prince Czartoryski was elected President. In the war with Russia which ensued, he enlisted as a private soldier, at the age of sixty. After the collapse of the revolution, he proceeded to London. He survived for thirty years, most of which were spent in Paris, and continued to watch for opportunities to aid his country. Perhaps the last service he was able to render it was just prior to and during the Crimean war, when he gave valuable advice to Napoleon III., and, although more than eighty-three years of age, showed a remarkable ability in entering into detail and an extraordinary memory. He died November 15, 1861, and cherished to the last his hopes of his country's resurrection.

The History of Nicolas Muss. Translated from the French of Charles Du Bois-Melly. Harper & Bros.

'EUGENIA; A Friend's Victim,' is a peculiarly nonsensical story of hypnotism told in bad English and rank style. The elaborated but wholly superfluous horrors and mysteries stand in gory masses quite detached from any possible connection with any supposed construction. It might be the work of a schoolboy who had fed and battened upon Conway and Haggard. It is inscribed to "my tried and trusted friend Mr. Frederick Peakes," to whom we extend sincere sympathy, regarding him (and supposing that he must regard himself) as cast for the title-rôle.

'A Counsel of Perfection' is a refreshing novel of a merit quite above the average. There is a grace and delicacy in the style and in the air of the story which recalls that happy hour when was made the acquaintance of Miss Thackeray's 'Story of Elizabeth.' The resemblance ends with these traits, for in the unwilling cynicism of the present volume are touches which recall the elder rather than the younger Thackeray. The characters in 'A Counsel of Perfection' are few, but of a distinctness which never hardens into exaggeration, and shows the work of the artist no less than of the writer. Dr. Casteen, locked up in his church heresies, and living to-day not later than the year 316, is a pendant portrait to the immortal Casaubon. The spinster Lydia, with her child's heart and her lion's courage, is a study of life between youth and middle age which we do not remember to have seen so well done—with so fine heed to the young and warm impulses of such a character and its old and cold judgments, and at the same time with such entire avoidance of caricature. Mr. Denison, aptly described as "one-fourth angel and three-fourths unmitigated bore," and his worldly, shrewd, brainless wife, are admirably clear personalities. Antony Hammond, the apostle of the smooth and comfortable for others as well as for himself, made up of many complex but shallow currents, kind and shifty, is excellently adapted to the post assigned him of modernizing the shrinking Lydia, and bringing the shadows into the story by his fatal inability to stand out of the sunshine. The balance is harmoniously held between the light and the serious both as to places and persons. Dr. Casteen's dim study, the sparkling air of Switzerland, the mossy churchyard of Bishop's Marston, each lends itself in turn finely to the writer's deeper use. The wit that plays through the book keeps the atmosphere free from miasma, and if it does pitilessly light up some ugly troubles that beset humanity, it also brings into cheerful clearness the philosophy which can outlive and live down worse woes than Lydia Casteen's.

That portion of the public which must have a periodically recurring story of a German baronial estate, a golden-haired maiden, a dragon cousin, a Caliban of a lover who is at the last disclosed as a Lord Orville of a husband, may gratify its longing by reading 'In Hot Haste,' unless, indeed, another perusal of its thumbed 'Gold Elsie' or its dog-eared 'Old Mam'selle's Secret' is more convenient, in which case it would not be repaid for any considerable trouble by noteworthy novelties in this later story. To such readers may be left the exquisite bliss of the accustomed. To those whose leisure hours may not be so many, it can do no harm to hint that the baronial estates are always saved from the interloping Jew, that the beardless and unknown hero of the first chapter always turns out to be the bearded conqueror of the last; that the blue-eyed maiden always survives the cruel treatment she receives as governess in the English family; and that Caliban always casts off his superfluous austerities and shows his lamb's nature in the end.

'Fraternity' is truly named "A Romance," but not because its incidents are excessively marvellous, as works of fiction go. Compared with those of many novels, they are every-day matters, though displaying a due share of lost children, lost parents, lost property, and similar stock in trade of the story-teller. The romance lies in the atmosphere of the book, rarefied by the permeating idea of the Fraternity of Man, not as a theory, but a practice. Equality is distinctly denounced as being against reason, the mere trial of it leading to "terrible and futile" ends; but a generous fraternity reducing all "*hurtful* inequality" is the author's remedy for social ills. This theory leads to some apotheosizing of begging as a boon to the giver, which in a romance perhaps finds a natural home. The doctrine of Fraternal Socialism will seem more pointedly put when some author shall be consistent enough not to make all his high-souled paupers turn out to be eldest sons of old families, and his renunciatory young ladies of rank unconsciously marry money. That Edward Haig proves to be a scion of an ancient Welsh family is clearly, in the author's mind, as triumphant a badge of superiority as ever was strawberry-mark upon the arm of rightful prince. We beg to plead with our writer, in the words of his compatriot, Captain Fluellen: "Peradventure, I shall think you do not use me with that affability as in discretion you ought to use me, look you; being as goot a man as yourself, both in the disciplines of wars and in the derivation of my birth and in other particularities."

But with these strictures our grudge against the book ends. It is cause of thankfulness that stories are written in the generous and high-minded tone of this one. The too wild Celtic strain brings compensation in fresh pictures of Welsh scenery, Welsh patriotism, and Welsh home life. The hero will be dear to all who like Kenelm Chillingly and Daniel Deronda, who know that such men do not exist, but who wish they did. Further, it must always be refreshing to pass an hour among ideals, temporarily removed from bread and butter, with men and with women who are not afraid to borrow each other's best qualities, and who, while living by the highest standards, are not perpetually enforcing the right by dwelling upon the wrong.

For such crystalline work one feels renewed gratitude on plunging into the muddy depths of 'A Pure-Souled Liar.' The Liar's declaration in her last moments, of her belief that the true is better than the beautiful, is intended presumably to be the culmination of the book's teaching. Even this white-shining sentiment, however, does not justify the pages which lead to it. Whether they sin more against truth or against beauty might be a question, if it were worth while to add a moment to the noisome hour wasted in their perusal.

The Greek in the soul may be pleasantly fed by reading 'Pictures of Hellas,' differing from the greater number of recent stories of which the scene is laid on classic soil, by antedating them. These offer a nearly unused and a wholly inspiring point of view. One tale goes back to the Pelasgian period, the author himself admitting that little is known of that time, but building upon a single historic fact and the ancient idea of the voice of Fate an impressive and living tale. The scenes of others are laid in Athens, on the Ægean Sea, and in Thessaly, and all are full of color and motion, and leave the reader steeped in the spirit of the times of "the flowering of Hellas," whether under the sky, or in caves of Hymettus, or beneath Athenian porticoes, or in the dwellings of fair Attic maidens.

The 'History of Nicolas Muss' purports to be the account given by a household servitor of Admiral Coligny of the "vigil, feast, and octave of the Saint-Barthélemy of that year, 1572." The bare historic facts connected with these terrible days are so dramatic that dressing them out in story form comes dangerously near an impertinence, and certainly can hardly add to their novelty or interest. M. Du Bois-Melly, however, has escaped the danger as far as is possible by his quaintly worded narrative—well translated into fittingly antiquated English—and there is no doubt that the autobiographic form has a vitality for many minds impervious to the charms of a plain historical recital. The little book, then, will deservedly find a welcome from such readers as like their history sugar-coated and spiced with gossip. The notes, which add to the value of the book, might have been fused with the text in many cases, and so have made a more homogeneous narrative.

GERMAN LITERARY USAGE.

Sprachgebrauch und Sprachrichtigkeit im Deutschen. Von Karl Gustaf Andresen. Fünfte Auflage. Heilbronn: Gebrüder Henninger. 1887.

RECENT years have been fertile in books that aim in their several ways at the purification of the German language and the improvement of German style. Thus we have the well-known 'Wörterbuch der Hauptschwierigkeiten' and the more recent 'Stil-Musterbuch' of Dr. Daniel Sanders, the useful 'Antibarbarus' of Keller, and various other works that might be mentioned. But among all these treatises Andresen's is easily best, whether for the German writer who needs a practical handbook for his own guidance or for the foreign student who may occasionally wish to know how the case stands between the prescriptions of theory on the one hand and the facts of practice on the other. For the fifth edition the work before us has been thoroughly revised, and also reprinted with a smaller page. It is now a handy volume of just 400 pages, exclusive of the long and indispensable index.

In a brief introduction the author defines his position with regard to the nature and competence of grammatical authority. With Horace, he holds that usage must be the final arbiter; if a locution is once firmly established and generally accepted, it is a part of the language, no matter how illogical or ungrammatical it may appear to be. But when is a usage firmly established? How many and what kind of speakers and writers are necessary to accredit it properly? Everybody knows that a particular habit of speech may be at the outset simply the result of ignorance or carelessness or affectation. In such case the new locution always has to make its way, if it makes its way at all, at the expense of something better. Now, here, as Andresen very properly holds, is the right place for the counsels and the remonstrances of the grammarian. While usage is still conflicting, or not yet general, the theorist may and should make himself heard for the furtherance of what is good and the banishment of what is bad from the theoretical point of view. Our author's method is to take up by topics the disputed points of German usage, state and comment upon the rule of the textbooks, and then indicate by means of illustrative quotations how the rule actually fares at the hands of the German people and their representative writers. These quotations are the most valuable part of the book; they are culled from a variety of different authors and newspapers; the names of Goethe, Jacob Grimm, and the Cologne *Gazette* being of the most frequent occurrence.

On the subject of spelling-reform Andresen would go further than the new Prussian rules go, but would stop short of a purely phonetic system. He is of those who hold that one of the functions of orthography is to preserve a record of facts in the history of speech. He likes neither the German print nor the practice of using initial capitals for substantives, but appears to think the cause of reform hopeless—the abandonment of the capital initials even more hopeless than the general introduction of the Latin print. As between "reines Herzens" and "reinen Herzens" our author recommends the former. The weight of contemporary usage seems to be in favor of the weak inflection "reinen." Grimm advocated and used the strong form. Goethe's practice wavers, but, upon the whole, favors the weak form. Here we have to do with a modern innovation (the weak inflection is not found in Luther) which came in originally in defiance of grammar, and is now engaged in a conflict with the older locution. In such a case, argues Andresen, one who wishes to follow the best counsel will do well to take sides with what is historically correct. But this argument, we must observe, loses much of its force unless it is shown that the innovation itself was at the outset fortuitous. If there was a reason behind it—if, for example, it was the result of phonetic analogy, or if it was due to a desire to avoid a succession of sibilant endings—then we have to do with a new "law" crossing the old one and modifying its action, under particular circumstances. In that event, it would be difficult to see why we should be called on to reprobate "reinen Herzens" on historical grounds, unless we were also prepared to reprobate the cause which produced that form from the older one. If this were not so, we could have no peace until we had restored all the grammatical apparatus that ever belonged to our language. To our thinking, it is with the parvenus of language as with other parvenus: when they have been long with us and have acquired a standing in the community, there is nothing for it but to take them on their own merits without inquiring too narrowly into the length of their pedigree. It is only the fresh parvenu, with the marks of a base origin still upon him, that criticism can hope to make any impression upon.

As between "mit gutem rothem Weine" and "mit gutem rothen Weine," our author holds that it is not necessary to decide, since the phrases have different meanings; the latter being equivalent to "mit gutem Rothweine,' whereas the former brings the color into prominence. Our own observation indicates, however, that locutions like "mit langem weissen Bart" are growing in favor even for cases where it cannot be said that the second adjective is, after a fashion, taken for granted, or forms a compound idea with its substantive. Against the growing use of such superlatives as "hochverehrtest," "tieffühlendst," Andresen enters his protest. Probably, the protest will be ineffective in spite of its obvious propriety; at any rate, we find one of his German critics disagreeing with him, and urging that there is a valuable difference between "die hochgestelltesten" and "die höchstgestellten Männer."

Since the days of Adelung the grammatical authorities have, as a rule, counselled against the use of the neuter "es" with a preposition, advocating for example, "dafür" or "für dasselbe" instead of "für es." Andresen repudiates this doctrine, and commends the Cologne *Gazette* for writing: "Das eine der beiden Kinder war von einer Thür, die *über es* gestürzt war, das andere durch einen *auf es* gefallenen Stuhl, beschädigt worden." In the present conjugation of verbs like "blasen," "essen," "dreschen," Andresen recommends the long forms "du bläsest," "issest," "drischest," although usage is all but overwhelmingly in favor of "bläst," "isst," "drischt." On page 76 we find a reference to "the six verbs which exhibit *Rückumlaut* in the preterite," although the best authorities are now telling us that there is not and never was any such thing as *Rückumlaut*. The now very common locution "ich anerkenne" for "ich erkenne an" is objected to by our author, and in this connection the remark is made that usage sanctions neither "er aufersteht" nor "er ersteht auf"; whence the conclusion is inevitable that this verb is not available to express the thought, "he rises from the dead."

Highly interesting are the pages upon the use of illogical or elliptical modifiers, as in "reitende Post," "schwindelnde Höhe," "knieende Bitte," etc. Expressions of this kind were objected to by Adelung, but very many of them are now in use, and Andresen sees no objection to them, although for Goethe's "blasende Instrumente" he thinks it better to say "Blasinstrumente," and for "fallende Sucht" (compare our *falling-sickness*), "Fallsucht." The multiplication of such expressions in modern German may be in a measure due to French phrases like *café chantant*, or to the misunderstood analogy of English *writing-table* and the like. At any rate, they have now become so numerous that Andresen is willing to defend the fish-dealer's advertisment: "Lebende Ankunft wird garantirt." As regards this last phrase, it may be noticed that while in English we might get along with "Live delivery guaranteed," we could hardly tolerate the substitution of "living" for "live." So, too, though we speak of a "dizzy height," we have no provision for a "shuddering height." In general it may be said that the tendency to make an adjective do duty for a phrase or a sentence is more marked in German than in either English or French. We often hear "English lessons" and "Italian tour," but recognize "lessons in English" and "tour in Italy" as better. So in French, but in German "englische Stunden" and "italienische Reise" are almost the rule. Andresen is even able to quote from the *Kreuz-Zeitung* an advertisement in which a noble lady deplores the death of her "unvergesslichen, *langen* Ehemannes," the adjective being intended to signify that the deceased had *long* been her husband.

On the fruitful subject of long and complicated sentences, Andresen has some remarks for which, were there hope that they might do any good, the civilized world should be grateful to him. His collection of syntactical monstrosities on page 319 ff. is one of the most entertaining and at the same time appalling that we have encountered. This familiar vice of German style is analyzed by Andresen, and ascribed to a desire on the part of writers to crowd into the compass of a single sentence, not only an essential thought, but also everything that happens to come into the mind as connected, directly or indirectly, with the thought. To turn off good periods that are at the same time long and involved, is no doubt possible in any language, but to do it requires care, patience, and skill. Unless a writer has a genius for style, his attempt to exhaust all the incidental implications of his thought as he passes by, is more likely to bewilder and repel his reader than to edify him, or to impress him with the mental acumen displayed. Some of the sentences quoted by Andresen have reminded us of the movements of an untrained cur in pursuit of large game: the animal cannot content himself to follow the main scent, but continually scurries off into the bushes upon every rabbit-track that crosses his path, and then, with endless snuffing at this and that, zigzags his way back as best he can to the course he ought never to have abandoned. A single example from the Cologne *Gazette* may serve to point our moral and conclude our notice:

"Wie bekannt, hatte Herr Appellationsgerichtsrat Rottels auf Grund der über die wegen ihres Widerstands gegen die jüngsten vatikanischen Beschlüsse ausgesprochenen Excommunication gegen die Forderung fernerer Steuern Seitens der Kirchenbehörde den Rechtsweg beschritten und das hiesige Friedensgericht No. 2, in welchem der trotz seiner Excommunication Besteuerte die die Execution betreibende Stadtgemeinde verklagte, zu Gunsten desselben entschieden und das Stadtverordnetencollegium sich hierbei ohne Appellation beruhigt, weil die Sache nur die betreffende Pfarrgemeinde, nicht aber die Stadtgemeinde angehe."

Poetry, Comedy, and Duty. By C. C. Everett, D.D. Boston: Houghton, Mifflin & Co. 1888.

THE analysis of the æsthetic and ethical elements in the mind is one of the most interesting subjects of philosophy. It is also one that is so fruitful in absurdities as to make it a great pleasure to meet with a book such as this of Prof. Everett's, in which the whole matter is treated lucidly and with a certain unity running through it. Little claim for real originality would be made for the substance of the volume, although the author's mind plays freely about the material which his scholarship has provided him with: he acknowledges that portions of what he affirms are drawn from Hegel, and he refers other parts of the truth to Schopenhauer; but he has framed his thoughts, however derived, into a consistent and intelligible whole. He takes the idealistic point of view, finds beauty to be an object of contemplation, poetry to be a representative art, with the ideal for its subject. In ethics, similarly, from motives of love and honor and under an obligation of obscure and blended origin, men take that practical attitude towards the ideal which is summed up in the word duty. In the æsthetic branch of the inquiry, the nature of poetry as an art, the poetic aspect of nature, the analysis of tragedy and comedy, are the principal topics, after the subject has been philosophically opened. In these chapters there are criticisms of an acute and thoughtful kind in explanation of those matters which the great masters of formal analysis have advanced, from Aristotle to Kant and Spencer, and it is observable that all are noticed with equal courtesy. Much of the ground is still doubtful. Prof. Everett offers a single suggestion of his own with reference to the fact that incongruities in tragedy give pain and in comedy give amusement: he thinks that the difference lies in this, that the comic incongruities affect only the form, the tragic go further and affect the contents. Comedy passes into tragedy when the results of the action enter into the thought; "nothing is comic to the heart." It is an interesting distinction, and falls in with the logical habits of the author's mind and style.

These matters, however, require too ample illustration in their discussion to be entered upon here. It is necessary only to notice the author's clear and precise method of developing his subject, the absence of all dogmatism and controversy from his manner, the extreme conscientiousness of his thinking, which are distinguishing qualities of his work. Those who are skilled to think and to write like this are few in our day—perhaps because logical discipline is no longer what it was in the old schools.

Books and Men. By Agnes Repplier. Boston: Houghton, Mifflin & Co. 1888.

THIS is one of those books by a reader which are often so delightful a resource in leisure hours. The author is also a good writer, with a pleasant rippling style, and occasionally the sparkle of piquancy on the surface—able enough to hold her own with words; but first of all she is a reader, and this small volume of miscellaneous papers is the fruit of her enjoyment of her library. They are seven in number, and range from the ways of children and parents to the character of Claverhouse; but, whatever the subject, superstition or criticism or sentiment or pessimism, the essay has the same sort of interest. There is abundance of anecdote, usually drawn from history or imaginative literature, which gives the reader a comfortable sense of being familiar with a great many more books than he has ever read; and these illustrations are selected with skill and effectively grouped. If the elder Disraeli had been a reviewer of rather unimportant books, we should fancy him writing in such a style, with this blending of illustrations from widely different sources with good taste and excellent sense in the substance of the thought. The author is by no means the slave of her books: she has the freedom of the little literary citadel which is hers; and her remarks are those of an observant and thoughtful mind, not without a disposition to a certain grave humor which flavors the page. Her advice with respect to children's books we have already commended, and the essay now reprinted seems to us the most useful, and in style the brightest, in the small collection.

Perhaps the volume occasionally suffers from the triviality of its subjects, for many themes are glanced at in its pages; and in such parts, as, for example, with Mr. Edgar Fawcett's opinion of critics, the topic is really so slight that no wisdom in the comment can reconcile us to wasting our time over it. It is not every book that can be made an excuse for such literary recreation as this author delights in, not every writer that can be fitly yoked in the same reference: Mr. Saltus and Leopardi, for example, are not twins of the intellect. There is some disproportion in the author's literary perspective. This, nevertheless, is a delightful new form of the miscellaneous article, and within its limits it reaches real excellence both in matter and form. Moreover, beside its seriousness and its touch of humor, it has a very agreeable weakness for the shapes of old romance—giant-killing and hero-worshipping ghosts that never come to the "materializing" point, and other trifles of the imagination. Altogether, the author affords a fine and full expression of what one may call her private literary life.

Elementary Political Economy. By Edwin Cannan, M. A. Oxford: Clarendon Press; New York: Macmillan. 1888.

THE difficulty of preparing elementary treatises is generally in an inverse ratio to their size, and this is certainly true of the science of political economy. There are large tracts of debatable ground still to be apportioned and regulated, and some even of the most important definitions are yet unsettled. Under these circumstances, an author may present such doctrines as may be called canonical, omitting controversial matter; or he may adopt the views of a certain writer or school, and call them the science. He cannot, within the limits of an elementary treatise, take up controverted points and state opposing theories. It is necessary, in short, to be guilty both of the sin of omission and of the sin of commission. We cannot praise Mr. Cannan more highly than by saying that his sins of both kinds are on the whole of a venial character, and that his merits are conspicuous. He has a strong grasp of the subject, his style is clear, and his method is sensible. His book is not meant for children—indeed, it frequently taxes the attention of readers well acquainted with the subject; but it is never obscure.

The first part of it is devoted to explaining the causes of the wealth of nations, the second part deals with the causes of the wealth of individuals exclusive of the influence of State action, and the third shows how these causes are modified by such action. The first part is excellent, but the others are more open to criticism. The discussion of value is not satisfactory, perhaps for lack of space to make it so, and there are many statements that are altogether too sweeping. Such are the declarations, that where public criticism is freely allowed, State management is as good as that of large joint-stock enterprises; that no man will be restrained from adding to his income by any increase of income tax; and that in the case of excise duties the remuneration of the producers will be diminished directly by the deduction of the tax from their profits. Why did the distillers during our civil war persuade Congress to increase the tax upon whiskey? But, as we have intimated, the necessity of making unqualified statements is the constitutional weakness of elementary treatises, and this book offends less than most of its class.

BOOKS OF THE WEEK.

Allen, J. H. The Tariff and its Evils: Protection which Does not Protect. G. P. Putnam's Sons.
Ames, Lucia T. Great Thoughts for Little Thinkers. G. P. Putnam's Sons. $1.50.
Beecher, Rev. H. W. Sermons in Plymouth Pulpit. 4 vols. Fords, Howard & Hulbert. $1.50 each.

Valrose, Viscount. Hon. Uncle Sam. John Delay.
Vandegrift, Margaret. Little Helpers. Illustrated. Boston: Ticknor & Co. $1.50.

PROTECTIONISM.

The ism which teaches that waste makes wealth. By Prof. Wm. G. Sumner. 16mo, cloth, $1. Postpaid.

HENRY HOLT & Co., 29 W. 23d St., N. Y.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

HAVE NOW READY:

I. BEHIND CLOSED DOORS. By Anna Katharine Green, author of 'The Leavenworth Case,' 'A Strange Disappearance,' etc. 16mo, paper, 50 cents. Cloth, $1.00.

*** This extraordinary story will be found even more absorbingly interesting than the world-renowned 'Leavenworth Case.'

II. MISS GREEN'S COMPLETE PROSE WORKS. Including 'The Leavenworth Case,' 'A Strange Disappearance,' 'Hand and Ring,' 'The Sword of Damocles,' 'The Mill Mystery,' 'X, Y, Z,' '7 to 12,' 'Behind Closed Doors.' Seven volumes, bound in vellum cloth, in box, $7.00.

Of these popular stories, in their several editions, over a quarter of a million copies have been sold.

III. THE SCHOOL PRONOUNCER. Based on Webster's Unabridged Dictionary. A Guide to Correct Pronunciation. By W. H. P. Phyfe, author of 'How Should I Pronounce?' 16mo, cloth, $1.25.

IV. STORIES OF THE ITALIAN POETS, by Leigh Hunt. 2 vols., 32mo, $2.00. KNICKERBOCKER NUGGETS. No. XIV.

"The purpose of these volumes is to add to the stock of tales from the Italian writers, to retain at the same time as much of the poetry of the original as it is in the power of the writers' prose to compass, and to furnish careful biographical notices of the authors."—*Extract from Author's Preface.*

Of the series of "Nuggets," the *Bookmaker* says: "For a long time nothing has been thought out or worked out so sure to prove entirely satisfactory to cultured book-lovers."

V. THE TARIFF AND ITS EVILS, or, Protection Which Does Not Protect. By JOHN H. ALLEN. Questions of the Day, No. 53. 12mo, cloth, $1.00.

"A clearly written and sensible treatise. . . . The chapters on the shipping interest are peculiarly valuable."—*N. Y. Evening Post.*

MACMILLAN & CO.'S

NEW BOOKS.

DICTIONARY OF NATIONAL BIOGRAPHY. Edited by Leslie Stephen Vol. XVI. (Drant—Edridge). Royal 8vo, cloth, $3.75; half morocco, $4.50.

"There are many books on the lack of which no working library is complete, and among the number of such Leslie Stephen's 'Dictionary of National Biography' must have henceforth an assured, conspicuous, and lasting place. Nothing in existence rivals it, and nothing attempts to rival it."—*New York Times.*

THE COMPLETE WORKS OF ROBERT BROWNING. New, Uniform, and Revised Edition. (To be completed in sixteen volumes.) Vol. VI.—Dramatic Lyrics and Luria. Globe 8vo, $1.50.

A POPULAR HANDBOOK TO THE NATIONAL GALLERY. Including, by special permission Notes collected from the works of Mr. Ruskin. Compiled by Edward T. Cook. With Preface by John Ruskin, LL.D., D.C.L. 12mo, cloth, $4.00; half morocco, $4.50. *** Also an edition on large paper, limited to 250 copies. 2 vols., 8vo.

"The book is full of historical and biographical information, and one of its greatest charms is the lavish quotation from the works of Mr. Ruskin, which their author has specially and amiably permitted."—*London Globe.*

BY THE AUTHOR OF 'BIBLE TEACHINGS IN NATURE.'

ROMAN MOSAICS; or, Studies in Rome and Its Neighborhood. By Hugh McMillan, D.D., LL.D., F.R.S., author of 'Bible Teachings in Nature,' 'The Sabbath of the Fields,' etc., etc. Globe 8vo, $1.50.

A TEXT-BOOK OF PHYSIOLOGY. By Michael Foster, M.A., M.D., LL.D., F.R.S., Professor of Physiology in the University of Cambridge. With Illustrations. Fifth and thoroughly revised edition. In three Parts. 8vo. Part 1, comprising Book 1.—Blood; The Tissues of Movement; The Vascular Mechanism. *Ready October 15.*

BY J. H. SHORTHOUSE.

THE COUNTESS EVE. By J. H. Shorthouse, author of 'John Inglesant,' 'Sir Percival,' etc. 12mo. *Shortly.*

Oxford Clarendon Press New Books.

FOSSILS OF THE BRITISH ISLANDS. Stratographically arranged. Part 1. Palæozoic, Cambrian, and Silurian Species. By Robert Etheridge, F.R.S. 4to, $7.50.

ELEMENTARY POLITICAL ECONOMY. By Edwin Cannan, M.A., Balliol College, Oxford. 16mo, 25 cents.

"Mr. Cannan displays a complete mastery of the essential elements of his subject. . . . One of the most suggestive books which have appeared on the subject for some time."—*Pall Mall Gazette.*

AN INTRODUCTION TO LATIN SYNTAX. By W. S. Gibson, M.A., late Exhibitioner of Balliol College, Oxford. 16mo, 50 cents.

A LATIN PROSE PRIMER. By J. Y. Sargent, M.A., Fellow and Tutor of Hertford College, Oxford. 16mo, 60 cents.

*** This is intended to be used as a companion to 'Easy Passages for Translation into Latin,' by the same author.

NEW EDITION OF BUCHHEIM'S MODERN GERMAN READER. PART I.

MODERN GERMAN READER. A Graduated Collection of Extracts in Prose from Modern German Writers. Part I. With English Notes, a Grammatical Appendix, and a complete Vocabulary. 16mo, 60 cents.

"Of the Notes it is hardly possible to speak too highly."—*Athenæum.*

J. B. Lippincott Company,

715 and 717 Market St., Philadelphia.

SECOND-HAND

ENGLISH BOOKS.

Extensive and very interesting additions to our stock have recently arrived, including desirable editions of standard authors, beautifully illustrated works on botany, natural history, etc., and many rare and out-of-the-way books, some of them in fine bindings: comprising recent purchases abroad and from libraries. Prices moderate. Inspection invited.

G. P. PUTNAM'S SONS,

LONDON, 27 King William St., Strand. NEW YORK. 27 & 29 West 23d St., Near 5th Ave.

WILLIAM CRANSTON LAWTON

Will accept a few engagements for lectures on the Greek Drama, including such translations as have appeared in his recent Atlantic essays. Address Cambridge, Mass.

SCHOOL BOOKS IN FOREIGN LANguages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals. CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

HOUGHTON, MIFFLIN & CO.'S SATURDAY BOOKS.

The Poetic and Prose Works of John Greenleaf Whittier.

New Riverside Edition, from entirely new plates. With Notes by Mr. Whittier. The Poetic Works in four volumes, crown 8vo; the Prose Works in three volumes; uniform in all respects with the Riverside Edition of Longfellow's Works. With two etched Portraits and three Steel Engraved Portraits of Mr. Whittier. The set, seven volumes, $10.50; half calf, $19.25; half levant, $28.00.

Volumes I. and II. of Poetic Works now ready. Crown 8vo, cloth, gilt top, $1.50 each.

The Peckster Professorship.

A Story by J. P. Quincy. 16mo, $1.25.

This story possesses peculiar interest for students of occult forces and curious incidents. It is written in admirable style, and has an atmosphere of high breeding which is by no means too common.

After Noontide.

Selected and edited by Margaret E. White. 16mo, gilt top, $1.00.

This little book contains passages chosen [illegible] excellent judgment to add sunshine to the afternoon.

Realistic Idealism in Philosophy Itself.

By Nathaniel Holmes, author of 'The Authorship of Shakespeare.' 2 vols., crown 8vo, $5.00.

Judge Holmes is well known for the ability and acumen of the work in which he has discussed the authorship of Shakspere. He brings to the present work great maturity of thought, and the results of long study upon questions of a philosophical character.

Dante's Divine Comedy.

Translated into English Verse, with Notes and illustrations, by John Augustine Wilstach, translator of the Complete Works of Virgil. 2 vols., crown 8vo, $5.00.

Mr. Wilstach is known to the literary and classical world by his translation of Virgil. He has now prepared, upon the same plan, a translation of the *Divina Commedia*, to the study of which he has given years of careful and critical labor, and his work cannot fail to challenge the attention of all who are interested in Dante's great work.

*** For sale by all Booksellers. Sent by mail, post-paid, on receipt of price by the publishers.*

LA FRANCE.

NOTES D'UN AMERICAIN RECUEILLIES ET MISES EN ORDRE PAR
A. DE ROUGEMONT.

An entertaining and instructive reading-book for French classes. Cloth, 188 pages, $1.00.

From Yale College.

"I shall take every opportunity that may present itself to recommend its use."—*Prof. W. D. Whitney.*

"In seventeen short chapters we are told (in French) all about the soil, climate, population, industries, social classes, and principal cities of France; and in twenty-two chapters more, the educational system, the language and universities, the literature, the arts, the sciences, religion, and domestic life of France are discussed."—*The Critic*, New York.

Deutschland

UND DIE DEUTSCHEN. *The* LAND *where German is spoken, and the* PEOPLE *who speak it.* Cloth. $1.00.

An excellent, most useful, and attractive reader for students of German.

"I am very much pleased with 'Deutschland.' It is comprehensive, compact, and practical, and few can read it without entertainment and profit."—*Prof. W. Wells, Union College.*

"I do not see how this work can fail of a generous acceptance, especially when everything pertaining to Germany awakens among us such general interest."—*Prof. Th. L. Angell, Bates College.*

Specimen copies of either book sent to teachers for examination for 50 cents. Liberal discount on introductory orders.

Elwall's Dictionary.

English-French and French-English.

"The newest, most complete and precise, most satisfactory ever published" (1888).

B. M. DAVIES, B. R. WHEELER, ALBERT H. HORTON, SAMUEL T. HOWE, S. L. LEAVITT, Directors.

We, the undersigned, hereby certify that we have carefully verified the above statement and find the same correct.
RANKIN MASON, BYRON ROBERTS, Auditors.

I, H. E. BALL, President of The Kansas Investment Company, do solemnly swear that the above statement is true to the best of my knowledge and belief.
H. E. BALL, President.

State of Kansas, Shawnee County, ss.
Subscribed and sworn to before me, this 30th day of April, 1887. JOHN P. GOGGIN, Notary Public.

If you are seeking an investment for your funds where they will be, first of all absolutely secure, and secondly, pay you a rate of interest that is higher than is usually obtainable for them in the Eastern loan markets, we would like to have you address us at our home office in Topeka, Kansas, or at 101 Devonshire Street, Boston, Mass.

We have been in business since 1879, and have loaned several Millions of Dollars. We have never lost a dollar we have loaned, nor have we ever been compelled to press a foreclosure to a sale.

Write for our pamphlet descriptive of our Saving Fund Trust Deposit Certificates.

SAFE INVESTMENTS.

Capital, $750,000,
Surplus, $355,016.

Principal and interest both fully guaranteed by capital and surplus of $1,105,016. In seventeen years of business we have loaned $11,494,600, paying from interest. $7,056,800 of interest and principal have been *returned to investors without delay or the loss of a dollar.* Real Estate *First Mortgage and Debenture Bonds and Savings Certificates* always on hand *for sale* —In savings departments, in amounts of $5 and upward; in the mortgage department, $300 and upward. Full information regarding our various securities furnished by

PUBLISH THIS WEEK:

OMITTED CHAPTERS OF HISTORY, DISCLOSED IN THE LIFE AND PAPERS OF EDMUND RANDOLPH. By MONCURE D. CONWAY. Octavo, cloth, with portrait. $3.00.

CHIEF CONTENTS.—The Randolphs—"A Child of the Revolution"—The Washington Family—The Virginia Convention of 1777—The First Attorney-General of Virginia—Congress 1780-1782—The Estates of Jefferson—Correspondence with Washington—Randolph's Draft of a Constitution—The English and American Constitutions—The Last Struggles of Sovereignty—How Virginia was Carried for the Constitution—Launching the Constitution—The First Attorney-General—The Founding of Religious Freedom—Randolph and Jefferson—Secretary of State, 1794—Fauchet—A Fatal Victory—The Intercepted Letter—The Ordeal—Revelations from English Archives—A Suspended Sword—Confessions Précieuses—The "Overtures"—Mr. Wolcott—Col. Pickering—Washington in Judgment—Germanicus in Exile—The Fictitious Default—A Last Tribute to Washington—The Brave Broken Heart.

BRITISH LETTERS: ILLUSTRATIVE OF CHARACTER AND SOCIAL LIFE. Edited by E. T. MASON. Three volumes, 16mo. Uniform with 'Humorous Masterpieces' and 'Prose Masterpieces.' Cloth, extra. $3.75. Vellum cloth, gilt top. $4.50.

The selections for this work have been made with a view to present bright and attractive aspects of life and character. The letters are arranged in groups, under the headings, Town-Life, Country-Life, Adventure, Manners, Self-Portraiture, Home-Life, Anecdote, etc., etc.

A HISTORY OF GREECE. FROM THE EARLIEST TIMES TO THE IONIAN REVOLT. By EVELYN ABBOTT, M.A., LL.D., Fellow of Balliol College, Oxford. Octavo, cloth, extra. $3.00.

CHIEF CONTENTS. — I. Hellas — II. The Earliest Inhabitants—III. Migrations and Legendary History—IV. The Asiatic Coast and the Islands of the Ægean—V. The Homeric Poems—VI. The Spartan State—VII. Argos—Arcadia—Achæa—VIII. The Messenian Wars—IX. Early Attica—X. Northern Greece—XI. The Greek Colonies—XII. The Tyrants—XIII. Solon—XIV. Sparta in the Sixth Century—XV. Pisistratus and Clisthenes—XVI. The Greeks in the East.

AMERICAN ORATIONS. From the Colonial Period to the Present Time. Selected as specimens of eloquence and with special reference to their value in throwing light upon the more important epochs and issues of American History. Edited, with introduction and notes, by ALEXANDER JOHNSTON, Professor of Jurisprudence and Political Economy in the College of New Jersey. Large-paper edition, limited to 600 copies. Three volumes, octavo, with twenty-one portraits on steel, uniform with the large-paper edition of 'Prose Masterpieces.' $7.50.

"An admirable idea, admirably executed."—*Boston Advertiser.*

QUICK COOKING. A volume of Culinary Heresies. By one of the Heretics. 16mo, cloth, $1.00.

☞ New list of publications for the present season sent on application.

Scribner & Welford's

NEW BOOKS.

Lyrics from the Song-Books of the Elizabethan Age.

Edited by A. H. Bullen. New and revised edition in one volume. 16mo, gilt top, uncut edges, cloth, $1.50.

Irish Pictures.

DRAWN WITH PEN AND PENCIL.

With numerous illustrations. Imperial 8vo, cloth, $3.50.

The volume of the Pen and Pencil Series for 1888. In the engravings, which will be more numerous than in most volumes of the series, all the characteristic features of Irish architecture, art, scenery, and life will be depicted. In the letter-press special attention will be paid to the natural features, social customs, etc., exhibited in this remarkable country.

*** All previous volumes of the Pen and Pencil Series on hand.

John Standish.

OR, THE HARROWING OF LONDON. By the Rev. E. Gilliat. With numerous colored Illustrations. Crown 8vo, cloth, $2.00.

A remarkably interesting story of the time of the rebellion of Wat Tyler, reproducing, accurately and vividly, the manners and life of the English people of that day. The heroine of the story is Calote, the daughter of the poet Langland, and among the other characters are Chaucer, Gower, Langland, King Richard II., and the Fair Maid of Kent.

Mark Rutherford.

THE AUTOBIOGRAPHY OF MARK RUTHERFORD; and Mark Rutherford's Deliverance. With a New Preface, and the Addition of another paper. Second and Cheaper Edition, in One Volume. Crown 8vo, Cloth, $2.25.

The Life and Adventures of Edmund Kean, Tragedian.

By J. Fitzgerald Malloy, author of 'Life and Adventures of Peg Woffington,' 'Court Life Below Stairs,' etc. 2 vols., crown 8vo, cloth, $5.00.

"A really good biography of the gifted actor, whose life was so full of dramatic contrasts, and c me to so sorry an ending: a full, fa'r, carefully studied record, embellished, too, with sketches of the great little man's contemporaries eminently readable and sympathetic."—*London World.*

The Life of Benvenuto Cellini.

Newly translated into English by John Addington Symonds. With portraits. Revised and cheaper edition. 2 vols., crown 8vo, handsomely bound in cloth, $3.00.

"As a piece of workmanship, Mr. Symonds's translation deserves to rank among the best translations in the English language."—*London Athenæum.*

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE.

With Dictionaries and other Books of Reference.

Comprising in all translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin and Greek,

700 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

VICTOR HUGO'S DRAMATIC WORKS. HERNANI—RUY BLAS—THE KING'S DIVERSION. Translated by Mrs. Newton Crosland and F. L. Slous. $1.40.

THE LETTERS AND WORKS OF LADY MARY WORTLEY MONTAGU. Edited by her great-grandson, Lord Wharncliffe; with additions and corrections derived from original MSS., Illustrative Notes, and a Memoir by W. Moy Thomas. New Edition, Revised, in Two Vols., with Portraits. $4.

"A most convenient reprint of Mr. Moy Thomas's admirable edition."—*Athenæum.*

AN EGYPTIAN PRINCESS. An Historical Novel. By Georg Ebers. Translated by Emma S. Buchheim. $1.40.

"The translator's rendering is easy and elegant."—*Morning Post.*

ADAM SMITH'S THE WEALTH OF NATIONS. An Inquiry into the Nature and Causes of. Reprinted from the Sixth Edition. With an Introduction by Ernest Belfort Bax. Two vols., $4.

SENECA (L. ANNÆUS) ON BENEFITS. Addressed to Æbutius Liberalis. Translated by Aubrey Stewart, M.A. $1.40.

"This is a faithful rendering of the 'De Beneficiis' in plain but Academic English."—*St. James's Gazette.*

RANKE'S HISTORY OF THE LATIN AND TEUTONIC NATIONS. Translated by P. A. Ashworth. $1.40.

HEINE'S TRAVEL-PICTURES. Translated by Francis Storr. $1.40.

"Mr. Storr's brilliant version."—*Academy.*

GOETHE'S CORRESPONDENCE WITH ZELTER. Selected, Translated, and Edited by A. D. Coleridge, M.A. $1.40.

THE STUDENT'S HANDBOOK OF HISTORICAL GEOLOGY. By A. J. Jukes-Browne, B.A., F.G.S. $2.40.

PAUSANIAS'S DESCRIPTION OF GREECE. Translated by A. R. Shilleto, M.A. 2 vols. $4.

HOFFMANN'S TALES. The Serapion Brethren. First Portion. Translated by Lieut.-Col. A. Ewing. $1.40.

HAUFF'S TALES. The Caravan—The Sheik of Alexandria—The Inn in the Spessart. Translated by S. Mendel. $1.40.

GOLDSMITH'S WORKS. A New Edition. By J. W. M. Gibbs. 5 vols. $7.

A SELECTION.

ANTONINUS, THE THOUGHTS OF M. AURELIUS. $1.40.
ADDISON'S WORKS. 6 vols. $8.
BAX'S MANUAL OF THE HISTORY OF PHILOSOPHY. $2.
BOSWELL'S LIFE OF JOHNSON (Centenary Edition, edited by Napier). 6 vols. $8.40.
COLERIDGE'S WORKS. 6 vols. $8.40.
FAIRHOLT'S COSTUME IN ENGLAND (Dillon). 2 vols. $4.
LESSING'S LAOKOON. Translated.
LESSING'S DRAMATIC WORKS. 2 vols. Translated.
MILTON'S PROSE WORKS. 5 vols.
MOLIERE'S DRAMATIC WORKS. 2 vols. Translated. $4.20.
PEPYS'S DIARY. 4 vols. $8.
PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

*** *The above sent upon receipt of advertised price. Catalogues of our regular stock, also full lists of all Bohn's Libraries, will be mailed, if desired, to those interested. New catalogue of choice and rare books ready.*

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

Ex-Secretary McCulloch's Reminiscences.

Men and Measures of Half a Century:

SKETCHES AND COMMENTS. By Hugh McCulloch, Secretary of the Treasury in the Administrations of Lincoln, Johnson, and Arthur. 8vo, $4.00.

No book published in this country for many years contains more of interest to the general reader than this work by a distinguished American whose public career extends back for fifty years.

From an extended review in the Boston Herald.

"Hardly any other volume of contemporary memoirs is entitled to greater consideration than this. There is a great deal of insideness to these reminiscences. They come from one whose judgment was keen, clear, and accurate, and whose opinions are entitled to great weight. We have had political reminiscences, and the story of the war has been told by some of the great commanders, but it is doubtful whether any other volume on public affairs is more informing and reveals more of what at the time were state secrets than this one."

"It is of exceptional public interest, and a work of no slight mark for its enlightened views."—*Brooklyn Eagle.*

"One of the most valuable and interesting contributions to the historical literature of our time."—*Washington Post.*

PUBLISHED TO-DAY:

Children's Stories of the Great Scientists.

By Henrietta Christian Wright. With 8 full-page portraits. 12mo, $1.25.

Miss Wright, the author of two very popular books for children, has written brief, entertaining biographies of sixteen of the world's great scientists, presenting graphic pictures of the men and their times, and explaining, in clear, simple language, the nature and importance of their discoveries. The narratives are fresh and animated, and well designed to interest and instruct boys and girls.

Stuff and Nonsense.

By A. B. Frost. New edition. With additional illustrations and sketches by the author. 8vo, $1.25.

Mr. Frost has prepared a new cover and a number of additional drawings for this fresh edition of his amusing book, some of the old illustrations being also redrawn.

"There is at least a bushel of fun in the book. And it is honest, wholesome fun from cover to cover."—*Boston Traveller.*

DARLEY EDITION.

Reveries of a Bachelor;

OR, A BOOK OF THE HEART. By Donald G. Mitchell ("Ik Marvel"). New edition, with F. O. C. Darley's original illustrations printed in tint. Square 8vo, $3.00.

"It is one of the most tender and touching works in our literature. It must be read as a consummate, artistic, gem-like whole."—*New York Tribune.*

Heroes of the Olden Time.

By James Baldwin. 3 vols. 'A Story of the Golden Age,' 'The Story of Siegfried,' both fully illustrated by H. Pyle; and 'The Story of Roland,' fully illustrated by R. B. Birch. Each, 12mo, $1.50; the set, $4.00.

"Mr. Baldwin's work in the 'Golden Age,' as in 'Siegfried' and 'Roland,' is of exceptional merit, and is to be classed with the 'Tanglewood Tales' of Hawthorne rather than with the average story for the young. Mr. Pyle's drawings are of great artistic excellence and of genuinely illustrative character."—*Providence Journal.*

The Nation.

NEW YORK, THURSDAY, OCTOBER 18, 1888.

The Week.

SECRETARY FAIRCHILD'S speech at the great meeting in Wall Street on Saturday was one of the pearls of the year's debate. It was temperate and convincing in argument. It dispersed and scattered all the charges brought against his employment of the Treasury surplus. It knocked Mr. Blaine once more "into a cocked hat." It offered a delicate poser to Senator Allison, and wound up finally with a healthy appeal to the self-reliance of the American people. Dealing with the question of "pauper labor," he brought his own former experience as a member and officer of one of our charitable organizations into service to show that we have no need to go to Europe for edification, and that, whatever be the cause of pauperism, it is quite certain that protection does not protect us from it. There was just sufficient admixture of humor in the speech to relieve it from dryness, but not enough to distract attention from the logical sequence of the argument. The Secretary certainly made a hit when he said that if he had known that he should be liable to impeachment in case Mr. Blaine were ignorant of the law, he would never have accepted the office. He made another when he said that if Senator Allison would offer any bonds to the Treasury upon which 2 per cent. interest could be realized, they would be thankfully accepted. In short, the speech was a telling one all the way through. Its statements of fact correspond with what business men already knew. The arguments drawn from the facts correspond equally with the gathering drift of public opinion. In short, the speech has the material for a first-rate campaign document, and we are convinced that it will have a marked effect on the vote of this city and State. If any people have held the notion that Mr. Fairchild is a mere routine officer and calculating machine, without ideas or the power of expressing them, such misconceptions will be pretty generally dispelled.

Mr. Blaine's speech at New Albany, in reply to Secretary Fairchild, was as disreputable and brazen as anything he has uttered in the present campaign. Mr. Fairchild had taken pains to explain why he did not begin to buy bonds at a premium before Congress had interpreted for him the act of 1881, which was supposed to authorize such purchases. He said that he doubted his authority, and that he asked Congress to affirm or construe the act as soon as the session began last December. Doubting his authority, he was compelled to deposit the surplus in the national banks meanwhile. He said also that the condition of things was so strange and anomalous that he could not be satisfied with his own action, whichever course he might take, and that he did not blame others who were not satisfied with it. Now, what does Mr. Blaine say to all this? He ignores it completely and insinuates a falsehood. He says:

"Mr. Fairchild does not frankly and manfully confront the issue. He does not state to the people how the banks could afford to buy Government bonds when the Government itself could not afford it. If it was an advantageous proceeding for these banks to invest $60,000,000 in Government bonds, why was it not still more advantageous for the Government to do it? I press this question upon Mr. Fairchild, for he has not answered why, if the banks could make 2 to 2½ per cent. upon the purchase of United States fours, the Treasury Department could not make as much [cheers], when by doing what the banks did he could have wiped out $60,000,000 of the public debt. I press this question, not only because it is a pertinent question, but it is a question asked by one of Mr. Fairchild's most distinguished predecessors."

The answer to this rigmarole is that the banks bought their bonds and received their deposits *before* Congress relieved the Secretary's doubts as to his legal power to buy bonds at a premium for other purposes than the sinking fund. Why, asks Mr. Blaine, could not the Government afford to pay a premium if the banks could afford it? "I press this question upon Mr. Fairchild," he continues, "for he has not answered why, if the banks could make 2 to 2½ per cent. upon the purchase of United States 4s, the Treasury Department could not make as much." Mr. Fairchild had explained why, with the utmost clearness and fairness. If Mr. Blaine had the Secretary's speech before him when he replied to it, he told a deliberate lie. If he did not have the speech before him, he ought to have known what the explanation was, because it was a matter of general discussion in the newspapers and in Congress for months. Perhaps the Secretary made a mistake in his interpretation of the act of 1881. He admits that he may have erred, and he only asks that the truth should be told about it. But we shall not get that from Mr. Blaine. The Greatest Living Statesman (or Humbug) jumped at a conclusion which was contrary to the facts, as he did in regard to the English savings-bank deposits, and now he finds it necessary to support his false conclusion by fresh falsehoods.

It is evident already to every close observer of the present political campaign that the Republicans have wofully deceived themselves about their main reliance for success, namely, their ability to frighten the working classes by the argument that a reduction of Federal taxes means a reduction of wages—in other words, that American workingmen earn better wages on the average than most European workingmen solely because of our protective duties. It is retributive justice that this failure of a sophistical argument is due to the real cause of the better financial condition of American wage-earners, that is, to their greater intelligence. If the questions which are under discussion in this year's campaign were argued before constituencies of a low order of intelligence, it would be easy to convince them, by the mere statement, that because wages are higher here, and because we have a high tariff, therefore the wages depend on the tariff. To demonstrate the error of this proposition requires an argument which will attract the attention and appeal to the reason only of men who can think for themselves. The tariff reformers hold that the main reason why American workmen get better pay than their European fellow-craftsmen in most branches is because they work with more intelligence, produce better results in a given time, and so are "worth more" to their employers. The Democrats, under President Cleveland's lead, have honored American workingmen by placing faith in their ability to understand the right of this great question, and the early indications from Maine and Newark have proved that they have not overestimated the American workingman's intelligence.

The use of the "pay-envelope," which is intended to express the wish of the employer that his employee shall vote the Republican ticket, if not to threaten him with the loss of employment if he fails to do so, was undoubtedly one of the contributing causes of the Republican defeat in the Newark election. No native-born American citizen, and no foreign-born citizen who has been here long enough to imbibe ideas of independence, likes to be told how he ought to vote by anybody who stands to him in the relation of employer, or creditor, or landlord, or in any relation which carries the suggestion of power and coercion. The first thought conveyed by the pay-envelope is that the employer wants the employee to do something over and above what the contract of employment calls for. There is no other significance to the pay-envelope. If it is merely desired to distribute campaign documents for information and enlightenment of the voters, there are a hundred ways of doing this that would not offend the workingman's sense of political freedom. The post-office is a ready means of conveying such literature. Boys may be employed to hand documents to the men as they come out and go in to their work, or to leave them at their places of residence. The methods of reaching all intelligent voters without putting the imputation of servility upon them are endless. But when a man's wages, fairly earned, are handed to him in a piece of paper stamped with words signifying how he should vote, the suggestion comes to him that his vote and the money are linked together, or that it is desired that they should be. If the amount of the wages is unsatisfactory (and it generally is), the bitterness arising from this fact is apt to be heightened by receiving it in an envelope which calls for a vote in addition to the labor performed. We do not wonder that some of the more independent employees upon whom the pay-envelope has been "worked," have positively refused to

receive their wages in that shape. We think that the Republican managers have considerably undersized the manhood of the American workingman in this instance, and that they will be unpleasantly reminded of their mistake on election day.

An excellent feature of the New Jersey election this year is the fact that there will be no chance for the defeated party to cry fraud over the returns from Jersey City and Newark, as the Republicans have so often done in the past. The new election law compels every voter in those cities to register in person, and requires the polls to close at sunset. The Philadelphia *Press* the other day said of this law that "it will cut off from 1,500 to 2,000 of the Democratic votes that have heretofore been fraudulently cast in Hudson County, and probably a proportionate number in Newark," which returns nearly as large a poll as all Hudson County. The result of last week's election in Newark, however, would indicate that the Republicans have greatly exaggerated the amount of fraudulent voting in these quarters. It is universally conceded that no frauds were perpetrated this year, and yet the vote shows a great increase over the corresponding election of four years ago. The same candidates headed the respective tickets in the two years, and their votes compare as follows:

	1884.	1888.
Peddie, Rep.	13,511	13,851
Richmond, Dem.	11,892	14,556

It will be seen that the total vote not only shows no falling off, from the absence of fraud or any other cause, but that, on the contrary, there is an increase of 3,004, of which 2,664 was secured by the Democrats. Newark, by the way, ranked ninth among the manufacturing cities of the country, according to the last census.

The issue of the forged quotations from the English press by the Republican clubs and committees continues with unabated vigor. They are sent to us every day in bundles, by persons to whom they have been forwarded, or who have procured them at the rooms. We should be ashamed to call attention to them so often if it were not that they are the chief feature of the Republican campaign literature, showing that more reliance is placed on them than on anything else to influence the working-class voters. We have endeavored, whenever it was possible, to bring home the responsibility for their issue to individuals, so as to appeal to the individual conscience or sense of shame, but with only indifferent success. In fact, the eagerness with which respectable men, in good business and social standing, partners in large houses, and members of churches, set them afloat, is a curious phenomenon, but not more curious than the silence of the ministers and other moralists who are going to vote the Republican ticket. From not one of these latter, so far as we know, except Mr. Joseph H. Walker of Worcester, Mass., has there come one word of protest against this shocking exhibition of party decadence and immorality. The *Evening Post* sent a reporter to call the attention of Mr. John F. Plummer of the house of John F. Plummer & Co., of 345 Broadway, and the attention of Mr. W. B. Fuller of the house of H. B. Claflin & Co., President and Vice-President respectively of the Harrison and Morton Dry Goods Club, to the fact that the club was issuing forged quotations in great quantities, and to ask them what they thought about it. Both these gentlemen absolutely declined to say a word on the subject, and one was rather abusive. Shame or regret they did not seem to feel in the least, although were they to issue these forgeries in the course of their business, for the purpose of procuring the smallest sum of money or thing of value, they would both be sent to the penitentiary, amidst general approval. Now, how is it that such men as these think nothing of forgery, with the view of deceiving poor voters on what ought to be the most solemn duty of their year, while they would not for worlds use forgery to make a thousand dollars? We commend this question to the earnest attention of their pastors.

The First Ward Republican Club, No. 5 Broadway, issued on Thursday, and presumably had been issuing previously, a bundle of campaign documents, containing not only the various forged quotations from English papers, but the *Emancipator*, a weekly containing one or two illustrations, of which the "Editor and Proprietor" is "Prof. R. C. Mezzeroff." Mezzeroff is, we believe, a Russian by birth, and has been long notorious in this city as an Anarchist of the Donovan Rossa type. But he is a man of much more education than Donovan, and actually opened a school here to teach the nature and use of dynamite as a weapon of political warfare, and in fact proclaimed himself the author of a plan by which he could destroy a city like London in a very few minutes. He is, indeed, a more dangerous wretch by far than John Most. That he is now a furious Protectionist was to be expected, but that he should be the friend, and ally, and probably paid agent of the Republican party, is something which we did not expect; for is it not a party with "a majestic history," the party of Lincoln and Seward, and Chase and Sumner and Andrews? What *does* Dr. Storrs say to this, if he has already stomached the alliance with "Pat" Ford, another dynamiter, and deserter to boot?

The genesis of the famous London *Times* quotation about the use which England can make of an Irishman (or the Celt) by sending him to America to vote for Free Trade, is disclosed at last in a letter to the *Evening Post* from a gentleman in Brooklyn, who has taken the pains to trace it from the *Tribune* office to the Yale Publishing Co., and thence to the office of Pat Ford's *Irish World*. Pat told this inquirer finally that the quotation was never in the London *Times* at all, but was published fifteen or twenty years ago in a pamphlet entitled 'Why Ireland Is Poor,' written by John F. Scanlon of Chicago, and published by Henry Carey Baird of Philadelphia; or rather that this was "the gist" of the pamphlet. Of all the explanations offered this is the most reasonable. Scanlon is or was a Head Centre of the Fenians. Ford would be pretty certain to be acquainted with his writings. The evolution of the quotation from a Fenian pamphlet to the editorial columns of the London *Times* is more remarkable than anything in the Darwinian system, but it is too much to expect that the circulation of the lie can now be stopped even among those who know it to be false.

Senator Allison, in his new rôle of high-tariff man, overlooks some things that he ought to be reminded of. For example, in his speech on Monday week, while arguing that the Senate bill will save to the consumer $6,000,000 in sugar, which would otherwise go to the refiners, he said, "Six millions to whom? Where will it go?" And then he proceeded to show that it will go to the consumer. But why not let it go to the wage-worker along the usual path *via* the bank account of the sugar refiner? That is the approved high-tariff method of disposing of a surplus. Besides, who knows but that the foreign sugar-growers and refiners will first crush out the domestic ones by lower prices, and, having accomplished their fell purpose, put up their prices again to an extortionate figure, to the great injury of the American consumer? We find that Mr. Allison has not got rid of all the bad stuff that he put into his great speech of March 24 and 25, 1870.

The chances of Mayor Hewitt's reëlection have been greatly improved by the action of the Republican County Convention last Thursday. Nobody can look at the ticket which it put in the field, and believe that the men who nominated it have the remotest idea that it can be elected. The nominee for Mayor is a thoroughly respectable man, who was chosen because nobody more desirable would accept the place. Many of his associates on the ticket have been put up and defeated in previous elections. Some of them have been "traded off" at the polls by their closest friends, and will be so treated this year if opportunity can be found. Diligent search has been made during the past week for a rich and respectable candidate who would pay a handsome "assessment," give a color of sincerity to the Republican professions of a belief that there is a chance for success, and thus furnish a basis for a profitable "deal" at the polls. Former unhappy experience had, however, made all the rich members of the party so shy that none of them could be found who was willing to be made a victim. It became necessary, therefore, to fall back upon respectability alone, and make the best of the situation. Thousands of Republican voters will now give their support directly to Mr. Hewitt as the only way of defeating the Tammany nominee. The Boys will "deal" with

Tammany for all the votes which they can transfer in a body, but this number is not large. In these "deals" the national Democratic ticket may suffer somewhat, but we do not apprehend serious harm in that direction.

Dr. W. E. Boggs has been recently elected, by a unanimous vote of the Board of Trustees, Chancellor of the University of Georgia. Dr. Boggs, it will be remembered, was one of the professors at the Columbia (S. C.) Theological Seminary who warmly espoused the cause of Dr. Woodrow. His election is, therefore, a sign of the growth of a liberal spirit in the "orthodox" South. The discussion among the members of the Board concerning the kind of man to be chosen furnishes most curious evidence of the stride forward which Georgia has taken. The advocates of a preacher for the post doubtless represented the views of the majority. Gov. Gordon and ex-Congressman Hammond, who "felt" that the University needed "a man of piety and power at its head, who would commit it by example and precept to religious thought and sentiment," were unquestionably the spokesmen of the vast body of its friends and patrons. He who opposed this "feeling" is himself a preacher, and perhaps the most distinguished one in the State—Bishop Beckwith of the Episcopal Church. The Bishop insisted that the first duty of the Board should be to find a man strong enough to combat the scientific doubts thrown over religion, and that though he was not opposed to the selection of a clergyman, it would be next to impossible to find one possessing sufficient scientific attainments to hold his own with Spencer, Darwin, Huxley and their followers, who were reaching the young through popular articles in our magazines and newspapers. He declared that the clergy do not realize the importance of this matter. "They preach," said the Bishop, "of Christian duty, while their hearers are doubting the very divinity of Christ. It does not suffice for a clergyman to preach the simple gospel from his pulpit while the pews cry out for argument that will justify them in holding to their faith, and save them from surrendering that which they hope and believe to be true." He advocated the selection of a trained man of science, who could answer the doubts of the young, and lead them to reject so much of the alleged science of the day as is false, and to hold to that which is true.

The Bishop closed with this sentence, which we dare say would startle many boards of trustees in this country: "The old-fashioned Gospel of Christ and Him crucified has satisfied the world for centuries, but a new era is upon us. Tremendous progress has been made in thought and discovery. New theories are proposed and decided, and we stand on the brink of the most tremendous intellectual revolution this world has witnessed since Martin Luther nailed his papers to the door of the church. Georgia should appreciate this, and her university should stand as a beacon-light amid the doubts that are raised." This was not questioned, but the other members of the board suggested that doubts would arise, if the Chancellor presented scientific arguments and attempted to refute them; that these doubts could best be answered in the laboratory and class-room; that it was not necessary for the head of the university to enter upon scientific discussion of technical points of religious faith, but to present an example of piety, coupled with power and liberality. The selection of Dr. Boggs followed, as his general and special equipment commended him to both parties in this discussion. The Bishop seconded the nomination.

Mr. Wemyss Reid, William E. Forster's biographer, has answered Mr. Gladstone in the last number of the *Nineteenth Century* touching the cause of Mr. Forster's withdrawal from the Cabinet. Mr. Gladstone said, in substance, that the cause was a mystery, seeing that the Cabinet had stood by Mr. Forster to the end, and that, as regards the release of Parnell, Parnell gave the pledge to discourage outrage and intimidation which was what Mr. Forster agreed should be the condition of his release. Mr. Reid now shows pretty clearly that what Forster demanded was a public pledge, and that the Cabinet contented itself with a private one, which Mr. Forster said would do no good. But this does not really improve Mr. Forster's position. The act under which Parnell was imprisoned gave the Government power to imprison him only in case he was "reasonably suspected" of having done and of intending to do certain things. Both Forster and Gladstone agreed that where this "reasonable suspicion" ceased to exist, a prisoner under the act should be released; that he could not properly be confined merely as an aid in carrying out a certain line of policy, or in order to strike terror into his friends and supporters; that he must stand or fall by the belief of the Government as to what his state of mind was. Now, if Parnell's private pledge removed this "reasonable suspicion," Mr. Forster had no warrant of law for keeping Parnell in jail. To confine him in order to compel him to give a public pledge was to confine him simply in order to help the Government in pacifying the country—something which both Forster and Gladstone agreed it had no right to do. Mr. Reid's article clears up some points in dispute, but not the main one. It leaves Mr. Chamberlain just where it found him.

The conversion by Dr. Morell Mackenzie of his record of the sufferings of his patient, the Emperor Frederick, into merchandise of the lowest kind, and the sale of it to a disreputable sensational Sunday newspaper in this city for a good round sum, strikes us as one of the shabbiest and least professional acts ever committed by a member of a noble calling. A quarrel of doctors over a dead body is always a rather repulsive thing, doubly repulsive when the body is that of a man at whose bedside the whole civilized world watched with sorrow and respect. We can readily conceive, however, that Dr. Mackenzie may have found it necessary to lay before the public a full account of the sickening details of the progress of the dreadful and fatal disease, owing to the assaults made on his professional reputation. We are treated to so many of these clinical horrors, nowadays, whenever a distinguished man dies, that doctors are naturally more and more ready to supply them on small provocation. But surely the vindication ought to have been made in the quietest and most professional way, and addressed as far as possible, in form as well as in fact, to a professional audience only. Does any layman or laywoman whose literary tastes are not thoroughly morbid or depraved care to follow in minute detail the history of a fatal cancer in the throat? But what are we to say of a doctor who makes a sort of popular novel out of the story of his patient's horrible sufferings, and sells it then for a large sum to one of the most enterprising purveyors of nastiness in the world? The arrangement has miscarried through somebody's dishonesty; but it is very rare indeed for a thief to render indirectly such good service to the cause of decency as this one has done.

The visit of the German Emperor to Italy, which he is now making, has been the subject for some months of rather angry diplomatic debates. The question was whether the Emperor was to call first on the King or on the Pope, for if he called first on the King he recognized him as the greatest man in Rome and Rome as the capital of Italy, whereas if he called first on the Pope he recognized the Pope as the greatest man in Rome, and Rome as the capital of the Papacy. For a good while the Papal diplomats tried to extract from the Emperor some sort of caveat or memorandum that his visit to the King was not to be considered as a personal recognition of the King's supremacy in Rome; but he refused to give anything of the kind, and he has solved the problem by going first to see the King, while the Pope was obliged to submit to a second visit.

The German Catholics are in the habit of holding a convention every year at Freiburg, and the Prussian Bishops a conference at Fulda. The assemblies usually confine themselves to strictly religious topics of discussion, but this year they have gone out of their way to denounce the recent Italian legislation, making it penal to agitate for any change in the territorial constitution of the existing kingdom of Italy, or to insist on the necessity for the Pope of "a city to himself," and to protest against the German alliance with Italy. The Pope has congratulated the Freiburg Convention on the stand it has taken, and it is now rumored that under Roman inspiration similar conventions are to be held in all the countries of Europe, to begin a general pressure on the German Government in favor of some modification of the Pope's position; Germany being assumed to be the only country that Italy will heed.

GOVERNMENT DEPOSITS IN NATIONAL BANKS.

No part of this campaign of mendacity and vulgarity has been more disreputable than the charge that the Administration is censurable for "lending the public money to the banks." This charge has been repeated and reiterated till probably some ignorant people begin to think that there may be something in it. Gen. Harrison himself has had something to say about it in his speeches, but we are inclined to think that, as usual, he sinned through ignorance and unfamiliarity with the subject. We do not think he would make a false statement. We do not think that any such excuse can be made for Mr. Blaine, because it is his habit to make all kinds of reckless statements in his speeches, taking the risk of being found out and exposed. His statement at Detroit that if any Republican Secretary of the Treasury had deposited as much money in national-bank depositories as Mr. Fairchild has deposited (about $60,000,000), the Democrats would have impeached him if they had been in power, was one of these reckless statements amounting to downright falsehood. Mr. Blaine prefaced this statement by saying that he had had experience in public affairs which entitled him to speak with authority. We showed in reply that, during seven months in the year of 1879, Secretary Sherman had on deposit in national-bank depositories various sums ranging from $97,000,000 to $276,000,000, and we remarked that this matter was of no importance except as illustrating Mr. Blaine's recklessness on the stump.

Now comes Mr. Thomas M. Nichol, who evidently thinks that he has had experience in the affairs of Government sufficient to enable him to take part in public instruction. His explanation of the large deposits in national-bank depositories by Secretary Sherman is in this wise :

> "Mr. Sherman had no large surplus to use at his discretion. He was engaged under the law in refunding the high interest-bearing bonds which then represented the public debt. As fast as he could sell 4 or 4½ per cent. bonds, he was directed by law to redeem the outstanding 6 per cents. But he was not allowed to call any bonds for redemption till he had money on hand with which to redeem them from the sale of those bearing the lower rate of interest; and when he made a call, the law required him to give three months' notice to the owners of the bonds called, which were designated by their numbers.
>
> "This direction of the law obliged the money provided to pay for each batch of bonds called to remain idle during these three months. As the new bonds were sold through the banks, it was simply a natural consequence that the money obtained from them should remain in these banks for some period of time—that is, until the Government called for it. This was a very different matter from that of turning money in the Treasury over to the banks for their use and benefit."

This means that the money deposited in the national-bank depositories was exactly the amount of the called bonds and interest. Evidently Mr. Nichol did not have the Treasury reports before him when he made this statement. If he had had them, he would have seen that the amount of called bonds and interest was reported as a liability every month, and that the amount of money deposited in the banks was a vastly greater sum. The figures are as follows :

	Deposits held by Nat'l Bank Depositories.	Called bonds and interest.	Excess of deposits.
Feb. 1, 1879	$166,357,141	$6,928,703	$159,428,438
March 1, "	249,586,805	6,699,291	242,887,514
April 1, "	226,681,802	7,997,936	218,683,866
May 1, "	260,760,430	68,632,751	192,127,679
June 1, "	276,442,471	57,377,637	219,064,834
July 1, "	201,402,860	39,082,398	162,320,462
Aug. 1, "	97,078,837	81,408,785	15,670,052

Now, you may take these figures any way you please. You may reckon the deposits three months before or three months after the corresponding amounts of called bonds, and you will not find a month until the last when the excess of deposits was not vastly greater than the largest sum deposited by Secretary Fairchild. The truth is—and it was a matter of adverse comment at the time, although the criticism was, in our opinion, unfounded—that Secretary Sherman had made money easy by large deposits in the banks, in order to float the 4 per cent. loan. If his object was to make money easy in order to carry to a successful issue the funding of the national debt at a lower rate of interest, he was justified in doing so. He was justified, even if after events showed that the step was unnecessary. As in the present case, there was an abnormal situation in Treasury affairs, and the Secretary used his best judgment in meeting it.

In the present case, everybody knows what would have been the consequence of locking up the Treasury receipts in the Treasury vaults. It would have led with a rush to a commercial crisis. Everybody saw this at the time, and everybody, Republicans as well as Democrats, accordingly urged the Secretary to deposit the incoming surplus in national-bank depositories. Most people feared that the banks would not take it on the conditions as to security that the law required ; and, in fact, the banks did refuse to take more than the $57,000,000 or $60,000,000 which constituted the bugbear of Mr. Blaine's speech. To call this deposit "loaning the money to the banks" is a lie by indirection. All Secretaries of the Treasury since the close of the war have "loaned money to the banks" in this sense, because all have kept more or less money on deposit with them. The deposit has none of the characteristics of a loan, and to call it such is a deliberate attempt to deceive by the misuse of words.

THE WORLD'S WHEAT HARVEST.

In connection with the International Grain Market which is annually held at Vienna, it has become the custom to arrange an estimate of the world's crops for the current year. Special attention has been given to wheat, and the results on the whole have been so nearly correct that they are looked for now with much interest. Their importance this year is even greater than usual. The changes in the price of wheat have been so rapid, and the future is as yet so uncertain, that every impartial and competent estimate of the crop is of decided value.

It is true that the statisticians have been this year subject to exceptional difficulties. The season was so late that there was an opportunity for change of conditions after the estimate was published. In France and in England there was an improvement, in most other countries a falling off. Yet with all these unavoidable sources of error, the Vienna figures are worth studying in detail.

The general results for 1887 and 1888, as given in the general summary, are shown in the following table. The figures are in millions of hectolitres, one hectolitre being equal to two and five-sixths measured bushels :

IMPORTING COUNTRIES.

	Production.		Demands for import.	
	1888.	1887.	1888.	1887.
Great Britain	20	28	58	45
France	90	111	27	7
Germany	39	42	9	6
Switzerland	0.6	0.8	4.2	4
Italy	37	42	9	4
Spain and Portugal	47	47	5	5
Belgium and Holland	7.5	8.5	6	5
Greece	1.5	1.5	1	1
Denmark	1	1	1	1
Sweden and Norway	1	1	1	1.5
Other importing countries (not included in estimate for 1887).	2	?	6	?
	246.6	282.8	127.2	79.5

EXPORTING COUNTRIES.

	Production.		Supplies for export.	
	1888.	1887.	1888.	1887.
Austria	53	56	5.8	7
Russia	90	82	32	24
Servia and Rumania	13	13	6	6
Turkey and Bulgaria	11	12	3	4
United States and Canada	152	162	36	46
India	65	75	13	13
Australia and Chili	11	10	7	6
Egypt	5	5	1.5	1.5
	400	415	104.3	107.5

Putting these two sets of figures together, we have a total of 646.6 million hectolitres in 1888, against 697.8 million in 1887 ; that is to say, 1,832 million measured bushels in 1888, against 1,977 in 1887—a large but by no means unprecedented variation. It is hardly necessary to warn our readers against placing too implicit reliance on these figures. The estimate for a country like India, or even like Spain, can be little more than a guess. The introduction of a few additional importing countries outside of Europe into the table for 1888 also constitutes a disturbing element.

On the other hand, the estimate of exports and imports is far more trustworthy in itself, and one in which the members of the International Congress were more directly interested. In this respect the season of 1888, taken by itself, shows a deficit of 22.9 million hectolitres against a surplus of 28 million in 1887. How serious this is to be will depend partly upon the amount of wheat carried over from last year, and partly upon the extent to which other food products can be substituted for wheat.

The deficit is due chiefly to bad harvests in the importing countries. England, France, and Italy all have suffered severely; though the loss in the two former is probably not so great as was at one time supposed. The wheat acreage in Great Britain was somewhat larger than in the years immediately preceding, but the yield was unsatisfactory. Other crops have done reasonably well. In France, which, next to the

United States, is the greatest wheat-producing country in the world, the yield was estimated at only 80 per cent. of the ordinary harvest; and other crops were below the average. Last year, with a satisfactory wheat crop, France imported a little less than 20,000,000 bushels. This year it was at one time expected to need 75,000,000 to satisfy its demands. In Italy, matters seem even worse. The harvest will probably be not more than 85 per cent. of that of last year, and perhaps little more than three-quarters of that of a good average year. The demands for importation are estimated at about 25,000,000 bushels, against 11,000,000 bushels in 1887. Germany shows a slight reduction from last year, but on the whole an advance above the mean of a dozen years preceding; and the same may be said with less reserve of Austria. In both of these countries the results in 1887 were so good that considerable diminution was possible without producing anything like real distress. Both in Hungary and Austria, wheat shows a yield of nearly 10 per cent. above the average of past years per acre under cultivation. It is to be noted, however, that in both of these countries other grains have been far from successful.

Russia has done well, distinctly better than last year, some of the best provinces showing a yield as high as 120 per cent. of the average. Other grains besides wheat have also given large crops. It is estimated that Russia will be able to export over 90,000,000 bushels instead of 68,000,000, as was the case last year. The regions of the lower Danube, which are relied upon for a considerable wheat export, have repeated their good results of last year. In fact, the details would indicate that they had done decidedly better; but the general estimate gives the same aggregate figure of wheat production and probable export as in the year preceding. The final result of all this is, as has been seen, a most distinct deficit in the European wheat crops, without a corresponding increase in other parts of the world. In India the harvest is pronounced, in a vague way, good; but the detailed figures of production, such as they are, hardly warrant this view of the matter. It is doubtful whether India can export more wheat than last year, or as much as has been the case in several years previous. The total amount shipped by South America, Africa, or even Australia, is too small to have any decisive effect; and the wheat crop of the United States is certainly in no condition to make good the deficit in Europe.

A VANISHED ILLUSION.

Just two years and a half ago a great many sensible people thought the appearance of Mr. Powderly and his Knights of Labor in the American political arena meant the application of a new force to human affairs. The religious weeklies and the monthly reviews in the early part of 1886 had numerous articles, frequently from clergymen, warning all those of us who did not work with our hands, that we were on the edge of a great social revolution, which would put "labor on top," and in some unexplained manner make life very hard, or at all events very different, for the quill-drivers and the bookmen and the people who worked with their brains. We were favored, in fact, with a few not obscure intimations that the days when Delmonico's, and the opera, and landaus, and summer trips to Europe, and imported clothes were reserved for people who had money enough to pay for them, were passing away before our eyes, and that we were now to witness the strange but splendid spectacle of the poor, and ignorant, and lazy monopolizing the luxuries of the earth. Politics, too, were to be taken out of the hands of the incompetents who now manage them, and given in charge to laboring men, who, as Grand Master Workmen, Worthy Foremen, Venerable Sages, and Walking Delegates, were to show us, after our weary waiting of 100,000 years or thereabouts, how the world ought to be governed. Rings, corners, monopolies, self-seeking, and corruption were to vanish from our affairs. Everybody was to have plenty of money, and justice was at last to reign.

Immediately after the Southwestern strikes Powderly went before the Congressional Committee, and was there gravely asked by Mr. Barnes to supply the Committee with his (Powderly's) opinion as to what could be done under the existing law to end "labor troubles," and also "what might be done and ought to be done by amendments to the Constitution." Powderly, instead of modestly shrinking from a job which would have appalled the Convention of 1787, answered cheerfully, "I shall do so, and thank you for the suggestion."

A kind of panic at this moment, however, seems to have seized the Committee. They feared that Powderly, in providing for the settlement of the labor question through immediate legislation, might refuse to take into account the limitations placed on Congressional action by the Constitution, and might insist on converting the legislative branch into an omnipotent parliament. Consequently Mr. Buchanan, just in the nick of time, before Powderly had begun to think the matter over, said: "Will you also, in considering the question, take into view the complex nature of this Government, and the divided responsibility between Federal and State legislation, so as to make your suggestions such as the national Legislature can duly act on?" Powderly, with great moderation, we admit, answered, "I will do so." We believe he has never produced these suggestions, but we have no doubt that, for a few weeks at least, a good many people waited for them with some anxiety.

About the same time, Prof. Ely of the Johns Hopkins University issued through the Baltimore *American* a solemn appeal to the Knights of Labor to reform the civil service. In doing so he was compelled to admit that the civil-service reformers were a sorry lot, who wore swallow-tail coats and white neckties, and were unworthy to "lead the masses." He knew the Knights could not be expected to keep company with such duffers, but they "could at least enter into their labors and appropriate what they had done." The good Ely evidently believed that if he could get the ear of the Knights, he could have all the good measures we need passed at once, and throw the civil-service reformers, with their swallow-tails, and the politicians, with their "petty personalities," overboard. Ely's wrestlings with the Knights were, indeed, we think on the whole, the funniest incident in the tragi-comedy which occupied public attention during the first half of 1886. The figures which Powderly gave out, too, touching the strength of his order—between 2,000,000 and 3,000,000—shed a sort of lurid light on the scene; and when we learned that the Executive Board had purchased a $100,000 "mansion" as a headquarters in Philadelphia, and furnished it in a manner fit for Jay Gould, and that Powderly himself had $5,000 salary, and no end of secretaries, there came a moment when both Capital and Brains were near throwing up the sponge, and hiding their diminished heads in the nearest ash-barrel.

The changes which have since occurred are most significant and instructive, and we commend them to the attention of all social philosophers, of both sexes, who think that human society can be revolutionized by taking thought, or enrolling one's self in a club, or by anything except a change in human character. The treasury of the Knights is reported empty. The members of the Order number, according to the most sanguine estimate, 200,000. One Secretary, Litchman, has resigned, in order to be hired by the "politicians" as a campaign orator. Another, Barry, has retired also, firing Parthian arrows at Powderly, who denounces them both as dishonest, and says they were Knights "for revenue only." Powderly himself is said to be more sensible than was generally supposed, and to have been studying law in order to be ready to earn his living at the bar when the $5,000 salary ceases. Ely is silent, though, doubtless, still hopeful. In District Assembly No. 49 there has been a hard struggle for possession of Pythagoras Hall between the well-known Quinn and the well-known Fitzgerald, both distinguished Walking Delegates, who have frequently offered to solve the labor problem and regenerate society in this city. Quinn got possession of the hall, and he and his adherents were garrisoning it in a peaceful manner, when Fitzgerald stormed it by a night attack. A brief struggle in the dark, with spittoons, chairs, and empty bottles, ended in the capture of the place and the expulsion of the defenders, almost in a state of nudity, into the streets. A more shameful conflict has never taken place between capitalists and brain-workers in our time, and to some it will doubtless make the future of man seem very dark. The civil-service reformers still wear their swallow-tails and white cravats; and society goes on in the old way, improving solely through toil and industry, the spread of knowledge, the progress of science and invention, and the strenuous exertions of the great mass of men to abolish their own poverty.

FRENCH CONSTITUTIONAL AMENDMENT.

THE French Chambers met on Monday, and, as was expected, M. Floquet at once proposed a revision of the Constitution. The scheme which he has submitted is not as radical as was expected or feared by the Opportunists. It was supposed that it would include the abolition of the Senate, whereas it simply makes the Senatorial term of office three years instead of nine, and that of the Deputies three years instead of four. But it takes away from the Senate the power of absolute rejection of any bill originating in the Lower Chamber, which the Senate now possesses in common with all other Upper Houses, and substitutes therefor a "suspensive veto," which expires in two years. In other words, the Senate would, after this change, have simply the power of imposing on the Chamber further consideration of any measure originating in that body. Its power over financial measures, which is now the same as that of our Senate, M. Floquet proposes to assimilate to that of our Board of Aldermen—that is, to reduce it simply to criticism or remonstrance which would make necessary a second debate in the Chamber. The Senate would also, under M. Floquet's plan, lose the power it now possesses conjointly with the President of dissolving the Lower Chamber. This right would hereafter be reserved to the President exclusively.

None of these things are, however, so important as the provision of a fixed term for the Ministers, who are to be removable during this period, as we understood the despatches, only by a solemn vote of the Chamber that they have lost the confidence of the country, and not, as now, by mere defeat on a bill or resolution. This is the first distinct abandonment of the English for the American constitutional system. The experiment of perpetuating under the Republic the old English custom, adopted by the constitutional monarchy in France, but discarded by the Second Empire, of making the Cabinet responsible to the Chamber, and removable by defeat on any bill or resolution, has proved a total and lamentable failure, and has done more than anything else to discredit the Republic. The result has been that since 1875 ministries have not lasted, on the average, over ten months. As each change, too, involves the introduction of new men into high office, as well as the depreciation of those who have already held it, the quality of French statesmen has gone on deteriorating in an almost alarming way. Most of the ministers nowadays are men who have never been heard of till they take office, and are never heard of again after they leave it, and they usually retire loaded with contempt and followed by jeers.

The causes of this state of things are, as usual, numerous, and showed themselves very soon after the adoption of the Constitution. We do not feel competent to pass on the comparative or positive efficacy of any of them, but the chief, as specified by the best observers, are: (1.) The French passion for equality, or, as detractors call it, French envy. As soon as a man shows signs of becoming eminent in parliamentary life, all parties unite in pulling him down. Gambetta was, it is said, ruined by this course, and after him, Ferry. In politics, the French take no national pride in great men. (2.) The absence among the French of the habit of party government, perhaps never fully formed under the Monarchy, and totally destroyed under the Empire. Party ties being feeble in the Chamber, and there being no commanding leaders, the Republicans had no cohesion, and easily broke into small "groups," on whom no Minister could count for consistent and steady support, and who competed with each other for supremacy over him by means of threats and exactions. (3.) Offices or "spoils"—according to some, the most disintegrating agency of all. Every member from the country districts comes up now to Paris, eager to show his constituents how influential he is with the Ministry; and the only way he can show it is by getting places for his henchmen or votes of money for his "deestrict." The Government offices, great and small, have been multiplied enormously in order to satisfy him, but he cannot be satisfied. No Minister has one-hundredth part enough places at his command to meet the demands on him, and every member whom he disappoints becomes his enemy.

The confusion worked in this way—the plain inability of each Ministry to form a parliamentary majority or govern through it—has, after thirteen years' trial, greatly disgusted and, what is worse in France, humiliated the country. For the present régime does not supply the English remedy for ministerial shortcomings—the putting of the Opposition into power. There is in France no Opposition able to take office and hold it against all comers. Even if there were, however, it is doubtful whether the French voters have yet acquired enough political skill to avail themselves of it. The French mind, when in political trouble, turns, under the influence of the strongest tradition of French history, not to agitation, or persuasion, but to the discovery of some kind of dictator. It is this which has now given them Boulanger, and which keeps him afloat, in spite of disadvantages of all kinds which make his eminence so incomprehensible to foreigners. So that when M. Floquet proposes to adopt the American plan of giving the Ministers a certain degree of permanence, he is really fighting "Boulangism" as much as anything else—that is, trying to revive the popular confidence in parliamentary institutions.

Whether he will succeed is of course still doubtful. The Constitution has been twice revised already, in 1884 and 1885, when the life senatorships were abolished, and when departmental representation on a general ticket (*scrutin de liste*) was substituted for district representation (*scrutin d'arrondissement*). It was framed in 1875, by an Assembly mainly composed of Monarchists, and nobody denies that it was meant to be the foundation of a Monarchical restoration. The wonder is that, with this taint on its origin, it has lasted substantially unchanged so long. The demand for its revision will probably, after each revision, be as strong as ever in some quarters, which would be no great harm if the process of revision were as difficult there as it is here. Even children after a while stop crying for what they find it hard to get; and if the French Constitution could only be changed by a two-thirds vote on a plébiscite, or the vote of two-thirds of the Departments through the Councils-General, it is possible the electors would settle down into quieter political ways.

One bit of revision is now confessedly a failure—the return to the *scrutin de liste*. This was Gambetta's plan of forming great parties in the Chamber, and it has been as fertile in the production of cantankerous "groups" as the *scrutin d'arrondissement* ever was.

THE LAW OF THE RUNDSCHAU'S CASE.

THE Berlin *Nation*, in its issue of September 29, publishes an article entitled "The Indictment of the Diary of Emperor Frederick," in which Dr. Munckel, a high authority on criminal law, criticises severely the recent letter of Prince Bismarck to the Emperor. Although at the time the article was written the matter had not yet been formally referred to the public prosecutor, the writer had no doubt that a prosecution would be ordered by the Minister of Justice. But what crime will be charged? Prince Bismarck says that if the Diary is authentic, its publication constitutes treason beyond a doubt. If it is not authentic, it is not so clear, according to him, that there is a case of treason; but, under various provisions quoted by him, and perhaps under other provisions, the discovery of which is left to the Public Prosecutor, the publisher might be convicted of a misdemeanor. Now, the Public Prosecutor always tries to secure a conviction of as grave a crime as the circumstances will possibly allow. He will, therefore, elect to prosecute for treason; but in order to do this successfully, he must prove that the document is authentic.

Assuming that he succeeds in proving the authenticity, the question remains whether the publications constitute treason under Section 92 of the Penal Code. This section is directed against any one who publishes state secrets, or such other facts as he knows the interest of the Empire, or one of the Federal States, requires to be kept secret from foreign States. This section can only be invoked if the facts published are true; for how can anything that is not true be kept secret? Prince Bismarck, however, says positively that all facts mentioned in the Diary, the publication of which might be considered as being opposed to the interest of the Empire, are untrue, *e. g.*, the alleged plan of Emperor Frederick to compel, by force if necessary, the South German allies to give their assent to the proclamation of the Empire; the opinion expressed on the character of the Kings

of Bavaria and Würtemberg; the views of the Prussian Government on papal infallibility. In fact, his doubts as to the authenticity of the Diary are based on the utter falsity of these statements. The authenticity of the Diary would not make these untruths true. The only explanation would be that the Prince was mistaken, unless we assume that Prince Bismarck does not speak the truth, and, of course, the latter position cannot be taken by any public prosecutor. Prince Bismarck bases his letter on the assumption that only two aspects of the case are possible—either the Diary is authentic, or it is spurious. He forgets that even an authentic document may contain misstatements. Perhaps, however, as Dr. Munckel ironically observes, he had this possibility before his mind when he wrote the letter, and intended that, if the authenticity was shown, the German people should be the judges as to who was correct in his statement of the facts, the Emperor or the Chancellor.

If the facts are not true, this paragraph of Section 92 does not apply. The accused will, of course, invoke on this point the testimony of the Chancellor, and with all the more force because, if ever the question came up, whether or not the interest of the Empire was jeoparded by the publication of the Diary, assuming the fact to be true, the testimony of the Chancellor would certainly be conclusive. For Prince Bismarck is the man, so his friends assert, who made the Empire; the man whose diagnosis of the infantile diseases of the newly founded State (diseases which can be cured only through the intervention of the Public Prosecutor) is infallible. That such a man has solemnly asserted that the facts narrated in the Diary never took place, and that he did so in the same document in which he says that the publication is dangerous for the state, is most fortunate for the accused.

Perhaps, if the Diary is spurious, the second paragraph of Section 92 will be invoked. It is directed against those who falsify, destroy, or suppress documents or papers by which rights of the Empire or of a Federal State are evidenced, to the injury of such Empire or State. In the first place, even if the Diary were spurious, the publication would not fall under this section unless the additional point were proved that the facts narrated in it were false. But, furthermore, this provision is not applicable, because it assumes that there have been genuine documents which have been falsified or suppressed. It has never been alleged that the editor of the *Rundschau* has had such genuine documents in his hands and that he has falsified or suppressed them. On the contrary, it is rather the non-suppression which is complained of.

The only other penal provisions which have to be considered are those under which the publications would constitute an offence of comparatively little importance. In order to invoke them, the Diary must of course be proved to be spurious. If it were otherwise, the Emperor Frederick would have to be considered as an accomplice. At the end of his letter, Prince Bismarck clearly admits the correctness of this view, for he takes the position that the publication constitutes a defamation of the character of the deceased Emperor. But it is doubtful whether a Prussian court, if it merely interprets the law and leaves politics out of view, can hold that the publication of the Diary constitutes a defamation of character, on the ground that it contains a wilfully untrue charge against the Prince of a fact which, if true, would constitute moral turpitude or expose him to public contempt. Moreover, a prosecution on this ground can only be had on the complaint of an immediate relative, and it is very doubtful whether, in this case, such complaint would be made.

The Diary certainly does not contain any defamation of living persons. The Chancellor, who is very sensitive on this point, does not even pretend that it does. It is true that, after reading it, one feels angry towards certain persons; but it is not an indictable offence to excite such a feeling. Even if the document is spurious, the Public Prosecutor will therefore have to act ex-officio. He may, perhaps, invoke two other sections—in the first place, Section 131, which punishes him who knowingly asserts non-existent facts in order to excite contempt for existing institutions. The Diary says that the Constitution, or part of it, is a "chaos." This word is not flattering, but it cannot be said to excite contempt. On the contrary, it is rather flattering for the Chancellor, who has reigned for eighteen years with this chaotic Constitution. In the second place, Section 263 might be invoked. It is directed against those who attempt to derive profit from documents which they know to be spurious. In addition to the difficulty of proving the spurious character of the Diary, there would be here the difficulty of proving that the publisher had actual knowledge of its spurious character. Where even the Chancellor has only a suspicion, it would be almost impertinent to say that another can have actual knowledge.

The legal argument contained in the article of Dr. Munckel is cogent and conclusive; but unfortunately the Arnim litigation and other political prosecutions have shown that it is doubtful, to say the least, whether German courts, when appealed to to decide, not on legal but on political grounds, would make their own the famous answer of the Parlement of Paris to a similar request—"This court renders judgment, not service."

THE EMPEROR FREDERICK'S DIARY IN FRANCE.

PARIS, October 4, 1888.

THE emotion created by the publication in the *Deutsche Rundschau* of fragments of the Diary of the late Emperor Frederick has been as considerable in France as it has been in Germany. The whole history of the war of 1870-71 has been brought back to our memory, and people have been able to see, so to speak, from the outside what they had only seen from the inside. Important as the Diary may be in an historical sense (and, though it may have suffered some alterations in the *Rundschau*, it will certainly remain one of the most curious documents of our time), it cannot be denied that its publication has been an imprudence and an indiscretion. We are still left in ignorance of the circumstances of this publication. Many versions have been given, and at the present moment it is needless to discuss them. We can only say that if it was in accordance with a wish expressed by the late Emperor he must have been attacked, like other sovereigns, princes, and princesses of our time, by an inordinate love of publicity. There has never been a time when persons who seemed born to live behind the clouds of an Olympus, have come so much before the public, and volunteered to make us cognizant of their inmost thoughts. It may be that the sort of seclusion in which they live inclines them to analyze their own thoughts more than common mortals do. I believe, however, that this disposition is most dangerous, and that those who indulge in it ought at least to take as much precaution as Prince Talleyrand, whose memoirs are not yet published, and will not be for a long time.

If the publication of the Diary was not made by the Emperor's orders, it is an act of unjustifiable indiscretion and cannot be judged too severely. I am not much surprised that the Chancellor of Germany has ordered the Public Prosecutor to begin a criminal action against the *Rundschau* and the authors of the publication of the Diary; but I must confess I have been somewhat surprised at the terms of his report to the Emperor, and at the efforts which he makes to prove that the Diary "in its present form" is not genuine, and at the long discussion into which he enters in order to show the inaccuracies of the Diary. It is in the very nature of a diary to be sometimes inaccurate and always incomplete: a diary gives only fragmentary sensations and emotions, and Prince Bismarck showed too much irritation when he wrote that in 1870 he had not the King's permission to talk with the Crown Prince on esoteric questions of the policy of Prussia, "since his Majesty, on the one hand, dreaded the indiscreet revelations which might thus be made to the English Court, which was full of French sympathies, and, on the other, was apprehensive lest detriment might thus accrue to our relations with our German allies by reason of the far-reaching aims and violent means which were recommended to his Royal Highness by political counsellors of doubtful ability."

It is quite true that Prince Bismarck was in 1870 the responsible adviser of the Crown, while the Crown Prince was irresponsible. Prince Frederick was an ardent lover of German unity. Though he was a man of action, as he sufficiently showed on the battle-field, he was somewhat of what Napoleon the First called an *idéologue*. The dream of united Germany was his favorite dream, as well as a restoration of a purely German Empire; and, understanding well the wishes and aspirations of the German people, he was willing, if necessary, to coerce the reluctant princes, and to use with regard to them the maxim "Compelle entrare." The campaign in Bohemia, in which he took such an important and decisive part, had led to such extraordinary results that he might well be forgiven for thinking that Prussia, in her work of unification, could find no serious obstacle in the ill will of a few princes. Though destined to wear the crown of Prussia, he was less of a Prussian than a German, and thus stood in contrast with his own father, who remained to the end convinced that Prussia was not to be merged into Germany, but that she should remain the nucleus of Germany, the

great centre of attraction of all the German States.

These differences can be traced to different conceptions of the new German Empire. Is it to be or to become an empire in the Roman sense of the word, accommodated to modern necessities by parliamentary institutions—an empire embracing all the German-speaking provinces of Europe, with only an Emperor, an Upper and a Lower Chamber framing laws for all? Or is it to be an empire founded upon a hierarchy of princes and sovereigns, with an Emperor surrounded by confederate princes bound to the Emperor by a *feudum*, by treaties, and by conventions? Poets have sometimes extraordinary visions: Victor Hugo, in his famous monologue in "Hernani," when Don Carlos is waiting for the result of the imperial election, places in his mouth words which are not a bad description of the great empire of Charlemagne, supported by his vassal kings, princes, and electors.

The idea of German unity did not always take that form. After the Revolution of 1848, the Frankfort Parliament wished to constitute a new Empire; there was for a time a vicar-general of this Empire, and finally the imperial crown was offered to Prussia. It was refused: the new crown was not to be the gift of a popular assembly. Prince Bismarck was among those who were the most resolutely adverse to the revolutionists of 1848. He spoke against the adoption of the Frankfort Imperial Constitution. "The Frankfort crown," he said, "may be very brilliant, but the gold which lends truth to its splendor must be added by melting into its composition the Prussian crown; and I cannot believe that its recasting is possible by means of the proposed Constitution." On the 9th of September, 1849, he said again:

"I deny that any desire has ever existed in the Prussian people for a national regeneration modelled on the theories of Frankfort. The policy of Frederick the Great has been frequently alluded to, and it has even been identified with the proposal of union. I am rather of opinion that Frederick II. would have turned to the most prominent peculiarity of Prussian nationality, to her warlike element, and not without result. He would have known that to-day, as in the era of our fathers, the sound of the trumpet which calls to the standard of the father of the country, has lost none of its charm for Prussian ears, whether the question concern the defence of the frontier or the fame or greatness of Prussia."

It has been said that the publication of the Diary of Frederick III. would diminish the claims of Prince Bismarck, considered as one of the founders of the new German Empire and of German unity. It does not seem so to me. The extracts which I have just given (and I might give many more, conceived in the same spirit) show conclusively that Prince Bismarck has never understood German unity as it was understood by many of the framers of the abortive Constitution of Frankfort. He always maintained that Prussia would have the right to decide what the nature of the Constitution should be, at the risk of casting the sword in the balance; and the sword was cast when, after the Danish war, Austria and Prussia fought for the hegemony of Germany. Nothing can show better the character of the German policy of Prince Bismarck than his conduct after Sadowa: with regard to Hanover, he used, to its full extent, the right of the conqueror; he spared Saxony and Austria, and he did not deprive them of a single province. It was enough for him that Hanover should cease to form an independent country in the very heart of Prussia, and that Prussia should have the hegemony of all the German provinces, as far as the Main. He did not wish to inflict on Austria such a blow that she could not forget or forgive. After Sadowa, the Prussian armies might have pursued their victory and entered Vienna triumphantly. They did not, and the preliminaries of Nikolsburg were signed.

This policy has borne its fruits: Austria and Prussia are now allied by the strongest ties. In certain eventualities their armies would be united in the field, and this certainty has become the best guarantee of European peace. Those who may be inclined to reproach Prince Bismarck with wavering and hesitating on the subject of the Constitution of the new German Empire, will do well to reflect on the results of the policy of Prussia after Sadowa. History may be familiarly compared to a fine piece of tapestry: we see generally only one side of it, and it is not usual to look on the side where the design is vague, where the colors seem mixed, and where strings of silk or wool hang in confusion. Few know all that remains hidden, for instance, under the great work of Italian unity. What we see is only the result: we are ignorant of many of the means—the obscure, sometimes the immoral instruments, the hesitations, the fears, the treasons, the dirty work of the kitchen. I doubt whether Cavour kept a diary; but if he did, and if he told everything in his diary, what should we not find in it! It is perhaps as well that history, in its great lines, should assume rapidly a legendary form.

The creation of the new German Empire, sprung out of the war of 1870, was not an artificial work; it was, in fact, the result of a work which had been going on for more than half a century in the German mind, which had remained tentative, which had at times been fostered by popular revolution, and sometimes by the ambition of sovereigns. It is not to be wondered at if, at the moment when the dream was becoming a reality, when all the German energies were united, when all aspirations were common, those who had the responsibilities of the situation felt some anxiety and some hesitation. All the allies of Prussia had responded readily to her call; could she sacrifice them? All the confederate princes had lent their armies to the Emperor William; was it for him to humble them and to deprive them of their rights? Practically, the question to solve was this: Was the imperial crown to be offered to the King of Prussia by popular assemblies, or by a great German assembly like that of Frankfort, or was it to be offered by the German princes, and what were to be the new relations of the princes and the Emperor?

The work of Italian unity ended in the destruction of all the Italian States save one: Parma, Modena, the Kingdom of the Two Sicilies, are no more; the Pope has lost his temporal power. Such has not been the solution adopted by Prince Bismarck and his sovereign. "E pluribus unum" has been their device. Believers, as they both were, in the rights of kings (qualified by the right of conquest), both enemies of what is vaguely called revolution, they did not give the imperial power the basis of the popular will: they preserved the historical continuity, as far as events allowed them to do so, and left their autonomy to all the German States that entered into the great confederacy, at the head of which stands the Emperor, still King of Prussia. The army still remains the pillar of the state, and Prussia still remains the pillar of the Empire. There has really been no radical change in the views of Prince Bismarck, since 1849; he remained, when he respectfully opposed some of the views of Frederick III., what he was at the time when, in all the vigor of youth, he opposed the German policy of Herr von Radowitz.

MILTON'S LEONORA.

MANTUA, September 11, 1888.

THE investigations of Alessandro Ademollo into the early history of Italian music, and especially of the opera, have brought out many interesting facts with regard to the life of Milton's Leonora, to whom the poet wrote three Latin epigrams, and who probably inspired some of his sonnets. The various monographs of Signor Ademollo are dry and hard to read; but they contain many documents and extracts from contemporary authors, and offer us a glimpse of an interesting period in the life of a small court, as well as of intrigues at Rome in the seventeenth century.

The well-known Eastern traveller, Pietro della Valle, wrote to a friend in 1640:

"Whoever has seen or heard, as I have, Signora Adriana in her youthful years, with that beauty which all the world knows of, sitting among the nets on the seashore at Posilippo, with her gilded harp in her hand, must needs confess that even in our times there are sirens on those shores; but beneficent sirens, adorned with beauty as well as virtue, and not, like the ancient ones, malevolent and man-killing."

This siren was Adriana (or more properly Andreana) Basile, born at Posilippo about 1580, one of a numerous family. Her brother, Giovanni Battista Basile, obtained some literary reputation, but is chiefly known as the author of the 'Pentamerone' or 'Lo cunto de li cunte,' dear to all lovers of folk-lore and tales, which, though not published till after his death, was immediately translated into German and English, as well as into Italian, and even into Bolognese. Her husband, Muzio Barone, was in the service of one of the Caraffas, Prince of Stigliano, who kept him occupied in managing one of his distant estates, while the beautiful Adriana held a sort of musical court at Naples, where she was adored by all the poets, wits, and fine young gentlemen of the time. These, beginning with Caraffa himself, addressed her adulatory verses, all more or less bad. Even the poet Marino knew her before being obliged to run away from Naples, and wrote for her six sonnets and two madrigals; while, long after, the remembrance of her inspired him with the celebrated octave in the seventh canto of the 'Adone.' Although Marino says, at a time when she was very old or already dead,

"... intenerir col dolce canto
Suol la bell' Adriana i dolci affetti,
E con la voce e con la vista intanto
Ir per due strade e saettare i petti."

and Chiabrera and other poets even give particular descriptions of her, yet we must believe that her beauty came chiefly from her voice and from her expression. We know that she had the rare combination of golden or blond hair with very black eyes, and that her hands were white and shapely; but her portraits are not attractive, and Cardinal Gonzaga, before hearing her sing, said only that she was "rather beautiful than otherwise"; while another priest (who was, however, more concerned about her soul than her body) wrote: "She is a stout lady, and although not pretty, is not so ugly as I have been given to understand. As far as I have been able to find out with the greatest diligence, she leads an honest life, but is, nevertheless, an alluring and wonderfully seductive siren—a Neapolitan Armida."

When the fair Adriana was at the height of her reputation at Naples, her portrait and the accounts given of her induced Vincenzo Gonzaga, Duke of Mantua, to invite her to become one of the inmates of his musical harem. The

Duke, who had enjoyed, and apparently had deserved, much ill-repute in his early life (although he does not really seem to have been much to blame for the death of the Admirable Crichton, whom he has been accused of murdering in cold blood), held at this time the most brilliant court in Italy. He was a patron and protector of the fine arts; he had recently been honored by the visit of Rubens; and his company of singers and musicians was the best in Europe. At first Adriana did not require much persuasion; but she suddenly repented, and there was need of all the efforts of the Duke's special envoy, and of many letters from himself and the Duchess to the Viceroy of Naples and to Princess Stigliano, succeeding each other rapidly for three months, to induce the singer to start. After still further delay at Rome and Florence, she finally arrived at Mantua at the end of June, and immediately joined the Duchess at her country place of Porto, as she was attached to her service. The Duke came on at once to hear her sing. She pleased, and she rapidly acquired great influence. The Duke showed her marked attention and constantly gave her presents; the Duchess could not live without her, as she was the sole consolation in her bad health.

There was a very amusing correspondence between Adriana and the Cardinal Gonzaga, with a curious mixture of thanks for presents and requests for a bit of the true cross from Cardinal Borghese; instead of which, the Cardinal being ill, she only received medals and rosaries. She expressed her gratitude for two love songs and remarks on the manner of singing them; and, in acknowledging the medals, asked for "some ballad or gay little song," and wished him the Papacy. The Cardinal made a short visit to Mantua, where he enjoyed her society, and the next winter wanted to take her to Naples with him. This was, of course, impossible, as she had much to do at court, in addition to the regular Friday concerts, where she sang madrigals composed for her by the Cardinal, as well as songs sent expressly to her from Savona by Chiabrera, who was in receipt of a pension from the Duke, and who recommended that "they should be sung in a noble audience suited to such a great singer."

During a temporary absence of Adriana in Milan, where she was greatly tempted to remain, the poor Duchess of Mantua, Eleanora de' Medici, died, and the Duke, though himself far from well, immediately set about looking for a new wife, and even thought of remarrying his first wife, a Princess of Parma, whom he had divorced and sent into a convent. What was most necessary to him was a large dowry, for in a reign of twenty-five years he had run through twenty millions of gold scudi, and his exchequer was at a very low ebb. He had frequent itchings to have recourse to alchemy; but although some experiments were made in the Palazzo di Te, and there were efforts to buy up the secrets of professors of the great art, he generally recoiled before the expense, as alchemy turned out to be the most costly way of producing gold yet discovered. He died, too, soon after, in February, 1612, but not before he had given to Adriana and her husband the barony and the title of Piancerreto, and had procured for their son, from the Duke of Savoy, the white cross of the order of SS. Maurizio and Lazzaro. Just about this time a little daughter was born to Adriana, who was named Leonora, and was christened in the Duke's chamber, he and his acknowledged mistress, the Marchesa di Grano, standing sponsors. On this occasion he presented the mother with a pearl necklace worth 300 ducats. This child was Milton's Leonora.

Duke Vincenzo was succeeded by his eldest son Francesco, who immediately made very necessary reforms in the court; but the position of Adriana and her husband remained unchanged. Indeed, we have a very charming picture of the ducal matrimonial felicity, in a letter from the Duchess, Margherita of Savoy, begging Adriana to come and console her with her singing while the Duke is out fishing in the Mincio; and another from the Duke describing his luck, sending her some of the catch, as well as fruit from his garden. Francesco reigned scarcely ten months, when he died of the smallpox, and was succeeded by his brother Ferdinand, the Cardinal, who obtained a dispensation to marry, and resigned his sacred office in favor of his younger brother Vincenzo. This latter, when engaged in the siege of Nizza, found nothing better to do than to write to Adriana the details of his valorous exploits. Ferdinand was detained in his lovely villa, La Favorita, by a fever, and begged Adriana to come and visit him; but although he signed the letter, "The sick Cardinal Duke of Mantua," he dated it, "In the Ducal Bed," and Adriana thought it more prudent to pay a visit to Verona, which was desired by the Marchesa di Canossa; whereupon the Cardinal used the language of a sovereign, and she remained at Mantua, and thus persuaded the Cardinal to use his authority in collecting some debts due to her in Naples, and in enabling her son to make a good marriage there. The better to affirm her position, Adriana had her pretty sister Margherita come on from Naples—one sister was already in Mantua. Margherita was in high favor for about two months, when she was married to a Mantuan gentleman and given a large dowry, "in consideration of her great services"; and the Duke married the unfortunate Camilla Faa, who was obliged to take the veil after the birth of a son. The Duke then married Catherine Medici, sister of Cosmo II. Vincenzo became only nominally a Cardinal, for he never went to Rome nor received the hat. On the contrary, he secretly married a lady whom he afterwards maltreated; for, it being bruited about that she had bewitched him, she was sent to Rome and imprisoned in the Castle of St. Angelo. Pope Paul V. was so indignant that he ordered that for a hundred years no member of the house of Gonzaga should become a cardinal.

During this time Adriana seems to have been a little in the shade, and, while her younger sisters were superseding her, went to Rome, where she found the customary worship of the sonneteers and the kindly attentions of three distinguished cardinals; and then to Naples, where she was able to show that she had not been dismissed in disgrace by the frequent and amiable letters of both the Duke and the Duchess. After her return to Mantua she reached the culmination of her glory in the great Festival of 1621, in honor of the election of Pope Gregory XV. and the accession of Philip IV. to the throne of Spain, and in the visit of the Mantuan Court to Venice in 1623, where she created a veritable furore. Next year Adriana went again to Naples, leaving at Mantua, as hostages for her return, her younger children, including Leonora. She never returned. First, she had fears of war, and then she again became a mother, although her eldest son had been married several years. The Duchess hinted to Adriana that she was not likely to return so long as the Duke of Alba was viceroy of Naples; but the real reason was, that there were negotiations on foot for her going with her two daughters to Warsaw, to the court of Prince Vladislas Sigismond, the elected Grand Duke of Muscovy. This project proved impossible, and Adriana again turned her thoughts to the Court of Mantua; but the Duke Ferdinand died, and the next year his successor, Vincenzo II.; and the French Duc de Nevers, who succeeded him, would have none of her.

Meanwhile Leonora was growing up. At the age of sixteen she was already celebrated at Naples; and in 1633, when she was twenty-two, the family moved to Rome, where their frequent concerts gave them a distinguished position. It must have been at these concerts that Milton made the acquaintance of Adriana and Leonora. He could not have seen them at the theatre in the palace of the Cardinal Barberini, of which he speaks in a letter to Holstenius, because at that time women were not permitted to act on the stage, and in the Barberini at least were not admitted even as spectators. This theatre had been built in 1633; and during the Carnival of 1634, Prince Alexander Charles of Poland being in Rome, a melodrama or opera was performed there called "St. Alexis," the music by Stefano Landi, and the drama by Giulio Rospigliosi, afterwards Pope Clement IX. Another melodrama on a religious subject—what would now be called an oratorio—the "Life of St. Theodora," was played there in the carnival of the two following years, after which, oratorios having been admitted into the monasteries, the Barberini theatre emancipated itself from sacred subjects, and gave in 1637 "Il Falcone," and in 1639 a comic opera, "Chi soffra speri," written also by the future Pope. The carnival that year finished on the 8th of March. We have two descriptions of the performance on March 1, probably the one which Milton attended, on a Sunday, too—one in a despatch from Montecuccoli to the Duke of Modena, and another in the *Avvise di Roma*. It is estimated that 3,500 people were present, most of whom were received at the door by Cardinal Antonio, who stood waiting (not Cardinal Francesco Barberini, as Milton mistakenly says). Great praise was given to the music, the costumes, and especially to the scenery, which represented in one act part of the Barberini Gardens, and in another the Fair of Farfa; there being in both cases many horses, carriages, and carts introduced on the stage. The musical partition exists in the Barberini library; the libretto is nowhere to be found.

Italian writers will have it that Milton was a lover of Leonora, this being to them a natural explanation of his admiration for her. But there seems not to be the slightest reason for such a statement, except such inferences as may be drawn from Milton's own poems. In the same year in which he was in Rome, Cardinal Richelieu, with projects in his head for opera at Paris, sent to Rome André Maugars, his favorite viola-player, who made a report to him dated October 1, 1639, from which—as it is a very rare pamphlet—I quote. Speaking of two other singers he says:

"They do not seem to me to sing so agreeably as Leonora, daughter of that beautiful Adriana of Mantua, who was a miracle in her day, and who worked a still greater one in bringing into the world the most perfect person for singing well. I should think myself doing wrong to the talent of this illustrious Leonora if I should not mention her to you as a wonder of the world. . . . I shall limit myself to telling you only that she has the gift of a fine wit, and very good judgment in discerning bad from good music, which she understands perfectly well, since she composes, so that she knows what she is singing, and pronounces well, and expresses the sense of the words. She does not pique herself on being pretty, but she is neither disagreeable nor coquettish. She sings with an assured modesty, a generous simplicity, and a sweet gravity. Her voice is of great compass, true, sonorous, and harmonious, which she softens and swells without effort or grimaces. Her

outbursts and her sighs are not lascivious. Her looks are not immodest, and her gestures such as suit a young girl. In passing from one tone to another, she sometimes causes one to feel the divisions of the enharmonic and chromatic scales with so much skill and charm that every one is delighted with this beautiful and difficult method of singing. She has no need to beg the aid of a theorbo or a viol, for she plays both instruments perfectly well. I have had the pleasure of hearing her sing several times—more than thirty different airs, with second and third couplets which she composed herself. One day she did me the special favor to sing together with her mother and sister, her mother playing the lyre, her sister the harp, and herself the theorbo. This concert, composed of three beautiful voices and three different instruments, surprised so much my fancy, and carried me off into such a rapture, that I forgot my mortal condition and thought that I was among the angels."

The ultimate effect of this letter was that Leonora, with her husband Giulio Cesare Castellani, was invited to Paris in 1644 by Cardinal Mazarin, who had probably himself known her in Rome when he was an intimate of the Barberini Palace. There is probably an allusion to her in one of the libels of the Fronde, 'Lettre d'un religieux au Prince de Condé,' written by Brusse, the Curé of St. Roch, which says: "Qui ne scait ce que coustent à la France les comédiens-chanteurs qu'il a fait venir d' Italie, parmi lesquels estoit une infâme qu'il avoit desbouchée à Rome, e par l'entremise de laquelle il s'étoit mis dans les bonnes grâces du Cardinal Antonio?"

Leonora arrived in Paris in March, 1644, and remained there till April, 1645, when she returned to Rome, and there passed the remainder of her life (Fétis to the contrary notwithstanding). She is mentioned by Mme. de Motteville in her Memoirs, and we are told that once, when Anne of Austria was walking in her gardens, she met the poet Voiture silent and sad, and on asking him what he was thinking about, he replied with an impromptu containing an allusion to love and to the Duke of Buckingham. The Queen took it in good part, and Leonora, who had a good memory, immediately sang the words to one of her airs. A letter from the Abbé Scaglia to Christine de France, Regent of Savoy, tells how well she was looked upon in France, how she was lodged and maintained in a house belonging to the Cardinal, and what fine presents had been given to her by the Queen, the Duke of Orleans, and others of the Court. Among them, the wife of Charles I., Queen Henrietta Maria, then living at the Louvre, presented the friend of Milton with a diamond ring worth more than a thousand scudi.

Monsignor Rospigliosi, the author of the opera acted at the Palazzo Barberini, wrote also a sonnet on Leonora's picture, which was included with others in the 'Applausi Poetici,' published in her honor in the year of Milton's visit. When Adriana was dead, and Leonora, her sister, and her niece had begun again their musical evenings after her return from Paris, the house was frequented by cardinals, and Rospigliosi was one of the most constant visitors. He was made a cardinal in 1657, and seems almost immediately to have been considered *papabile*. While Alexander VII. was still in good health, there was, as always, talk of his probable successor. Donna Berenice Chigi, wife of the Pope's nephew, meeting Leonora one day, said sarcastically: "Signora Leonora, my Pope is in excellent health: how is yours getting on?" In 1667 Leonora got her Pope, for Rospigliosi ascended the papal chair as Clement IX. The new Pope was at first a little shy of Leonora's influence, but he gradually yielded to it, and no one was scandalized; for he was sixty-seven years old, and his conduct had been thought exemplary, although he had always been gallant and polite. He was no sooner elected than he sent presents to the ladies, and especially to his gossips. Raggi, the Genoese Resident at Rome, wrote: "He is very amiable to the singer Leonora, called the Adrianella. The Duke of Bracciano sent the Pope a queen-fish (*regina*) from his lake, weighing fifty pounds. The Pope sent it to Signora Leonora as the queen of *virtuose*."

At this time Leonora tried to pose as a fine lady, and would have been glad to conceal her quality of singer. At a reception at the Venetian Embassy, while she was making her compliments, the Marchesa Spada said: "This is Signora Leonora Castellana, the *virtuosa*. You may perhaps have known how famous she is for singing. She has sung very well in Rome and France; and to the Queen, too." Leonora grew red, and replied, evidently annoyed: "I only sang three times to the Queen. I am known otherwise." On going away she kept complaining of the Marchesa for having revealed her musical faculties, saying: "What coldness, what coldness, what insipid praises! Why hunt up such memories?" Leonora was obliged to submit to many such petty slights, but she nevertheless maintained her position, and was considered almost to belong to the papal household. Her house was a meeting-place of society; she always had her following of cardinals, and sometimes even the Pope himself visited her; and, when seeing her in public, would indulge in familiar little jests which made the cardinals laugh. Raggi reports: "The Rospigliosi family have been again to the Pope, together with the singer Leonora, who complained that the Cardinal de' Medici had left Rome without visiting her," and he adds malignantly and falsely, "She was a little beggar of very low birth, who has made her way by her music and her tongue; a woman who has always been acquainted with everybody, and yet Rome insists on considering her chaste. Fortunate woman!" But Raggi's remarks grow more favorable. On July 26, 1668, he tells of her usual fête for the Scuola Pia, which was crowded; on the 5th of August, that she had received 1,000 scudi from the King of France in part payment of the arrears of her pension, the Pope having praised her to the French Ambassador.

"August 29, 1668.—Leonora, the singer, continually advances in his Holiness's graces. There is not a week in which he does not give her presents three or four times. He has just sent her one of above 400 scudi; but she gives no tips to the messengers, saying that all would go in tips—hers she reserves for Christmas and Easter."

"November 7, 1668.—The Spanish Ambassador was invited by Prince Savelli to a feast at Albano. . . . The Ambassador [the Duke Astorga, of whom many queer stories are told] danced until night, always keeping his spectacles on. . . . Signora Leonora was determined not to dance, was implored by the Ambassador, and at last let herself be overcome. Never is there a day without her receiving a dish from Castelgandolfo, from the Pope's kitchen; and should this fail one day, on the next they send her two."

"March 23, 1669.—At the house of Leonora, the singer, there was a musical representation, and all the Rospigliosi, male as well as female, were present. Leonora sang, and her niece and Monsignore Casale. In every circumstance of his career she has always been the Pope's favorite, and is so now more than ever; and every one seeking a favor has recourse to her."

This is the last mention of her except that she died in April, 1670, less than four months after the death of her protector, Pope Clement.

Correspondence.

WHERE ARE THE PLATFORMS?

To the Editor of The Nation:

Sir: As the campaign draws to its close, it occurs to me that it would be an interesting task to endeavor to answer the question which heads this communication. The merits of the respective platforms were thoroughly discussed at the time of their adoption: it is curious to observe how they have stood the wear of three months' service.

Let me say at the outstart that we may at once reject all the useless rhetoric in which documents of that kind are apt to abound. In a vigorous condition of party life, where a large body of men is cemented by the force of conviction, simplicity in the party's declaration is inevitable. No two ideas could possibly be brought to bear upon such an organization without producing hopeless cross divisions. The endeavor to utilize local currents of every sort indicates, therefore, only the decay of genuine and healthy political activity—shows that there is a considerable body of men who can be held to their allegiance by appeals and flattery which an intelligent man would despise, that the party is no longer animated by a single purpose, that it contains within it those who are beyond the reach of ideas. Whatever declarations these platforms contain which can be properly called party matters, are easily reduced to a single head. The question of civil-service reform, for example, cannot by any means be made a party question: its sole hope is the transformation of political life by the infusion of serious interest into our public affairs, and in the adoption of its principles by men of all parties. As it is now, there is no public man except the President who has shown a thorough understanding of its principles; and the President is so handicapped by his failure to secure it firmly that his power to do good has been greatly lessened. The reform must be upheld strictly for four years, and must have stood the test of a change of parties in the Presidential office, before it can be considered as finally established; and the leaven which is just beginning to affect our national life has yet far to spread until we can count upon this. As for the other issues raised in these platforms (the questions of Trusts, of pensions, etc.), they are mere corollaries to the one vital question of the hour, that of tariff taxation.

If the Republican platform has any meaning at all—and it contains no statement more explicit—the party was pledged to maintain the tariff as it stands, even if it became necessary to abolish the entire internal-revenue system, whiskey tax and all. Notice now, that, unlike the sweeping general statements in which astute politicians are supposed to say much and mean nothing, here is proposed a perfectly practicable scheme of legislation; it differs from the denunciation of Trusts in the same document in that it proposes an end which an Act of Congress can at once secure. It says nothing, moreover, of maintaining the principle of the tariff while submitting its details to revision; it is an emphatic protest against touching it at all, and so the Republicans in the House interpreted it.

A very slight experience with this "plank" convinced its authors that the thing would not serve; and not only has it been sedulously ignored, but every speaker or writer has proceeded to formulate his own notion of just what the party intends to do. In the course of this operation some curious conflicts have arisen,

which must have seriously disquieted the gentlemen charged with the conduct of the Republican canvass. Mr. Harrison, for example, escaped the difficulty by wisely remarking that the question was really too remote to require discussion. Mr. Blaine, disdaining to take the hint, while accepting the platform, has yet found repeated opportunity to oppose the repeal of the whiskey tax. To make matters still worse, the contingency which, a few weeks ago, seemed to Mr. Harrison too remote to require consideration, has suddenly become so pressing that at this late day the Republicans have introduced into the Senate a bill to reduce the revenue some $75,000,000. The situation is still further complicated by a grave doubt as to the sincerity of this last move. Between the platform, Mr. Harrison, Mr. Blaine, the Senate, and the House, each in its sphere the official instrument of the party, how is a disinterested voter, eager to vote intelligently and dispassionately—how is such a voter, Mr. Quay, to decide?

But the real position of the party on this question—the question of the "condition, not the theory," the question as to how it proposes to meet the details of the tariff problem, is, to my mind, of less importance than the mere fact of the hopeless confusion of counsels which prevails in its ranks, indicating, as it does, the utter absence of purpose, its utter helplessness in the presence of a serious difficulty. Consider for a moment what intensity of conviction must animate the main body of the party when each of its accredited leaders is thus independently permitted to define its policy and to tamper with its official declarations! We can draw from this but one conclusion: on this grave question the party is incapable of carrying out as a unit any scheme of action, be it good or bad.

The attitude of the Democratic party, on the other hand, gives them two decided advantages: (1.) Their position is in perfect accord with that of their leader. The platform itself was somewhat timid. It was a mistake, it seems to me, to endorse the Mills Bill by an independent resolution, rather than in the platform itself; but any doubt that may have arisen at that time has been happily dissipated. The progress of events, instead of carrying the party away from any definite course of action, has steadily fastened it to such a conrse more and more securely. The vote by which the Mills Bill was passed, the President's letter of acceptance, the unmistakable tone of Mr. Thurman's speeches, the complete disappearance of Mr. Randall and his few adherents from the scene of action, the eager and general acceptance of the Mills Bill throughout the party, are conclusive and final as to its ultimate purpose.

(2.) The unequivocal stand of the Democratic party has united to it the disinterested intelligence of the country. In the ideal republic, the conduct of every citizen is actuated only by the purest considerations; among us at this moment the number of those who so govern themselves, or who are able so to govern themselves, is small. It is not, indeed, so small but that in States where votes are most needed they may decide the contest; but their real importance lies quite apart from this. It is this small body of thinking men to whom we must look to give tone, elevation, character to the nation. If, indeed, as a nation, we are ever to be thoroughly united by the bonds of intellectual sympathies, by the tie of common aspirations; if we are ever to produce poets, philosophers, and statesmen who are to exemplify and interpret to the world the American ideal, and if this expression is to possess any abiding value, then in the increase of this body and the spread of its influence lies our only hope. For the first time, the generation which has known only the experience of the last decade sees this influence again making its way, slowly yet effectively, into the atmosphere of common life; but our politicians, who have, as a class, little sympathy with ideas, and no appreciation of their subtle but insuperable force, have yet to learn that before their insidious attack the whole structure of error and falsehood must crumble into ruin.

It is plain, then, that, while the Republicans began with a clear statement of their intentions, they have steadily drifted away from it, and that the party is rapidly disintegrating. On the other hand, beginning somewhat doubtfully, the Democratic party is every moment more completely identifying itself with the policy on which reason, philosophy, and patriotism alike unite. This is not, however, the policy of free trade: a contest between protection and free trade would at least be rational, but for such a contest the present one is only preparing the way. There is no feature of the Mills Bill, in fact, which the faith of a sincere but disinterested protectionist would require him to reject. The theory of protection requires only such duties as equalize competition, not duties which, like the present ones, give the home manufacturer an incontestable monopoly. The fight is, therefore, not against protection, but against protection run mad—against the whole breed of vicious and injurious notions to which a surfeited treasury has given rise. It is a struggle, therefore, claiming far more importance than could be claimed for a mere matter of economical policy. The Blair Bill, the Texas Seed Bill, the Dependent Pension Bill, River and Harbor Bills, Public Building Bills — does not the place which these measures occupy in the national legislature speak volumes as to the tone of our public life, as to its gradual usurpation of functions which can only corrupt it, as to the predominance in its deliberations of influences of "which all honest men should beware"? When men like Sherman and Edmunds yield to an infection like this, has not the evil already taken deep hold? A more righteous war has not been waged, indeed, since the war against slavery; and the mental and moral obliquity of those who succeeded in persuading themselves that slavery was a natural and beneficent institution, has much in common with the attitude of men who can honestly believe that the present tariff, instead of being iniquitous and dangerous, is really a source of good to all.

Louisville, Ky., October 11, 1888.

THE TEACHER AND THE COMMUNITY.

To the Editor of The Nation:

Sir: Several of our leading periodicals have of late much deplored the fact that the personality of the teacher has come to count for so little in our public schools, and attribute this serious defect largely to the custom in most of our cities which gives the preference to teachers who have been graduated from their own schools, and who, familiar only with the methods there employed, repeat the same processes until they "become automatons, capable of imparting only cut-and-dried information."

In happy contrast to this machine-like system, I wish to call attention to the public schools of a Western town where it has for years been the policy of the School Board never to employ one of their own graduates. The teachers, carefully chosen with reference to character and training, come from different sections of the country, and sometimes represent almost as many States as individuals. Thus various methods are suggested, new and large views of life are interchanged, and a tolerant spirit is promoted. While there is an able superintendent, each teacher is allowed in large measure to work out results after her own ideas. The personality of the teacher thus becomes a large factor, and makes of each room a workshop for character building no less than for mind training.

Seldom does a public school enter so largely into the vital interests of a town as this. It is not unusual for the pastors of the several churches to address the teachers upon the responsibilities of their high calling, and also to announce as a special theme the duty of the parents towards the teachers, in giving them cordial entrance to their homes, and in cultivating that friendly acquaintance which necessarily brings the child into closer sympathy with both parent and teacher. The result has been beneficial in a marked degree, and it is no exaggeration to say that the teachers have had a large part in shaping the social environments of their scholars.

The ability of the teachers is indicated by the fact that many of them have been called to higher institutions of learning, while some have achieved a national reputation; but we may believe that the moral result of their teaching is due largely to the liberal spirit and friendly tone of the citizens, which have made it possible for the teachers to develop their true worth, and to leave behind them living influences which cannot fail to aid their successors in fitting the youth for intelligent and worthy citizenship.

ALLITERATION.

To the Editor of The Nation:

Sir: A few years ago, Professor Zupitza, in reviewing some book on English literature, asked with a sort of pathos when people were going to stop talking of 1328 as the birth-year of Chaucer. By this time, perhaps, his complaint is groundless. But there is another error which, ancient enough, seems to be enjoying a remarkably green old age. It is the idea that alliteration consists in the agreement of the initial letters of two or more words. The dictionaries support this statement. According to Worcester's definition, we have alliteration in two words like "get" and "gnaw"; still more unhesitatingly would "rebel" and "return" be accepted as an alliteration. It is surprising enough to find Grant Allen, in his book on 'Anglo-Saxon Britain,' stating (p. 203) that "what answered to rhyme [in Anglo-Saxon verse] was a regular and marked alliteration, each couplet having a certain *key-letter*, with which three principal words in the couplet began." Now, every student of philology knows what a mass of error has resulted from this fatal trick of talking about a letter when we mean a sound. "Alliteration" is rhyme, as Grant Allen intimates; only it is the beginning, not the end, of a syllable which we regard. We do not call "bough" and "cough" a rhyme, nor "swaying" and "climbing." Similarly, for alliteration, with "get" and "gnaw," "rebel" and "return." In short, alliteration is an agreement of initial sounds in accented syllables. This ought to be a truism; but when Grant Allen prints "Ætheling" as alliterating with "Eternal," there is evidently room for the missionary.

Yours, etc., Francis B. Gummere.

Haverford College, October 6, 1888.

Notes.

D. Appleton & Co.'s forthcoming publications include 'From Flag to Flag: Experiences and Adventures in the South during the War in Mexico and in Cuba'; 'Florida of To-Day,' a guide for tourists and settlers, by James Wood Davidson; 'A Dictionary of Terms of Art,' illustrated; 'A Manual of Decorative Composition,' by Henri Mayeux, also illustrated; 'Nature and Man: Essays Scientific and Philosophical,' by the late Dr. W. B. Carpenter; 'Astronomy with an Opera-Glass,' by Garrett P. Serviss, illustrated; 'The Folk-Lore of Plants,' by T. F. Thiselton Dyer; 'Handbook of Historical and Geographical Phthisiology,' by Dr. Geo. A. Evans; 'The Development of the Intellect,' from the German of W. Preyer; 'Memory: What It Is and How to Improve It,' by David Kay; 'Outlines of Pedagogics,' by F. W. Parker; 'Hints about Men's Dress,' by W. H Barrett; 'How She Did It; or, Comfort on $150 a Year,' by Mary Cruger; 'Raleigh Westgate; or, Epimenides in Maine,' by Helen Kendrick Johnson; and 'The Secret of Fontaine-la-Croix,' by Margaret Field.

The Baker & Taylor Co. have in preparation 'Distinguished Witnesses to the Great Value and Success of Foreign Missions.'

Thomas Whittaker is about to publish a library edition of Pascal's 'Thoughts,' from the text of Molinier, by C. Kegan Paul. He will also begin a new series of illustrated books under the title of "Whittaker's Home Library."

Macmillan & Co. will bring out directly a handsome two-volume edition, Globe octavo, of 'Robert Elsmere,' uniform in size with their edition of Matthew Arnold's writings, and manufactured expressly for the American market.

'Her Only Brother,' from the German of "W. Heimburg" (Bertha Behrens), is in the press of T. Y. Crowell & Co.

Next month, Ginn & Co., Boston, will have ready 'A Brief History of Greek Philosophy,' by B. C. Burt.

Miss Minna Irving's poem, "The Haunted Heart," which appeared in the *Century* in 1885, will furnish the title to a volume of selected verse to be published by Belford, Clarke & Co. on November 1.

Wm. Henry Hurlbert's 'Ireland under Coercion,' which in Scotland bears the imprint of David Douglas, Edinburgh, is to be issued here by Houghton, Mifflin & Co. They will shortly publish also the First Supplement to 'Poole's Index to Periodical Literature,' edited by W. F. Poole and W. I. Fletcher; and new editions of the Poetical Works of the late Emma Lazarus, and of Hawthorne's 'Scarlet Letter,' the latter illustrated by Mary Hallock Foote.

A new and complete edition of the works of the poet and critic Giosué Carducci is announced by Zanichelli of Bologna. It will form about twenty 16mo volumes of about 400 pages each, obtainable separately at four francs apiece. Zanichelli has been for some time the publisher of the poems of Carducci; but this author's critical and literary essays have been dispersed through many books, in part as prefaces and critical introductions, and have never before been collected. The first volume now in press, 'Discorsi Letterari,' includes his recent address at the eighth centenary of the University of Bologna, his lecture on the work of Dante, commemorative addresses on Virgil, Petrarch, and Boccaccio, and his lectures on the development of the national literature and on the literary revival in Italy.

Arminius Vámbéry, the well-known Hungarian traveller and writer on Eastern subjects, is at present at C nstantinople together with Mr. William Fraknói, the Secretary-General of the Hungarian Academy of Sciences. They are nominally engaged in looking for further remains of the celebrated library of Mathias Corvinus, which was taken from Buda to Constantinople during the Turkish occupation. Some waifs from this library were presented by the Sultan to the Royal Library some years ago during one of the enthusiastic *rapprochements* between Hungary and Turkey. More books, however, are believed still to exist, either in the library of the seraglio or in the collections of the chief mosques. Mr. Vámbéry has, besides, the intention of studying the changes in Turkey since he was last there, and will probably collect his notes into a volume. He has been received by the Sultan, who told him that his works had aided in imparting to the foreign mind a correct knowledge of the principles and doctrines of Islam; and who, in recognition of his literary merits, conferred upon him the Grand Cordon of the Order of the Medjidie.

A fresh issue of Sir Walter Scott's edition of Anthony Hamilton's 'Memoirs of Count Grammont' is ready for the season of costly publications (London: John C. Nimmo; Philadelphia: J. B. Lippincott Co.). It is in one volume, the largest octavo, with broad margins, heavy paper, and handsome (though not matchless) typography. The illustrations, however, probably constitute its excuse for being. These consist of a portrait of Hamilton, plus thirty-four etchings, great and small, by French artists—L. Boisson, after C. Delort. The most of these are ornamental vignettes, of no little delicacy and grace, and all have been carefully studied with reference to the costume of the period. The designer has seized the grosser opportunities afforded by the dissolute text for a few plates that could be spared, however much in keeping with their surroundings.

Mrs. Brookfield's 'Collection of Letters of Thackeray, 1847–1855,' has just been revived in a very dainty edition by Charles Scribner's Sons. The rubricated title-page is still further adorned by a portrait of Thackeray in a harmonious tint.

Four more volumes of the new translations from Victor Hugo, in course of publication by Thomas Y. Crowell & Co., have been received. The two volumes of 'L'Homme qui rit' have been rendered into English by Miss Isabel Hapgood, whose versions of 'Notre-Dame de Paris,' 'Les Misérables,' and 'Les Travailleurs de la Mer' have already been commended in the *Nation*. A quite unwarrantable liberty has been taken with the title of the present work, which has been altered without necessity into 'By Order of the King,' upon both the title-page and the cover, although a literal and entirely satisfactory translation of the original name, 'The Man Who Laughs,' is retained upon the first as a secondary and explanatory title, and is given as a heading to the pages throughout. In the original, "By Order of the King," is merely the name given to Part II. of the work. The two volumes of the 'History of a Crime' continue the series, which, with these personal recollections of the *Coup d'État*, goes beyond the romances of Victor Hugo into his political writings. The translation is a very readable one, and is by Mr. Huntington Smith.

Little, Brown & Co. are also publishing "Victor Hugo's Romances" in a new library edition, to be completed in twelve volumes, and to include translations of the five most famous of his prose fictions, 'Notre-Dame,' 'The Man Who Laughs,' 'The Toilers of the Sea,' 'Ninety-three,' and 'Les Misérables.' The last of these, in five volumes, was issued last year, and we now have 'Notre-Dame' in two volumes and 'Ninety-three' in one. The books are smaller and more compact than those of the edition published by T. Y. Crowell & Co. They are printed in large, clear type, upon handsome paper, at the University Press of Cambridge, so well known for the excellence of its work. 'Ninety-three' is well translated by Mrs. Aline Delano. The translations of 'Les Misérables' and of 'Notre-Dame' are the best English ones, revised, with all omissions supplied, and special translations of important chapters, as the publishers inform us.

From the same house we have the first of the series of "The D'Artagnan Romances," Alexandre Dumas's 'Three Musketeers,' in two volumes, brilliantly bound in highly-gilt cloth of a wine color. The typography is of parallel excellence with that of the Victor Hugos just described, and the size most convenient for the hands. A portrait of Dumas is prefixed.

In line with the foregoing for the gift season is the pocketable oblong 16mo 'Essays of Elia,' first fruits (to our knowledge) of the "Temple Library"—a limited edition, represented in this country by Macmillan & Co. The Chiswick Press has done well by these two volumes, of which the type is clear, if small, and the margins generous. Pretty etchings by Herbert Railton are scattered here and there, and Mr. Augustine Birrell has supplied a biographical sketch, and sparse, unobtrusive footnotes. This edition is one to be fond of, and therefore good to bestow.

A holiday garb is given to the American reprint of the 'Rubáiyát of Omar Khayyám' in Edward Fitzgerald's English verse (Houghton, Mifflin & Co.). The merit of this edition is that it gives the fourth (and virtually final) form of the quatrains as worked over by the translator, as well as the first form, each having its special beauties and felicities, and both being cherishable by the lover of noble poetry. The editor has added, besides, some literal versions of his own by way of comparison, in a list of references to the sources upon which Fitzgerald drew; a biographical sketch of the English poet; Fitzerald's own account of Omar, and notes; and a letter to Mr. Quaritch, describing Omar's grave, which is pictured in the frontispiece. We predict a wide sale for this volume.

The Henry Irving Shakespeare (Scribner & Welford) has reached the fourth of its six volumes. The responsible editor, Mr. Frank A. Marshall, has the services of a corps of assistants; his supervising and suggestive hand is visible in the plays generally, but "Much Ado About Nothing" is the only one which he edits entirely by himself. Of the remaining four which the volume contains, "The Merry Wives of Windsor" shows the collaboration of the eminent textual scholar, Mr. P. A. Daniel, and "King Henry V." that of a new American hand, Mr. Oscar Fay Adams, who has, we believe, been an assistant of Mr. Rolfe in similar work. "As You Like It" is cared for by Mr. A. Wilson Verity, and "Twelfth Night" by Mr. Arthur Symons. Of the general merits of this edition we have already spoken. An appendix of corrections is promised for the last volume. The work will possess special interest as an example of the merits and demerits of coöperative scholarship in a particularly trying field; its success would be more doubtful were it not that so large a portion of the labor of the Shakspere commentator now is compilation and condensation from

older scholars. The illustrations are plentiful, but show no improvement.

John Bunyan is the subject of the latest issue in the "Great Writers Series" (London: Walter Scott; New York: T. Whittaker). Canon Venables is the author, and treats both the biography and the literary works of Bunyan fairly and discreetly. He has not attempted to do more than present briefly the facts of Bunyan's life, already known, and recently exhaustively treated by Dr. Brown, and to add the obvious remarks upon his place in our literature. The only new matter which he includes is the warrant for Bunyan's arrest in 1675, lately discovered among the Chauncey papers. This is dated March 4, 1675, and bears the signature of thirteen magistrates. It puts the fact of his third imprisonment beyond doubt, and it sustains the story of Bishop Barlow's alleged interference to procure his release, which has been questioned on the ground of discrepancy in dates; but it should be observed that the Bishop deserved little thanks for what he did. It was suggested by Dr. Brown that the 'Pilgrim's Progress' was begun during this third imprisonment, although he did not have such evidence as we now possess as to the fact of the imprisonment. Canon Venables supports this suggestion, and, as he states, the recovery of the actual date tends to confirm this view. This little Life of Bunyan, as a whole, is to be highly commended, avoiding, as it does, the dryness and tediousness of detail that were inseparable from Dr. Brown's voluminous narrative.

Prof. Charles F. Kroeh, of the Stevens Institute of Technology, adds to his series of 'Drill Books' a little thirty-page pamphlet on 'The Pronunciation of Spanish in Spain and America.' It is as accurate as it is compact, and would undoubtedly work well in the hands of a competent teacher. The phrase, "the Spanish colonies of America," is not well chosen as a term inclusive of Mexico and South America, and is particularly misleading as used by Prof. Kroeh, since the only existing Spanish colony, Cuba, does not, as stated, prevailingly sound *z* and *c* before *e* and *i*, like *s*.

Perhaps the best, because the freshest and most careful, of Mr. Gosse's 'Seventeenth Century Studies' is his paper on Etheredge, the first English dramatist to feel the influence of Molière. Mr. A. Wilson Verity has now edited 'The Works of Sir George Etheredge, Plays and Poems' (London: John C. Nimmo), with all needful notes, and a biographical introduction, in which he has utilized Mr. Gosse's paper, adding not a few illustrative facts of his own finding. As a dramatist, Etheredge is more important chronologically than he is dramatically, but the "Man of Mode; or, Sir Fopling Flutter," made its mark once, and can still be read with interest. The poems here collected are pleasant little bits of society verse, not unlike those of his friends, Sedley and Dorset; while they do not rise to the level of the best *vers de société* of their time, they are easy in style and even easier in morals.

In reviewing Mr. R. W. Lowe's recent edition of Dr. Doran's 'Annals of the Stage,' we expressed a hope that the editor might be induced to bring the book down to date. Now we are glad to learn that this hope is to be gratified, and that Mr. Lowe has in preparation a continuation of 'Their Majesties' Servants' from the death of Edmund Kean, where Dr. Doran left off, to the days of Mr. Henry Irving. It will be published in London by Mr. Nimmo. A continuation of Mr. Ireland's 'Records of the New York Stage' (which stopped in 1860) would be equally welcome.

M. Coquelin *cadet* has written a pleasant little preface for 'Le Guignol des Salons,' a collection of puppet-plays by M. L. Darthenay (Paris: E. Plon, Nourrit & Cie; New York: F. W. Christern). The dozen easy and amusing playlets contained in this volume are intended to be performed by Punch-and-Judy figures—puppets animated by the human thumb and fingers, skilfully concealed inside them. The English-speaking Punch-and-Judy theatre suffers from the monotony of its repertory, which is in fact confined to a single play, "The Life and Misadventures of Mr. Punch." The French, as becomes a race fond of the theatre, refuse to be bound down to a unique spectacle; and this book of M. Darthenay's, like M. de Neuville's 'Pupazzi,' shows that their freedom has been used to advantage.

M. Francis Decrue de Stoutz is a young and ambitious writer, who has hitherto confined his historical researches to the sixteenth century. His work 'La Cour de France et la Société française au xvi^e^ siècle' (Paris: Firmin Didot) is a collection of articles first published in the *Revue Suisse*, after having been delivered as lectures in Geneva, the author's native city. M. Decrue speaks of the 30,000 manuscript letters which he has "transcribed, analyzed, or read" in various European libraries. The present work, however, might have been written without consulting any manuscript authorities, for it contains nothing that cannot be found in some of the best-known and most elementary works on the sixteenth century. The now little read and rather uncritical Monteil has been used much too freely. In spite, however, of the excessive claims made by M. Decrue in his preface, his book is not without merit. It is easily read, and gives on the whole a fair impression of the general tone of thought and state of civilization and culture in the sixteenth century in France. The picture drawn is rather a flattering presentation of a period which had hard lines and dark sides that M. Decrue ignores almost wholly. Of the six chapters into which the work is divided, the third, on the different classes of society, is the most satisfactory.

Paris Illustré (New York: International News Co.) made its début on October 6 in an English dress, with a very palpable squint towards the American public. Its chief colored plates, in short, are portraits of the President and Mrs. Cleveland—the former being the more successful, to our thinking.

French caricaturists are the subject of an illustrated article in *L'Art* for September 1 (Macmillan), by M. Augustin de Buisseret. The occasion of it is a recent work by M. John Grand-Carteret, entitled 'Les Mœurs et la Caricature en France,' of which the appendices have a high bibliographical value. The succeeding issue of September is largely occupied with a general estimate of Rubens's works in the Hermitage at St. Petersburg, by Émile Michel, with a few specimens at second-hand.

Numerous pictorial souvenirs of Fritz Reuter accompany an article in the current issue of *Vom Fels zum Meer* (F. W. Christern), by Oscar Schwebel, on the birthplace of the great humorist—Stavenhagen in Mecklenburg-Schwerin. The conductor who shouts out the name of the station gives it, we are told, a pronunciation midway between Stammhagen and Stappnhagen.

A good copy of Sully's portrait of Andrew Jackson is frontispiece to the October number of the *Pennsylvania Magazine of American History and Biography*. It is published in connection with the closing sketch, by Dr. Stillé, of "The Life and Services of Joel R. Poinsett," which is a useful contribution to the history of Nullification.

Another advance has been made in the leisurely 'Complete Index to *Littell's Living Age*,' the fourteenth part completing the educational section, and beginning that of Fiction (Philadelphia: Edward Roth, No. 1135 Pine Street).

The third number of the publications of the University of Pennsylvania, in the Department of Political Economy and Public Law, is a paper upon ground-rents in Philadelphia, by Edward P. Allinson and Boies Penrose of the bar of that city. It is a well-known fact that there are in Philadelphia more dwelling-houses than voters, so that, as a rule, every family has its own separate abode. The authors of this paper contend, with much force, that the practice of selling land subject to ground-rents has promoted subdivision and facilitated the acquisition of homes by the poorer classes. For the explanation of this tendency we must refer those interested to the monograph itself, which is extremely concise, and contains, withal, an excellent presentation of the legal aspects of these estates. They seem to be peculiar to the State of Pennsylvania.

—The ninth volume in the imposing series of the 'Index-Catalogue of the Library of the Surgeon-General's Office, U. S. A.' (Washington), opens with the remainder of the long title *Medicine*, and also disposes bodily of the letter N. Like its predecessors, it is a marvel of fulness and accuracy: we have not, in a cursory examination, found even a typographical error, though error is almost courted by the repetition of titles in full, under author and subject respectively. Extraordinary attention is given to biographical data—birth and death of an author, his obituary notice, his portrait, etc. Places form an important feature of the classification: 40 pages are given up to New York State and city, for example. Nostrums, like Norris's Drops, are entered along with the drugs in regular use, *e. g.*, Morphine and Mercury, which fill 7 and 22 pages respectively. Kindred sciences, like Meteorology and Natural History, make a good showing, the former in 10 pages. The Microscope has 16; Museums 8; Monsters, 36. The parts of the body most favored in this volume are above all the Nerves (upwards of 140 pp.), the Muscles (33 pp.), the Nose (35 pp.), the Neck (23 pp.), the Mouth (11 pp.), and the Membranes (10 pp.). The Mind gets 10. Meningitis heads the diseases with 20 pages, Mumps counting but 4, and Melancholia 4. The swallowing of needles and pins requires 2 pages, in very fine print, of references to periodicals mostly. To complete our statistical view, we may note that the Müllers among the authors occupy 12 pages, the Meyers 7.

—The Index Catalogue is a veritable polyglot. We single out as curiosities original Japanese medical works, like 'Tokuhon wo Jinku Ho,' or 'Tokuhon's Nineteen Principal Diseases and their Treatment'; and Japanese translations from the German, such as, 'Netsu Shinrou,' or 'The New Doctrine of Fever.' Odd titles abound. Under Memphis occurs this: 'Section of a Human Stomach, having been used twelve years in trying to digest Wolf River third-best water, showing cause of dyspepsia.' Under Mind-Cure this, proving the antiquity of it: 'Narrative of the late extraordinary cure wrought in an instant upon Mrs. Eliz. Savage (lame from her birth), without the using of any natural means, etc., with an appendix, attempting to prove that miracles are not ceas'd' (London, 1694). Somewhat earlier is G. A. Mercklin's tractate on transfusion of the blood, "qua bæc quæ sit e bruto in brutum, . . . illa quæ e bruto in hominem, . . . et ista quæ ex homine in hominem,' etc. (Nuremberg, 1679). Nicolo Monardes wrote 'Delle cose

che vengono portate dall' Indie occidentali pertinenti all' uso della medicina,' etc. (Venice, 1575), which was Englished in London by John Frampton in 1596 as 'Joyfull Newes out of the New-found Worlde,' etc. Marchmont Needham's 'Medela Medicinæ' (1665) he defines as "a plea for the free profession and a renovation of the art of physik, . . . tending to the rescue of mankind from the tyranny of diseases, and of physicians themselves from the pedantism of old authors and present dictators." Under Midwifery, one may see what a contest has raged over the proper sex for this profession. Daniel Neal published (1722) a 'Narrative of the Method and Success of Inoculating the Smallpox in New England, by Mr. Benj. Colman,' "with a reply to the objections made against it from principles of conscience in a letter from a minister at Boston." Nostradamus is represented by his 'Zwey Bücher,' "erstlich in frantzösischer Sprach von ihme beschriben: Nun, aber, unserem Vatterland zü Gütem, in das gemain Teutsch auff das trewlichst verdolmetscht" (Augsburg, 1573). But we must not wander further in these pleasant pastures.

—The poets Drayton, Drummond of Hawthornden, Dryden, and Dunbar, with many lesser luminaries, fall to the sixteenth volume of the 'Dictionary of National Biography' (Macmillan & Co.); and the notice of Dryden not only is the longest and most significant of any between the two covers, but demonstrates again that the editor's skill in this sort of composition is unsurpassed by that of his colaborers. Mr. Leslie Stephen regards Mr. Lowell's as perhaps the best modern judgment of Dryden. Mr. Stephen also writes the compact account of Miss Edgeworth, not omitting the painful "attempts to increase her growth by mechanical devices, including hanging by the neck." There is a good deal of information about Martin Droeshout and his engravings, of which his Shakspere bust of 1623 is the most famous. Thomas Drummond, the inventor of the light which bears his name, and afterwards the most beneficent ruler that Ireland had ever had, is fitly commemorated, and is, indeed, a name to be remembered at this time. The contrast of his success with Forster's failure, while neither wholly one of temperament nor wholly of training—the scientific spirit versus the reformatory—is deserving of study. Besides British soldiers who had a hostile hand in our Revolutionary struggle and in the war of 1812, such as abound in this Dictionary, there is a rather large proportion of more cheerful international entries. We may instance Samuel Eaton, colleague of the Rev. John Davenport in New Haven, and his brother Theophilus, the first Governor of the Colony; Henry Dunster, President of Harvard, and his scaly predecessor, Nathaniel Eaton, President pre-designate. England gave to us Dr. John W. Draper, and we gave to England Joseph Chessborough Dyer, who, a mechanical genius himself, helped many American inventions to an introduction abroad, notably Fulton's steamboat, and who remembered the land of his nativity when he took a share in founding the *North American Review*. Dyer's name, by the way, is omitted from Drake's 'Dictionary of American Biography' and from the new Appletons' 'Cyclopædia of American Biography.' He was a native of Stonington, Conn., and his father is said to have been "Capt. Nathaniel Dyer of the Rhode Island Navy." Might not Mary Dyer, the Quakeress, hanged as such on Boston Common in 1660, have been properly included in Mr. Stephen's Dictionary?

—The free and easy methods of the German universities in the matter of attendance upon lectures have been so highly commended by not a few American educators, and the seminary system has been so loudly hailed as the highest development and crowning glory of the best possible system of instruction, that it may be worth while to look for a moment on the reverse of the medal as presented in the following extract from the Berlin *Politische Nachrichten:*

"Many as are the advantages of the present system of teaching in our universities, it has this disadvantage, that the students who, as is well known, are not required to attend regularly the lectures for which they are registered, but for which they nevertheless receive their certificate of attendance, are beguiled into turning their backs upon the lecture-rooms, especially in their first semesters; the consequence is, that later, in order to pass the examinations, they are forced to obtain in a comparatively short time the requisite knowledge of their subjects, to the detriment of their general culture and of their health. Another result is, that the knowledge thus acquired is frequently no more than is absolutely indispensable. In order to bring about a closer personal intercourse between students and teachers, and thus lead to a more regular attendance upon lectures, the so called seminaries, sometimes called *Privatissima*, *Uebungen*, etc., were brought into existence in our universities. In these, more use is made of the scholastic methods, and these institutions have been very successful. Even they, however, suffer from the fact that the professor has no means, other than moral suasion, at his command to urge on to greater diligence those students who have shown themselves negligent during the semester. We have, therefore, cause to rejoice that the Minister of Education has, by a recent statute, conferred upon the Director of the Historical Seminary in Berlin University powers hitherto not possessed. By this statute the members of the seminary are required to attend regularly the exercises of the seminary, must not absent themselves without giving previous notice of the reason for absence, and must display all required diligence in their studies. For violation of this statute, or for other valid reasons, the Director may exclude any student. Every student, therefore, who enters the seminary, under these regulations, has his attention called at the opening of the semester to the consequences of any lack of diligence on his part; and nothing less than regular attendance will secure for him at the close of the semester the needful certificate of his participation in the work. Thus there is brought to bear upon the student a pressure which must work only to his advantage, and it is much to be desired that the same regulations might be extended to the seminaries in other branches of knowledge."

Can it be that we have here the entering wedge of the marking system and compulsory attendance, which, under the guidance of our German friends, we had begun to look upon as twin relics of barbarism in our American universities?

—Two congresses have just met at Venice, and have received the usual hospitality of that city—illuminations, fireworks, serenades on the Grand Canal, receptions by the authorities in the Ducal Palace, a dinner at the Lido, a trip to Murano and Torcello, and another up the Brenta to Padua. The Meteorological Congress, under the Presidency of Padre Denza, the well-known seismologist and Director of the Observatory at Moncalieri, was a small body of serious scientific men and did some good work. The International Literary Congress, which never boasted of a very eminent membership, seems to have fallen entirely into the hands of second and third-rate writers, especially of those who manage the International Literary Association of Paris. On this occasion M. Louis Ratisbonne was the president, and M. Louis Ulbach the chief manager. The other important members were all French, Italian, Spanish, and Belgian, except one Englishman, Mr. Clifford Millage, of whose literary status we must confess to having no exact information. Germany, Austria, and other nations seem this year to have taken no active part in the proceedings. The protection of literary property, which is now theoretically the main object of this Congress, took up very little of the time and attention of the members, and the discussion on the American International Copyright Law, which had been greatly advertised in advance, amounted only to a brief résumé of the Chace Bill, and an anodyne resolution (passed without debate) recommending the United States to accept the international arrangement formulated a few years ago at Berne. The discussion on the reciprocal rights and duties of authors and publishers was somewhat more lively, especially when the Dutch were attacked for having permitted the performance of the opera "Otello" without payment to Verdi or the publisher Ricordi. A Dutch delegate defended his countrymen on the ground that there existed in Holland but one wandering opera company, which gave representations in turn at Amsterdam, Rotterdam, and The Hague, and could not exist if compelled to pay heavily for new operas; and he humorously cited parallel examples from the literary and musical history of Belgium and France. This called out indignant protests. As hosts, the Italians were expected to amuse the Congress, and Vittorio Malamani, the author of that excellent book, the 'History of Venice in its Private Life,' read the opening paper of the session, on "Venice in French Art and Literature"; while the learned Professor De Leva of Padua delivered a discourse on the Diarist Marino Sanuto and the proper place of chronicles in history. Both these papers will be published —the former in the *Nuova Antologia*.

—The missionaries of Adana, in Cilicia, have been spending the heated term in Comana Aurea, in Cappadocia, once the seat of the worship of the goddess Ma, celebrated throughout the Hellenistic period for its wealth and splendor. Miss Laura Tucker, in a private letter, says:

"For our own curiosity we have been pursuing some original investigations by way of opening up one of the smooth, oval, artificial mounds that crown all the *high places* in this vicinity. We chose the largest mound, in sight from the Protestant chapel, and two weeks ago set some men to digging. They began at the top of the mound, and, after digging several days, got tired, and began on the south side. To-day our efforts were rewarded by an entrance into a prettily built stone tomb, containing one main room, ten feet long, eight feet wide, and eight feet high, with a long entrance-hall. We got into the building from the top. The stones are all nicely carved and put together carefully. The floor was once paved with foot-square smoothed limestones, but the place seems to have been entered and rifled, perhaps centuries ago, and the pavement partly torn up. The roof of the little structure is arch-shaped, and the door of the inner room was shut by a large stone, cut to fit the entrance. It is curious to notice that the entrance of the mausoleum, and that to this second underground tomb, is toward the west. You know that all *these people*, living here now, speak of sunrise as the 'birth of the sun.' Can it be that the ancients who dwelt here associated birth and religion with the sun and sunrise, while they in some way connected death with sunset? . . . Those Germans and Austrians who were in Marash just before you, have made excavations in Zingirli and discovered important Hittite ruins, among them a colossal statue of Sardanapalus, the old Assyrian."

NARRATIVE AND CRITICAL HISTORY OF AMERICA.

The United States of North America. Part II. [Narrative and Critical History of America. Vol. vii.] Edited by Justin Winsor. Boston: Houghton, Mifflin & Co. 1888. Pp. viii, 610.

THE present volume very well exemplifies the distinctive advantages of the coöperative me-

thod in historical work, and at the same time some of its essential limitations. Perhaps in no previous volume has there been a more obvious appropriateness in the assignment of subjects to writers. As instances may be mentioned the chapter on "The Constitution of the United States and its History," by Mr. George Ticknor Curtis; that on "The History of Political Parties," by Prof. Alexander Johnston; that on "The Peace Negotiations of 1782-1783," by Mr. John Jay; and that on "The Diplomacy of the United States," by President James B. Angell. Of an importance only secondary to these, however, are the other chapters of the volume, by Mr. Edward J. Lowell, Dr. George E. Ellis, Prof. James Russell Soley, Dr. Edward Channing, and the editor, Mr. Winsor, respectively. The volume, as a whole, supplies a history of the United States to 1850, giving separate consideration, not only to its diplomatic and territorial aspects, but also to its political and constitutional, and its military and naval phases as well.

It is, nevertheless, in the portion bearing upon the diplomatic aspects of the history that the present volume possesses the greatest interest, as comprised in the contributions of Messrs. Lowell, Jay, Ellis, Angell, Channing, and the editor. Mr. Lowell's chapter, by far the longest in the book, follows the thread of our "Relations with Europe," from 1775 to 1782. It deserves a careful reading, not merely from the intrinsic interest of its subject, but from the extreme care with which the writer has traced it, often in the most remote and least accessible quarters. Mr. Lowell's researches in connection with one phase of the subject, the Hessians, were embodied in his monograph published in 1884, but have here been supplemented by applying a similarly exhaustive scale of investigation to the subject at large. No less informing than his chapter is Mr. Lowell's "Critical Essay," in which are indicated some of the European depositories of the original archives to be consulted. Following this essay, the editor has supplied a very serviceable "List of Treaties, Conventions, and Declarations," 1674-1784, bearing upon the American Revolution and the Armed Neutrality.
